FYR-PRUF

STOVE AND NICKEL POLISH

... Really *Two* Polishes in One

Actual Size

Fyr-Pruf (pronounced Fire-Proof) is a modern polish that cleans and polishes both stove and nickel trim in a single operation . . . imparting a more brilliant and longer lasting lustre. Women use Fyr-Pruf Stove and Nickel Polish unhesitatingly because it is absolutely safe . . . it cannot burn or explode . . . and it will neither stain nor injure your hands. With *Cold* water and soap it washes off quickly. Never use hot water. Fyr-Pruf is odorless and dustless, too.

Home Sweet Home

YOU will enjoy the old songs more for knowing something about the people who wrote them. Here is John Howard Payne and his old home at East Hampton, Long Island, which inspired him to write "Home, Sweet Home." Below is a reproduction of the second edition of this old song. See page 2.

Songs that Mother Used to Sing

The excess weight in ordinary boots makes you waste, every day, enough energy to lift a stallion weighing over a ton!

If you tried to lift
this *Belgian Stallion*
with your foot!

Men's short brown boot, knee to hip lengths.

*Lighter
Tougher!*

MAJOR DE MALMAISON, Grand Champion Belgian Stallion, 1929 International (After a photograph).

TWENTY-THREE hundred pounds—Major de Malmaison, Grand Champion Belgian Stallion, at the 1929 International! Suppose this prize stallion were hung from your instep. Your strength would not be equal to the strain.

And yet, every day that you wear ordinary boots which are only two ounces heavier than they should be, you lift just as much useless weight as that with your feet, and have wasted, by the end of the day, all the energy necessary to lift the stallion. And here's the proof:

Suppose, in chores around the farm, you cover 5½ miles in a working day. (Most farmers do much more than that.) Even if you average a full yard to every step you must take 9,680 steps to do it.

If each of your boots weighs only

two ounces more than it ought to, in the course of the day you lift 2,420 pounds of unnecessary weight!

That's why Goodrich boots are made *light*.

It cost The B. F. Goodrich Footwear Corporation more to make them lighter and still keep them tougher, and yet it costs *you* no more to buy them.

Twenty-seven different compounds and fabrics go into the Goodrich boot. It is a combination created by years of laboratory study and practical experience in making footwear and automobile tires. And the same careful study and long experience have gone into the creation of every piece of footwear in the Goodrich line.

Try on a pair of Goodrich boots at your dealer's and you'll know the difference.

Songs that Mother Used to Sing

Home, Sweet Home

By DAVE THOMPSON

THINK of Home, Sweet Home! as a hymn, if you will; the fact remains that it was written as the theme song for an opera.

This is how it happened. A playwright by the name of Payne was making a fair living, for a bachelor, by going to see French plays on the Paris stage, and if they clicked with him, translating them freely, interpolating much of his own stuff, for use in the English theatres in London. He was an American and thought in dollars, although I presume that he talked francs or pounds.

During the winter of 1822-23, which he spent in Paris, he happened to have a contract for the production of three original plays for the London stage, to be produced at the Covent Garden Theatre. The other two do not matter, except that they made three, for which he was to receive a total of 250 pounds. But the third, an opera called Clari—does matter, for it gave us as its theme song the sentimental ballad, Home, Sweet Home!

How the Song Was Written

Let us imagine John Howard Payne, with the first 80 pounds pay on the contract in his pocket, in his bachelor quarters in Paris, diligently at work writing this opera. He is a young man, not 32 years of age until the next June 9. He is of ordinary size and build, but with features which contemporaries describe as "too beautiful for a man." On his own since a child, he has lived a clean, moral life. His travels have taken him all over Europe. He has been a keen observer of things and people. His dramatic sense is of the highest. He himself has been an outstanding figure on the stage in America and London. In London he has won the applause of the severest critics for his acting, fcted by royalty for his fame as the best young actor of his time. In London he has been in jail for debt contracted by a theatrical venture of his own, working his way out by writing while confined, the most successful play of his career. It was called Therese, and made him enough to settle his obligations and place him on easy street for a while.

Just now he is sitting pretty. In Paris, with a good contract, on which he has a liberal advance, working with men he likes who are in London writing the airs to his songs and producing his plays upon the stage. Upon the best stage, too; the Covent Royal Garden Theatre. What more can a young man ask of life?

He is in his room. The play, Clari, upon which he is working, has "Home" for its theme. Clari is the name of the girl who for a while is led astray. The luxuries of the world lie before her. She is surrounded by all the splendors of the duke's palace. Thus far she has resisted his entreaties—has repulsed him. But the ease, the beauty, the gems, the entreaties and promises of the duke are causing her to weaken. She has slept through the night on a downy couch in a magnificent chamber.

Music Not Original

Thus far, John Payne has come along well with his opera. The plot has been standard, the dialogue has been easy, the situations have worked out just right. But now—what to do. He lays aside the neatly written sheets of paper. Here is a place in the play for the highest emotion. It must center about the theme, Home.

Memory comes to his aid. It is a beautiful morning in Italy. He is strolling alone amid delightful scenery. His attention is arrested by the sweet voice of a peasant girl who is carrying a basket laden with flowers and vegetables. She is trilling a plaintive air, filled with sweetness and simplicity. He speaks to her, asking for the name of the song. This she does now know, and fearing that the air will escape him, he requests that she sing it again while he jots down the notes as best his limited knowledge of transcribing music will allow him.

Here he again comes into action. Retrospect has given him the lead he needed. Among his notes he finds the

copy he made that bright morning in Italy while the peasant maid sang the old Sicilian air. And to the measure of this air, the poet in him composes the words of Home, Sweet Home! This is the way the original manuscript reads:

'Mid pleasures and palaces though we may roam,

Be it ever so humble, there's no place like home!

A charm from the sky seems to hallow us there,

Which seek through the world, is ne'er met with elsewhere!

Home, Home, Sweet, Sweet, Home!

There's no place like home!

There's no place like home!

An exile from home, splendor dazzles in vain!

O, give me my lowly thatched cottage again!

The birds, singing gayly, that came at my call—

Give me them—and the peace of mind, dearer than all!

Home, Home, Sweet, Sweet, Home!

There's no place like home!

There's no place like home!

In the opera, Clari sings the words to the music as written by Henry R. Bishop, to whom Payne sent the completed manuscript with the suggestion that he use the air as shown by the rough notes Payne submitted with the manuscript. Bishop, a composer of note, knew the old Sicilian air, and adapted it to the words as written by Payne. The singing of this song, of course, fills Clari with determination to return to the lowly-thatched cottage of her parents. The duke follows her, and they live happily forever after.

John Howard Payne was born at Broad Street, near the corner of Pearl, in the city of New York, June 9, 1791. He died in Tunis, Africa, April 1, 1852. His early childhood was spent in East Hampton, Long Island.

His Later Life

Payne's mother died in 1807; his father went bankrupt in 1809; and the opportunity being offered him to make some money upon the stage, the father gave permission, and John Howard Payne made his first appearance upon the American Stage at the Old Park Theatre, New York, February 24, 1809, as Young Norval. He immediately became the rage, and for four years played to packed houses in all the leading cities. On January 17, 1813, he sailed for England, where the critics raved over his performances. After his first London appearance, the Morning Herald said: "Nature has endowed him with every quality of a great actor."

His life as an actor and playwright was colorful—and much like good English bacon—a streak of lean and a streak of fat alternating.

Returning to the United States in 1832, he was given a series of benefits throughout the country. In those days they called them benefits, but today we would speak of them as personal appearances. For 10 years he traveled the United States, writing, making personal appearances and promoting a cultural publication. While in Georgia and Alabama, which was at the time the Cherokee tribe was being exploited by land traders, he became a staunch friend of the Cherokee chief, John Ross, whom he advised in his dealings with the traders and with the United States government. That was while the government was dealing with the Cherokees for their transfer into Indian Territory. The government agents complained about Payne blocking their dealing, but he stoutly maintained the righteousness of his position.

Under President Tyler he was appointed as United States Consul to Tunis, August 23, 1842. Payne was in Tunis only about long enough to get his living quarters remodeled to suit the dignity of the American Consul when a change of administration caused his recall. With the next change of administration he was returned to the post. He had been there something

The A.A. Trespass Sign Has Teeth

St. Lawrence Test Case Carried to Supreme Court

At least one trespasser will hesitate a little before going on posted land again without the permission of the owner. This man, Murray Brough by name, went on the property of Melvin R. Fletcher in January 1929, killed a muskrat, took the fur and sold it. When Mr. Fletcher objected, Brough swore at him and abused him shamefully. The case was appealed to the Game Protector, Brough was arrested, tried in a local justice court, and acquitted. Then Mr. Fletcher, thoroughly aroused, appealed to the Service Bureau of AMERICAN AGRICULTURIST, and we got busy, determined to see if there was any justice in this whole matter of trespassing. It has taken some time to see the matter through, but we were determined to test it out in the courts and had the splendid cooperation of the New York State Conservation Department, and of the Attorney General's office. The story, told mostly in the following letters from various parties involved, will be found intensely interesting to every farm owner.

The first letter comes from Mr. Fletcher himself, and tells how the case started. When we read this letter we were just as mad as Mr. Fletcher. Does a farmer, we asked ourselves, not have any property rights at all? Is there no justice in a local court?

Asked Help of Service Bureau

Service Bureau,
American Agriculturist.

You advise us farmers to post our farms for protection. In September 1927 we posted our farm consisting of 163 acres. The posters we obtained through American Agriculturist and the farm is posted to comply with the conservation law in every way, shape and form, measured between every poster with a tape measure and all under 40 rods. Have always replaced destroyed signs at the proper time. EDITOR'S NOTE—The law requires posters

twelve inches square on every corner and at least one every forty rods around the boundaries.

On January 17, 1929 a Murray Brough deliberately and knowingly went on our property with a club and killed a muskrat and took said fur, and it has also been proven he sold same. I called to Mr. Brough and told him not to go on those posted lands, that it was all legally posted. He said, "To h— with posters, they don't amount to a d—." He abused me shamefully so I reported it to a game protector, Clark Hutchison, 711 Lafayette Street, Ogdensburg, N. Y. The matter was taken up and Brough given every chance to settle peacefully and at a time when he could conveniently, but he ignored it all and at last demanded a jury trial which was held today, December 10, before Justice of the Peace Lester Rickett at Heuvelton. Attorney Louis J. Welt of Ogdensburg defended him. Brough said he ran over the rat on the federal highway with an oil truck and killed it, but such is not the case. As we had no one but the game warden to defend us we were beaten, the verdict was "Not Guilty."

Now here is where we need some backing or Brough is right about posting. I feel that had the conservation department furnished us a lawyer it might have had a little more bearing on the jury. The game warden doesn't usually have a square deal at such times.

Now it isn't a question about the muskrat nor a dozen of them. But have they got the right to trespass and take away things whenever they see fit? They do just about as they please with the farms and farmers and it makes us feel that we pay our money out for nothing and get laughed out of court in the bargain. Not only myself but other farmers as well feel that there isn't much use trying. How will this crime wave ever be controlled if it is made light of.

I have done all that I can and am going to appeal to you. If there is any protection I want it. I own my farm and am taxed to death. If this matter can be taken up again in any way kindly advise me; I don't feel that I have had a just and square deal.

Conservation Department Pledges Help

After receiving the above letter our Service Bureau wrote immediately to Alexander Macdonald, Commissioner of the New York State

Conservation Department, and the letter was promptly answered by Llewellyn Legge, Chief of the Department of Fish and Game. Here is Mr. Legge's letter:

Replying to your letter of December 30th, directed to Commissioner Macdonald, attached to which was copy of letter from Melvin A. Fletcher of De Kalb Junction, N. Y., relative to the posting law, would say that I can fully realize how aggravated a person would become who has posted his land and then have it trespassed upon by persons who are not respecters of the law.

You may be sure that if Mr. Fletcher will make an affidavit of his land being legally posted as provided by the Conservation Law, and file his complaint with the court, upon which a warrant can be issued, the Department will then step in and prosecute those who wilfully trespassed. It is not possible for the Game Protectors or Agents connected with the Department to swear out a warrant where a person has trespassed upon posted lands owing to the fact that the officers have no knowledge of the land being posted in accordance with the Conservation Law.

Case Given to Attorney General's Office

As soon as we heard from Mr. Legge we forwarded the information to Mr. Fletcher. By this time most people would have cooled off and would not have cooperated by taking the necessary further steps. Not so Mr. Fletcher. He made affidavit and furnished information for the arrest of Mr. Brough. This information was forwarded to Mr. Legge at the Conservation Department who immediately turned it over to Honorable Hamilton Ward, Attorney General of the State of New York, and the case was put in the hands of C. S. Ferris and Charles F. Cummings, Assistant Attorneys General in charge of legal conservation work in the Attorney General's Office. Under the leadership and through the work of these able gentlemen in the

The More Hens Eat the More They Lay

A Few Ways to "Pep Up" the Appetites of the Farm Flock

By H. L. COSLINE

Associate Editor, American Agriculturist

sirable if the hen was expected to lay more than a few dozen eggs a year. Practically every state college worked out a home mixed ration which in many cases gave excellent results and for that matter still gives results. A little later commercial manufacturers realizing the high potential market for poultry feed began to sell ready mixed

feed and this ready mixed feed has gained steady popularity on the market.

One of the first problems to be decided is whether one is to mix his own ration at home or to buy it already mixed. There are certain advantages to both methods. There is little doubt but that poultrymen can mix their own ration at a little less cost per hundred pounds than if purchased already mixed, that is, if one does not count his own labor and work worth anything. If labor is charged at what you have to pay for it there is not much saving.

Some time ago I mentioned the greater cost to a friend who was feeding a ready mixed poultry feed and his reply was that he was not thinking so much about the cost per hundred pounds as he was the profit from his flock of hens. After trying both methods he had concluded that he could get more money for the labor he put on his flock by feeding the ready mixed feed than he could by trying to mix it himself.

There seems to be a tendency to feed a more complicated ration to hens than was the fashion a few years ago. This, of course, adds to the difficulty of mixing the ration as well as to the possible inability to get certain ingredients of the ration when it is time to mix up a new batch. It is, of course, bad management to change rations frequently, particularly when the hens are going well. Doubtless some will continue to home mix for a long time, perhaps indefinitely, but it seems certain that there is a tendency to feed more ready-mixed feed.

The one idea which should be in the mind of the poultryman all of the time is to get the hens to consume more feed. It is our belief that many poultrymen, perhaps the majority of them, do not so manage their feeding that the hens eat

(Continued on Page 18)

H. L. COSLINE,

this in mind. When we come to the ration itself we must get one which is relatively low in fiber, which is palatable and which contains those newly discovered elements or compounds known as vitamins. It is not so many years since corn was the principal feed and in some cases the only feed given to the poultry flock. During the long winter the appetites of the flock might be tempted once in a while by some baked potatoes or, in case the milk was skimmed at home, by some skim milk but in general, their ration had little variety. Even in those days, skim milk acquired quite a reputation as a feed for hens because, although the reason was not recognized, they always seemed to produce more heavily when it was available. When more attention was given to the question of feeding hens, experiment stations began to work out rations based upon the needs of the hen for producing eggs and one of the first things discovered was that protein, particularly animal protein, was particularly de-

If you wish to have the egg basket filled this winter, watch the feeding of your flock carefully.

Vol. 126 October 4, 1930 No. 14

What Is a College For Anyway?

DEAN CHRISTIAN GAUSS of Princeton University in an article in the Saturday Evening Post points out that about half the boys and girls who enter college either fail in one or more subjects or do not graduate at all. With many colleges, three-fourths of those who enter fail to complete the courses. What a startling and sad fact for the millions of American parents who strive so hard to give their children a college education only to see "Johnny come marching home", "busted" out of college and more or less in disgrace. Sadder still is the disastrous effect on the mind of Johnny himself when he feels that he is starting life a marked failure.

Dean Gauss and nearly all of the other college professors with whom we have talked always blame this trouble upon the boy or girl's lack of ability or bad high school training. In their supreme egotism many of these college leaders are not able to see that the failure of half of the students who come to them is a tremendous indictment of the college itself and the whole system of so-called higher learning.

Of course, there is much poor high school and elementary school training. We all know also that there are many boys who go to college only to have a good time, and who try to loaf and bluff through the courses. But we know, too, that all the boys who are admitted to college on the college's own entrance examinations were trained enough to pass these tests set by the college itself, and were bright enough to graduate from high school. These youngsters may be slow-minded, hard to learn, but they are certainly above the average in intelligence or they could not have been admitted to college.

Dean Gauss points out in his article and we have heard other college men say, that the slow-minded boy ought not to go to college because he holds up the progress of the bright students. Well what is education for anyway? Who needs college help, the bright boy who can take care of himself in life anyway, or the slower fellow who needs all the help he can get and who will be the better citizen because of it. Is the college, and the college professor, more interested in maintaining high scholastic records for the college through easier teaching of the bright students, or are they interested in turning back into the great life stream the average boy who needs the right kind of help?

One trouble with the American college at the present time is that it is aping the old scholastic, classical colleges of Europe; too much emphasis

on scholarship and not enough on the practical application of learning to life itself; too many letters, diplomas and degrees and not enough teaching of the problems that will help the young student after commencement time to solve the questions of the work-a-day world, and to get some happiness for himself and others because of his education.

Another trouble with the college is that it has the foolish idea that it can take young students out of the protection of their homes and put them forthwith and without warning entirely on their own responsibility in the college life where there is more freedom and temptation than there is in the average community. At home the boy has had regular hours of study, he is supposed to be in at certain hours, and to guide his life so as to fit it into and with the lives of other members of his family. The modern college cuts the boy or girl almost entirely loose from family guidance and substitutes little advice or personal help. The universities even state in their catalogues that they will not furnish home reports of students' scholastic progress. In most cases the parent never has any warning of a boy's failure until he arrives home. In a business office a man who fails to make good is warned time and again and he is given many chances to correct his deficiencies, but the young boy in college takes his examinations and if he fails, out he goes.

The Princeton Dean complains also that boys and girls enroll in courses without regard to their fitness for those particular courses or professions. Well, of course they do, but whose responsibility is it if not the college's to work constantly and to study every individual student to try to guide him into the course and the type of work for which his talents are best suited? Even the "hard boiled" army tests and classifies its men so as to best fit them into the great war machine.

Fortunately our agricultural colleges have less failures possibly because they take a little more personal interest in the students and also because the farm colleges are closer to the everyday affairs of life. It is true, too, that some of the finest, best and kindest men we know are college professors, but before they begin throwing stones at students slow to learn or at high schools, we think it is time to look at their own glass houses and to bring their colleges and universities out of the clouds of theoretical, classical training down to the problem of teaching with a much less number of failures, their boys and girls how to make a living and how to live.

The Disappearing Oil Lamp

THAT the farm people are fast becoming tired of the old kerosene oil lamp is shown by the rapid gains made each year in farm electrification.

In the Middle Atlantic States, New York, New Jersey and Pennsylvania, for example, there was a gain of nearly 11% of additional electrification on farms during the first six months of 1930. At the close of last year there were 53,060 farms served by high power lines in New York state. At the end of the first six months of 1930, this had increased to 56,222 farms in New York.

These figures do not take into consideration, either, the increase in the use of independent electric plants which are doing so much to bring light into dark places in those communities where electricity from power lines cannot be had.

Let's Practice What We Preach

THE Department of Health in New York City is to be commended for conducting a new campaign stressing the importance of milk for the building and protection of the health. Milk dealers are cooperating by placing a card on every milk wagon, prepared by the Department of Health, urging both adults and children to drink at least four glasses of milk a day.

The Dairymen's League Cooperative Association, the Borden Farm Produce Company, and Sheffield Farms, all maintain nutrition depart-

ments which are doing excellent work for both milk producers and consumers in reminding the public that milk is the best food in the world and an actual necessity from the standpoint of health. Try keeping account for a week or a month of the amount per person of butter and milk used by your family. If we urge a city consumer to use large quantities of dairy products at city prices how about patronizing our own business at wholesale prices?

Bouquets in Orchards

IN calling on farms in fruit districts this year, we have been impressed with the large number of orchardists who are experimenting to get better pollination. Large growers are becoming convinced that lack of good pollination is the cause of most of the failures of fruit to set.

In every orchard we saw this year where bouquets have been hung in the trees at blossoming time to make sure of cross pollination good fruit resulted. Often there were no apples at all on other parts of the same tree where there was no bouquet.

"All of which goes to show", said one man whom we visited, "how little we really know about farming after all these years."

We might also add that it shows, too, what a complicated business farming has become. Growing up in the business, farmers do not realize themselves the great knowledge and skill required in their own business. You will best realize this when you watch a city man who has never been on a farm try to pitch on a load of hay, milk a cow, plow with horses or with a tractor, and do a hundred and one tasks that you do every day and think nothing of. If you had to start in without any such knowledge it would take you just as long to become a good farmer as it would to study to be a doctor, or for any other trade or profession.

Daylight Saving with a Vengeance

OF all the petty nuisances with which traveling men have to contend, daylight saving is just about the worst. With many farmers it is bad enough but what it does to travelers is well illustrated by a trip which we took in September.

Starting from New York City and stopping off for a few days up-state, we set our watch back to conform to Standard time. Then, leaving New York State for Chicago, we again set the hands back to agree with Central Standard time, but something was the matter with the watch when we arrived in Chicago, for we seemed to be an hour slow. We had forgotten that Chicago is on daylight saving time which is exactly the same as Eastern Standard time. Leaving Chicago for the Northwest, we again had to reverse the watch for Central Standard time, and then starting east we had to do the whole process all over again, only ahead instead of backwards.

When will the American people have sense enough to agree on a uniform time that means something?

Eastman's Chestnut

CURRY WEATHERBY, Circulation Manager of American Agriculturist, sends a little paper to all of our representatives in the field once a week called, the A.A. Pepper Pot. After discussing business matters of interest to our salesmen, the Pepper Pot usually closes with a sheet of jokes which I look forward to reading every week because I think Curry has a pretty good sense of humor.

The joke that tickled me the most in the last issue went like this:

"Shocked by the language of two linemen, an elderly lady complained to the telephone company, and the foreman was asked to explain. His report follows:

"Me and Bill Fairweather were on this job. I was up on the pole and accidentally let the hot lead fall on Bill. It went down his neck. Then Bill said: 'You really must be more careful, Harry'."

Old Redfield Keeps Open House

A Community That Takes Pride in Itself

By JARED VAN WAGENEN, JR.

IN making up the catalogue of those qualities by which we judge a man's worth and character, I have never heard it enumerated that he had a very exalted opinion of himself. As a matter of fact, personal modesty is by common consent held to be one of the most becoming of virtues. Indeed some cynic has counseled "Stop talking about yourself for a bit and then just notice how long it is before someone else brings up the subject."

Jared Van Wagenen, Jr.

But on the other hand when it comes to communities, it seems to be agreed that a proper, not to say lusty pride is distinctly a virtue to be emulated and sought after. So I am especially glad when I find some little hamlet which believes in itself so heartily that it is eagerly anxious to proclaim itself to the world.

I have just discovered such a place.

Redfield Won Dramatics Contest

This same small community of Redfield, so interestingly described in Mr. Van Wagenen's story, has done other things worthy of note. In 1928 the Redfield Grange captured the state prize of \$50 offered by American Agriculturist to the group winning first place in the New York State Dramatics Contest. The final run-off took place at Farm and Home Week at Cornell in February, 1928. True to the spirit of their wonderful community, they used the prize money towards the purchase of fire-fighting equipment for the village of Redfield.

On the Saturday preceding Labor Day I went to old Redfield in Oswego County to attend a couple of sessions of their Old Home Week.

Now I feel quite sure that the good folk who live in this pleasant place will be entirely willing that I tell the truth and say that Redfield is not by nature among the most favored communities of our state. It is remote from the railroad or even from the main trunk lines of highway. It is nine miles from the nearest railroad and considerably further from anything that can be called a good-sized town. A dozen or twenty years ago this would have been an almost insuperable handicap but hard roads and motor transportation have done much to minimize the disadvantages of old-time isolation.

More serious than the lack of convenient railroads is the fact that the township of Redfield can hardly be classed among the more fertile regions of our state. There is a section just about where Oswego, Jefferson and northern Oneida join each other which is really about as rough and unsettled as any part of the Adirondacks and Redfield lies close to this forbidden land. In addition to this the township has experienced a calamity such as has come to quite a good many other communities in our state including our own Schoharie County village of Gilboa. Some years ago a big power company put in a dam on the Salmon river backing the water for about 14 miles, flooding the best land and taking the very heart out of the township. I suppose such things must be done to clear the way for our so-called march of progress but that does not alter the fact that it spells pathetic tragedy to those communities which experience them.

You see I am enumerating all the disadvantages and misfortunes of the

village and yet despite them all, Redfield has now maintained for fourteen years an institution which in itself makes it a noteworthy place to set apart from other communities.

Oswego can hardly be called one of the old counties of our state. It is true that the site of the city of Oswego has been a trading post with a rude fort (at intervals at least) for more than two hundred years but not until the early years of the last century did settlers come in any large numbers and the Congregational Church of Redfield founded in 1802 is declared to be the oldest organization in the county. In a word it is a village with traditions.

At an earlier day, like so many small

hamlets, it was unfortunate in being greatly over-churched when three Protestant churches competed and contended with each other while a Catholic Father cared for his own flock. I try to be a somewhat enthusiastic Churchman but I stand for the ideal of only one Protestant and one Catholic church in a community until that community becomes of considerable size. All too often the duplication of churches in tiny villages stands as a symbol of the triumph of denominational zeal rather than as a monument erected to the glory of God. Redfield has learned to order things more wisely and in recent years the Protestants have come together under the banner

of a Community Church and this along with their Catholic friends holds the fort for Zion.

Redfield may also be proud of her five-teacher centralized school with a fine, dignified, modern brick edifice that fronts on the "Square" and is distinctly an ornament to the village.

I did not inquire the population of the village. It is surely less than it was in the palmy days now many years ago but if I venture to guess 200 souls all told I am sure it will be full high.

* * *

There is no old rural community anywhere in our land but during its existence has made important contributions to the great world outside. It is (Continued on Page 26)

Suggestions for Grange Programs

ON the efforts of the subordinate Grange lecturer more than on any person, depend the effectiveness of Grange meetings. There is nothing very thrilling about routine business and while it is pleasant to meet and visit with friends there are other places where this can be done just as pleasantly. The lecturer's hour, however, gives a wonderful opportunity to discuss topics of vital interest to every member. We firmly believe that if this opportunity is utilized there will be no need to worry about Grange attendance.

While it may seem that Grange meetings should be devoted to something outside of the regular farm business and that it is adding insult to injury to expect members to work at farming all day and then discuss it in the evening, it seems reasonable that a Grange program should be a farm program and entirely different from those put on by other organizations. It is not necessary to make it a school. Problems may be discussed in an interesting manner and there may be plenty of fun, but let's have it farm fun and not city fun. We have attended Grange meetings where the program would have been perfectly suitable for a children's day exercise, a program for a village club, or in fact, any social gathering. Pieces were spoken, songs were sung, but never a

word about anything particularly pertaining to farms.

Soon the evenings will be longer and Granges will take an increased activity following the summer season. Here are just a few topics which we suggest to Grange Lecturers for consideration:

1. Crop conditions and crop prospects are becoming of vital interest to every farmer. We believe that a Grange lecturer can well afford to give these a place on the program at several meetings during the year; in fact, whenever crop reports come out. Why not write to the New York State Department of Agriculture and Markets at Albany, New York and to the U. S. Department of Agriculture, Washington, D. C., asking to be put on the mailing list for crop reports whenever they are issued? During the year, American Agriculturist publishes many reviews on crop prospects. We particularly mention those in recent issues on cabbage, potatoes and apples written by Dr. M. P. Rasmussen of the New York State College of Agriculture.

2. A topic that is causing much discussion in rural sections is farm electrification. Here are a few sources of information for the lecturer who wishes to put on a discussion on this topic. The General Electric Company of Schenectady has a rural electrification section. They will be glad to answer any questions that lecturers or Grange members may care to ask them. The Department of Rural En-

gineering at the New York State College of Agriculture has spent considerable time on this subject and have information which may be secured by writing to them.

Safeguarding Your Interests

When it comes to any difference of opinion between our readers and electric light companies it is always in order to appeal to the New York State Public Service Commission at Albany, N. Y. Agriculture is now ably represented on this Commission in the person of M. C. Burritt of Hilton, New York. It might also be well worth while to write to "Electricity on the Farm", 24 West 40th Street, New York City, a small publication devoted to rural electrification and ask them to put you on their mailing list.

To those who are actually interested in installing lights we recommend a little booklet "Wiring The Farm For Light, Heat and Power" published by the Committee on the Relation of Electricity to Agriculture, 1120 Garland Building, Chicago, Ill. which can be secured for 50c. Another interesting and worthwhile booklet is "Niagara Power" which can be obtained by writing to the Hydro-Electric Power Commission of Ontario, Canada.

3. Another topic which is well worthy of study is reforestation. Recent legislation allows the State Conservation Department or the county to purchase land and reforest it. Many farmers are reforesting small areas for themselves. Do Grange members know where they may secure trees, when they should be planted, how many it takes per acre and in fact, many other questions pertaining to reforestation? Lecturers may secure information by writing to the State Conservation Department, Albany, N. Y., The New York State College of Forestry, Syracuse University, Syracuse, N. Y. or the Department of Forestry, New York State College of Agriculture, Ithaca, N. Y.

Do You Know Your Rights?

4. The trespass situation is a peculiarly annoying one to many farmers. How many Grange members know exactly what the law provides regarding the posting of farms and exactly what their rights are when hunters and fishers ignore these warnings? Many times trespassers have bluffed their way out of a difficult situation because the property owner was not sure of his rights. Why not write to the Conservation Department at Albany, asking for a copy of the law on this subject, and following a discussion, ask the Department to answer any questions which come up and which do not appear to be answered in the law.

These are just a few suggestions for your consideration. If it has not already been done it helps wonderfully to have a program committee to plan out work for a year in advance and have the program printed or mimeographed. Several heads are always better than one and it is easier to plan a year ahead rather than to plan for each meeting.

The Four Houses of America

AMERICA is a nation of four houses. These houses were built first in the country. Whether in Protestant New England or in Catholic Maryland, Christian civilization founded four houses.

By DR. J. W. HOLLAND
The A. A. Philosopher

Church as much as the insider. The absentee worshiper, the member who is spiritually dismembered, the man who gads and forgets God, he is the Church's chief peril in this age of liberty and license. With all her imperfections the Church has had a voice that has urged America forward, and has helped men in the attaining of good and stable character.

Dr. John W. Holland

The Dwelling House was the domestic and industrial center of rural colonial life. The first homes in America were places of prayer and devotion. Characters that were strong for every test of life were nurtured there. The rural home is being attacked by city problems today. Life is shifting from its old moorings. We need to fortify our homes against the paganism of life. If we can keep the home fires burning we can keep the heart of our civilization warm.

There was the Meeting House. Rude, cold, and uninviting as they were, the people found at Church, inspiration for their efforts, comfort for their sorrows, and forgiveness for their sins. The Church is being bombarded now by its most bitter critics. The outsider has never damaged the

There was the School House. Ignorance of nature makes man a savage. Ignorance of the moral laws of the world makes him a criminal. The moral standards of the highest concepts of life must be taught in our schools. Otherwise we shall proceed to train a generation of light fingered and clever crooks.

The last house is the Court House. Justice is simply the essence of fair dealings between men. There is a growing suspicion that our Court Houses have failed us. Great criminals often escape, while little offenders get the "limit." Impartial justice is the only thing worthy of the name. Our great rural jurists in the Colonial day had a passion for justice to all. It must be the same among us.

Any conduct that tends to un-roof or destroy the foundations of these four houses will but hasten America to her doom. "Our House will be left unto us desolate" if we FORGET GOD.

INCREASE Your egg production with this great FUL-O-PEP FEED

QUAKER Ful-O-Pep Egg Mash, containing generous quantities of pure, fresh oatmeal, is recognized by poultrymen as the most dependable, uniform and efficient mash for maximum egg production.

Ful-O-Pep Egg Mash increases egg production because its scientifically blended ingredients bring your pullets into a vigorous, healthy condition and provide the stamina for sustained, long-time laying. It contains all the materials for making larger, more uniform, more palatable and stronger-shelled eggs. Each of the ingredients contributes a part toward the production of more and better eggs—the finest proteins, carbohydrates, minerals, vitamins obtainable.

Quaker Ful-O-Pep Egg Mash has demonstrated its worth in stimulating consistent egg production in all climates and in all seasons of the year. The Ful-O-Pep 50-50 combination Growing Mash and Egg Mash will bring your hens safely and speedily through the molting season.

Your Quaker dealer will tell you how to make greater profits from your eggs by feeding Ful-O-Pep Egg Mash. He has Ful-O-Pep Growing Mash and Ful-O-Pep Scratch Grains too. See him today.

A.A.'s Western New York Farm and Home Talk

Buyers Are Cautious

By M. C. BURRITT

ONE or two more light rains have given further relief from the long, severe drought, although far from enough rain has fallen yet. The parched ground will take up great quantities of water before it is thoroughly saturated.

M. C. Burritt

Wells are as dry as ever, rains not having affected them at all as yet. And rains were too late to be of much help to most crops. Late cabbage, cauliflower and tomatoes to some extent will be helped. Meadows and pastures will be revived and will go into winter in better condition. Certainly the acreage of wheat in this part of western New York will be much less this year than in any recent year. The drought has undoubtedly contributed to this as it has prevented or delayed plowing and fitting. But the basic cause of the decline is no doubt the low price and the conviction that the crop was even more unprofitable than others. Were it not for the straw and the desirability of utilizing the land, the crop would be almost entirely abandoned. The seeding of clover and grass seeds has been shown to be just as good with spring grain as with wheat.

Farmers Watch Markets

The depressed condition of markets is the chief concern of most farmers at the present time. Decrease in such crops as cabbage and tomatoes have not resulted in compensating increases in price. Cabbage is selling as low as six dollars per ton. Most tomatoes are contracted at fixed prices. Moreover, all buying of farm products is slow, markets are inactive and nearly all prices unsatisfactorily low. On the Rochester public market nearly every seller reports it difficult to make sales and prices low. This is perhaps more pronounced with fruit than with most vegetables.

Apple harvest is under way. Wealthys and Alexanders have been pretty well harvested and the picking of Greenings and Twenty-Ounce is under way. The quality of most of the fruit is excellent this season and in many orchards, especially those with a good percentage of early and mid-season varieties, the quantity is good also. But this quite satisfactory crop is not finding ready sale or at good prices. Buyers appear to be afraid to buy, especially upon a speculative basis. They want to be sure of a sale before they spend their money. This is probably a reflection of the slowness and uncertainty in business generally.

The effect of this situation is to leave

the grower holding the bag. The buyer tells him that his fruit ought to be worth more but that he can't pay it. He says that he will buy from the grower later out of storage and at a better price if the market warrants it. He, himself, appears unwilling to take the usual market risk. So the grower is compelled to take it or accept a price below that which the supply in relation to the normal demand warrants. This situation may cost growers thousands of dollars, unless general business conditions improve. Three inch U. S. No. 1 Twenty Ounce are bringing only \$1.25 per bushel.

Bean harvest is well along; in fact, more than half completed. The crops look well as they are harvested in the field, but yields cannot be large for the pods are not well filled and the beans small and in some instances more or less shrunken. The weather has been quite ideal for harvest. Corn harvest is also well along. Some earlier fields of potatoes are being harvested with low yields and relatively low prices as well. And yet in spite of the effect of the drought, and depressed market conditions, I believe that most western New York farmers will do unusually well. For others comparatively fewer in number, the year will be a hard one.—Hilton, N. Y., September 21, '30.

Distance for Planting Cherry Trees

What is the most profitable distance for planting of sour cherry trees?

IN many cases sour cherry trees have been planted together as close as 16x16 feet. Probably when planted at this distance the crop for the first few years may be larger per acre than if they were planted farther apart. However, when they are planted 25x25 feet each way the yield when the trees become fully mature will be higher than where they are planted 16x16 feet.

When given plenty of space a cherry tree should grow in size until it gets to 20 or 25 years old. A tree which is twenty years old can easily bear three or four times as much fruit as one ten years old. If they are planted 16x16 feet they will not grow much after they are ten years old because of lack of room.

Manure for Orchards

Where we use manure in the orchard, would it help to add superphosphate to it?

THERE is no experimental evidence that apples respond profitably to phosphoric acid or potash. However, where cover crops are grown these fertilizers will help the growth of the cover crop and so indirectly help the growth of the tree.

—JUDGE.

The Prospects for Cabbage

By M. P. RASMUSSEN
New York State College of Agriculture

ACCORDING to an estimate made by the United States Department of Agriculture, dated September 12, 1930, the 1930 crop of late domestic cabbage will be about 4 per cent larger than that of 1929 and the crop of Danish cabbage will be 6 per cent larger.

Prospects for Domestic Cabbage

Despite the considerable increase in cabbage acreage in New York, Pennsylvania and Ohio, the domestic crop of cabbage in these 3 states promises

Table 1

ESTIMATED PRODUCTION OF DOMESTIC CABBAGE, SEPTEMBER 1, 1930, COMPARED WITH PRODUCTION IN 1929 AND THE AVERAGE PRODUCTION DURING THE PAST 5 YEARS 1925-29.

State	Aver. production past 5 yrs. 1925-29 (tons)	Production 1929 (tons)	Estimated production Sept. 1, 1930 (tons)	Increase or decrease 1930 crop compared with 1929 (tons)
Long Island.....	30,100	30,800	26,400	less 4,400
Upstate New York.....	112,040	97,200	87,000	less 10,200
Total New York.....	142,140	128,000	113,400	less 14,600
Pennsylvania	8,680	9,200	6,100	less 3,100
Ohio	27,900	32,300	22,100	less 10,200
Total, above states.....	178,720	169,500	141,600	less 27,900
Indiana	13,980	15,100	15,500	gain 400
Michigan	22,060	18,400	21,500	gain 3,100
Wisconsin	54,420	60,200	72,200	gain 12,000
Minnesota	10,560	8,100	9,100	gain 1,000
Colorado	15,420	11,200	18,700	gain 7,500
Oregon	9,380	5,000	8,800	gain 3,800
Total above states.....	125,820	118,000	145,800	gain 27,800
Total 9 important States	304,540	287,500	287,400	less 100

to be almost 28,000 tons less than in 1929 and over 37,000 tons less than the average crop of the past 5 years (table 1). New York State (including Long Island) has almost 15,000 tons less than last year and almost 29,000 tons less than a normal crop. This shrinkage in eastern production, however, is entirely offset by an increase in the states stretching westward from Indiana and Michigan to Oregon. As the result of a substantial increase in acreage, Wisconsin gives promise of having a crop of domestic cabbage 12,000 tons larger than in 1929 and 18,000 tons above normal. The results of larger acreages are also apparent in Michigan, with an increase of 3,100 tons, and in Colorado with an increase of 7,500 tons compared with 1929. The net result is that the 1930 domestic cabbage crop in the 9 most important states is actually estimated to be only 100 tons less than in 1929, and about 17,000 tons (about 5 per cent) less than a normal crop.

Prospects for Danish Cabbage

Every one of the important Danish cabbage producing states increased its acreage of Danish cabbage to some extent this year. The Danish cabbage crop would undoubtedly have been much larger had the extended drought and high temperatures of July and August not been experienced. Despite adverse weather conditions, it was estimated on September 12 that the 1930 Danish cabbage crop would exceed that of 1929 by almost 15,000 tons (about 1,200 carloads), (table 2). In New York State, the increased crop amounts to only 900 tons and in Pennsylvania there was a decrease of 100 tons. Wisconsin shows the greatest increase in the middle west, 4,800 tons, followed by Michigan with 1,800 tons, and Minnesota with 1,300 tons. In the far west, an increase in Danish cab-

bage of 5,800 tons is reported for Colorado. All of the middle and far western states have crops of Danish cabbage above normal. In the east, the Danish crop in New York is almost 30,000 tons (about 16 per cent) below normal, and both Pennsylvania and Ohio have sub-normal crops.

Marketing Prospects

More abundant rains and lower temperatures during the balance of September and October may increase the late cabbage crop, both domestic and Danish. So small and hard are most of the heads, however, that any considerable increase in moisture is more likely to cause the heads to burst and reduce rather than increase the marketable crop.

What Will the Early Crop Do?

The favorable prices received by late cabbage growers last spring were due very largely to the partial failure of the early cabbage crop in the South. The Texas crop was short 36,000 tons and the Florida crop 14,000 tons last spring. A recurrence of this condition can hardly be looked for during the winter and spring of 1931, and competition will probably be much sharper from the early states.

Not only is competition from the South likely to be more sharp this winter, but it will probably appear earlier than usual. During the past 6 or 8 years, southern growers have made strenuous efforts to hasten the maturity of their cabbage. Whereas during the years 1922-26 but little early cabbage came on the northern markets before the middle of February, during the past 3 years (1927-29) larger and larger volumes have been shipped during December and January. If this tendency extends itself much further, the market for storage cabbage from the north must inevitably suffer severely.

Business at Low Ebb

There can be little question that the current business depression, with the accompanying unemployment and relatively low purchasing power in our large cities is having a most decided effect on prices received by farmers for vegetables and fruits. Consumption

Table 2

ESTIMATED PRODUCTION OF DANISH CABBAGE, SEPTEMBER 1, 1930, COMPARED WITH PRODUCTION IN 1929, AND THE AVERAGE PRODUCTION DURING THE PAST 5 YEARS 1925-29.

State	Aver. production past 5 yrs. 1925-29 (tons)	Production 1929 (tons)	Estimated production Sept. 1, 1930 (tons)	Increase or decrease 1930 crop compared with 1929 (tons)
New York	186,980	156,000	156,900	gain 900
Pennsylvania	5,160	4,700	4,600	less 100
Ohio	3,780	3,000	3,200	gain 200
Michigan	3,060	2,500	4,300	gain 1,800
Wisconsin	74,220	69,100	73,900	gain 4,800
Minnesota	16,640	13,500	14,800	gain 1,300
Colorado	21,200	22,800	28,600	gain 5,800
Total 7 important States	311,040	271,600	286,300	gain 14,700

has been reduced to a minimum and even for those crops, which were relatively short, prices have been much below normal and very unsatisfactory.

The market has been very draggy and dull for cabbage thus far this season. Carlot shipments to date are almost 7,000 carloads (about 26 per cent) behind those shipped to the same date last year, and this despite a larger crop. Unless business stages a real recovery, and unless a marked shortage develops in other green, leafy vegetables, it seems unlikely that late cabbage prices during the coming fall and winter will exceed those of last season if, indeed, they even approximate them.

"Outwears Them All!"

Wearers will tell you that the Ball-Band Mishko "outwears them all." Shown above is the toe cap style. Notice double and triple stitching of extra strength thread, and rust-proof nails reinforcing the sole. (Also made with sewed sole.)

"I never saw a shoe that gave as much wear for the money"

— writes R. M. Parker, Erie, Penn.

Many men like the plain toe style Mishko with no seam or box to stiffen the toe. Comes in men's sizes—all heights.

MANY of you have written us almost unbelievable stories about your Mishko-sole leather work shoes. "I'm starting my third season on my first pair." "If you made that sole of iron, it couldn't wear longer."

Today the Mishko Shoe has more "guts" than ever before—yet costs no more. The tough, flexible water-proof sole—an exclusive Ball-Band product—has no rival. The upper is of grain leather—soft, pliable, durable. Seams are double and triple stitched to keep them from pulling apart.

More than five million pairs of these work shoes have given wearers extraordinary service from Maine to California.

Mishko Shoes carry the same Red Ball trade-mark found on Ball-Band rubber footwear for over thirty years. Both are made for more days wear in our great factories at Mishawaka, where we specialize in one task alone—the making of lasting footwear. Our line includes over 800 items. There's a Ball-Band dealer near you. If you do not know his name, write us. Remember to look for the Red Ball.

MISHAWAKA RUBBER & WOOLEN MFG. CO.

Out Goes the Manure from the barn to the field—in a jiffy

MANURE LEACHING in piles or in a pit waiting to be spread doesn't help much to boost land values and crop yields. To get full benefit it should be SPREAD PROMPTLY and EVENLY.

The McCormick-Deering Manure Spreader is the machine that makes the job SIMPLE and SPEEDY. Built with a low, steel-braced box, it loads quickly. Roller bearings make it light draft. Six conveyor speeds give you close control of the spread. And the improved type beaters and the wide-spreading spiral maintain an even spread of finely pulverized and shredded manure right down to the last forkful.

Take the time to examine the McCormick-Deering Manure Spreader on the McCormick-Deering dealer's floor. Find out how well this spreader is built and how profitably it will serve you.

The McCormick-Deering Manure Spreader

Annual Illinois Farm Plowing Contest Draws Thousands

ON the P. J. Patterson farm, at Wheatland, six miles southeast of Aurora, Illinois, the fifty-second annual plowing match proved to be full of interest and tense moments.

Under a hot September sun, 15,000 farmers and their families cheered and shouted as Homer Lapp, 26-year-old Will county farmer, staged a thrilling and hard fought battle to again emerge victorious over all tractor drawn plows. Young Lapp used a single blade plow drawn by three powerful bays, which he has now owned for over ten years. It is his third consecutive sweepstakes win in as many years.

The award was based on the time, the symmetry of furrows, the conformation, the straightness, the evenness of depth and general neatness. Lapp

Let's Have a Plowing Contest

For some inexplicable reason, plowing contests seem to have lost favor in the East. The good old sport of horseshoe pitching has been revived and at many farmers' picnics stock judging contests and demonstrations of up-to-the-minute farm practices occupy an important place but the fine points of plowing have been neglected.

We are giving on this page a little account of the Illinois contest to show that the old-fashioned plowing contest still has a place, and with the thought that it may stimulate a demand for similar contests in American Agriculturist territory.

scored 94 points on the half-acre field he plowed and the judges remarked on "the beauty of his well-rounded furrows."

Second place went to Frank Boardman with a total of 92 points, and Carl Shoger took third with 89 points. Both of these men used tractors but the horses proved superior to these increasingly popular "iron monsters."

Twenty-two contestants entered the contest, a classic in the hearts of ruralists and townspeople of the vicinity.

During the forenoon, the farmers' wives and daughters brought great quantities of cakes, pies, needlework and other home products to be judged for prizes, while young boys proudly exhibited sleek, fat steers and other blooded stock to an enthusiastic crowd and placing jury.

Modern farm equipment—plows, corn pickers, harvesters, tractors, etc., attracted just as keen interest and comment at the booths, as any other attraction on the grounds.

After seeing the last furrow turned on forty rods of black dirt, which a few minutes before was ankle deep clover stubble, the hungry crowd lined up in a large tent for a lunch prepared by hundreds of the womenfolk.

At the close of the day women stood back while their prize cakes, cookies and pies were auctioned off to the highest bidders.—K. F. KEITH.

An Ulster County Spray Outfit

ONE of the interesting stops on the 1930 Hudson River Valley fruit tour, was at the farm of C. J. Hepworth & Son at Milton. Mr. Hepworth's orchard is hilly and for the past five years they have been using what might be called a home-made stationary spray outfit. This consists of a 150 gallon, two plunger pump, which hand-

A part of the crowd on the fruit tour and the power plant for Mr. Hepworth's stationary spray rig.

les two spray guns at 200 pound pressure anywhere on the line.

Using three men, one to keep the tank full and the other two to handle the two guns, 700 fourteen-year old trees can be sprayed in eight hours. The pipes for this outfit are not buried, but are run on top of the ground through the orchard. Mr. Hepworth says it takes only an hour to put the pipes together or take them apart. During the summer these pipes are removed and a duster is used for the balance of the season. Seven hundred feet of pipe are used in the orchard.

Mr. Hepworth reports that this system has just about cut in half the time required to spray his orchard. In his opinion, a grower should have at least ten acres of apples in order to make such an outfit worthwhile. He says: "We surely must find these new ways to cut our costs on apple raising or go out of business. Visitors at the Hepworth farm are always welcome."

Washing Apples for Spray Residue

I notice that quite a bit has been said about washing apples in order to reduce the amount of arsenic to a point which

will allow them to be exported. Is there anyone who has any evidence as to the cost of this washing and is there a satisfactory machine on the market which will do the work.

THE New Jersey Experiment Station reports that the cost will vary between five cents and one-half cents per bushel under different methods. This, of course, will depend on the amount of apples to be washed, the five-cent cost applying where about 5,000 bushels are washed annually and the smaller cost where a larger amount is washed.

One apple washer which has been used to some extent in New Jersey costs approximately \$1000. Some growers have made a home-made washer which can be built for approximately \$475. The home-made washer has the capacity of about 60 bushels an hour while the commercial type has a capacity of about 80 bushels an hour. A grower who has a very small lot of apples or pears to clean may dip them by hand in which case two tanks are necessary, one for the acid solution and one for the rinsing solution. The cost of these tanks should not be over \$70 and two men can easily dip 400 bushels a day.

Cull Apples Bad for Markets

Why is it that so many growers will persist in offering cull apples on public markets when they must realize that it is bad for the business in the long run?

IT would seem that this is the old story of taking a little temporary profit rather than depending on future gain. So long as cull apples can be sold for more than they will bring for cider apples, there are a certain number of growers who will continue to sell them.

There is no question but that it hurts the business. Often the consumers get less for the money expended than they would in buying first quality stuff, and naturally they are not likely to go back for more.

The Cortland Apple

Is the Cortland apple giving satisfaction to those apple growers who have planted it?

REPORTS which come to us indicate that growers are rather enthusiastic about the Cortland apple. The points in its favor, of course, are that it keeps somewhat later than McIntosh and therefore extends the season for this fine apple and it appears to color up a little better than the McIntosh does. One objection we sometimes hear is that they do not grow very uniform in shape and color. Certainly a lot of Cortland trees are being bought by orchardists.

Foreign requirements limiting the amount of spray material on apples exported from this country have increased the interest in apple washers. This machine located at the New Jersey Fruit and Produce Packing House at Glassboro, N. J. has a capacity of 80 bushels per hour.

what's your COW'S "horse-power"?

WHAT CAN SHE DELIVER?

What she is producing, is one thing—but what she CAN produce, is another! The difference is in care and feeding!

Feeds make milk in proportion to their feeding value. Some feeds are poor producers—some are good for a time—**BUT—only a feed that's made to produce SUSTAINED PRODUCTION can show you what your cow's limit is—what she CAN do!**

Larro Dairy Feed!

Larro is made to produce full production throughout the lactation period. It is made to produce **HEALTH** to sustain its higher production. It is made to keep cows free from udder troubles, "off-feed" conditions, constipation, lost quarters, etc. *It is made in the only feed mill in the world that can make and does make a feed ALWAYS THE SAME—so that each sack is able to do exactly what the formula has been proved to do!*

Put your cows on this full capacity—full profit ration NOW! Get out of them every cent you can—in milk—in health—in Larro's higher profits! You'll find they CAN do more—develop more milk-producing "horse-power" than you ever thought possible.

Progress With a Dairy Program

By C. G. BRADT,

Delaware County Farm Bureau Agent

THOSE of you who have ever taken an automobile trip through Delaware County from Oneonta down through Stamford, Grand Gorge, Roxbury and Margaretville, or from Deposit on the west, up the West Branch of the Delaware Valley through the pleasant villages of Walton, Delhi, Bloomville, Hobart and Stamford; were no doubt, deeply impressed with the beauty of the region and the apparent agricultural prosperity which appeared on every hand. You saw the deep valleys with their wooded slopes coming down to meet those green luxuriant pastures which were amply providing summer feed for those thousands of dairy cows. Don't you remember how you remarked about the peculiar construction of those over-shot dairy barns which were built on the hillside with the barn floor well up in the peak? The farm buildings too, were in good repair and well painted. Abandoned farms as we know them in some counties of central New York, were hard to find.

Where Cows Feel at Home

Delaware County is an intensive dairy section and if our census reports are correct, it ships more fluid milk and cream than any other county of the State and we are almost safe in saying, the whole United States. With this great dairy interest on every side, the Farm Bureau of this county naturally devotes a large percentage of its time in the development of dairying. The bureau has its committees of progressive dairymen who are constantly working on new plans which, when carried out, mean better sires, better cows, better crops, better homes and a more satisfied and prosperous farm people. It is through this high type of farm leadership that the dairy business in Delaware County is making headway. It is not going backward; it is not standing still; but it is going forward very decidedly.

You may ask in what way progress is being made and what has brought about these changes. In the first place, I believe climate and topography have been largely responsible for dairymen devoting so much time and energy to the building of profitable herds. Delaware County is primarily a dairy section. It has good spring water, the pastures are far above the average of the state, the soils produce good cuts of hay, the greatest milk market in the world is at our door and the farmers are natural dairymen. With all of these factors favoring the dairy business and with few possibilities of branching out into the growing of cash

crops on a large scale, our farmers have given their entire time to the business of dairying and its development.

In the past five years, we have seen remarkable changes. Milking machines have been installed, modern haying equipment has been purchased and at present, mechanical milk cooling is coming into vogue, especially in the vicinity of grade A milk plants. Besides these labor saving devices, we have seen better sires purchased, more calves of good breeding being raised and more economical feeding practices being followed. Along with this, the production per cow is on the increase and cattle diseases are being better controlled. All of these things together have meant a lower cost of milk production and a correspondingly larger profit for the man who has adopted these modern methods.

The Farm Bureau has in its fifteen years of existence, been constantly working with dairymen and the dairy leaders to bring about the improvements in dairying. It has had campaign after campaign to bring the dairyman's attention to the importance of keeping abreast of the times by adjusting his practices to meet existing economic conditions. In this day of efficiency, every business operator is constantly working out plans to produce for less money. The manufacturer has done this for years and is still at it. The dairyman is now following suit.

How Records Pay

If I should be asked to name the one thing which has been doing most to build the dairy business of this county, I should say immediately, it was dairy records. Records which are secured through the use of the milk scale and the Babcock test. Delaware County has been the leader in the state in this respect as we have more dairy herd improvement associations and more cows on test than any other county. At present there are five associations in operation with approximately three thousand cows being regularly tested each month. These associations are located about the communities of Andes, Bloomville, Walton, Margaretville, Hobart and Harpersfield. Two other associations are in the process of formation at Downsview and in the communities of Masonville and Sidney.

These associations, in my opinion, are doing more than any other thing to bring about profitable dairy herds. When you see men continuously keeping records from year to year on their herds through the dairy improvement

(Continued on Opposite Page)

Fauvic's Gamboge Prince, owned by John R. Sibley of Spencer, Mass. is the youngest Jersey bull to win the American Jersey Cattle Club Silver Medal. This herd sire won the award at the age of four years and eight months. His first six daughters tested won silver medals in their first lactation period.

A WONDERFUL FEED

Nothing can equal DRIED BEET PULP

It's the most wonderful supplemental feed known for promoting and maintaining health of animals, thereby increasing milk production in dairy cows and producing rapid profitable gains with beef cattle and sheep.

Yet it does not add to the cost of the ration. It supplements pasture, replaces silage, corn and other carbohydrate feeds. Where hay is short or high priced six pounds of Beet Pulp will do the work of ten pounds of hay, and do it better.

No other feed has such unique health building properties. It is light, bulky, cooling, palatable, laxative. Not only highly digestible itself, it also aids the digestion of other feeds. "Off-feed" days are eliminated.

Low Prices in Effect

Dried Beet Pulp is always profitable to feed but now with the present low prices you certainly should avail yourself of its advantages. Feed it—you'll see immediately how your profits increase.

Dried Beet Pulp which results from the extraction of sugar from beets is the only vegetable feed available in commercial form. Can be delivered anywhere in the United States. Ask your dealer.

(Continued from Opposite Page)

association, you know they are getting results. They are not in the association merely to have a check on the creamery but for a bigger purpose. They want to know definitely if each cow in the herd is a profit maker. The poor and unprofitable cows have no chance of "getting by" if association records are kept.

Another form of dairy record keeping which is being started, is the dairy record club. Through this record club, the dairyman weighs the milk from each cow and takes a sample. He also records the amount of grain which each cow receives. The milk samples are then mailed to a central laboratory where tests are made and records computed. This method of testing shows much promise here in the county as a supplement to the testing association. The dairymen with small herds seem to favor this record club idea because it is somewhat less expensive. The charge is twelve cents per cow per month with a minimum charge of one dollar and twenty cents.

"What about Delaware County's purebred sire work", one man asks? "Do they raise many heifer calves to maintain their herds?"

Yes, dairymen are beginning to raise more of their own stock and consequently, they are paying more attention to the kind of bulls which they keep at the head of their herds. This has been especially true during the past few years when the price of dairy cows was high. Many believed they could raise a better cow than they could buy for the same money. The tuberculin test work has also led to the raising of more stock at home.

At present the Farm Bureau is conducting a purebred sire survey in thirteen communities of the county. This survey is being carried on by the Farm Bureau committeemen. Such a survey will tell the kind of bulls which are now being kept and what the need is for better bulls. This survey, when completed, will be followed by a series of meetings where better sires and better breeding methods will be advocated. We expect that next year when the same communities are surveyed, that the number of scrub and grade bulls will have decreased and that the number of purebreds will have increased.

In the matter of dairy feeding, I believe we have greatly advanced. In the first place, we have better dairy rations on the market from which to choose. These rations should give satisfactory results when properly fed. Some dairymen I know, still feed all cows alike but this is not true of the majority, especially those who weigh the milk. They feed according to production and are getting more milk and using less grain by so doing.

Roughages as fed on our farms are of better quality today than ever before. Some men make the practice of reseeding more often with clover in mixture with timothy. Others add alfalfa seed to this mixture with good results. These legumes have been an important factor in improving the quality of hay. There has also been a tendency to start haying earlier than usual. This too, means greater feeding value.

Generally speaking, Delaware County has pretty good pastures, but in some sections they seem to be running out to weeds. In order to meet this condition, the Farm Bureau induced forty dairymen last spring, to improve pieces of pasture by adding manure and superphosphate. We believe the results on these forty farms will prove the value of pasture improvement methods on other pastures.

The dairy progress in Delaware County, I believe is based on certain fundamental factors. First of all, the soil and climatic conditions favor dairying which in my opinion, is the most important of all. Second, the people are "cow minded." They like cows. Third, the market for fluid milk is nearby and lastly, Delaware County has a type of farm leadership which cannot be surpassed in any other county of this state. With all of these things in Delaware's favor, why shouldn't it be a leader in the dairy industry and why shouldn't progress be made? Only time will tell if this progress can be maintained in the future.

"This chart proves every cow is a Money-maker"

... Feed a balanced ration, keep records, and you can't lose

Here is the surest guarantee in the world for making money in the dairy business. Feed a balanced ration. Keep records of milk and feed. Sell the losers and feed the rest a liberal balanced ration.

That's the plan recommended by Dairy Herd Improvement Associations. And it's the plan that's keeping many dairymen on the profitable road.

The same plan will work on your farm!

Feed plenty of protein

No cow can produce to capacity unless she gets a balanced ration in the right quantity and home-grown feeds are too low in protein for a high producing cow.

That's why leading dairymen always feed plenty of protein-rich Linseed Meal. It's the old reliable protein supplement that every farmer knows.

Try this Ration

Here is a balanced ration for dairy

cows being fed clover hay and corn silage. It was prepared by feeding experts and has proved profitable.

Ground Corn, Hominy or Barley . . . 200 lbs.
Ground Oats 200 lbs.
Wheat Bran 100 lbs.
Linseed Meal 100 lbs.

If you use ready-mixed feed, replace the wheat bran and Linseed Meal in the above ration with 250 lbs. of good 24% feed. Be sure the ready-mixed feed contains Linseed Meal—look on the label.

You can place complete confidence in ready-mixed feeds prepared by reliable manufacturers. The real test for quality is to look on the label for Linseed Meal.

Mail the coupon for Chart of Balanced Rations and the book "Practical Feeding for Profit." They're both free.

Free Ration Chart and Feeding Book

Chart is printed on tough paper for tacking up in your barn. Book has heavy covers and string for hanging up. Both mailed to you postpaid.

ported last week strained the situation to the extent that prices broke on Sept. 22 and continued a downward trend reaching 39c for creamery extras on the 24th. The price remained unchanged on the 25th but on the 26th a one half cent increase was registered and as the market comes to a close the trend is upward. The dullness that existed in the early part of the week ending the 27th was aggravated by the fact that on Tuesday and Wednesday the market was at a standstill due to the Jewish holidays.

Fundamentally the market is firm. At mid-September the cold storage holdings in the four cities were approximately 5,000,000 pounds short of last year's holdings and the country as a whole reports a shortage of approximately 25,000,000 pounds compared with a year ago. The out of storage movement is slightly in excess of that of last year, which clearly indicates that we are using storage supplies freely.

Fresh Cheese a Shade Higher

STATE FLATS	Sept. 26, 1930	Sept. 19, 1930	Sept. 27, 1929
Fresh Fancy	20 1/2-22	20 1/2-21 1/2	25 1/2-26 1/2
Fresh Average			
Held Fancy	24	26	27 1/2-29 1/2
Held Average			

Fancy fresh New York State whole milk flats have followed the strengthening in the cheese market gaining a fraction of a cent since our last report. Trading on all styles of fresh cheese is quiet. Country costs are sustained and there is no inclination or tendency to shade prices. The cheese market is more or less "sitting tight". Holdings are slightly over a million pounds short of those of a year ago, in the ten cities making daily reports. How long this balance will exist is hard to say for our into storage movement is now running ahead of a year ago.

Egg Market Depressed

Pullets	24-26	25-27	38-43
Pewees	20-23	20-23	28-33
NEARBY BROWNS			
Hennery			
Gathered	32-41	33-41	55-60
	25-31	29-32	38-54

Unseasonably warm weather and heavy posted receipts have combined with the other favorable factors in the egg market to cause a downward turn in the price curve. The two day Jewish holiday put an awful crimp in the egg market. During the holiday not a wheel turned and eggs piled up, resulting in a considerable accumulation.

The situation in the egg market is bad and there is no need in fooling ourselves about it. Holdings are heavy, with little prospect of any material shrinkage in the lay. Posted receipts have been running ahead of those of a year ago with an occasional let up every day or so. This has worked to the detriment of the market, keeping it very unsettled. The wide spread between fancy eggs and the average run makes it quite apparent to producers that the man who is sending a well graded product to market and holding back and disposing locally the less desirable grades is ahead of the game. Poorly packed eggs are having a hard time of it.

Live Poultry Market Not Good

	Sept. 26, 1930	Sept. 9, 1930	Sept. 27, 1929
FOWLS

TURKEYS	25-30	25-30	-18
DUCKS, Nearby	18-26	19-26	40-45
GEESE	-16	-16	24-30

The live poultry market during the week ending September 27 was a rather jumbled affair. Colored fowl as a rule have been hard to sell, while Leghorns have been doing a little better. Lighter colored stock cleared more easily than heavier birds. Colored chickens were also having a hard go of it, while Leghorns were selling at premiums, especially on the fancier lines.

The market closes very unsettled. It is reported that several cars from the freight yards are to be unloaded Saturday and the price situation is up in the air.

This is having a direct effect on the express market which leaves the entire situation unsettled and most unsatisfactory.

Hay Prices Easier

Receipts of hay have been liberal during the week ending September 27 and in excess of a very good demand. Top quality hay in large bales has moved satisfactorily. In Brooklyn the bulk of the supply has consisted of low grade hay in small bales, which have been difficult to move. Straight timothy No. 1 in large bales has brought \$27 to \$28, with other grades bring \$1 per ton less as they ranged downward. Mixtures have sold at \$1 per ton under straight timothy prices, and small bales have brought \$1 per ton less than large bales.

Meats and Livestock

CATTLE—Steers scarce, fully steady with Wednesday's advance. Two loads 1250-1527 pounds medium grassers \$9.30-9.85. Cows scarce, fully steady. Common to medium \$4.00-5.00.

VEALERS—In light supply, steady. Good to choice \$12.00-14.50; medium \$9.50-11.50; cull and common \$6.00-9.00.

HOGS—Steady 160-220 pounds \$10.25-10.75; 220-230 pounds \$9.50-10.00.

LAMBS AND SHEEP—Lambs in moderate supply, very slow, around 50c lower; good to choice \$8.00-8.50; few \$8.75; medium \$6.00-7.50. Ewes weak to 50c lower; medium to choice \$3.00-3.50; cull and common \$1.50-2.50.

COUNTRY DRESSED CALVES—Receipts all through the week were moderate. Trading was normal with prices generally firm and slightly higher from Wednesday to closing today. Market was not cleaned up at close but prices were fairly steady. Some extra fancy sold at premiums. Fresh receipts per pound: Choice 18-19c; fair to good 14-18c; small to medium 10-14c.

LIVE RABBITS—Receipts all the week moderate, but slow sales caused accumulation. Prices were lower and irregular. Per pound by the coop, 10-16c.

Wool

The wool market has been slow. New York better fleece wool, unwashed, fine per pound, 21-30c; 1/2 blood 23-30c; 3/4 blood 24-29c; 1/4 blood 24-30c; low quarter blood 25-27c; common and braid 23-25c.

Trend of the Farm Markets

(Special to American Agriculturist from Market News Service, Bureau of Agricultural Economics, U. S. Department of Agriculture.)

Washington, D. C., Sept. 23, 1930. Fruit prices were rather well maintained the third week of September, but potatoes and sweet potatoes lost practically all of their recent gains. Onion and celery markets were weak. Sharp breaks in prices of slaughter cattle and cuts in hog and lamb values took place during the week. Dairymen and poultrymen were encouraged by the firm prices of butter and poultry, as well as by the continued downward slant of feed grains and feed concentrates. Domestic and foreign wheat markets remained weak and unsettled. An easier tone pervaded the trading in cheese and eggs.

Although potatoes in general lost much of their recent gain, city markets showed price-levels still 20 to 35 cents above

opening quotations for September. F. O. B. prices in northern Maine were down to a range of \$1.40 to \$1.50 per 100 pounds. Eastern sweetpotatoes again declined, with Virginia stock selling at \$2.25 to \$4.25 a barrel. Two-thirds of the current shipments are coming from Virginia.

Western New York shippers reported cabbage about steady at \$9 to \$12 per ton in bulk. Asking price on yellow onions at Connecticut Valley points was \$1 but sales in western New York were being made at 85 to 95 cents per 100-pound sack.

Fruit prices were generally firm. Shipping-point quotations on Wealthys and Greenings in the Rochester district of New York were from \$1.10 to \$1.25 a bushel. Bartlett pears were bringing \$1.30 to \$1.40 in that section and Elberta peaches mostly \$1.50 to \$1.75 a bushel basket. New York was furnishing more than two-thirds of the current peach supply.

The egg market was easier in New York, with prices 2 1/2 to 3 cents below quotations of mid-September. Similar, though less drastic, declines were noted in other markets. Dressed poultry show no new developments. The into-storage movement continues somewhat heavier than at the same time a year ago, although holdings are still below those of a year ago by an appreciable margin.

Butter markets continued nervous and unsettled, but conditions at New York improved and prices advanced half a cent on all grades. Fancy butter was reported in rather light supply at New York and receivers showed a close clearance of this class of goods. Feed conditions over a large part of the dairy sections are fairly satisfactory, as only 10 per cent of the butter fat supply of the country is produced in the drought areas.

In general, cheese at the large distributing centers was barely steady, but eastern markets were in a slightly healthier condition than those of the Middle West.

There were no important changes in the general wheat market situation. Although future markets remained weak, domestic cash wheat was fairly steady under a good milling and feed demand for the moderate offerings. Market stocks of corn have increased slightly during the past few weeks and current offerings are being taken readily. Prices are generally steady. Barley markets had a weak tone but price changes were unimportant. Domestic oats markets were slightly lower with current offerings easily equal to trade requirements.

Prices of feedstuffs continued their downward trend with offerings generally in excess of the prevailing demand which has been reduced by some improvement in pastures and heavy farm feeding of homegrown supplies of grain and roughage. The wheatfeed situation at Buffalo and other eastern points was weak due to the heavy mill offerings considerable selling pressure and slow demand. Offerings of linseed meal at Buffalo were liberal and prices declined under dull inquiry.

Hay markets remained generally steady, with light offerings apparently about equal to the demand. Timothy markets were somewhat irregular but prices for that class of hay averaged higher than for other classes.

A materially broadened demand for stocker and feeder cattle was an encouraging feature of an otherwise sluggish livestock market the third week of September. Prices on slaughter classes of both cattle and lambs declined sharply. Receipts were of seasonably generous dimensions. Fat she stock showed downturns in values compared with the break on slaughter steers. Poor dressed beef markets and the effects of a series of Jewish holidays, starting this week, also added to the depression. The decline in fat cattle values, while severe, was regarded by many in the trade as of temporary character.

Receipts of hogs at leading market centers increased moderately and carried a heavy percentage of light and medium weights of the spring crop. Maximum price declines were noted on the lighter weight offerings, well-conditioned heavy butchers, which are becoming seasonally scarce, showing but slight depreciation in value.

The fat lamb market followed a series of sharp declines that carried values to the lowest point in years. The slump was traceable to the continued heavy marketings. Although in light supply, matured sheep closed weak with sales of fat ewes mostly around \$3 to \$4.

The Boston wool market took a turn in sellers' favor, particularly on the finer grades of domestic wools, during the latter part of September. Trading on such grades showed a broader demand from top makers and manufacturers and trading was more active than for some time previous.

Get
a load of
this...

BACK your pipe up to a tidy red tin of Prince Albert and chute in a load of sunshine. Hold a match to the flue and pull that blissful blue smoke up the stem. You *know* it's going to be like that the instant you open the tin and get P.A.'s fragrance full in the face.

What a taste! What a joyous justification of the jimmy-pipe! Cool as a ticker-tape bringing bad news. Sweet as a rally that hands you

a profit. Mellow and mild and refreshing, down to the last bit of ash in the bowl. A pipe-tobacco with a pedigree, Men, and no fooling.

Any way you take it . . . pipe or roll-your-own . . . Prince Albert promises the contentment that only this *better tobacco* can bring. Try it and see. You can load-up and light-up from shower to sheets, and enjoy every wonderful, joy-wadded puff.

PRINCE ALBERT

—the national joy-smoke!

The revenue-stamp tells you there are TWO full ounces in every tin.

or feed to the farm,***

the Ford Truck pays its way

THE design of the Ford truck is such that it lends itself exceedingly well to farm use. It is built of the finest materials obtainable. All moving parts, which have a direct bearing on its performance over a long period of usage, are manufactured with remarkable care and precision.

The price of the Ford truck is low, in accordance with the policy which characterizes all Ford products. This low price is made possible by Ford production facilities, and by a sincere desire on the part of the Ford Motor Company to provide a low-priced haulage-unit of high value.

You will be pleased by the way the Ford truck carries a load over uneven ground, up the hills, across soft, muddy stretches. And by its able performance under all the varying conditions of road and load that a truck must meet on a farm.

Strength of the Ford truck chassis is one reason for the long and reliable service it gives. Forty different kinds of steel go into the making of the truck. Fine steel forgings are extensively used. These all give increased resistance to strain and wear, without adding to chassis weight. More than twenty ball and roller bearings reduce friction at important points, and prolong the life of the truck.

New features of the truck, which add to its value, are the spiral bevel gear rear axle; two optional gear-ratios; 4-speed transmission; heavier front axle and spring; larger brakes; and dual rear wheels available at small additional cost.

Go to your Ford dealer and see this truck. Consider its low first cost. Then let the dealer show you how inexpensive it will be to operate and maintain in your service.

Name and address of the game on every box

NAME your game—and there's a Remington Game Load waiting, already addressed to the game you want.

No matter what you may intend going out after—goose, duck, pheasant, dove, grouse, quail, snipe, squirrel, or rabbit—the right load is ready for you. The powder is not measured by grains or drams, by weight or bulk, but by accurate tests to determine uniform velocity, pressure, penetration and pattern, an entirely new method insuring a positive uniformity of result that will improve your shooting.

Remington Game Loads are made wet-proof by Remington's patented process. Just name your game to your dealer, tell him you want a Remington Game Load—and the load will do the rest.

Kleanbore Cartridges in rim fire and center fire sizes have brought a new standard of accuracy to rifle shooting on the range and in the woods. They protect the barrel from rust, corrosion, pitting, and leading. You owe this protection to your rifle.

REMINGTON ARMS COMPANY, Inc.
Originators of Kleanbore Ammunition
25 Broadway New York City

For long shots at all kinds of game, Nitro Express Game Loads are supreme. They outshoot any long range, heavy loads on the market.

Remington

"They make my tires!"

Ownership of Goodyear Tires is proud ownership. They are superior tires, by a margin great enough to have made them the largest selling tires in the world. They embody the prestige as well as the values of leadership. They bear the greatest name in rubber: greatest because of Goodyear's services to transportation, on land, sea and in the air. When you buy tires buy a name you can be proud of. There is a deep and proper satisfaction in knowing that your judgment coincides with the world's on that quality which has made *"More people ride on Goodyear Tires than on any other kind!"*

Goodyear is now building for the United States Navy the two largest airships the world has ever seen, each being nearly twice as large as the famed Graf Zeppelin. Goodyear also operates six smaller airships as well as several airplanes in its own service

Farm News from New York

Secretary Hyde Charges Russia With Attempt to Lower Wheat Price

THE wheat question has again forced itself on the front page. Secretary Arthur Hyde of the U. S. Department of Agriculture, charges representatives of the Russian Government with a deliberate attempt to depress United States wheat prices by selling grain for future delivery on the Chicago market without any possible prospect that the grain will ever be delivered. The Secretary quotes prices for September 8, 9, 10 and 11, the days on which the Russian Government sold the wheat, to substantiate his statement. On September 8, wheat for May delivery at Chicago opened at 99½¢ a bushel and by September 11, had dropped to 94½¢, a decline of 5¢.

Selling for future delivery is closely connected with speculation in this way. Dealers frequently sell wheat for future delivery which they do not at present own, believing that when the

upon the world situation, the Russian Government would not have to sell wheat for future delivery in America in order to depress prices. There is at least a suggestion that someone may have been smart enough to realize the possibility of making a profit for the Russian Government by selling wheat which they do not own for future delivery, believing that they could buy it later at a lower price and thus make a profit.

Says Russia Needs Wheat

One estimate states that Russia has between forty and fifty million bushels of wheat for export, which is more than seven times last year's exports. Other reports indicate that the Russians do not even have enough wheat for their own use and if they export heavily now they will have to go into the market and buy wheat later. It is also rumored that the Russian Government is commandeering wheat for export regardless of the fact that it may be needed to feed their own people.

A rumor in the form of messages from some unknown person to the effect that the Canadian wheat pool had failed financially, also had its effect on the price drop. On Wednesday, September 24, grain prices at Chicago hit the lowest point for sixteen years. When the bottom was reached by wheat for September delivery, the price was 77½¢.

Various remedies have been suggested. It has even been rumored in some quarters that Secretary Hyde is merely looking for a reason or excuse for the failure of the Farm Board to maintain wheat prices. Representative Hamilton Fish, chairman of the house committee investigating radical propaganda in the United States, expects to issue subpoenas for the heads of three New York commission houses who were identified with the sale of seven and a half million bushels of Russian wheat. In the near future, a similar hearing is expected at Chicago with officials of the Chicago Board of Trade. Senator Oddie of Nevada announced that he would introduce a bill in the coming session of Congress, excluding from this country a number of Russian products, including wheat. It is rumored that strenuous efforts will be made to have the Treasury Department reconsider previous demands for embargoes on Russian manganese and lumber.

Assuming that Secretary Hyde's statement is correct, everyone is wondering what motive the Russian Government has in depressing wheat prices. It is at least expected that there is a deliberate program on the part of the Russian Government to increase economic depression generally with the idea of bringing about discontent on the part of workers and to make a more fertile field for the spread of communist propaganda.

Reports From Maine Indicate Cut in Potato Yield

IN Maine the present outlook is for 41,360,000 bushels of potatoes, about 6 per cent less than was expected in August, and 18 per cent less than the record crop of last year, but 7 per cent more than the five-year average production in the state.

In Aroostook county the generally wet growing season led to a very severe attack of late blight during August, and the vines around the first of September in nearly all instances were showing the effects of blight and appeared in very poor condition. In central and northern Aroostook the blight was followed by material damage from rot, the extent of which cannot be accurately determined until most of the crop has been dug. September weather will be a large factor in determining the amount of damage from rot. The warm weather during the past week will cause further damage as the Maine growers were looking forward to cool, dry weather as a means of preventing further damage.

Many of the potato men in Aroostook expected a greater cut in the September estimate, and still believe that a further

reduction will be necessary as the blight and rot did not appear to any extent until late August and early September. The government report for September 1 put the Maine production at 41,360,000 bushels against the August report of 44,180,000 bushels.

The cut of 34,000,000 bushels in the total United States yield had a good effect in Aroostook, but in many places it was believed the reduction would be much higher. Many of the dealers are now making plans to store, and have hopes and expectations for a good year.—New York Packer.

State Now Retesting Accredited Herds

THE retesting of accredited herds at State expense began March 19, 1930. This class of tuberculin testing is performed by Accredited Veterinarians working under blanket authorizations issued by the Department of Agriculture and Markets—each Accredited Veterinarian being assigned to a zone made up of one or more townships.

The Department records show that on September 1st 82,829 herds, made up of 814,960 cattle, were classified as "accredited." Up to September 1st 31,695 herds, made up of 353,129 cattle, had been retested at State expense—the percentage of reactors being .5 of 1% and the cost per animal 52¢.

Will Broadcast National Dairy Show

THE National Dairy Show will be put on the air from the Arena at St. Louis through a network of 37 stations of the National Broadcasting Company as part of its daily farm and home hour. Beginning at 12 o'clock noon, Central Standard Time, on October 13, and continuing through October 17, the principal awards in the cattle judging and other contests, important announcements and talks by leading dairy authorities will be broadcast over this chain. It is said to be one of the most extensive broadcasts of agricultural events ever planned, the hook-up including stations from coast to coast and from Canada to the Gulf.

New Poultry Disease in Southern Tier Counties

IN several sections of the southern tier counties of New York State as well as the northerly counties of Pennsylvania, a new disease of poultry, at least to these sections, has appeared. No external signs of the disease appears, as the birds are suddenly stricken, death occurring almost instantaneously.

Investigation of the birds after death show in each case, a marked enlargement of the liver, which in some cases so compresses the other organs as to almost completely fill the body cavity.

Ordinary appearance of health is present as of plumage and head, weight etc.

Tractors or Horses?

IN our issue of August 23, we asked for the personal experiences of our subscribers on the subject of tractor or horse power. Do you still use horse power and if so, why? Or, do you do all your work with tractors? If you keep both horses and tractors, what work do you do with horses, what with tractors and how have you worked out the problem of getting the most efficient results from both?

For the best personal experience letter on his subject, American Agriculturist will pay \$3.00 and will pay \$1.00 each for all others published. To be considered, letters must be received in the A. A. office not later than October 15.

Specimens have been sent by several poultrymen to the College of Agriculture at Ithaca but nothing definite has been traced out by the department as yet. From its appearance in several localities, there is no indication of any marked breed susceptibility, or any chance of infection from food. The Cornell department is reported as believing that the disease is of a cancerous or tumorous type. Poultrymen throughout the section are alarmed and are checking their flocks carefully for appearance of the disease.

Wins Award for Service to Agriculture

THIS is Stephen Moulton Babcock, the man who in 1890 invented the test which bears his name for determining the butterfat content of milk, and who was awarded recently the first annual Capper prize of \$5,000 for distinguished service to American agriculture.

Dr. Babcock is professor emeritus of agricultural chemistry at the University of Wisconsin, Madison, in which city the cash prize and a gold medal will be presented to him when the American Country Life Conference

Stephen Moulton Babcock

convenes there October 7 for a three-day session.

That the Babcock test made possible the growth of today's important industry of dairying, there is no doubt, and that the inventor had the welfare of agriculture at heart is not doubted when it is known that his invention was never patented so that it might more fully benefit the dairy industry.

Heretofore the outstanding men in science, literature and the various other creative arts have been awarded valuable prizes for their achievements. This is the first time that the men who devote their lives to working for agriculture have been eligible for a prize of any kind, nationally speaking.

County Notes

Genesee County—A fine rain last Tuesday set farmers hustling in their winter wheat. In most instances the ground was ready, but the soil lacked moisture and Tuesday's rainfall was the heaviest we have had since July. Fruit is very plentiful and farmers' wives are busy canning. Tomatoes can be bought at 50¢ to 75¢ a bushel and peaches from a few cents to \$1.00 a bushel. The rain benefited cabbage which was badly infested with lice. In spite of dry weather the yield seems to be fair and selling price is not very high.

Genesee County poultrymen will hold a poultry tour today, September 20. Professor Robert Ogle of the Poultry Department of the New York State College of Agriculture, will be the principal speaker. His subject will be "Adjusting the Poultry Business to the Present Economic Situation." The poultrymen will leave the Court House at Batavia at 9:30 and visit the farms of Wilbur Chase, Oakfield Road, William Artman of LeRoy, William Wilcox of Bergen and Frank Miller of North Bergen. A basket lunch will be served at one of the farms visited.—Mrs. R. E. GREEN.

Just David—Our Next Serial

OUR next serial story which will begin soon is "Just David" by Eleanor Porter. Many letters from our subscribers indicate that they have enjoyed the Indian Drum, but our readers who may not care so much for adventure stories will appreciate "Just David".

This is the story of a violinist's son who is taken to a mountain cabin by his father in order to prevent his fond relatives from spoiling him. His father dies suddenly and the boy lives for a number of years with a farm family. His ways are so different from theirs that at times they think him "queer." However, in time his simple faith and ideals change their lives for the better, as well as the lives of anyone with whom he comes in contact.

We must not tell you too much about the story as you will want to read it yourself. The first installment will appear in an early issue. Do not fail to read it.

time comes for delivery they will be able to buy the wheat at a lower price and thus realize a profit. The representatives of the Russian Government admit the sale of the wheat, but state that it is merely a "hedging" operation. People who do not wish to speculate protect themselves against price changes by buying a certain amount of wheat for future delivery and at the same time selling a certain amount for delivery at the same time. In this way what they lose on one operation is gained on the other. Many buyers prefer to "hedge" rather than to speculate with the consequent possibility of loss.

Sales Not Illegal

The statement from those governing the Chicago market, says that there is nothing irregular or illegal about the activities of the Russian Government.

Secretary Hyde says: "It is not my province to pass judgment on the policies of foreign governments, nor is it within my power to discern their motive in bearing American markets, (trying to force prices lower) but it is my province and my duty to expose such transactions and to insist that American institutions be so regulated as to make such transactions impossible."

Other factors are also upsetting the wheat situation. Reports also come to us that Russian grain is being offered at Liverpool considerably below the established price. It has been pointed out that inasmuch as wheat prices depend upon the world situation, the Russian

Other factors are also upsetting the wheat situation. Reports also come to us that Russian grain is being offered at Liverpool considerably below the established price. It has been pointed out that inasmuch as wheat prices depend

If you want the laying mash that will pay you the most profits, you will buy Lay or Bust, the original dry mash.

There is only one Lay or Bust, Park & Pollard's.

Keeping the Henhouse Dry

By L. E. Weaver

MOISTURE comes into poultry houses by the pailful or pipe line to quench the thirst of the birds. It also gets in through the roof, floor or open windows. But, this is not true of properly built and properly managed houses. Moisture is carried out of the poultry house in the egg pail, in the litter carrier when the floor or dropping boards are cleaned, and in the air. Of these three agents of dryness the air is by far the most important. It is

L. E. Weaver

claimed that 83 cubic feet of fresh air is needed by a flock of 100 hens every hour. But to carry out the moisture thrown off by those 100 fowls requires 5400 cubic feet of air per hour; that is, when the inside air is 10 degrees warmer than that outside. While those figures may not be exact they do seem to indicate that if we can get enough air through the house to keep it dry we need not worry about the birds not having all the oxygen they need.

The amount of moisture that the air will pick up and carry out of the house depends on how warm that air is. At 32° (freezing) 1000 cubic feet of air can hold three tenths of a pound of moisture, while at 80° the same amount of air can take on a load of one and seven tenths pounds of moisture; that is, nearly six times as much. It is easy to see then why the litter stays dry so easily in warm weather, and why it is sometimes almost impossible to keep it dry in winter. The colder the weather the greater the amount of air that must be passed through the house to keep it dry. But when it gets too cold the hens become inactive and may fall down on egg production, so most of us start closing up the windows to hold in part of the heat. And along with the heat (which doesn't amount to very much) we hold in some of the moisture. And that is worse on the hens than the cold is. So in this matter of damp winter poultry houses the poultryman seems to be between the devil and the deep-blue-sea. Open up the house to dry it out and you will freeze up the hens. Close it to warm them and you will give them colds because of the dampness.

The situation is not actually quite so bad as that. Fortunately in most of our north Atlantic States the severe cold snaps are short, so that by opening up the windows and ventilators in between spells we can keep the houses fairly dry most of the time. Many men have been and are now getting good egg yields in spite of cold weather. No doubt they would do better in many cases if the houses were both warmer and drier.

Two situations that are particularly hard to handle are (a) damp foggy weather lasting several days. At such a time the air is so saturated with moisture that it cannot take up any more. Moisture might actually be brought in by the air instead of being carried out; (b) Over-crowded houses where the amount of moisture released by so many birds is greater than the air is able to take up.

There are two things that can be done to relieve such a situation: (a) Clean out the litter every few days—as often as it becomes damp, and (b) set up a brooder stove in

each pen, keep a fire in it during very cold or damp weather, and keep several windows or ventilators open. Many poultrymen have used this plan on similar ones and report excellent results where care is used to maintain a temperature not above 40°, and where the houses are kept open enough to let the moisture-laden warmer air out.

Straw-loft poultry houses are usually much easier than other types to keep dry, probably due to two facts—they are usually warmer and the straw absorbs a great deal of moisture in damp times and quickly dries out on mild days ready to take up the next surplus.

The More Hens Eat the More They Lay

(Continued from Page 3)

as much as they should. It is not enough merely to have mash in front of the hens all of the time. There is an old proverb that says "the eye of the master fatteneth the flock" and this certainly applies to poultry. Some men have the ability to watch hens closely and to coax them along so that they will consume more feed and lay more eggs than the flock of a neighbor that may have come from the same hatchery.

Look at your hens as machines. They will require a certain amount of feed to maintain their body weight and to produce heat and energy. It is just as impossible for them to produce eggs unless they consume feed as it would be for a saw mill to turn out lumber without logs.

How then can we induce our hens to consume more? Well, in the first place we can lengthen their days. It is next to impossible to fill a hen up at 4 o'clock on a winter afternoon with enough feed to keep her warm and comfortable until daylight comes the next morning. If artificial illumination is supplied it should be looked upon as a method of getting the hens to eat more feed. There is no magic about lights and unless the hens do eat more feed, lights will prove a damage rather than a help.

Then we can furnish them with a palatable ration. Probably corn would get the most votes if hens were allowed to pick their own feed but if they were given this exclusively they would become too fat to produce heavily. Whatever ration we give them we can have it composed of good clean feed kept free of mold, and fresh so that it will be attractive to them. Along with the question of palatability we might consider green feed. There is a difference of opinion on this matter. Certainly hens enjoy green feed and a certain amount of it may help to tone up their digestion and enable them to produce more heavily. However, too much can be fed. This is a bulky feed and if hens fill up on any sort of green feed they will be unable to eat sufficient quantities of mash and scratch

The Easy Way to Kill Lice on Poultry

Paint the Roosts

No matter how big the flock or how lousy, only a small paint brush, a can of "Black Leaf 40" and a few minutes time for "painting" it on top of the roosts are required to rid an entire flock of body-lice. Do away with old laborious and disagreeable methods of dusting, dipping and greasing!

Just Paint the Roosts with "Black Leaf 40"

About a half hour before fowls perch, "paint" "Black Leaf 40" on top of roosts. When fowls perch upon roosts that have been so "painted", fumes are slowly released that permeate the feathers, killing the lice. The treatment is so easy, effective and cheap that poultry owners need never be bothered by lice on their flocks. Think of the time, labor and expense that this method saves! There is no individual handling of fowls. "Black Leaf 40" is sold by poultry supply dealers. \$1.25 size treats 100 feet of roost. Ask your dealer or write us.

"Hones", Mister, I ain't never done nothin' like this befo'."—JUDGE.

(Continued from Opposite Page)

feed to enable them to produce heavily. In other words, if you feed green feed, watch the consumption carefully.

In our opinion one matter which is too often neglected is a constant supply of good fresh water. Probably we have all seen hens drinking from a dirty puddle and may have concluded that they prefer it to fresh water. Such, is not the case. If a constant supply of fresh water is kept before them all day long, particularly early in the morning, they will eat more feed and produce more eggs. In the winter time this is a problem because of the ease with which water buckets freeze up. Many poultrymen are turning to the water heater as a solution to the problem or if this does not seem practicable, it certainly pays to watch the water supply carefully and change it as frequently as necessary.

There is still one way of tempting a hen's appetite which is by feeding wet mash. Even though there may be dry mash in front of them all the time, they will quickly respond to a meal of wet mash because it is more palatable. It should not be necessary to feed wet mash all the time but whenever production slumps or hens lose weight, this method of feeding should be considered. Last, but not least, the hen's crop should be well filled with good scratch feed before they go on the roost at night.

Just what happens anyway when hens do not consume sufficient feed? Well, they may go on producing for a week or two but along with their production is a heavy loss of body weight. Some poultrymen watch this very carefully, picking up a number of hens every day or two and weighing them to see whether their weight is being maintained. Sooner or later, if they do lose weight, they will stop producing. When they do stop, it is too late so far as immediate results are concerned. It is then necessary to build up their weight by feeding scratch feed heavily which will require ten days or two weeks before they can be brought back into production.

One System of Feeding

Here is one system of managing the feeding of the flock. Early in the morning give the flock about a quart of scratch feed per 100 hens. See that the grit, shell and mash hoppers are filled. Then empty, rinse and fill all the water buckets.

During the winter time it is a good idea to give them a little scratch feed during the forenoon to promote exercise—perhaps a quart to each hundred birds. When green feed is used it is common to give them this at noon, feeding about 6 to 8 pounds to 100 birds. Then at least an hour before it becomes dusk, feed the birds heavily on scratch feed at least 6 or 8 pounds per 100 hens. If lights are used, of course, this can be delayed until later in the evening.

Hens, by the way, like to eat dry mash frequently, a little at a time. It is therefore necessary to see that there is plenty of hopper space available. There should be at least a foot of hopper, for each ten hens.

In conclusion there are two general rules that it is always well to keep in mind: First, keep the birds active especially during the forenoon, being careful not to overfeed the old hens on scratch feed, which is likely to make them fat and reduce production. There is little danger of overfeeding pullets and we doubt if it is possible to overfeed a good hen assuming that she is given the right ration. On the other hand it is easily possible to overfeed a mediocre hen and allow her to put on so much weight that it is practically impossible for her to produce eggs.

Send the birds to roost with full crops. If you make any changes in feeding, either in the feed or in the way you feed it, make them gradually.

One more word of caution, which is that there is no best ration for all conditions. One poultryman may get good results with one ration where his neighbor may get equally as good results with another. Consequently it is not a good idea to change every time somebody else gets good results. If you are getting good results with your own ration, stick to it. Changes do not always work out to the best advantage.

Would You Rather Have 14,520 EGGS or 16,302 EGGS?

14,520 is a big figure — especially when it's that many eggs. And we have a pen of 100 pullets that laid that many in 9 months. But we also have a pen of 100 pullets that laid 16,302 eggs in 9 months. And 16,302 is bigger than 14,520 by 1782 eggs.

Both these pens of pullets are mighty good layers. You can see that from the eggs they laid in 9 months. Both received the best of feed and care.* It takes good feed and care to make 100 pullets lay 14,520 eggs in 9 months. But what does it take to make 100 pullets lay 16,302 eggs in 9 months—especially when these pullets are just like the ones that laid only 14,520 eggs — and when they received the same identical feed and care? It takes Dr. Hess Poultry Pan-a-min in addition to good feed and good care. That is just exactly what the pen that laid 16,302 eggs received — Dr. Hess Poultry Pan-a-min. That and that alone accounts for the difference of 1782 eggs between these two pens of fine pullets.

Dr. Hess Poultry Pan-a-min is a conditioner and mineral supplement that helps hens turn feed into eggs. Its conditioning properties keep them in laying trim day in and day out. Its vital elements will increase the production of your flock—no matter how good the hens or the feed—just as it did for the hundred pullets that laid the 16,302 eggs. Buy a supply from your local dealer now or write us. It's time to start your flock off to a record in fall and winter egg production. Dr. Hess & Clark, Inc., Ashland, Ohio.

*By the best of feed and care we mean a mash of ground corn, wheat middlings, wheat bran, meat scrap, dried buttermilk, soy-bean meal—a scratch feed of cracked corn and whole wheat—also cod-liver oil and oyster shell—lights in the morning. Both pens received all these things in the same proportion and in the same way. But no matter what the feed, it is good feed and care plus Pan-a-min that makes extra fall and winter eggs. Dr. Hess & Clark, Inc., Ashland, Ohio.

Here are the test pullets that laid 14,520 eggs in 9 months

Below are the Pan-a-min pullets that laid 16,302 eggs

POST YOUR FARM And Keep Trespassers Off Reduced Prices on TRESPASS SIGNS

Effective October 1, 1930, trespass signs are offered to subscribers of American Agriculturist at new reduced rates in quantities of fifty or more. The new rates are as follows:—

Per Fifty..... 3.50
Per Hundred..... 6.50
Per Thousand.... 60.00

The price for smaller quantities remains at \$1 per dozen.

Specially worded signs will be made up at slight additional cost.

These signs are made up of extra heavy cloth material that will withstand the severities of the weather.

We unreservedly advise farmers to post their land. The signs we have prepared are worded to comply with Conservation Law.

Cash must accompany order.

"RCA Radiotrons bring out the full tone beauty"

Says

E. F. McDONALD, JR.

President

ZENITH RADIO CORPORATION

"We are proud of the new Zenith Radio. It is engineered and built on the basis of RCA Radiotron characteristics—and tested with RCA Radiotrons. RCA Radiotrons bring out the full beauty of Zenith tone . . . For the full thrill of Zenith performance we urge all Zenith owners to use RCA Radiotrons. Zenith dealers are instructed that the dependable performance of RCA Radiotrons makes them the logical choice for initial equipment and replacement purposes."

RADIO ENGINEERS ADVISE:

Replace all the vacuum tubes in your radio set with RCA Radiotrons at least once a year. This is the only sure way to maintain good performance and minimize disagreeable noises and other troubles caused by inferior tubes. RCA Radiotrons will give you the maximum in selectivity, sensitivity and tone quality.

Old tubes may impair the performance of the new.

RCA RADIOTRON CO., INC., HARRISON, N. J.

This is the 23rd in a series of endorsements of RCA Radiotrons by the leading radio set manufacturers.

Farm Mechanic

Picking Good Galvanized Roofing

ONE of our subscribers asks us how he can tell good galvanized roofing from a poorer quality and whether there is any simple test for determining whether the galvanizing is well or poorly done. Also whether heavier roofing necessarily means better roofing.

It is very difficult for the average farmer to tell anything about the quality of galvanized roofing except as to the weight or gauge. The heavier roofing is not necessarily better than some a little lighter, since the quality will also depend on the amount and quality of galvanizing and how uniformly it is applied, and on the purity of the iron or steel in the sheet base. However, it is safe to assume that when made by a reliable manufacturer the heavier roofing is the better and will give the longer service. Nothing lighter than No. 28 gauge, weighing approximately 85 lb. per 100 square feet of corrugated galvanized roofing, should ever be used for roofing farm buildings; and No. 26 gauge, weighing about 98 lb. per square of corrugated galvanized roofing, is far better and well worth the very slight additional cost; while if one wants still longer service, the 24-gauge, weighing about 125 lb. per square of corrugated galvanized roofing, will be the cheapest buy.

Buy a Reliable Brand

There are various laboratory tests for determining both the total weight of the galvanizing on metal or wire; and also on how long it will stand up under corrosion, which depends on uniformity as well as on thickness of galvanizing. These tests are of great value in the hands of experts, but hardly practical for the farmer. It seems to me that he must buy his galvanized roofing largely on the reputation of the manufacturer. He should of course reject any galvanized roofing which has laid out in the weather or in contact with the ground until rust spots already are showing, or any sheets where the galvanizing shows a tendency to peel.

Our subscriber also asks whether

painting galvanized iron is worth while and whether it will stop rusting. Undoubtedly a good coat of paint well kept up does protect the surface both from moisture and air and probably does prolong the service which galvanized roofing will give. It should be kept in mind that in many cases, especially on stables and similar buildings, moisture collects and corrosion takes place more rapidly from below than from above. In such a place painting the top surface will do but little good in securing longer service. Hence many doubt whether painting is worth the time and expense and believe that the extra money will do more good if spent in putting on a heavier gauge of galvanized roofing.—I. W. DICKERSON.

Getting Ready for Winter

IT seems just a few days since we were discussing hot weather and dry weather, yet days that grow shorter and shorter and nights that grow chillier and chillier remind us that winter is just around the corner. Why be blue about it though? Who wants summer all the time? Winter has its good features, especially if it finds us well prepared with everything snug and the cellar full of eatables.

But is everything snug? That window light that Johnny broke when his slingshot missed the cat is still out or perhaps put in with a few carpet tacks. Now is a good time to putty it in securely. More than likely, too, there is at least one door around the place that is off its hinges, because someone left it open during the big windstorm. A few minutes' time will put it back in place.

You will appreciate a full cistern of water when things freeze up. Are the eave troughs in a proper state of repair and is the cistern itself clean?

While you are at it, it will do no harm to take a look at the chimneys to see that they are safe and free from soot. Winter brings high winds and defective chimneys are a serious cause of farm fires. Remember the old say-

(Continued on Opposite Page)

Wood That Heats and Wood That Doesn't

A seasoned woodpile gives a quick, hot fire

THERE is no woman on earth more to be pitied than the tired farm wife who rushes to her kitchen to cook a meal on wet, green or soggy firewood. Her requirements of course are heat, intense heat, quickly produced, the very thing she is ten thousand miles from with wet, green or soggy wood. Furthermore, she is helpless. There is scarcely a farmer in the land who does not realize the value of a good wood shed and at some time or other has planned one. A good wood shed, costing but little to build, solves the wet, green and soggy wood problem perfectly providing it is kept filled.

Trouble is thousands of farmers never get to the wood shed. This is no reason why such farmers should continue burning wood that produces smoke, worry and disappointment instead of heat. Wood properly ranked out of doors cures out rapidly, takes but little water and gives a quick, intense heat when wanted. It pays handsomely any time of the year to rank and season firewood on the farm. A quick, intense heat when needed not only saves the farm wife trouble and disappointment, but the farmer as well whose time and that of his hired help hinge largely on getting meals promptly.—C. C. C., Jr.

(Continued from Opposite Page)

ing. "It is better to be safe than sorry."

Repairing a leaky roof when it is dry and the weather is still warm is an entirely different proposition than stopping the same leak when the roof is wet and the temperature is just above freezing. You know the good wife has reminded you of that leak several times and unless she is a saint she is more than likely to say, "I told you so" if you put it off too long.

When the wind begins to whistle and the snow piles up in fantastic drifts, how satisfying it will be of an evening to gather the family round the old chunk stove and enjoy good books, a pan of apples or if you wish, the latest news or music by radio, knowing that nothing has been left undone that might add to the comfort of both man and beast.

With the A. A. RADIO MAN

New Device Permits A.C. Radio Sets on D.C. Current

READERS who have direct current farm electric light plants and for that reason have been unable to buy alternating current electric radio sets, will now be able to install AC sets by buying an instrument designed to change the direct current into alternating current. This little piece of equipment is put in the circuit between the farm electric light plant and the radio and changes either 32 or 110 volt direct current to 110 volts alternating current.

Radio Questions and Answers

How many loud speakers is it possible to run from one radio receiving set?

That depends upon the power output of the set. The ordinary outfit will usually operate two speakers satisfactorily, and many sets, having high-power amplifiers, will run four or five. When it comes to operating dozens of speakers, as in hotel installations, etc., it is necessary to build a large power amplifier. One radio set is sufficient, of course, except as to the audio amplifying section.

* * *

What do you think about the statement that radio tubes ought to be replaced once a year?

Well, if you do this, you are at least certain of replacing any tubes which happen to be worn out or defective. Some tubes will fall below standard in less time than that, too. If you have all the tubes tested every three months or so, or if you keep one new and tested tube of each type on hand all the time, for substitution for the others as a test now and then, you'll accomplish the same thing, perhaps even better. Most people don't care for any avoidable trouble, and as tubes are not very costly, the "once a year" idea is fairly well liked and almost always successful in improving the reception.

* * *

I find that grasping the aerial wire near the set greatly increases the volume of sound from some stations. Why is this?

Perhaps the aerial is rather small, and your body acts as additional "pick-up". Or, possibly the ground connection is poor. Try a direct wire to the water main where it enters the house.

* * *

Is there any sort of wave trap that will eliminate interference from ships? We live near the seacoast and are bothered a good deal in this way.

No, a wave trap will not help much. Gradually, spark sets on ships are being replaced with modern tube outfits, however.

A tractor pulling a 3-furrow tractor plow like this one keeps in better "trim" when Socony Special Gasoline plus Ethyl and Socony Aircraft Oil are used.

BREAKING HARD SOIL IS EASY when your Tractor is powered with SOCONY

FOR a hard day's plowing with the tractor, Socony Special Gasoline plus Ethyl has the needed power and Socony Motor Oil keeps the engine cool. The use of these petroleum products keeps down repair bills, too.

New York and New England farmers have learned to appreciate other Socony products besides, such as:

Eureka Harness Oil, manufactured for oiling, blacking and preserving leather and harness. It is free from acids and will not become rancid. It prevents cracking of leather and breaking of stitches and penetrates the leather and lasts longer than any other oil.

Standard Hand Separator Oil is made for the lubrication of hand separators. It is free from gum, is anti-rust and anti-corrosive. It is a quick-acting oil adapted for the lubrication of close-fitting bearings.

Socony Lubricote (Household) Oil is made for all purposes where a light oil is required. It lubricates, it penetrates, it prevents rust. It is useful for lubricating lawn mowers, bicycles, guns, and all forms of light machinery.

In addition, we make many more products for use on the farm. How many of these are serving you?

Prairie Harvester Oil . . . Socony Turex Oil (for Diesel and Oil Engines) . . . Leather Dressing . . . Mica Axle Grease . . . Socony Disinfectant . . . Parowax . . . Socony Motor Oil . . . Socony 990A Motor Oil for Model A Fords . . . Dendrol Dormant Spray Oil . . . Verdol Summer Tree Spray Oil . . . Socony Banner Gasoline

The Hallowe'en Harbor

Here Is "Different" Entertainment for the Night When Witches Walk

INSTEAD of the usual cats and witches, the Hallowe'en table was centred by a fleet of little walnut shell ships, with orange and black paper sails. A little melted paraffine poured into each shell gave it proper balance, while a toothpick, imbedded in the paraffine while the latter was soft, served as a mast. Tucked in each ship was a tiny slip of paper on which the fortune was written.

The Harbor was a shallow pan of water, surrounded by vines. On this, the little fleet rested, while a couple of toy ships holding candles gave illumi-

dish and bake in a very moderate oven until firm to the touch. Then remove and serve in the same dish in which it was baked.

Corn and Tomatoes Escalloped

Mix together in a good sized baking dish 1 pint of cold boiled corn, 1 pint of chopped tomatoes, 1 teaspoon salt, $\frac{1}{8}$ teaspoon pepper, 2 tablespoons butter, 1 teaspoon sugar. Spread 1 cup bread crumbs over the mixture, dot with small pieces of butter and bake in a moderate oven $\frac{1}{2}$ hour.

Corn Chowder

Cut fat salt pork in small pieces; there should be about $\frac{1}{3}$ cup. To this, add 1 small onion finely chopped, stirring until onion is browned then add 2 cups diced potatoes and 2 cups corn, 2 teaspoons salt, $\frac{1}{8}$ teaspoon pepper, add 4 cups boiling water and cook vegetables until soft. Then add 2 cups milk, 2 tablespoons butter and $\frac{1}{2}$ cup fine cracker crumbs.

Corn Fritters

One cup raw corn, 1 teaspoon flour (more if needed), 1 teaspoon butter, 1 teaspoon cream, 1 egg. Fry in hot fat.

Escalloped Corn

Two cups corn, 1 cup cracker or bread crumbs, $\frac{1}{2}$ teaspoon salt, $\frac{1}{8}$ teaspoon pepper. Place in baking dish, first a layer of corn, then of crumbs until dish is filled. Cover with milk, put bits of butter over the top. Bake about 30 minutes.

Escalloped Corn and Potatoes

Fill a dish with alternate cups of potatoes and corn, cover with the following white sauce: Melt 2 tablespoons butter, add 2 tablespoons flour, cook slowly and add 2 cups milk. Season with salt and pepper, when thick pour over the vegetables and bake until done.

Corn Custard with Broiled Tomatoes

Score ears of corn with sharp knife and scrape out the kernels until you have a cup of the pulp. Beat 2 eggs add 1 cup rich milk, stir in the corn and add a tiny onion finely grated. Pour the mixture into custard cups and bake until brown on top. Before it is quite done cut in slices large tomatoes, dip in corn meal, season with salt and pepper, and put on the broiler over a hot fire or fry in a pan in hot fat. Serve hot with the custard.

Fried Corn

Cut corn from the cob and fry in butter. This is very good for a change from the plain boiled corn.

Stuffed Haddock

Wash fish and wipe dry. Make a stuffing of one pint onions chopped fine, two tablespoonfuls suet, one-half

teaspoonful salt, one-fourth teaspoonful pepper, one and one-half teaspoonfuls savory and two pints of bread crumbs moistened with sweet milk. Fill the fish and sew together with white twine. Put thin slices of salt pork over haddock after it is put in baking pan and fasten in place with

BOUDOIR HANGER NO. B5473 is a delightful gift number, coming stamped for quilting on peach, orchid or green rayon taffeta. The package includes the padding for quilting, the wooden hanger and the ribbon. Price 50c. Be sure to state color desired and send order to Embroidery Department, American Agriculturist, 461 Fourth Ave., New York City.

meat skewers. Bake one hour in hot oven basting frequently and serve with any preferred sauce, or with the liquor in the pan thickened with flour and colored with caramel.—L.M.T.

This stuffing is quite strong with the onion flavor. If this is objectionable, the quantity of onion may be reduced.

Creole Halibut

Put small can of tomatoes in pan with one ounce of butter, one small onion sliced and a seasoning of salt and pepper. Simmer until onion is tender, and put through coarse sieve. Put thick slice of halibut in baking pan, pour the tomato mixture over it and set pan in a larger one of boiling water. Cook in oven until done, basting frequently. Remove to hot platter, pour sauce around fish, garnish with parsley or celery tips and serve.—L. M. T.

Graham Cookies

1 cup sugar $\frac{1}{2}$ cup bran
1 cup lard 1 teaspoon soda
 $1\frac{1}{2}$ cups graham flour 2 cups bread flour
 $1\frac{1}{4}$ teaspoons salt

Mix like pie crust. Moisten with water. Roll very thin, sprinkle with sugar. Bake in quick oven, remove from tin at once. They are different from most any other cookies.

Mrs. J. G., N. Y.

Date Biscuits

1 pint flour
1 cup dates (cut up fine)
 $\frac{1}{4}$ cup butter
 $\frac{1}{2}$ cup milk (about)
4 teaspoons baking powder
1 teaspoon salt

Sift dry ingredients together twice. Mix in butter with finger tips, adding milk with spoon until dough is soft. Add dates and roll on floured board 1

inch thick handling very carefully. Cut with small cutter and bake in greased pan about fifteen minutes.—R. S.

Fancy biscuits such as these may well be the chief attraction of a Sunday night supper. The dough may be mixed ahead of time and kept cold, then run into a hot oven and baked just before serving.

Orange Biscuits

2 cups flour
5 teaspoons baking powder
5 tablespoons shortening
1 teaspoon salt
about $\frac{3}{4}$ cup milk

Sift dry ingredients together and work in shortening with fork or spoon, adding slowly just enough milk to make dough the right consistency to roll out easily. Cut with biscuit cutter into dainty rounds, spreading half with orange marmalade, cover with rest of rounds, press together and bake in hot oven about ten minutes. Ideal for supper or afternoon tea.—R. S.

To add an individual touch to some of these biscuits a doughnut cutter may be used to cut the top round. The marmalade just oozes up through the whole in the center while the biscuits cook.

Using Left-overs

WHEN your cheese gets dry and oily in hot weather, do you throw it into the garbage-box? You need not. Grate it for use in various ways. Moistened with pimentos, it makes tasty sandwiches and is more digesti-

FINE QUALITY UNBLEACHED MUSLIN APRON NO. C2352 comes plain stamped on excellent quality unbleached muslin, a fine count fabric in beautiful cream shade. Enough additional material is furnished for the pockets. Price of this apron postpaid to any address is only 30c. Sufficient fast color embroidery floss for completely finishing same is 25c extra. Order from Embroidery Dept., American Agriculturist, 461 Fourth Ave., New York City.

ble than in the solid. It is fine for scallops and may be combined with dressing in salads.

Does much dry bread find its way into the scrap pan? It will be consumed like the proverbial hot cakes if you will toast it very slowly on the lower grate of a low-heat oven until it is golden-brown all through. This is what a celebrated health authority calls "Melba toast." When made right it is tender and delicious.

Do You Know That—

A glass of tomato juice makes a delicious and inexpensive cocktail and appetizer for winter meals, and it also provides vitamin C, so valuable for health, especially in children.

A small cabinet directly above the sink or drainboard is convenient for holding brushes, scouring soaps and other accessories used at the sink.

An Owl Pillow

This is a pillow that is really a toy. He is a plump green owl whose dignity may be dragged in the dust as a toddler pulls him off to nap by the tassel on his mortar-board cap. Order number M646 is a packet containing all materials, except stuffing, to complete the owl pillow—that is the stamped green gingham, front and back, black and white appliques, and black floss for embroidery and tassel. The size is about 11 by 16 inches and all materials are fast color. If you wish just a wax pattern, order number M646P and he may be made up in any color desired. Instructions come with either order.

nation. Each guest in turn took a ship from the harbor, and found the "fortune."

The following fortunes were used:

- (1) When your ship comes in 'neath skies so sunny,
'Twill bring to you a lot of money.
- (2) Your ship across the sea will bring
A brightly gleaming wedding ring.
- (3) Home comes your ship, bright
skies above,
To give to you romantic love.
- (4) Your ship comes back, as you
may guess,
And brings to you some great
success.
- (5) Back to port 'neath favoring skies,
Your ship will hold some glad
surprise.
- (6) Your ship is coming in, 'tis true,
And lasting fame 'twill bring to
you.
- (7) Aboard your ship you'll surely find,
A sweetheart suited to your mind.
- (8) Your ship sails home to harbor
fair,
Good luck to you 'twill surely bear.
- (9) Home, home again, from o'er the
sea,
Your ship brings opportunity.
- (10) Your ship returns, for you 'twill
hold,
The hope of having lots of gold.

ELSIE DUNCAN YALE.

Corn Pudding

Put $\frac{1}{2}$ pint of corn in a bowl, add the yolk of 1 egg, $\frac{1}{2}$ cup milk, 1 tablespoon butter, $\frac{1}{2}$ teaspoon salt, $\frac{1}{2}$ tablespoon sugar and the white of an egg beaten to a stiff froth. Mix all together, pour into a buttered baking-

Genesee County's first prize-winning booth among the Home Bureau exhibits at the New York State Fair. Hooked rugs as a Home Craft attracted a great deal of interest. Note the home-invented frame at the left. This holds the rug in position while the hooking progresses.

Mock Pumpkins

How a Reader Uses Her Summer Squashes

I WENT over to Mrs. A's one autumn afternoon and found her gathering her vegetables before Jack Frost nipped them. "Of course I am thankful for an abundance of beets, carrots, and such vegetables," she said "but whatever will we do without our pie pumpkins this fall and winter? They were a complete failure this year."

I looked over her garden carefully and then began smiling.

"Now, what are you smiling about?" she inquired. "Can you imagine that you see some lying about somewhere?"

"Well, not really real ones, but some perfect imitations," I replied.

"What do you mean?"

"What are you going to do with all those golden summer squashes scattered here and there?"

"Why, probably they will rot or be fed to the stock."

"My dear, don't let them. They are your mock pumpkins. Gather them now, store in the cellar in crates and they will keep into the middle of the winter. In my estimation, they make even better pies than pumpkins and they are delicious when cooked, mashed or strained, seasoned with butter, sugar, salt and pepper and served as a vegetable. While they are cooking, they smell exactly like pumpkin."

"I discovered the value of these sum-

mer squashes some years ago and I am glad to pass this secret on to you."

And as I started on my way home, I saw Mrs. A. begin filling her arms with the formerly despised golden nuggets.—L. A. C., New York.

Washable Table Covers

WHERE there is good reason to substitute something else for the regular linen tablecloth, there are the lovely colored oilcloths and better-than-oilcloth materials. For the kitchen or porch table, the bungalow or even for the library table, very attractive runners, doilies or covers may be had, hemstitched, mind you! Some of this patterned, damask-appearing material has a cotton-flannel back which keeps it from sliding around and comes in the most beautiful colors. It may be had by the yard as well as made up.

This is one opportunity to introduce pretty colors into the kitchen or dining-room without making extra work as these materials clean easily by wiping off with warm water and mild soap.

Care of the Waffle Iron

THE electric waffle iron needs certain care if it is to prove satisfactory. The instructions sent out with the iron by the manufacturer usually tell how to handle it, but all electric irons require somewhat the same general treatment. Greasing the grids is recommended by some manufacturers while others say a teaspoonful of water on the hot grid will prevent sticking.

Ten minutes pre-heating is usually required for any iron. If batter sticks it means either that the iron has not pre-heated long enough or has heated too long. In either case just let the batter cook until it is crisp, then it removes far more easily. But the iron must be cleaned thoroughly and re-greased before putting more batter on the grids. A small stiff wire brush is very useful for removing crumbs. For the brown stains which appear on the surface of the iron rub with a paste made of baking soda and water.

Of course care must be taken not to get water into the wiring or the plug. The nickel finish can be kept bright by wiping off with a wet cloth and drying carefully. Any abrasive cleaning agent would scratch the nickel. And when soap is needed, use only neutral soap.

When Coins Are Sent

EVERY day in large city post offices, loose coins are found which have escaped from the envelopes in which they were enclosed. Such coins or stray stamps are carefully recorded as to place of findings, name of finder, etc., and forwarded to the Post Office department at Washington. The total of these lost coins and stamps amounts to some thousands of dollars each year for the entire country and there is no way of returning them to the owners.

Sometimes a letter is sent unsealed,

or in an old envelope which is easily cracked or split; in other cases only the given name is signed to a letter and no return address put on the outside of the envelope. Loose coins in an envelope have a great many more chances of being lost than of arriving safely. If there are no stamps available when small amounts of money must be sent through the mail, it is advisable to wrap the coins well in paper and use only a good, tough envelope for mailing.

When orders are sent to any firm, it saves trouble, if time is taken to check them over to see if numbers are copied right, if all addresses are complete, and if the enclosed money is in a form to carry safely.

A New Book

"TRAILINGS" is a collection of picturesque poems, about fifty in all, giving captivating glimpses of fifteen different countries. A poem may have only a few lines but in that brief space, Jessie S. Miner conveys a definite impression of that particular spot. Good for the traveler or the stay-at-homer. The Lantern Press, \$1.00.

* * *

"THE LOST CRICKET" together with a collection of 38 other stories for children by Howard Dean French was written by a minister who wished to extend the influence of his preaching ministry to the children of his congregation. Each story has a little sermon of its own, yet all are told in a way to appeal to children. This is a fine collection for anyone who needs to keep children interested. Abingdon Press, \$1.50.

* * *

"WORLD-OVER STORIES" by Floyd W. Lambertson is a collection of about thirty stories for junior boys and girls. Many of them are condensed bits of history told in a manner suitable for young readers. Others are based on old legends and myths or other world-famous stories. They are intended to be helpful in the character education of the child and yet they provide highly interesting reading. Abingdon Press, \$1.10 by mail.

Songs Mother Used to Sing

(Continued from Page 2)

over a year when, his health having failed, he succumbed to disease.

For 30 years his remains lay in the old cemetery that overlooks the bay and the ruins of Carthage. On a white slab of Italian marble was this inscription:

In memory of

JOHN HOWARD PAYNE

Twice consul of the United States of America for the Kingdom of Tunis.

The first great public recognition given him after his death was upon the occasion when the Faust Club of Brooklyn presented the board of Prospect Park with a colossal statue. It was ceremoniously unveiled September 27, 1873, the most impressive part of the ceremony being the singing of

Home, Sweet Home! by 1,000 school children, the audience of 25,000 people joining in the chorus.

Some 10 years later his remains were brought home, with impressive cere-

For the Smart Schoolgirl

2757

DRESS PATTERN NO. 2757 is very smart, yet exceedingly practical for the schoolgirl. In crepe woolen of the new rust-brown shade, detachable collar and cuffs of white pique, the young miss would be very suitably dressed. The pattern cuts in sizes 8, 10, 12 and 14 years. Size 8 requires 2½ yards of 39-inch material with ¾ yards of 39-inch contrasting. PATTERN PRICE, 15c.

monies, placed in Oak Hill Cemetery, Washington, D. C., where there is a memorial inscribed with the same poetical lines that were on the stone in the cemetery in far-off Tunis.

Stunning Dress

2718

DRESS PATTERN NO. 2718 shows the very attractive, popular cowl neckline. In fact, every detail of the garment is dainty and becoming. Canton crepe, flat crepe, velvet or a crepe woolen would be well adapted to this graceful style. The pattern cuts in sizes 14, 16, 18, 20 years, 36, 38 and 40 inches bust measure. Size 16 requires 3½ yards of 39-inch material with ½ yard of 35-inch contrasting. PRICE, 15c.

TO ORDER: Write name, address, pattern sizes and numbers clearly and correctly and inclose with proper remittance in stamps or coin (although coin is sent at own risk). Add 12c for one of the new winter catalogs and address to Pattern Department, American Agriculturist, 461 Fourth Avenue, New York City.

The Indian Drum—By William McHarg and Edwin Balmer

She cried to him and, when he did not answer, she shook him to get him awake; but she could not rouse him. Praying in wild whispers to herself, she opened his jacket and felt within his clothes; he was warm—at least he was not frozen within! No; and there seemed some stir of his heart! She tried to lift him, to carry him; then to drag him. But she could not; he fell from her arms into the snow again, and she sat down, pulling him upon her lap and clasping him to her.

She must have aid, she must get him to some house, she must take him out of the terrible cold; but dared she leave him? Might Henry return, if she went away? She arose and looked about. Far up the shore she saw his figure rising and falling with his flight over the rough ice. A sound came to her too, the low, deep reverberation of the Drum beating once more along the shore and in the woods and out upon the lake; and it seemed to her that Henry's figure, in the stumbling steps of its flight, was keeping time to the wild rhythm of that sound. And she stooped to Alan and covered him with her coat, before leaving him; for she feared no longer Henry's return.

CHAPTER XXI

THE FATE OF THE "MIWAKA"

"SO this isn't your house, Judah?" "No, Alan; this is an Indian's house, but it is not mine. It is Adam Enos' house. He and his wife went somewhere else when you needed this."

"He helped to bring me here then?"

"No, Alan. They were alone here—she and Adam's wife. When she found you, they brought you here—more than a mile along the beach. Two women!"

Alan choked as he put down the little porcupine quill box which had started this line of inquiry. Whatever questions he had asked of Judah or of Sherrill these last few days had brought him very quickly back to her. Moved by some intuitive certainty regarding Spearman, she had come north; she had not thought of peril to herself; she had struggled alone across dangerous ice in storm—a girl brought up as she had been! She had found him—Alan—with life almost extinct upon the beach; she and the Indian woman, Wassaquam had just said, had brought him along the shore. How had they managed that, he wondered; they had somehow got him to this house which, in his ignorance of exactly where he was upon the mainland, he had thought must be Wassaquam's; she had gone to get help—His throat closed up, and his eyes filled as he thought of this.

In the week during which he had been cared for here, Alan had not seen Constance; but there had been a peculiar and exciting alteration in Sherrill's manner toward him, he had felt; it was something more than merely liking for him that Sherrill had showed, and Sherrill had spoken of her to him as Constance, not, as he had called her always before, "Miss Sherrill" or "my daughter." Alan had had dreams which had seemed impossible of fulfilment, of dedicating his life and all that he could make of it to her; now Sherrill's manner had brought to him something like awe, as of something quite incredible.

When he had believed that disgrace was his—disgrace because he was Benjamin Corvet's son—he had hidden, or tried to hide, his feeling toward her; he knew now that he was not Corvet's son; Spearman had shot his father, Corvet had said. But he could not be certain yet who his father was or what revelation regarding himself might now be given. Could he dare to betray that he was thinking of Constance as—as he could not keep from thinking? He dared not without daring to dream that Sherrill's manner meant that she

could care for him; and that he could not presume. What she had undergone for him—her venture alone up the beach and that dreadful contest which had taken place between her and Spearman—must remain circumstances which he had learned but from which he could not yet take conclusions.

He turned to the Indian.

"Has anything more been heard of Spearman, Judah?"

"Only this, Alan; he crossed the Straits the next day upon the ferry

Wassaquam to ask that; but suddenly he hesitated and did not inquire.

Wassaquam brought the mackinaw and cap which Alan had worn on Number 25; he took from the bed the new blankets which had been furnished by Sherrill. They waited until a farmer appeared driving a team hitched to a low, wide-runner sled. The Indian settled Alan on the sled, and they drove off.

The farmer looked frequently at Alan with curious interest; the sun

would go to him as soon as you were able."

"He sent no other word than that?" "Only that he had a very grave communication to make to us."

Alan did not ask more; at mention of Father Perron he had seemed to feel himself once more among the crashing, charging freight cars on the ferry and to see Benjamin Corvet, pinned amid the wreckage and speaking into the ear of the priest.

Father Perron, walking up and down upon the docks close to the railway station at St. Ignace, where the tracks end without bumper or blocking of any kind above the waters of the lake, was watching south directly across the Straits. It was mid-afternoon and the ice-crusher *Ste. Marie*, which had been expected at St. Ignace about this time, was still some four miles out. During the storm of the week before, the floes had jammed into that narrow neck between the great lakes of Michigan and Huron until, men said, the Straits were ice-filled to the bottom; but the *Ste. Marie* and the *St. Ignace* had plied steadily back and forth.

Through a stretch where the ice-crusher now was the floes had changed position, or new ice was blocking the channel; for the *Ste. Marie*, having stopped, was backing; now her funnels shot forth fresh smoke, and she charged ahead. The priest clenched his hands as the steamer met the shock and her third propeller—the one beneath her bow—sucked the water out from under the floe and left it without support; she met the ice barrier, crashed some of it aside; she broke through, recoiled, halted, charged, climbed up the ice and broke through again. As she drew nearer now in her approach, the priest walked back toward the railway station.

It was not merely a confessional which Father Perron had taken from the lips of the dying man on Number 25; it was an accusation of crime against another man as well; and the confession and accusation both had been made, not only to gain forgiveness from God, but to right terrible wrongs. If the confession left some things unexplained, it did not lack confirmation; the priest had learned enough to be certain that it was no hallucination of madness. He had been charged definitely to repeat what had been told him to the persons he was now going to meet; so he watched expectantly as the *Ste. Marie* made its landing. A train of freight cars was upon the ferry, but a single passenger coach was among them, and the switching engine brought this off first. A tall, handsome man whom Father Perron thought must be the Mr. Sherrill with whom he had communicated appeared upon the car platform; the young man from Number 25 followed him, and the two helped down a young and beautiful girl.

They recognized the priest by his dress and came toward him at once.

"Mr. Sherrill?" Father Perron inquired.

Sherrill assented, taking the priest's hand and introducing his daughter.

"I am glad to see you safe, Mr. Stafford." The priest had turned to Alan. "We have thanks to offer up for that, you and I!"

"I am his son, then! I thought that must be so."

Alan trembled at the priest's sign of confirmation.

There was no shock of surprise in this; he had suspected ever since August, when Captain Stafford's watch and the wedding ring had so strangely come to Constance, that he might be Stafford's son. His inquiries had brought him, at that time, to St. Ignace, as Father Perron's had brought him now; but he had not been able to establish proof of any connection be-

(Continued on Page 25)

The Story from the Beginning

UP in the country around the northern end of Lake Michigan, there is a legend that whenever a ship is lost on the lake, a sound can be heard like the beating of an Indian drum, one beat for each life lost. During a storm in December 1895, listeners counted twenty-four beats. The Miwaka with twenty-five people aboard never reached port and many relatives of those lost believed that one person survived and would some day return.

* * * * *

Alan Conrad a young Kansas farmer is endeavoring to solve the mystery of Benjamin Corvet, a member of the shipping firm of Corvet, Sherrill & Spearman, who mysteriously disappeared after summoning Conrad to Chicago. Last minute messages left by Corvet lead to the belief that Conrad is his son and Alan inherits the Corvet fortune and luxurious home. Just before Corvet disappeared he warned Constance Sherrill, his partner's daughter, to avoid Spearman to whom Constance becomes engaged. The first night in his new home Conrad surprises Spearman whom he finds searching Corvet's study. Spearman curses Alan, mentioning Corvet and the Miwaka, and then flees when Alan attacks him. Constance takes an interest in Alan's problem, much to Spearman's dislike. Conrad is mysteriously attacked and is threatened with blackmail by a drunken stranger named "Luke", who dies after demanding money to keep quiet. Alan finds a list of names in a secret drawer and he leaves for "the land of the drum" to investigate the clues they offer. Alan locates a carferry pilot named Burr who he believes can solve the mystery and gets a job on the carferry. He comes to believe that Burr is Corvet. On a winter's night, Burr, who is steering the ferry rams another vessel which he believes to be a ghost ship. The cars break loose and the ship flounders. Rescue ships save some survivors. Constance waits for word of Alan. Spearman hopes that Alan is lost. Constance leaves for the north to watch Spearman and to locate Alan. She walks along the shore of the lake until exhausted. Twelve are rescued, the Drum beats for twenty that are lost, leaving seven unaccounted for. The count increases gradually until one only is unaccounted for. Constance finds Alan exhausted on the shore.

there. In Mackinaw City he bought liquor at a bar and took it with him; he asked there about trains into the northwest. He has gone, leaving all he had. What else could he do?"

Alan crossed the little cabin and looked out the window over the snow-covered slope, where the bright sun was shining. It was very still without; there was no motion at all in the pines toward the ice-bound shore; and the shadow of the wood smoke rising from the cabin chimney made almost a straight line across the snow. Snow had covered any tracks that there had been upon the beach where those who had been in the boat with him had been found dead. He had known that this must be; he had believed them beyond aid when he had tried for the shore to summon help for them and for himself. The other boat, which had carried survivors of the wreck, blown farther to the south, had been able to gain the shore of North Fox Island; and as these men had not been so long exposed before they were brought to shelter, four men lived. Sherrill had told him their names; they were the mate, the assistant engineer, a deck-hand and Father Perron, the priest who had been a passenger but who had stayed with the crew till the last. Benjamin Corvet had perished in the wreckage of the cars.

As Alan went back to his chair, the Indian watched him and seemed not displeased.

"You feel good now, Alan?" Wassaquam asked.

"Almost like myself, Judah."

"That is right then. It was thought you would be like that to-day." He looked at the long shadows and at the height of the early morning sun, estimating the time of day. "A sled is coming soon now."

"We're going to leave here, Judah?"

"Yes, Alan."

Was he going to see her then? Excitement stirred him, and he turned to

shone down, dazzling, and felt almost warm in the still air. Wassaquam, with regard for the frostbite from which Alan had been suffering, bundled up the blankets around him; but Alan put them down reassuringly. They traveled south along the shore, rounded into Little Traverse Bay, and the houses of Harbor Point appeared among their pines. Alan could see plainly that these were snow-weighted and boarded up without sign of occupation; but he saw that the Sherrill house was open; smoke rose from the chimney, and the windows, winked with the reflection of a red blaze within. He was so sure that this was their destination that he started to throw off the robes.

"Nobody there now," Wassaquam indicated the house. "At Petoskey; we go on there."

The sled proceeded across the edge of the bay to the little city; even before leaving the bay ice, Alan saw Constance and her father; they were walking at the water front near to the railway station, and they came out on the ice as they recognized the occupants of the sled.

Alan felt himself alternately weak and roused to strength as he saw her. The sled halted and, as she approached, he stepped down. Their eyes encountered, and hers looked away; a sudden shyness, which sent his heart leaping, had come over her. He wanted to speak to her, to make some recognition to her of what she had done, but he did not dare to trust his voice; and she seemed to understand that. He turned to Sherrill instead. An engine and tender coupled to a single car stood at the railway station.

"We're going to Chicago?" he inquired of Sherrill.

"Not yet, Alan—to St. Ignace. Father Perron—the priest, you know—went to St. Ignace as soon as he recovered from his exposure. He sent word to me that he wished to see me at my convenience; I told him that we,

tween himself and the baby son of Captain Stafford who had been born in that town.

He looked at Constance, as they followed the priest to the motor which was waiting to take them to the house of old Father Benitot, whose guest Father Perron was; she was very quiet. What would that grave statement which Father Perron was to make to them mean to him—to Alan? Would further knowledge about that father whom he had not known, but whose blood was his and whose name he now must bear, bring pride or shame to him?

A bell was tolling somewhere, as they followed the priest into Father Benitot's small, bare room which had been prepared for their interview. Father Perron went to a desk and took therefrom some notes which he had made. He did not seem, as he looked through these notes, to be refreshing his memory; rather he seemed to be seeking something which the notes did not supply; for he put them back and reclosed the desk.

"What I have," he said, speaking more particularly to Sherrill, "is the terrible, but not fully coherent statement of a dying man. It has given me names—also it has given me facts. But isolated. It does not give what came before or what came after; therefore, it does not make plain. I hope that, as Benjamin Corvet's partner, you can furnish what I lack."

HANDY ANDY Says "Here's How"

To Sow Wheat

By Ray Inman

DRILLED GRAIN HAS MANY ADVANTAGES OVER BROADCAST SEEDING

drilled GRAIN IS UNIFORMLY SPACED, AT EVEN DEPTH AND PROPERLY COVERED

IT STANDS DROUGHT BETTER, DOESN'T FREEZE SO BADLY, ISN'T DAMAGED BY WIND. **Finally** DRILLED GRAIN PRODUCES MUCH HEAVIER THAN BROADCAST GRAIN.

WE WANT TO KNOW HOW MANY FARMERS DRILL THEIR WHEAT.

PLEASE FILL OUT QUESTIONNAIRE BELOW AND MAIL IT TO A CONGRESSMAN OR SOMETHING.

1. WHAT'S YOUR NAME?
2. WHO NAMED YOU THAT?
3. HAVE YOU SHOT HIM (HER)?
4. THEN WHY AREN'T YOU IN JAIL?
5. WHAT DO YOU DO WHEN FISH ARE BITING?
6. DID YOU EVER GET A FISH BITE?
7. WHAT DID YOU DO FOR IT?
8. WHAT COLOR ARE YOU?
9. HAVE YOU A VEST TO MACH?
10. STICK OUT YOUR TONGUE AND SAY "OSHKOSH."
11. WHAT KIND OF SOUP DO YOU YODLE BEST?
12. CAN YOU LOAN ME SEVEN DOLLARS?
13. ANY ICE TODAY, LADY?
14. WHAT'S THE DIAMETER OF A DOUGHNUT HOLE?

IF ANY ANSWERS ARE UNSATISFACTORY WE, OF COURSE, ARE JUST AS LIKE AS NOT TO CHANGE THEM; QUESTIONS ARE ALSO SUBJECT TO CHANGE WITHOUT NOTICE.

The A.A. Trespass Sign Has Teeth

(Continued from Page 3)

Attorney General's Office, the case was finally brought to a successful conclusion. How this was done is explained below.

Says Farmers Are Imposed On

On June 7th we received a letter from Mr. Fletcher which read as follows:

Judge Ferris of the Attorney General's Office in company with State Inspector, E. H. Gammon of Watertown, met the game protector who had arrested Murray Brough at my home. Judge Ferris told us we had a right to defend our property and that posters meant just the same on farms as up in the woods. Action would be taken as soon as he returned to Albany from the North Woods to look after some cases up there. He stated that he feels that farmers are being imposed upon.

Justice at Last

The Brough case was finally put on the calendar of the Supreme Court for September. The following is a letter from Mr. Fletcher telling just what happened.

Saturday, September 6th, Inspector Gammon and Attorney Cummings of the Conservation Department and the two game protectors in our case, called at my home and reassured us that everything was "watertight", served the subpoena and informed us our case was the most important case on the calendar and the first one to be called Monday, September 8th. This is the first we had heard since Judge Ferris was here in June, so I didn't have any chance of writing you beforehand.

The defendant Murray Brough and his attorney immediately requested a settlement (at Court). Judge Ferris said in these words, "We came out here to fight this case, if we don't win in this Court it will be carried to the next one; we are trying to get a ruling. We want the American Agriculturist satisfied and you people too. We are more than anxious to try the case for everything is in our favor but if he (Brough) is willing to pay the penalty we cannot make him fight." So in about an hour afterward Judge Ferris and Attorney Cummings came to Mrs. Fletcher and I, and said, "Well, I have it all down in writing. He has convicted himself."

Judge Ferris requested me to write to you people that they (the Department) were with you at all times and will fight every case that you call to their attention, and that from now on these trespass cases would mean more.

It is very evident that trespassers do not fear Justice Courts but they change their minds considerably when it comes up to Supreme Court.

How can we ever thank you enough? You have been with us all the way through—"our friend" as well as partner; not only us either, but other A.A. members as well appreciate the action you took in this matter. Words are inadequate to express my appreciation of your Service Bureau. Every letter you send out has that friendly warmth. Thank you again for your kindness and help in my recent trouble.

We have not printed our own letters, but we have written dozens of letters following up the case in an effort to get justice.

Everybody Pleased

Naturally we were elated over the outcome of this case, and expressed our thanks in letters to both Mr. Legge of the Conservation Department, and Judge Ferris, Assistant Attorney General at the Attorney General's Office. In reply, we received two letters, which explain themselves:

Sept. 16, 1930.

Service Bureau,
American Agriculturist.

Just a line to let you know that I appreciate your very nice letter of September 15th. It has been very pleasant to co-

operate with you in this matter, and the outcome is very gratifying.

ALEXANDER MACDONALD, Commissioner.
By Llewellyn Legge,
Chief, D.F.G.C.D.

* * *

Sept. 16, 1930.

Service Bureau,
American Agriculturist.

I am in receipt of your letter of the 15th instant, enclosing copy of letter from Melvin R. Fletcher, relative to the above entitled action.

The facts narrated by Mr. Fletcher in his letter are correct. I think he has overdrawn somewhat the value of my services in the case. Mr. Charles F. Cummings, mentioned in Mr. Fletcher's letter, is an assistant attorney general attached to the conservation bureau of the attorney general's office, of which I am in charge.

I think a review of this case in your paper will be helpful in enforcing the provision of the conservation law relative to posting private lands; that is, agricultural lands. The attorney general, represented by myself in these cases, will appear in any proper case to establish and

defend the rights of farmers and to prevent trespassing on posted lands.

The amount of the penalty recovered in the Brough case is not very large; but we were not seeking so much to recover a large penalty as to establish the proposition that when farmers have posted their lands under the conservation law their property rights shall be respected.

Very truly yours,

C. S. FERRIS,
Assistant Attorney General
In Charge of Conservation
Bureau, Department of Law

Our enthusiasm over the outcome of this case lies in the fact that it established a precedent and laid a foundation for enforcing the conservation law against trespassers. It definitely established with the Supreme Court of the State of New York the fact that farmers have rights in protecting their property. This publication is committed to the policy and the determination to help enforce the trespass laws. We are delighted at the splendid cooperation from those in the state charged with the enforcement of the conservation

Old Redfield Keeps Open House

(Continued from Page 5)

a commonplace and undisputed observation that the tiny hamlet and the farms constitute the peculiar breeding ground for famous preachers and educators and statesmen and captains of industry. Out of all proportion to his fellows in every capital of the world the farm bred man sits in the seats of the mighty.

So for many years Redfield along with thousands of other communities has been sending her sons and daughters out from her narrow bounds to do their work in the great world. Perhaps not many of them have become very rich or very famous but somewhere, sometimes far from home, they were playing their part and sometimes their hearts were turning, with a certain measure of fondness I hope, back to the countryside where they were bred.

Fourteen years ago certain elect men and women "whose hearts God had touched" (I use the Scriptural phrase) had a very happy thought for they said "Would it not be fine to have an Old Home Week and ask all our sons and daughters to come back and renew the old friendships and sing the old songs and go to the old church and let the world know that they have not forgotten their childhood playgrounds and their ancient hearthstones." So they had an Old Home Week and their wanderers came,—came from near and far—came from the Mississippi valley and beyond and each year they have been coming until the event has taken on the character of a pious pilgrimage.

I have no space here to go into details regarding the four day program. The church is not large enough to serve as an auditorium so a tent is rented for that purpose and equipped with seating for 700 auditors. The permanent date chosen is always the four days preceding Labor Day. Each week day

there are athletic events of the sort that country boys and girls can engage in. On two evenings there are amateur dramatics where the local actors play to capacity houses. Saturday is always Grange and Farm Day.

Sunday is the closing day and it is given a markedly religious significance. In the morning a prominent Protestant preaches in the community church and in the afternoon an equally well known Catholic speaks in his church—and best of all my informant tells me it is about the same audience on both occasions. Then again in the evening the Y.P.S.C.E.—Young People's Society of Christian Endeavor have charge of the final service and so the last word is said and another Old Home Week becomes history. I confess that I was somewhat thrilled and inspired by what I saw and heard. I wish that what Redfield does might in its essentials be duplicated in hundreds of our old worthwhile country communities.

But it remembered however, that big, fine occasions such as this do not just happen. First there must be men and women of vision who have the spirit of service and who are willing to sink their own comfort and ease in behalf of the common cause. It means the disbursement of considerable sums of money. They told me that the yearly budget of Redfield calls for some \$800.00—no small amount to come from a scattered country community. It means that for a few days a lot of people must forget their usual workaday tasks. It means sacrifice in order that Redfield may be celebrated. I hope that the peaceful years may come and go and bring to this old hamlet a still larger measure of community pride and that its sons and daughters in ever-increasing numbers may come back to renew their allegiance to their old home town.

"Don't look quite so natural, Elmer!"—JUDGE.

law. We are glad to say that these principles are backed by all honest sportsmen, and we believe, by their great organization, the New York Conservation Association, Inc.

We are in sympathy with all honest sportsmen, hunters and fishermen, and lovers of the outdoors who want to have the privileges of roaming through fields and woods, but who are gentlemen and who, therefore, respect such privileges. We want to urge upon farmers the necessity of courtesy, and of meeting honest sportsmen halfway when they ask permission to hunt or fish or to camp, when by so asking they show that they are respecters of property rights. We will aid, however, any farmer in defending such rights provided of course the farmer is right and fair, and that he will follow up his complaints as did Mr. Fletcher, with the necessary action to obtain justice.

Accredited Roadside Stands

UNFORTUNATELY, it is in many cases impossible to tell whether the fellow who is selling farm produce at a roadside stand grew the stuff himself, bought it from his neighbors or perhaps purchased it on the produce markets of the nearby cities. This fact has hurt the roadside stand business by taking a lot of business away from the producer and by lessening the confidence of the consumer in this method of buying. This selling of stale stuff is, we maintain, unfair competi-

The sign that guards Bergen County roadside stands.

tion because it is assumed by the buyer, when he stops at a roadside stand, that he is getting fresh stuff.

With the cooperation of W. Raymond Stone, County Agricultural Agent of Bergen County, New Jersey, and the Bergen County Chamber of Commerce, producers in that section have gone a long way toward meeting this competition. Mr. Stone, who is chairman of the agricultural committee of the Bergen County Chamber of Commerce, proposed a plan whereby the Chamber of Commerce would accredit farmers' stands who would conform to certain rules and regulations. A sign was to be issued which could be readily identified by motorists and would serve to them as a guarantee of quality. In order to have his roadside stand accredited it was necessary that the producer agree to grow at least 50 per cent of all products offered for sale and to buy those not produced from a nearby farm. He also agreed to display on his stand only well graded products of high quality and it was expressly agreed that any violation of the rules would be sufficient cause for removal of the sign. This plan has been in operation almost two seasons and many who have had their stands accredited are enthusiastic over the results of the plan. Perhaps the plan would work just as well in other states.

Take the children shopping occasionally and give them some of the responsibility of selecting their own clothes.

The Service Bureau

A Department Devoted to the Interests, Welfare and Protection of A. A. Readers

How Much is Health Worth?

GOOD health is an asset whose value is realized only when we do not have it. It is safe to say that no one likes to be ill, yet it is appalling what chances people, through lack of knowledge, will take with this most precious asset. There are, unfortunately, plenty of folks who are always eager to profit from the other fellow's misfortune and by leafing through the pages of a certain type of publication one can discover dozens of advertisements of quack remedies claimed to be cures for all kinds of ills.

Why do people patronize them? They must answer these advertisements or it would not pay to continue to publish them. In some cases it is due to a feeling of modesty which makes it difficult to discuss personal matters with a physician. In other cases it is through fear that a doctor would recommend an operation and a hope that a nostrum will cure the trouble. Then again, the question of expense often comes in. Those who are ill feel that doctor's bills are high and the few dollars which the patent medicine costs looks small. It is small, but in the meantime the trouble gets worse and a patent medicine manufacturer grows rich.

Arc All Patent Medicines Harmful?

There are, it is true, a number of patent medicines on the market which are excellent. We believe, however, that one rule will cover the use of them all, namely, that they should be taken only under the direction of a competent physician. He alone is able to diagnose the trouble and having diagnosed it, to recommend a course of treatment that is likely to be successful.

What are some of the troubles which quacks claim to cure? One of the most insidious is cancer. Because of the difficulty of proper diagnosis, particularly in the early stages, this is a peculiarly fertile field for quacks. Many persons fear they have cancer and are easy marks for the quack. In this connection it is only necessary to say that the best scientists in the world are as yet unwilling to claim that there is any sure cure for cancer. Operations are frequently successful if the remedy is applied in the early stages.

The sufferer from so-called heart disease will readily find many so-called doctors who are willing to separate him from his cash. It should only be necessary to say that the heart is subject to a number of ills that cannot possibly be diagnosed by mail. This should discourage anyone from patronizing this type of dope.

Goitre is still another trouble that lends itself to fraud. Here again there are different types of goitre. The trouble is closely identified with a number of bodily functions and even physicians themselves prefer to have goitre patients consult a specialist in this subject who has made the trouble a life study.

These are only a few of the ills that have put money in the pockets of quacks and patent medicine manufacturers. You are not likely to find patent medicine advertisements in a publication which guarantees its advertisers. We can only repeat the caution, TAKE NO PATENT MEDICINE EXCEPT UNDER THE DIRECTION OF COMPETENT PHYSICIANS.

Appliances Sometimes Abused

There are also a number of corrective appliances which in themselves, may not be harmful, but how can such appliances ordered through the mails be fitted at long distance? Many publications refuse to accept advertisements of rupture appliances. In the first place, most of these are not returnable and if they fail to get the desired results the money is lost. Then again, some ruptures can be cured by

an operation. Why not consult a physician and get the true facts in the case?

What about braces and appliances for foot troubles? Feet certainly are handy things to travel around on and personally we prefer not to take any chances of losing them. Mail order appliances may do some good, they may be harmless and it is conceivable that they may do great damage. At any rate, a specialist in foot troubles is, in our opinion, more likely to know what should be done than the person who advertises an appliance to be sent through the mail.

Why Trifle With Your Eye Sight?

It is still possible to buy spectacles through the mail. We have never been able to determine just on what basis the "doctor" determines the proper lens to send. It may be that they are all just alike or it may be that the older the customer the stronger the lens sent. Presumably, the lenses are mere magnifying glasses and doubtless al-

Do You Know This Boy?

MISSING from home since July 13, 1930, William Henry Bogart, 1940 Whitney Avenue, Niagara Falls, age fourteen, height about five feet, two inches, weight about one hundred and four pounds, slim build, fair complexion, dark brown hair, large gray eyes, large front upper teeth, large scar on right forefinger. When he left home he wore gray tweed suit, knickers, light waist, tan oxfords and boy scout hat. His mother is anxious to locate him and have him return and go to school. She is quite sure that he is working on some farm as he is especially fond of farming and horses.

Anyone knowing the whereabouts of this boy, will do his mother, Mrs. Bogart, a great favor by writing to the above-mentioned address or by communicating at once with the Chief of Police at Niagara Falls, New York.

low some people to see better temporarily. Certainly no one who has given any thought to the subject would claim that glasses can really be fitted without a careful examination by an expert in this line. The best oculist may charge a little more but who would put a price on his eyesight?

The fake eye surgeon who travels around the country removing imaginary cataracts from old people's eyes, is still with us. His charges seem to be based on the ability of the victim to pay and are often collected under threat. This type of grafter does not work long in the same community. He travels by car, picking up one victim and a few days later another one hundreds of miles away. If you hear of the activities of any such scoundrel, give the facts to the State Police immediately as delay is certain to make it difficult to find him.

The hard of hearing are also tempted to invest their money in the hope

that they will find relief. As we understand it, there are various causes for deafness or loss of hearing. There are appliances which help some cases, but which are useless in others. Some appliances advertised are of doubtful value to anyone. To those of our readers who are troubled this way, we suggest a letter to the New York League for the Hard of Hearing, 480 Lexington Avenue, New York, N. Y.

Some folks who are not ill are willing to trifle with their future health by taking nostrums claimed to keep them thin. It is claimed that most of these preparations contain either thyroid extract or a laxative. Thyroid extract speeds heart action and physicians will tell you that it should never be taken except when advised by a competent doctor. Apparently the human race is striving to avoid being different. Those who are fat want to be thin and those who are too thin want to increase their weight. We not only have the flesh reducer, but we have the flesh grower with us. Thin folks are guaranteed to gain weight, fat folks are guaranteed to lose. Physicians will tell you that there is nothing that can reduce weight except proper diet. Certainly diet can well be regulated but even here a good thing can be over-done and there are many cases of persons who have starved themselves until their health has suffered.

At the same time, there is nothing wrong with exercise and good food to build up weight and so we could never see the necessity for spending good money for a correspondence course in exercise. We are sure your family doctor will be more than glad to tell you where you can get directions for body building exercises at relatively low cost.

Fighting Against Quackery

Various associations throughout the country are fighting quack remedies. For example, the American Society for the Prevention of Cancer, 34 E. 75th Street, New York City, will be glad to send you a pamphlet stating how to recognize some of the early symptoms of this trouble. The National TB Association, 105 East 22nd Street, New York City, will be glad to furnish information to sufferers of this trouble or it is probable that you have a County TB Association which is likely to be located at your county seat. If you are in doubt about the merits of any remedy the American Medical Association Bureau of Investigation, 535 N. Dearborn Street, Chicago, Ill. will be more than glad to give you full information about it.

The best advice we can give is first, to see your family physician as soon as you notice disturbing symptoms. Many troubles can be cured in the early stages but become very troublesome later. Second, take no patent medicines of any kind and buy no appliances except on the advice of your physician.

Genealogical Society Declared Fraudulent

IN Service Bureau on June 7th we commented on the activities of the American Historical Genealogical Society of Philadelphia. At that time we reported numerous complaints against this concern. Recently letters addressed to them have been returned marked "Fraudulent", and we learn that this company, operated by J. Montgomery Seaver, in addition to having a fraud order issued against them, has gone into voluntary bankruptcy.

This does not look very favorable for those who have sent money and who have not yet received books they ordered. However, we learn that Mr. Walter C. Douglas, Jr., 1500 Walnut Street, Philadelphia, is the referee in bankruptcy, and on application to him we expect complainants will be able to locate the receiver and file claim against the company with him.

"I wish to extend my heartfelt thanks to you. It will be such a help to me at this time of need. I feel very much indebted to you for your kindness. May God bless you more and more in helping the needy as you have helped me."

Your **FREE** copy of this new "NATIONAL" style book offers Lowest Prices in years . . . !

IF you have not yet received your copy of this season's money-saving "NATIONAL" Style Book, send for it today without fail. In this beautiful book you will find displayed the newest styles—the favored New York and Paris fashions—at *America's Lowest Prices*—*low prices that have not been possible for many years.*

This new "NATIONAL" Style Book is more to you than a beautiful array of coats, hats, dresses, shoes—of everything for every member of your family. *It is your true measure of clothing value.*

America's Lowest Prices!

This year we have the greatest opportunity in our history to serve you. Prices for cottons, silks, woollens—all raw materials are lower in price than at any time since the war. Consequently our buyers have been able to buy this season's requirements at rock bottom prices.

So well has this buying been done that in this great new Fall and Winter Style Book *you will find America's lowest prices.* And remember, that prices are not *low* unless quality is *high*. At "NATIONAL" your savings are always doubled by the longer service that "NATIONAL" quality insures.

The "NATIONAL" Style Book Clothes the Entire Family

For 43 years we have been style specialists. We clothe the entire family for dress, work or play; we also furnish everything in dry goods for the home at the lowest prices—quality for quality—in America. You will always find lower prices at "NATIONAL" because we buy for cash and sell for cash, and these cash savings are all passed on to you.

So write today for your own copy of the "NATIONAL" Fall and Winter Style Book. See for yourself the remarkable savings and pleasure the "NATIONAL" Style Book, with its unequaled values, will bring to you this season.

The Final Test

Jack Frost

RIDES FRONT!

WHAT damage he can do to an automobile — what an unwelcome guest he is to the farmer who *has* to drive out in winter!

But the radiator and engine of your car are *safe* from Jack's icy hands, if you use Eveready Prestone, the ONE-SHOT anti-freeze. A single, economical filling protects your car all winter — from frost to thaw!

Eveready Prestone was developed in the great research laboratories of the Union Carbide and Carbon Corporation. It is distributed by the National Carbon Company, Inc., manufacturers of Eveready Flashlights and Radio Batteries.

It is different from all other anti-freezes. Eveready Prestone contains no glycerine. It will never become "gummy," never overheat a motor, or leave deposits. It always flows as freely as water.

It contains no alcohol, so it won't boil off, or harm the cooling-system or the finish of your car. It is absolutely safe, and it gives perfect, permanent safety at all temperatures.

Eveready Prestone is undiluted — compared with other anti-freezes, a smaller quantity is needed. In addition, a single supply protects your car all season. The result is a saving in money — as well as in peace-of-mind. Complete protection from early fall to late spring at a cost of \$2.50 to \$7.50, depending on moderate or extreme climates. Eveready Prestone is *economical*.

More than a million car-owners used Eveready Prestone last year. It safeguards busses and trucks all over the country. The Byrd Antarctic Expedition used it at the South Pole. It can give you the same satisfaction it gave them. This year, it has been further improved. So that you may easily identify the new Eveready Prestone, it is *green* in color.

You can put it in now — any time — after taking the few simple precautions necessary to make the cooling-system water-tight. Why not today?

Tune in the Eveready Hour every Tuesday evening at nine (Eastern standard time), over the N. B. C. network.

NATIONAL CARBON COMPANY, INC.
General Offices: New York, N. Y.

Unit of Union Carbide  and Carbon Corporation

9 POINTS OF SUPERIORITY

1. Gives complete protection.
2. Does not boil off.
3. Positively will not damage cooling-system.
4. Will not heat up a motor.
5. Circulates freely at the lowest operating temperatures.
6. Will not affect paint, varnish or lacquer finishes.
7. Non-inflammable.
8. Odorless.
9. Economical — one filling lasts all winter.

Do You Like Your Parsnips Buttered?

Why Grow Good Stuff and Spoil It by Bad Packing

By H. F. PRINCE

Chief Railroad Perishable Inspector, Buffalo, N. Y.

THE legislatures of our various forty-eight states appropriate millions of dollars annually for the agricultural colleges and experiment stations in their respective states, but like Ivory Soap's percentage, 99.44% of the appropriations go towards production projects and a fraction of one percent is spent on marketing problems and practically none on the safe transportation of the producers' goods to market. Of course, part of this is blamed on the politicians—they get a lot of blame and a little more will not hurt them—but most of the blame is due to our own indifference to appropriating for something new. However, if these growers' associations keep on taking trips to the larger terminals and have the good fortune to see the scrambled messes so often found there and insist on something being done to stop it, we will see those recalcitrant legislators making appropriations which will ultimately "butter more parsnips" on the producer's table.

Shucks! it is not production that is bothering the growers but what to do with the production after he gets it. You know how the spray men yell from the housetops when to put on the first spray, the second spray or whatever one it is, but don't you think it would be just as advantageous to shout just as loudly and

seriously, the effect of sending poor quality products to market and its direct relation in filling the grower's purse? Would it be better, if at Grange meetings, Farmers' Weeks and Farmers' Institutes, the programs had more talks on economic marketing and production and how to transport his perishables safely? Say, make it a 50-50 proposition; production 50 and marketing and transportation 50. I know this is rank heresy to even suggest it, but I can't help it. Before you say it is wrong and an unfair proposition, you should become acquainted with the constant daily losses due to ignorance and carelessness at the large terminals.

But what can the agricultural college do to give the producer more for his labors than they are doing at present? In New York State and Pennsylvania, for example, they should have representatives in New York City, Philadelphia, Pittsburgh and Boston to study marketing trends and prices; point out the mistakes of poor loading, grading and billing; the competition they have to meet and how to meet it; how they could better their prices. In other words, let the agricultural colleges have a marketing expert at the large terminals. California, for instance, in addition to the terminals mentioned, should have men in Chicago and Cleveland. Florida is in the same shoes as California. Florida sends over a hundred thousand cars of fresh fruits and vegetables to market annually. The cost for Florida to institute such a service of marketing experts would not cost over \$50,000. and such experts should save Florida and its customers somewhere between an average of five and ten dollars a car, to be real conservative. Somewhere between half a million and a million dollars could be saved at a cost of one-tenth to one-twentieth of that amount. Not a bad exchange, is it?

The use of knotty lumber for bulkhead for these tomatoes resulted in a break and some tomato catsup not in bottles.

Studies on Rule 240, "Iced; do not re-ice," (Continued on Page 6)

How English Farmers Manage Their Pastures

Where Dairy Cows Graze on Good Soil, Heavily Fertilized

By J. B. ABBOTT

I SPENT the latter part of May, all of June and the first few days of July in Germany, Holland, England, Scotland and Wales studying their methods of pasture management. In order that the very numerous details may not obscure the main facts with the result that the reader will "fail to see the forest on account of the trees," so to speak, I want to state the most significant fact of all right at the outset, namely that I saw thousands of acres of pasture land each acre of which regularly yields a *net profit* equalling or exceeding the *gross value* of an average acre of American silage corn or hay. And that such results are due primarily to adequate fertilization and skillful pasture management rather than, as sometimes assumed, to more favorable climatic conditions for grass, and that they can be obtained here as well as in Europe is pretty clearly indicated by the results of an experiment in intensive pasture management conducted at the Massachusetts Experiment Station and reported in their bulletin No. 262 "Intensive Grassland Management" in which they report net returns from grazing land running as high as \$80 per acre. I saw nothing much better than that abroad.

That it is profitable to have such pasture, even at a considerable cost, and thus maintain production at a high level throughout the summer and at the same time reduce or eliminate the manger feeding of hay, silage, soiling crops and concentrates during the normal grazing season, seems to me to be a self-evident fact. Each acre of such pasture yields a larger profit than the land would yield in any feed crop for manger feeding, a great

deal of labor is saved as compared with manger feeding and the cows certainly seem to produce as well or better. Admitting the desirability of such pasture, the question is how to get it.

Europeans Use Good Land for Pasture

In travelling by train and automobile the length and breadth of the countries which I visited, several thousand miles altogether, I did not see a single high class milking herd or bunch of fattening steers on really poor land. Frankly I could see little fundamental distinction, other than use, between so-called arable land (land used for crops and hay) and permanent grass land used for grazing. From its smooth, even surface I suspect that most of the grass land of this character was plowed and perhaps regularly farmed at one time—perhaps before the European market was flooded with wheat from the western hemisphere.

Of course there is a lot of very poor land in the countries which I visited, the same as there

is here; but the Europeans appear to have learned better than to let their high producing dairy cows and fattening steers wear themselves out racing over it in the vain hope of finding enough to eat. Instead they graze it with some animals with a relatively low energy requirement such as, for example, the hardier breeds of sheep, or use it for forest.

The contrast between European pasture practice and practice in the Hay and Pasture Belt of America is very striking. Here, for one reason or another, it has become customary to use for arable land about everything which isn't either steep enough to tip a smoothing harrow over or so rocky that the ledge comes up to the second rail of the fence, and expect the cows to find a summer living on the rest of it.

As I see the problem the dominant factors which are rendering a readjustment of farm practice imperative are, first, exhaustion of the virgin fertility of our present permanent pastures, second, the fact that a large portion of our present so-called pasture land is poor, unproductive land at best, third, the fact that cows have been bred up to a production which requires a great deal of feed and precludes the expenditure of too much energy in getting it, fourth, the fact that it costs more than ever before to feed a cow in the manger and fifth, the fact that we have a surplus of arable land, especially hay land, some of which might be devoted to grazing without causing any serious crop shortage.

Taking all these factors into consideration and in the light of current (Continued on Page 12)

A Word About the Author

THE author of this series of articles, Professor J. B. Abbott, is a member of the staff of The National Fertilizer Association and devotes all of his time to the northern and eastern states. He lives and has his office on his farm near Bellows Falls, Vermont, and has a milking herd of twenty to twenty-five high-grade Holstein cows and markets his milk through the Bellows Falls Cooperative Milk Producers' Association. He practices what he preaches, as many who have visited his farm will testify.

Professor Abbott was born on a Vermont farm, educated at Tufts College, the University of Vermont, and Purdue University. He was successively soil chemist, research agronomist, county agricultural agent, county agent leader, and extension agronomist in Indiana, New Hampshire, and Massachusetts. He has held his present position for the past five years. For the past two years he has devoted his time almost entirely to the problems of pasture management and fertilization, and during the past summer he spent six weeks in northern Europe, in order to familiarize himself with the latest practices, particularly in Germany and England.

Should Farmers Specialize?— A Prize Contest

THIS summer we had a very profitable and interesting visit with a man who had been nominated for Master Farmer and who had made a rather remarkable success in farming almost entirely through specializing in growing a few products.

In talking about the ups and downs of agriculture and why so many fail, this man said to us, "Well, here is my neighbor, a good man to know and to have as a friend, but always about two jumps ahead of the sheriff. He works hard, too. His trouble is that he has too many irons in the fire, so many that none of them pay, and so that he cannot afford proper equipment for any of his operations.

"He has excellent potato soil. I told him once to get rid of his forty or fifty unprofitable hens which keep his yard dirtied up all the time, to sell all but one of his mediocre cows, stop trying to raise a little corn and a little buckwheat and a few oats, and instead get him some proper equipment and put all of his energy into raising potatoes. Did he do it? Not on your life! He is in a rut like so many other farmers. Times have changed, but many men cannot change so they all go on until they are finally starved off entirely."

We have thought about this conversation a good many times since. Is this man right? There has been a lot of specialization in recent years and it does seem as if the specialists among farmers have made the most money. Is it right that the dairyman should stick to his dairy, the poultryman to his poultry, the potato man to his potatoes, the shoemaker to his last? Is that going to be the way of all agriculture in the future, or is it still necessary for the majority of farmers to farm along general lines with much diversification?

This is one of the most important social and economic questions or developments in present-day agriculture. You people who are right on the job are thinking about it. Let's have a round-up of this thought so that we can pass it on to our readers. For the best letter on the subject, "Specialist or Diversified Farmer—Which?" we will pay \$5.00, with \$2.00 for the second best and a dollar apiece for all the others we can find room to publish. Letters should not be over 300 words in length, should be written very plainly on one side of the paper only, and should be

mailed to the Editor, AMERICAN AGRICULTURIST, 461 Fourth Avenue, New York City on or before December 1st.

Keep Your Money

The New York State Farmers and Livestock Dealers Association are at work in this county. Recently two of the organizers told one of our bankers that their organization was working to get one half the price of retail milk for farmers. They are now operating under the name of the "Farmers' Union".—H. L.

WE have called the attention of our readers to the activities of this organization many times. Its leaders are without standing at Albany, in fact they seldom go there. Therefore, their claims that they can help to get beneficial legislation for farmers are nonsensical, and are simply used to get farmers to pay heavy fees for joining which in turn are used to pay the salaries of the officers of the organizations.

For years the Livestock Dealers' Association claimed to be working for higher indemnities for dairy cattle condemned for T.B. We published in AMERICAN AGRICULTURIST letters from state officials showing that the organization never did a thing toward securing such legislation. Their activities would be entirely harmless and we would pay no attention to it were it not for the fact that they do succeed in collecting hard-earned money from some farmers.

Give Farmers the Benefit of Lower Interest Rates

SINCE the Wall Street crash interest rates have been going steadily downward. Money is much cheaper. Banks, including country banks in the heart of farm districts, have been for months reaping the benefits of this cheaper money. But have they passed any of this reduction on to the farmers? Not in any large number of cases.

This publication has constantly stood for farmers doing more business with local banks. It is good business to pay cash for feed and other supplies, and get the cash when necessary at the bank. That is what banks are for, but it is certainly up to the banks to do their part.

Many country banks depend in large measure on farmers for their prosperity. It is therefore their responsibility to build up and maintain the prosperity of the surrounding agriculture, and also to show a kindly attitude to farm people and a sympathetic interest in their problems.

Many country bankers do this. Others seem intent only in collecting farm cash and investing it in city business.

Reducing interest rates on farm loans is one definite, immediate way by which bankers can serve the agriculture of their community.

Russia and the Wheat Situation

THE newspapers have contained many articles recently regarding the efforts of the Russian Soviet government to sell wheat short (that is wheat not actually owned) on the Chicago Board of Trade for the purpose of further depressing wheat prices. It is also reported that much more wheat is being exported by Russia than in former years, thus further lowering prices.

There is probably truth in these reports but whether there is or not, American farmers may as well make up their minds that competition in the world's food markets, particularly with grain, is going to become a serious factor. For thousands of years Russian peasants have farmed with crude tools and hand labor little better than the methods of Moses' time. Then suddenly the Soviet government gets busy with its farming as it has with all the rest of its social and economic life. It forces the small landholders to combine their farms into large tracts to be farmed collectively and by the use of power machinery under the direction of government experts. Incidentally, some of these experts and much of the machinery have come from the United States.

Some of these collectivized farms are around a million acres in area, containing some of the most fertile soil in the world. The individual peasants or farmers belong to a sort of production, compulsory, cooperative association. They work for wages and after other expenses are met, the profits, if any, are supposed to be divided equally among the members.

It is reported that some of the larger farmers who objected to the scheme were summarily stood against a wall and shot. The Soviet government does not do things by halves. This new plan of farming, ages ahead of the old methods is bound to have an effect upon world production and markets. Talk about making two blades of grass grow where one grew before, new methods and new machinery applied to Russia's millions of acres of fertile soil will make at least 16 blades grow where one grew before. The peasant himself will probably eat a little more food and a little more wheat than he did in the old days but some of the increased supply will certainly be exported into world markets already overloaded. Russia has always been a large exporter of wheat. Before the World War she exported about 162,000,000 bushels of wheat annually as against America's 100,000,000.

In the light of these facts, therefore, we thoroughly agree with Chairman Legge of the Federal Farm Board when he says that the sooner American farmers cease to be exporters of wheat the better will be the whole farm situation.

Says Farming the Greatest Industry

I have followed the industry of agriculture all my life and I believe it is the greatest industry in the world, the chief source of all living.

We are living in a progressive age and the methods of agriculture must progress. Much indeed, has been done to bring agriculture on a footing equal to the other industries and there is much more to be done. This can be accomplished through farm bureaus, our agricultural departments, the press and particularly farm papers such as the AMERICAN AGRICULTURIST which has been in my family for many years. Furthermore, it can only be accomplished by electing and appointing men who have the welfare of humanity at heart.

—ARTHUR BOICE, Master Farmer, Class of 1929.

WE are taking the liberty of passing on to you Mr. Boice's letter because of its expressed hope for the outlook for agriculture. Here is a man who has made good at farming,—for one reason, perhaps, because he likes it.

No one knows the trials and tribulations of farming better than a man like Mr. Boice who has spent a long lifetime at it, and when such a man still says that farming is one of the great occupations of the world, there must be something to it. He well knows through hard experience that few men ever get rich in farming. But he also knows as he stands near the close of the day and not so far from the "End of the Road" where all things are measured for their true worth, that the chances of being reasonably happy in farming are just as good as in any other occupation.

Eastman's Chestnut

IN a visit recently with a friend of mine, we were talking about a man who was "land poor" because he owned several worthless hill farms from which he received no income and for which he had to meet regular and sizeable tax bills.

"This man", said my friend, "reminds me of a Kansas farmer who in spite of the fact that he owned two farms, nearly starved to death on them, and finally leaving them in disgust he started east on foot without a cent of money. Afterwards he told the story of how on this trip he traded the deed to one of these farms for a meal of vittles and a night's lodging.

"What happened", said the man to whom he was telling his story, 'to your other farm?'

"Well," said the Kansas farmer, 'the poor fellow with whom I stayed all night could not read nor write, so I slipped the second farm in the deed with the first one!'

“The Proof of the Pudding—”

What New York's New Tax Saving Laws Mean to Your County

IN a recent speech Dr. C. L. Stewart, professor of Agriculture and Economics of the University of Illinois, said that New York led the nation in the largest number of new laws for the benefit of agriculture. “New York, said Dr. Stewart, “has not only placed a great deal of agricultural legislation on the books, but some of it is very far-reaching and especially deserves to be studied by leaders in other states.”

Dr. Stewart was referring to laws passed mostly during the last two years by the New York State Legislature, chiefly to improve roads and schools, and especially to relieve the heavy burden of farm taxation. Much of this legislation was the result of the work of the Agricultural Advisory Commission which was appointed by Governor Franklin D. Roosevelt, one of his first acts even before his inauguration because of his desire to help agriculture. But all of the new farm laws were finally put on to the books by the splendid cooperation and teamwork of the farm organizations and other leaders in the state and by the State Legislature. Politics, personal aggrandizement, and selfishness were laid aside while all worked for the good of the rural districts.

American Agriculturist has been very enthusiastic about this legislation from the start, but there have probably been many farmers who have thought it too good to be true, many who have been fooled many times before and who therefore were hard to convince that these laws amounted to much.

However, “the proof of the pudding

is in the eating.” What have these laws done for the taxpayers of your county? Much of this legislation has been working for some time and some apportionments of the new state money for rural districts have been made so that some actual results in dollars and cents can already be measured. You will find in the table on this page, one of the most interesting sets of figures you have ever seen, interesting because they mean actual savings to you. Apportionments from the state and savings for each county which either have resulted or will soon result from these new laws are shown in the table. You can see the results for your own locality.

In the first column is the name of your county. You will remember that one of the new laws passed was the gasoline tax law. All of us interested in the welfare of agriculture insisted that a fair proportion of the receipts from this law should be paid back to the counties for road purposes. In the second column you will note what your county has already received from the state from the gas tax. Think what this one item will mean in giving you better roads, and in cutting down your county road taxes.

Until recently every county was obliged to pay 35% of the construction of new state highways within the county and for building bridges on these highways, but Governor Roosevelt's Commission recommended, and the Legislature passed, laws requiring the state to take over the county's share of building these new highways and bridges. In the third and fourth

columns in the table, note what your county has saved on these two items alone.

Formerly the towns and villages were also required to contribute toward maintaining state highways. A new law did away with this putting the burden on the state instead of on towns and villages. The combined saving on towns and villages in your county on this item is shown in the fifth column.

American Agriculturist has for years stood for the elimination of the direct state tax on real estate. The State Legislature finally passed such a law and the saving to your county on this item is given in column 6.

Another burden which if allowed to continue, would nearly ruin some counties and farmers, was the law requiring the county to pay 10% of the cost of eliminating grade crossings. A new law reduces this 10% to 1% and the saving to your county is shown in column 7.

No state in the union has in recent years passed more constructive or helpful legislation for rural schools than has New York. Under the leadership of Governor Roosevelt's Agricultural Advisory Commission, state aid to one room rural schools was increased \$2,050,000 a year. Small village schools having up to five teachers are also receiving a million dollars a year more of state aid. These tremendous increases in state help are cutting school taxes now in hundreds of districts right in half, and at the same time are giving rural people better

schools. The additional help for the schools of your county is shown in column 8.

Mention should be made also, in connection with the new school legislation, of the central school act. Nearly a hundred such large central districts have been laid out at the request of farm people, and these districts are going a long ways toward solving the problem of better school facilities for country boys and girls.

The dirt road problem of the farmer was not forgotten either. When the new farm relief laws were being formulated last year an amendment to the town road law was secured which in many cases will reduce the farmers' taxation for town roads more than half. The richer towns of the state were not helped by this legislation. If you live in towns where savings were made by this increase in state aid to poor towns for dirt roads you will find the total saving for this purpose for your county in the next to the last column. In an early issue we will review some other new farm laws recommended by Governor Roosevelt's Commission and passed by the Legislature. These do not bear directly upon the tax problem but they are extremely important to farmers.

So taken altogether, we think you will agree with us after studying this table and the entire fine program of new legislation, that New York State is not unmindful of its agricultural problems and that it is making a sincere effort to improve conditions in the rural districts.

County	Apportionment for one year of county's share of Gasoline Tax receipts	Saving by eliminating county from paying 35% toward expense of highway construction. Annual average for ten year period	Saving by eliminating county from paying 35% toward expense of highway bridges. Annual average for ten year period	Saving by relieving towns and villages of their contribution to State highway maintenance	Saving by eliminating direct state tax on real estate	Saving by reducing county's share of eliminating grade crossings from 10% to 1% Annual average for ten year period	Increased state aid for rural education	Increased state aid for town (dirt) roads for fiscal year ending June 30, 1931	Total savings in taxes to county
Albany	\$ 67,585.62	\$ 40,400.00	\$ 57,400.00	\$11,937.65	\$168,092.98	\$ 52,839.00	\$ 27,950.57	\$ 2,875.80	\$ 429,081.62

*Figures designated with an asterisk indicate decrease instead of increase.

*a book
of interest to
every farmer*

THE new booklet "Permanent Farm Construction" is a practical working manual on farm concrete. It tells how to use concrete for barns, granaries, silos, septic tanks, and every structure required on the modern farm. Detailed suggestions for mixing and placing concrete are given, together with a large number of useful photographs and diagrams.

With this book as a guide, any farmer can make many profitable improvements on his farm at small cost. A free copy will be mailed to you upon request.

RED RASPBERRIES

*The most delicious of small fruits
Plant this fall, pick berries next summer*

VIKING
New Red
RASPBERRY

Berries large, firm, quality good, very productive, ripens early, brings highest price on market. Perfectly hardy in temperature of 35 below.

All orders will be filled with plants, guaranteed true to name, certified free from disease, from the originator's farm, Prof. F. C. Reeves, Canadian Horticulturist, Prince Edward Island.

Send for Catalog and let us tell you more about this splendid variety that leading Farm papers and Experimental Stations have referred to so favorably.

Good strong plants, well rooted. \$1.00 per dozen. \$8.00 per 100, 25 or over at 100 rates.

How Apple Varieties Originated

IT is always interesting to know the origin of different crops. At the New York State Horticultural Society's annual meeting in 1930 a number of varieties of apples were exhibited and histories of each variety were compiled by G. H. Howe of the New York State Agricultural Service Station at Geneva. Following are a few of these brief histories of the more common varieties as given by Mr. Howe:

ALEXANDER—Brought to England from Russia in 1817. Introduced to America prior to 1830. This typical representative of Russian apples has been widely disseminated from the Atlantic to the Pacific during the past 75 years.

BALDWIN—A chance seedling found about 1740 near Lowell, Mass. Known locally as Woodpecker, until Col. Baldwin distributed it in eastern Massachusetts about 1784. Little known in New York prior to 1850 but rapidly disseminated thereafter. A leading commercial variety in this State since 1875.

BEN DAVIS—Origin unknown. Tennessee, Kentucky, and Virginia variously credited with its origin at the beginning of the 19th century. Disseminated before the Civil War through the southern, central and Southwestern states. Widely distributed through the United States during the last 50 years.

CORTLAND—Of all the apple seedlings originated at the New York Experiment Station, Cortland is best known. A Ben Davis by McIntosh seedling introduced in 1915. In 15 years Cortland has been widely disseminated and is now much sought as a McIntosh type apple to supplement that well-known variety in regions where the latter does well.

DELICIOUS—Found in 1881 by Jesse Hiatt of Peru, Iowa. Called Hawkeye by the Hiatt family and so known locally. Sold to Stark Brothers of Louisiana, Missouri about 1894 and commercially introduced by that firm in 1895 under the name Delicious.

GRAVENSTEIN—Origin in doubt. Some historians believe that it was introduced from Italy to Germany early in the 18th century. Long a common apple in Germany and Sweden and later taken to England whence it came to America more than 100 years ago.

HUBBARDSTON—Originated in Hubbardston, Mass. Considered one of the most desirable varieties known in cultivation in eastern Massachusetts 100 years ago. Widely disseminated in New York. Still of commercial importance, but its displacement by better sorts in the next decade or two is inevitable.

MCINTOSH—Originated as a chance seedling on the McIntosh Homestead, Matilda Township, Dundas County, Ontario, where Allan McIntosh began its propagation about 1870. It is only during the past 25 or 30 years that the variety has attained prominence. Today it is a leading commercial variety in many fruit regions.

NORTHERN SPY—About 1800, Henry Chapin of East Bloomfield, N. Y. secured apple seeds from Salisbury, Conn. and started a seedling orchard from which came the original tree of Northern Spy. For many years the variety was confined to the vicinity of its origin and it was not until about 1840 that it commenced to attract attention in other localities. Extensively planted during the past 75 years not only in New York but in all northern apple-growing regions.

NORTHWESTERN GREENING—Originated in Waupaca County, Wis. Introduced in 1872 by E. W. Daniels. During the past 25 years it has been pretty widely disseminated throughout the northern portions of the apple belt where very hardy trees are desired. Sometime it will be superseded by a better variety.

RHODE ISLAND GREENING—Probably originated late in the 17th century near Newport, R. I. The original tree stood near a tavern kept by a Mr. Green and the fruit so suited the guests at the tavern that many took cions of the variety, calling it Green's Inn Apple, or the apple from Green's Inn. There is no record of its introduction into New York, but it was widely disseminated in the older settled regions of the state during the 18th century. Has ranked as a lead-

ing commercial variety for more than 100 years.

ROME BEAUTY—Found by H. M. Gill-ett, in Lawrence County, Ohio. First brought to notice at the Ohio convention of fruit growers in 1848 as a new variety. Widely disseminated in the leading fruit regions of the United States and still has merit in commercial orchards.

STARK—Supposed to have originated in Ohio. Widely disseminated from the Atlantic to the Pacific and for the past 25 years has been offered by nurserymen in all apple-growing sections of the country. Better adapted to the southwest and west than to New York although it has been planted extensively in this State.

STAYMAN WINESAP—Originated from seed of Winesap in 1866 at Leavenworth, Kansas by Dr. J. Stayman and first fruited in 1875. Attracted no special attention until about 1890, after which it was catalogued by J. W. Kerr, a nurseryman at Denton, Md., and considerably disseminated during the past 25 years. Better suited to the south and southwest than to New York.

TOMPKINS KING—Originated near Washington, Warren County, N. J. probably more than 200 years ago. In 1804, Jacob Wyckoff brought grafts of it to Tompkins County, N. Y. and named it King. The congress of fruit growers at Rochester prior to 1860 added Tompkins County to the name to distinguish it from other King apples, and it has often been called the King of Tompkins County. During the past 75 years it has been widely disseminated through the east and central states, where it is still considered of commercial merit.

WAGENER—In 1791, George Wheeler brought a quantity of apple seed from Dover, Dutchess County, N. Y. to Penn Yan, Yates County and sowed them in his nursery. In 1796, Abraham Wagener, from whom the name is derived, bought the seedling nursery and planted trees from it on his place in Penn Yan. In 1848 the old tree was producing annually abun-

dant crops. It has long been offered by nurserymen throughout the country for more than 75 years.

WEALTHY—Peter M. Gideon, Excelsior, Minn. raised this variety from seed, said to have come from the cherry crab which he obtained about 1860 from Albert Emerson of Bangor, Maine. It has been extensively disseminated and has been listed by most nurserymen for 50 years.

WOLF RIVER—Originated a good many years ago by W. A. Springer near Wolf River, Fremont County, Indiana, about 1876, hence its name. In 1881 the name appeared in the catalog of recommended fruits of the American Pomological Society. Since that time the variety has been pretty generally disseminated and is still considered of commercial importance.

Peach Moth Parasites Distributed

NEARLY a year ago we published an article giving the results of some experiments done by D. M. Daniel on the use of parasites to control the oriental peach moth. Professor Daniel now reports that one of the chief occupations of the Entomology Division of the New York State Experiment Station during the past winter and spring has been the rearing of these peach moth parasites. About the first of July these parasites were released in large numbers in infested peach orchards. In some of the larger peach areas as many as 40,000 of these parasites were released per acre.

The peach moth first made its appearance in New York in the Hudson River Valley where it has been established for several years. It is a particularly injurious pest because it has the unusual habit of discarding the first two or three mouthfuls of food which it takes from the fruit, so that poison has little or no effect upon it.

King Losing Favor

Why is it that so fine a variety as the Tompkins County King seems to be losing out on the market?

APPARENTLY the biggest handicap which this variety has had to overcome is some susceptibility to blight and collar rot as well as rather poor keeping qualities.

Do You Like Your Parsnips Buttered?

(Continued from Page 3)

and Rule 243, "Top icing," as to what and when certain commodities should be billed under these headings would account for no small portion of the saving; studies on watermelon loading and effect of fertilizer and climate on their inherent carrying qualities; taking up slack in citrus cars and other perishables. Figuring from the standpoint of a perishable inspector, the savings should go up to a couple of million or more, if they will only get men who are good salesmen, i.e. men who can sell their ideas and investigations to the producers.

But we don't have to go down south to save money in marketing. Take Pennsylvania for instance. Scab was pretty bad in most peach orchards there in 1929. In the cars inspected at one terminal it ranged from negligible to 85 per cent scabby peaches. The average for all cars was close to fifty per cent. A peach of a study could be made by some marketing expert comparing market demand for scabby and non-scabby peaches; those picked too green and those picked too ripe as compared with those picked just right and in good prime condition. If those Pennsylvania growers had a few honest-to-goodness facts about this, they would sleep in 1930 with one eye peeled for old man Scab and hand him a big dose of spray when it looked as though he was just around the corner.

Now I am not picking on Pennsylvania, but in one form or another the same is true to a greater or less degree in nearly all our states. Not all Pennsylvania peaches showed scab. Some cars ranged from negligible to occasional; some a few and some a whole lot. Don't think for a minute the grocer paid the same for a basket with an occasional scabby peach as one containing fifty to seventy-five per

cent scabby. Perhaps the commission man did, because he bought them F. O. B. but what about his reaction in 1930 if he lost money in 1929?

But one could not find the marketing experts, if all the states suddenly decided to have some one look after their own interests. The transportation end is a particularly difficult thing to figure out unless one has had some experience in it. There are the U. S. Department of Agriculture food product inspectors and those railroad inspection agencies where the men are all agricultural college graduates. These men see thousands of misfit cars of fresh fruits and vegetables and are the logical ones to fill such positions. A layman is of little use, even though he is an expert grower and an accurate statistician, for he cannot accurately analyze the cause for the losses seen every day in the large terminals. It is these losses caused by ordering the wrong kind or service; using the wrong kind of container; the wrong size or kind of nail; improper loading or nailing; improperly protecting against heating and freezing that needs experienced eyes.

If the agricultural college did these things there would be "more parsnips buttered" than is the case at present. Then each "ag." college would be completing its part in "proper production" which has been defined as the "economic production of a desirable article and its delivery to a satisfied customer." Well, are we going to sit back and take it as easy as we can and keep on grumbling about things not being what they should be—or are we going to get behind and boost our particular agricultural college to get those additional appropriations, so we may market our goods to better advantage and "butter more of our parsnips?"

The Firestone Dealer Will Save You Money

BY TAKING immediate advantage of the low prices now being quoted by the Firestone Dealer in your community, you can save money on tires. He has joined with Firestone in cutting costs—reducing his overhead and selling expenses—and because of the large volume of

PATENTED

business which he does at a very small profit per sale, he is able to sell you for less money.

Firestone's lower manufacturing and distributing costs permit substantial savings which are passed on to you through Firestone's 24,000 dealers who get their tires direct from nearby Firestone warehouses. This vast army of Firestone Dealers are always on the ground and are equipped to give the kind of service that motorists need and deserve.

Double Guarantee

Every Firestone Tire bears the name "Firestone" for your protection and is fully guaranteed by us and the dealer who sells it. Added to this is the fact that Firestone Tires hold all world records on road and track for speed, safety, endurance and mileage.

Know Exactly what you buy

Your Firestone Dealer will show you cross sections of Firestone and other tires. You can easily compare construction and value and recognize Firestone advantages.

Reviewing the Latest Eastern Markets

Milk Prices

Dairymen's League prices are based on
milk testing 3.5%. Sheffield on the basis
of 3%.

	Class	Dairymen's League	Sheffield Producers
1	Fluid Milk	3.37	3.17
2	Fluid Cream		2.00
2A	Fluid Cream	2.16	
2B	Cond. Milk		
3	Evap. Cond.	2.41	
	Milk Powder		
	Hard Cheese	2.00	1.80
4	Butter and American Cheese. Based on New York City Market quotations on butter and American Cheese.		

The Class 1 League price for October 1929 was \$3.42
for 3.5% milk and Sheffield's \$3.22 for 3%.

The above prices in each class are not the final
prices the farmer receives. The final price received from
the dealer is the result of weighed average.

Butter Market Irregular, Unsettled

CREAMERY SALTED	Oct. 3, 1930	Sept. 26, 1930	Oct. 4, 1929
Higher than extra	40½-41	40	40½-46½-47
Extra (92 sc.)	40	39½	46
84-91 score	33½-39½	33½-39	40 -45½
Lower Grades	31½-33	31	33 -39½

It is absolutely impossible to interpret
any trend in the butter market as the
first week of October comes to a close.
Trade has been quiet and an irregular
and unsettled undertone has been con-
stantly in evidence. There is a very un-
certain feeling about the future market
and this is having a marked effect on the
sentiment of the trade. In spite of the
fact that the statistical condition of the
market is fundamentally sound, never-
theless, the trade is noticeably nervous.
Pessimistic opinions expressed through
the columns of the daily papers are not
helping matters.

As the week comes to a close fresh
butter holds firm and in some quarters is
short of requirement. The trade prefers
to maintain steady prices and keep stock
moving rather than shove prices up only
to have them break. There is a vast
amount of storage butter being used and
withdrawals continue on a liberal scale.
Many butter users are piecing out their
requirements with the fresh make. If the
price of fresh butter were to be jumped
we would see a greater use of storage
butter. Holders of butter are making
money on the present deal. Their profits
are small but they are satisfied with them
and are making most of the opportunity.
It is believed that if prices were forced
higher consumption would be seriously
interfered with. As it is now the butter
market, in spite of the nervous under-
tone, is going ahead.

As September came to a close the four
main cities had about five million pounds
of butter short of their holdings at the
same time a year ago. A year ago the
holdings were in excess of 1928 by ap-
proximately ten million pounds.

Fancy Cheese Higher

STATE FLATS	Oct. 3, 1930	Sept. 26, 1930	Oct. 4, 1929
Fresh Fancy	20½-22½	20½-22	25½-26½
Fresh Average			
Held Fancy	24	26	27½-29½
Held Average			

Fancy fresh, New York State flats have
advanced to the point that they are now

selling on par with June specials, namely
at 22½c. The trade has been quiet but
there is a steady holding of fancy quality
fresh cheese. Country costs have been
fully maintained and the situation has
been steady. Storage stocks in the ten
cities making daily reports were approxi-
mately 1,500,000 pounds short of the hold-
ings at the same time a year ago. At the
same time, withdrawals from the storage
houses in the same cities are in excess
of last year's withdrawals. As the week
comes to a close the market holds its
firmness and there is just enough
strength to the market to lead us to ex-
pect a continued upward trend.

Egg Market in Bad Shape

NEARBY WHITE Hennery	Oct. 3, 1930	Sept. 26, 1930	Oct. 4, 1929
Fancy Jersey, incl. premium		47-48	
Selected Extras	43-48	40-46	61-66
Average Extras	37-41	35-37	55-60
Extra Firsts	29-33	29-32	47-53
Firsts	27-28	27-28	40-45
Undergrades	25-26	25-26	38-39
Pullets	22-24	24-26	38-43
Pewees	20-21	20-23	28-33
NEARBY BROWNS			
Hennery	34-44	32-41	53-60
Gathered	26-33	25-31	38-52

The egg market, both present and
future, is in bad shape. However, nearby
producers can thank their lucky stars
that they are not delivering eggs to the
future market. Futures have broken all
low records for the year selling as low
as 22½c. The best nearbys including pre-
miums are bringing 50c, approximately
16c under what they were a year ago.
The situation is bad and calls for heroic
efforts on the part of all elements in
the trade. The trade feels the necessity
of bargain drives on refrigerator eggs in
order to broaden outlets and speed up the
withdrawals from storage that have been
dragging behind a year ago. It is report-
ed on the street that a number of cars
of eggs are to be shipped to England and
that more business is expected in that
direction. Certainly the trade needs some-
thing to bolster it up.

Nearby whites of strictly fancy quality
and large size have been in somewhat
lighter supply and closed firm. Smaller
sizes and less desirable lines of fresh
eggs are meeting severe competition from
the storage market.

Live Poultry Market in Better Shape

	Oct. 3, 1930	Sept. 26, 1930	Oct. 4, 1929

GEES	19-26	18-26	45-50
DUCKS	18-19	-16	22-30

The live poultry market is in better
shape than it was a week ago. Slaughter
houses reported good clearances after the
holidays. The last few days of the week
ending October 4 found buyers taking
hold fairly well to obtain their supplies
for Sunday and the Feast of Tabernacles
which holiday begins at sundown Octo-
ber 6. There were plenty of fowls avail-
able but the undertone of the market was
unquestionably very healthy. The market
was in the best shape that it has ex-
perienced in several weeks. Leghorn fowls
were the only ones that were not enjoy-
ing the situation. Chickens hold up ex-
ceedingly well and ducks and geese show
improvement. Colored fowls and colored
chickens arriving by express have easily
brought premiums where they showed
class and extra fancy quality.

Meats and Livestock

CATTLE—Steady. Two loads low good
grade at \$9.75; mediums \$9.00-9.50; plainer
kinds \$8.50. Cows and Bulls scarce.

VEALERS—In light supply, steady.
Good to choice \$12.00-14.50; mediums \$9.50-
11.50; cull and common \$6.00-9.00. Small
lot of southern \$10.00.

HOGS—Steady. 160-220 pounds \$10.25.

LAMBS AND SHEEP—Two loads of
lambs at \$9.50, only offerings. One load
Ohio wethers averaging 100 pounds at
\$4.25. Ewes nominal.

COUNTRY DRESSED CALVES—Re-
ceipts all through the week were liberal.
Trading was slow in early part, improv-
ing at end. Supply was too great and top
prices declined. Market was not cleaned
up at close and prices were barely steady.

Some extra fancy sold at premiums.
Fresh receipts per pound: Choice 17-18c;
fair to good 14-17c; small to medium
10-14c.

LIVE RABBITS—Receipts all the week
moderate, but slow sales caused accumu-
lation. Prices were irregular and market
weak. Per pound by the coop, 10-15c.

Hay Closes Firmer

Hay receipts were liberal during the
early part of the week ending October 4.
At that time trade was slow and the
market was very draggy. At the first of
of the month the demand made a jump
and this, plus slackened week-end re-
ceipts shoved, the price level up \$1 per
ton. Strictly No. 1 straight timothy has
been scarce and stocks are well cleared.

Barnyard Golfers Take Notice

ONE of the horseshoe pitchers
who took part in the American
Agriculturist-Farm Bureau state-
wide tournament at the recent
state fair brought a fine little
case in which to carry his set of
horseshoes. Unfortunately, he
neglected to take it with him af-
ter the tournament. It was turned
in to the American Agriculturist
representative and is now in the
A.A. office at 461 Fourth Ave.,
New York City. We do not know
who the owner is but if he will
let us know we will be glad to
return the case to him.

Most of the arrivals are No. 2 down to
sample. New invoices indicate light ship-
ments which leads us to expect an up-
ward trend. The market closes with a
steady and firm undertone. Straight tim-
othy sold from \$20 to \$29 depending on
grade with mixtures generally \$1 under
the quotation for timothy. Oat straw \$13,
rye straw \$14.

Feeds and Grains

FUTURES	Oct. 3, 1930	Sept. 26, 1930	Oct. 4, 1929
(At Chicago)

43% C. S. Meal	37.00	49.50
34% O. P. Linseed Meal	40.50	56.00

The above quotations taken from the weekly feed
letter of the N. Y. S. Dept. of Agr. and Markets are
for straight carlots, f.o.b. Buffalo. Prices on mixed
cars and less than carlots are higher. Consult your local
freight agent for freight rates to your station.

Wool

The wool market has been slow. New
York better fleece wool, unwashed, fine
per pound, 21-30c; ½ blood 23-30c; ¾ blood
24-29c; ¼ blood 24-30c; low quarter blood
25-27c; common and braid 23-25c.

Advertising Eggs

The Merchantile Exchange, New York,
is raising a fund to be used to advertise
eggs this fall. The goal has been set at
\$20,000 and then a three-months adver-
tising campaign will be worked out to
stimulate the consumption of eggs. Help
from western shippers and storage
houses is expected to bring up the total
amount necessary to start the campaign.

The limestone and superphosphate
treatment at the Virgil experimental
field, Cortland county, has given nearly
two tons of thoroughly cured hay
this year. One ton of limestone and
600 pounds of superphosphate were ap-
plied for silage corn in 1928. Untreat-
ed land in the same experiment yield-
ed at the rate of 500 pounds of poor
quality hay to the acre.

THE HOOD RED BOOT

For long wear .
real protection .
solid comfort

COLD, grey days—drizzling rains—ground inches deep in mud and icy water—that's when you need real foot protection.

The Hood Red Boot will keep your feet dry and warm even though you have to work all day in mud and water. Heavy duty grey tire tread soles with big, wide extension edges for extra wear. Uppers of that special quality velvet finish red rubber that only Hood knows how to make—non-cracking, non-checking, long wearing.

From top to toe the Red Boot fits perfectly. There is plenty of room for the foot but a snug grip at the heel eliminates slipping or chafing. It will give you foot service, foot comfort and foot protection in all sorts of weather and under all conditions of hard wear. You can identify the genuine Hood Red Boot by the yellow arrow on the back.

Hood makes a complete line of boots, arctics and rubbers for every member of the family—for all work and dress occasions.

THE HOOD RED BOOT will give you maximum service, comfort and protection under the hardest conditions of wear in mud and water.

DODGE BROTHERS

A DEPENDABLE EIGHT NOTED FOR ECONOMY

Both town and country owners of the Dodge Eight-in-Line find it a truly economical motor car. » » It has the day-in-and-day-out dependability so typical of all Dodge cars. It requires little in attention or maintenance; delivers its smooth, vigorous power with surprisingly low fuel and oil consumption. » » The safe, silent Mono-Piece Bodies are squeakproof, rattle-

proof, exceptionally roomy and comfortable. The internal hydraulic brakes need no lubrication or equalizing adjustments. » » In economy as well as in power and masterful performance, the Dodge Eight-in-Line is a sound choice for those who ask much of a motor car. Get

behind the wheel and learn at first hand how much it offers at its surprisingly low price.

OUT TO MAKE NEW MILEAGE RECORDS

The Dodge Eight Mileage Marathon car is continuing day after day on its hard grind back and forth from coast to coast—piling up mile after mile in all sorts of going to establish new facts and figures about Dodge dependability and long life.

DODGE SIX, \$835 TO \$935—DODGE EIGHT-IN-LINE, \$1095 TO \$1145, F. O. B. FACTORY

Dodge Eight closed cars are factory-wired for immediate installation of Transitone—pioneer automobile radio. Other models will be equipped on order. Ask for a demonstration.

Farm News from New York

Two Political Parties Hold Conventions and Adopt Platforms

THE big news developments since we last went to press were the meetings of the Republican and Democratic political conventions for the nomination of state officers, and the statement of party principles in the platforms.

The Republican convention was held in Albany, September 26th and 27th, and nominated the following for the consideration of voters at the coming election this fall: For governor, Charles H. Tuttle, of New York; for lieutenant governor, Caleb H. Baumes of Newburgh; for comptroller, Daniel H. Conway; for attorney general, Isadore Bookstein of Albany; for associate judge of the Court of Appeals, Cuthbert W. Pound of Lockport.

Mr. Tuttle is the former United States District Attorney for the Southern district of New York and has made a name for himself in the vigorous prosecution of Federal cases. Shortly before his nomination he made a vigorous statement putting himself on record as against prohibition and calling for its repeal. Mr. Tuttle was therefore nominated on a strong wet plank, the first ever adopted by the Republican party of this state, and if elected, Mr. Tuttle has committed himself to do what he can for the repeal of the Eighteenth Amendment.

Mr. Baumes Republican nominee for lieutenant governor made himself famous by working for the legislation which bears his name, for longer and more severe terms for criminals.

The Democratic convention was held in Syracuse September 28th and 29th. Governor Franklin D. Roosevelt of Hyde Park was renominated for another term, and Herbert H. Lehman, present Lieutenant Governor was renominated, as was Maurice S. Tremaine of Buffalo for Comptroller. The Democrats named John J. Bennett of Brooklyn to run for the office of attorney general. Cuthbert W. Pound was nominated by both the Republican and the Democratic parties as associate judge of the Court of Appeals. The Democrats also adopted a strong plank for the repeal of the Eighteenth Amendment. Much of the speeches made at both the Republican and Democratic conventions were devoted to criticisms of the opposite party. This is supposed to be good politics, but we believe thinking people feel that such political hokum is obsolete.

Following the announcement of the Republicans calling for the repeal of prohibition, leaders of the Anti-Saloon League and of the W. C. T. U. together with some other Dry leaders announced that the Drys of the State would not stand for the Republican party or any other party which ran on a Wet platform, and a new party was therefore organized called the Law Enforcement Party with an open law book for an emblem. Professor Robert P. Carroll of Syracuse University was named as candidate for governor for this third party to oppose the repealists in the State campaign.

In the following paragraphs we are giving you the planks of both the Democratic and the Republican platforms that are of special interest to rural people. As with the speeches, the platforms also were taken up with criticisms of the opposite party. So far as we could without destroying the meaning we have omitted these from the following summaries:

Summary of Republican Platform

Water Power

We promise a speedy solution of the problem of developing the water power resources of the state which shall be based on sound economic principles rather than on political expediency. We desire to attract new industries, to create employment for our steadily increasing population and to supply electrical power at the cheapest possible rate to manufacturers, householders and farmers.

At the last session of the legislature the Republican majority, on its own initiative, did what it could to take this

vexatious question out of politics by authorizing the Governor to appoint a commission of his own selection to make a thorough study of any plans of water power development that have been or may be proposed. This commission must report before Jan. 15 next.

Unemployment

We recognize that the best assurance against unemployment is the preservation of industry in a healthy and prosperous condition. We are unalterably opposed to any system of a dole such as demoralizes industry and labor in other nations. Experience has there demonstrated that such a system puts a premium upon idleness, vastly increases the burden of taxation and raises the cost of living. We pledge aid to encourage employers and employees voluntarily to lay aside a portion of the income earned in days of prosperity for use in days of unemployment.

State Hospitals

We pledge continuance of our efforts to make adequate provision for the unfortunate wards of the state and we support the proposed bond issue for that purpose to be submitted to the people for approval at the forthcoming election.

Public Buildings

We pledge the expeditious completion of all public building which has been authorized.

Agriculture

During the last two years the legislature has enacted measures to relieve the unfair burden of taxation hitherto borne by the farmers of the state and otherwise assist them in their basic industry. We pledge our support to further measure to promote co-operative marketing with a view to securing for the agriculturist a greater return for his labor and further to assist in solving the problem of farm relief. We approve such measures as are necessary and reasonable to preserve the markets of New York State for the farmers of New York State.

Public Highways

The Republican Party pledges itself to extend and improve the state highway system. Dirt roads, which are important links in the transportation of farm products to the markets, are wholly inadequate and we shall favor liberal state aid for their reconstruction and improvement. We pledge ourselves to facilitate the prompt elimination of all dangerous grade crossings.

Public Parks

We pledge ourselves to make adequate provision for the development and maintenance of the state parks for the greatest satisfaction and enjoyment of the public.

Reforestation

The Republican Party has initiated a program for the reforestation of millions of acres of abandoned farm lands in the state. We pledge the continuance of this program and support for the proposed constitutional amendment dealing with this subject.

Taxation

The Republican Party pledges itself to equalize the burden of taxation in this state. A commission has already been created to make a thorough study of this

subject, and we shall do everything in our power to carry this work forward as rapidly and thoroughly as possible.

Public Health and Education

We pledge ourselves to take all necessary measures to safeguard the public health and to continue to strengthen wherever possible the educational system of the state.

Welfare

Conspicuous among the important welfare measures passed during the last two sessions of the legislature are: The public welfare law, the child marriage, the anti-loan shark, old age security and prison reform laws. We pledge our continued support to measures dealing with these and other similar problems.

Prohibition

To this end we favor the repeal of the Eighteenth Amendment, providing that simultaneously and as part of the new amendment a provision is adopted outlawing and forbidding everywhere in the United States the saloon system and its equivalent, the private traffic in intoxicating beverages for private profit, and, further, guaranteeing federal co-operation and assistance to states which have prohibition in whole or in part.

* * *

Summary of Democratic Platform

Relief of Unemployment

We pledge creation of a commission to make a scientific study of unemployment in the state, including employment exchanges, unemployment insurance by a contributing fund and not by a dole method and employment stabilization through advance planning and proper timing of public construction so as to take up the slack of private industrial activity. The commissions shall make such recommendations for remedial legislation as it deems appropriate.

Farm Relief

The Grundy super-tariff has crippled agriculture. It has added to the cost of everything the farmers buy. They have not been enabled to dispose of their surplus products. Agriculture in the nation is in greater distress than it was before the so-called aids to agriculture were adopted.

In striking contrast. Governor Roosevelt in the State of New York, by reason of his practical knowledge of agricultural problems and close sympathy with the needs of the farmer, has forced a comprehensive plan of farm relief unprecedented in the history of the state.

His action of the last two years is the best augury for the future. We pledged continued support of agricultural, educational and experimental institutions of the state; a scientific study of the spread between the price that the farmer receives and the consumer pays, and the development of a modern marketing system to reduce this spread; continued support to farmers' cooperative marketing and buying associations; adequate appropriations for the fight against bovine tuberculosis, including the re-testing of accredited herds at the expense of the state; better improved rural school facilities, improved farm to market roads, and provisions for rural health service;

Fishkill Farms Has Surplus Stock Sale

THE sale of surplus registered Holsteins staged by Henry Morgenthau Jr. at Fishkill Farms, Hopewell Junction, New York, on September 27, averaged just about as anticipated. A fair sized crowd assembled early and enjoyed the light lunch served by the ladies of the Wiccopee Grange. The weather was ideal and the location of the sale, adjacent to a beautiful little lake, completed the picture. Twenty two animals were brought into the ring, including cows, bred heifers, a yearling bull and several bull calves.

Fishkill Sadie Vale Colantha Inka, a daughter of Dutchland Colantha Sir Inka, topped the sale for cows at \$230. There were a number of bred heifers sired by King Piebe the 19th that brought good prices.

Fishkill Colantha Dichter Piebe, a yearling bull sired by King Piebe the 19th, and out of Fishkill Dichter Colantha Inka, she being a 30 pound

daughter of Dutchland Colantha Sir Inka, was the "buy" of the sale. A very prominent Holstein breeder of southeastern New York, who was an interested spectator at the sale, addressed the crowd on the quality of this bull. He made the statement that the dam of this bull was one of the finest Holstein cows in eastern New York. It is seldom that such high quality stock is offered at a surplus sale.

It is very evident, according to one authority at the sale, that farmers are buying very cautiously, scanning the animals and their pedigrees most carefully and bidding up by small amounts. A number of dairymen were interviewed before the sale and they all expressed the opinion that the dairymen were better off than most farmers. That the drought was a blessing in disguise but the situation is such that everybody has got to watch their p's and q's very closely.

rural farm electrifications and adequate appropriations for a state inventory of agricultural resources and a reforestation of marginal lands.

Prohibition

The Democratic party in the State of New York demands the repeal of the Eighteenth Amendment and the Volstead act.

We advocate restoration to each sovereign state of the fundamental right to determine for itself whether alcoholic beverages may be manufactured, sold or transported within its borders.

Following the repeal of the Eighteenth Amendment, the Democratic party of the State of New York pledges the adoption of such regulatory measures by and in our state as will promote temperance, definitely and effectively banish the saloon and recognize the principle of home rule in all localities.

Water Power and Regulation of Public Utilities

Electrical energy should be developed by the state from the water-power resources in order to insure low-priced electricity.

Municipalities should be given the right to construct and operate public utility services upon the approval of the people within their borders, so that public competition may insure fair rates.

Interference by the Federal courts with the regulatory powers of our Public Service Commission should cease.

The Public Service Commission should be an active, vigilant protector of public interests; its efforts should be directed toward obtaining fair rates and adequate service.

Education

We pledge adherence to the Democratic policy of improving public education, both rural and urban, and payment of adequate compensation to teachers in the public schools.

Parks and Recreation

The Democratic party is proud of its accomplishments in making available to vast numbers of people of the state great areas on the shores of Long Island and throughout the state for park and recreation purposes.

We pledge the completion of the statewide park and parkway system inaugurated by Democratic state administrations and resistance to all attempts to impair any part of our public forest reserves.

State Hospitals

The state hospitals for the care of the insane are overcrowded to a point where it is difficult for the state to give proper medical aid to our unfortunate wards. A Democratic administration instituted a program of hospital relief, and we promise to carry it to a successful conclusion. To that end we pledge ourselves to a vigorous campaign for the adoption of the bond issue to be voted on this fall to provide for more adequate hospital facilities.

Motor Vehicle Accidents

We recommend the appointment of a temporary commission to investigate the rapidly increasing number of motor vehicle accidents, their relation to delay in the courts and the feasibility of an improved system of compensation for such accidents.

Grade Crossings

We pledge the continuance of the policy inaugurated by a Democratic administration of making speedy provision for eliminating railroad grade crossings.

Editor Ed Looks at Life

IN a recent issue we ran a little note mentioning some changes in W.G.Y.'s agricultural programs. We have just been informed that the feature, Editor Ed Looks At Life, which is prepared by E. R. Eastman, editor of American Agriculturist, will appear Mondays at 12:40 Eastern Standard Time, instead of at 12:45 as previously announced.

A Correction

WE regret the error in the names of the prize winners in the State Spelling Contest in the issue of September 27. Jane Nichols comes from Cayuga County and won fourth prize. Second in the picture was Ethel Baum of Sullivan County who won second prize and fourth was Carol Hallock of Suffolk County who won first prize.

A WONDERFUL FEED

Nothing can equal DRIED BEET PULP

It's the most wonderful supplemental feed known for promoting and maintaining health of animals, thereby increasing milk production in dairy cows and producing rapid profitable gains with beef cattle and sheep.

Yet it does not add to the cost of the ration. It supplements pasture, replaces silage, corn and other carbohydrate feeds. Where hay is short or high priced six pounds of Beet Pulp will do the work of ten pounds of hay, and do it better.

No other feed has such unique health building properties. It is light, bulky, cooling, palatable, laxative. Not only highly digestible itself, it also aids the digestion of other feeds. "Off-feed" days are eliminated.

Low Prices in Effect

Dried Beet Pulp is always profitable to feed but now with the present low prices you certainly should avail yourself of its advantages. Feed it—you'll see immediately how your profits increase.

Dried Beet Pulp which results from the extraction of sugar from beets is the only vegetable feed available in commercial form. Can be delivered anywhere in the United States. Ask your dealer.

With the A. A. Poultry Farmer

Wheat Now Cheaper Than Corn

THE Cornell laying ration is now modified to permit using more wheat, oats, and barley, and to save corn. Forecasts of the United States department of agriculture indicate a corn shortage of nearly eight hundred million bushels this year, due to the drought, so it will be necessary for poultrymen to substitute lower priced grains for corn.

Wheat compares favorably with corn in nutritive value and has other desirable characteristics. It can be substituted to a greater extent than other grains, even to fifty or sixty per cent of the ration. Barley has a lower feeding value since it has more fiber. It can be used in part for wheat but should not make up more than one-third of the ration. Heavy oats, because of higher fiber content should be restricted to not more than twenty per cent of the ration.

If wheat is used in the mash mixture, it should be coarse-ground. On the other hand, barley and oats should be fine ground to reduce the hulls sufficiently. This can be done satisfactorily with a hammer mill.

When corn is replaced by wheat, barley, and oats the vitamin A content of the feed might be too low. To insure enough of this vitamin, make one-half of one per cent of the ration of cod liver oil if the usual formula is modified.

The Cornell laying ration may be modified as follows:

Grain mixture; 600 lbs. wheat or 400 lbs. wheat and 200 lbs. barley, 200 lbs.

cracked yellow corn, 200 lbs. heavy oats. Mash mixture; 200 lbs. flour middlings, 200 lbs. wheat bran, 200 lbs. ground heavy oats or ground barley, 100 lbs. yellow corn meal, 100 lbs. ground wheat, 100 lbs. meat scrap (50 to 55% protein), 100 lbs. dried skim milk or dried buttermilk, 10 lbs. salt and 10 lbs. cod-liver oil. (An extra 100 pounds of ground wheat can be used in place of 100 pounds of wheat bran).

Michigan Hens Win Farm- ingdale Contest

THE egg-laying contest at Farmingdale, Long Island, has just completed another year. The pen of leg-horns owned by W. S. Hannah & Sons of Grand Rapids, Michigan, won the contest with a production of 2,561 eggs. Second place was won by Lone Pine Poultry Farm of Medford, Long Island with a production of 2,349 eggs. Third place went to Codner's White Leghorn Farm of Owego, with a production of 2,290 eggs. Fourth place went to Oak Brook Farm from West Brookvale, New York, with 2,126 eggs. Fifth place went to Acre Farm of Monroe, New York, with 2,154 eggs.

The contest was judged on a point basis, which included size of eggs, as well as number which accounts for the apparent discrepancy in the placing. Inasmuch as each pen was composed of ten birds and the contest ran for forty-nine weeks, it will be seen that

How English Farmers Manage Their Pastures

(Continued from Page 3)

cent European practices I am inclined to the opinion that the next few years will see the virtual abandonment of hundreds of thousands of acres of the poorer portions of our present pastures together with the improvement of the better portions and addition to the grazing land of enough of our present arable land to provide sufficient grazing.

Europeans Recognize that Graz- ing Land Needs Fertilizing

I did not talk with a single European farmer who expected to get along without regularly doing something to enrich his pasture land. (I am speaking now of the better class of pastures such as are used for milking herds and fattening steers and lambs, and of the better class successful farmers.

Phosphoric Acid the Basis of Pasture Fertilization

Every one with whom I talked—scientists, fertilizer men and farmers—was of the opinion that phosphatic fertilization is the one absolutely indispensable treatment which cannot be omitted without utter ruination of the pasture—the sort of a thing like nailing on a loose board now and then or setting a few new fence posts, which may not be particularly profitable in themselves but which simply have to be done in order to avoid a heavy loss.

Unfortunately we in the Hay and Pasture Belt of America have been pretty slow in learning that lesson even with respect to tillage land, to say nothing of pasture land, and as a result have been land which used to carry a cow to the acre or such a matter in the days of our Daddies approach zero in carrying capacity and in value as well.

The pioneer pasture fertilization investigations of Dr. Sir William Somerville at the Northumberland County Experiment Station at Cockle Park in England, which were begun in 1897 and which are still carried on, are entitled to a great deal of credit for calling Public attention to the importance of phosphatic fertilization of grazing land. I spent a day at Cockle Park

and was especially fortunate in having Mr. N. P. S. C. Armstrong, the farm steward, as guide to the plots.

In view of the fact that the Cockle Park experiments have been cited by some agricultural writers as proving that nothing other than phosphatic fertilizer gives profitable results on grazing land it is worth nothing in passing that the investigators at Cockle Park draw no such conclusions themselves but on the other hand state quite explicitly that lighter types of soil respond to potash also. (And believe me, a soil does not have to be very light to be a lot lighter than that sticky clay at Cockle Park.)

Their conclusion is in accord with the results secured in the most extensive series of tests as yet reported in America—over 100 tests in 15 north-eastern States and the Province of Ontario conducted during the season of 1929 and reported by the National Fertilizer Association—which demonstrated a rather general response to potash and a universal nitrogen response in addition to the expected phosphoric acid response.

Tree Field at Cockle Park, the oldest of the pasture tests, consists of eleven differently treated plots of three and one-twentieth acres each. The soil of this field is poor and very stiff and heavy and lies on boulder clay. An attempt is made to measure the response to treatment by grazing each lot separately with yearling sheep and recording the increased weights; but this scheme, as will be pointed out later, is not so simple as it looks nor so accurate a measure of fertilizer response as might be desired.

Major experimental difficulties which have been encountered are:

1. Grazing with sheep alone (Tree Field) has produced only about half as many pounds of meat per acre as grazing with both sheep and steers (Hanging Leaves Fields), the soil and treatment being the same. This being the case, the results from Tree Field, though they do clearly demonstrate the value of phosphates in bringing in and maintaining a stand of clover on clay, very obviously are lacking in

the winners produced better than fifty per cent for the entire year.

Storrs Contest Nears Completion

IN the forty-seventh week of the Storrs laying contest, total production for all pens amounted to 3,065 eggs or a yield of 43.8 per cent. This is 147 eggs less than for last week but 363 eggs more than for the corresponding week a year ago.

The 1,000 birds have a grand total to date of 196,240 eggs thus bringing the average individual production up to 196.2 eggs as compared with 194.5 eggs in the preceding contest.

scientific accuracy as a measure of the full response to fertilizer.

2. The liability of sheep to soil-borne diseases and parasites in the case of heavily stocked continuously grazed land has prevented stocking the better fertilized plots materially heavier than the poorer, with the result that much good feed has gone to waste on those better fertilized plots instead of being made into mutton and credited to the plot treatment.

3. This apparently unavoidable under-stocking has been especially unfair to the plot treated with nitrogen each third year in that when the nitrogen is applied and produces grass enough for some twenty to twenty-five sheep for a month or six weeks in early spring the nine or ten sheep on the plot fail utterly to keep the grass properly grazed as a result of which it not only goes to waste and fails to be properly credited to the nitrogen treatment but also smothers out the clover and seriously injures the sod for the two years intervening before another application. The poor results obviously are due to faulty grazing management rather than to nitrogenous fertilization.

I should summarize my impressions as to the results of the fertilizer tests in Tree Field and Hanging Leaves Fields at Cockle Park about as follows:

1. Phosphatic fertilizers—slag, superphosphate and bone—have been remarkably effective in bringing in and holding a stand of wild white clover, which in itself is excellent pasture so far as it goes, though not particularly high yielding; and the clover in turn, together with livestock management well calculated to conserve plant food, has built up the nitrogen supply to a point where the grasses do fairly well.

2. Potassic fertilizers have not been necessary on this heavy clay soil.

3. Nitrogenous fertilizers have shown the usual response in greatly increased grass growth but the methods of grazing management have not been such as to utilize this increased growth or even to keep it grazed down sufficiently to avoid serious injury to the sod.

With the A. A. DAIRYMAN

Beet Pulp for Milk Production

FOR years dried beet pulp has been recognized as an excellent feed for dairy cattle, particularly where high records were sought, and dairymen have often been willing to pay prices above those warranted by actual food value when attempting to make high records on individual animals. For a number of years the amount of dried beet pulp on the open market has been exceedingly small. Now we understand that this feed is being manufactured in sufficient quantities so that it can again be purchased without any difficulty.

Savage and Maynard in their book, "Better Dairy Farming" have the following to say about beet pulp: "After extracting the juice from the sugar beets there remains a residue which when dried contains 9 per cent of protein, 60 per cent of nitrogen free extract, and 19 per cent of crude fiber, with about 1 per cent of fat. On the basis of its nutrient content it ranks somewhat below corn in feeding value and its high fiber content limits the amount that can be used in the ration. However, beet pulp is a very useful feed because of its palatability, bulk and laxative effect. These qualities cause it to be highly esteemed to lighten up a heavy ration fed cows on test. It has another property which gives it special value. It will absorb two or three times its weight of water. Thus moistened beet pulp may be used to furnish succulence when no silage or roots are to be had. Similarly, diluted molasses can be fed on it."

For Cows on Test

In commenting on feeding of cows on test, this same book says: "In the absence of roots, beet pulp soaked in water may be used in the proportion of two pounds of dried pulp and three pounds of grain. Pulp may also be soaked in molasses and warm water."

After commenting on the use of silage, Savage and Maynard say "Another way to provide succulence is by the use of dried beet pulp soaked in water before feeding. Take one pound of beet pulp in place of about eight pounds of silage and soak it in water ten to twelve hours."

Compares Favorably with Corn

"Feeds and Feeding" by Henry and Morrison, which has been considered a standard authority on feeds for years, makes the following comment about dried beet pulp: "Owing to the high prices of concentrates and the favor with which dried beet pulp has been received by stockmen, many factories have been equipped with facilities for thus preserving the pulp. Shaw of the Michigan Station found that dried beet pulp compared favorably with corn meal for fattening sheep and steers. It produced larger gains with growing animals, while corn meal put on more rapid gains with fattening animals nearing the finishing period. In the Scandinavian feed-unit system the value of dried beet pulp for dairy cows is rated 10 per cent below corn or barley. As dried beet pulp absorbs a great deal of water, when a heavy allowance is fed it is advisable to moisten it with two or three times its weight of water before feeding. The moistened dried beet pulp may be employed as a substitute for corn silage. At the usual prices the latter is the more economical form of succulence for those who can raise most of their own feed. Breeders of pure-bred dairy stock recommend dried beet pulp for cows on official test which are receiving heavy concentrate allowances as it has a tendency to keep the bowels open and is not apt to cause digestive disturbances."

A dairy cow requires an ounce or more of salt a day but she should not be forced to take more than she wants.

16 quarts
for 23¢

MILK...16 quarts for 23c. This bargain is in your very town...in a bag at The Store With the Checkerboard Sign. In this bag are 100 pounds of Purina Cow Chows. In the average 100 pounds of Purina Cow Chows are 16 more quarts of milk than are in the average bag of more than 130 other feeds. This bag of Purina Cow Chows costs an average of 23c more than the average bag of these other feeds. 16 quarts for 23c. These are the figures which come from a recent national farm-to-farm feed survey of 18 months...a survey of 505,536 cows...a survey covering 48 states...a survey conducted by 870 men...a survey still going on.

When you buy feed for your cows you are buying milk in a bag. Consider, then, what a bargain you get in a 100-pound bag of Purina Cow Chows...113 quarts of milk...all in 100 pounds of feed and the roughage that goes with it. 16 of these quarts are extra...16 quarts which cost only 23c...just a bit more than one penny per quart...what a bargain!

A bargain which is all yours when you are feeding Purina Cow Chows...a bargain which is waiting for you any time you happen into town...waiting in Checkerboard Bags at The Store With the Checkerboard Sign. Purina Mills, 898 Gratiot Street, Saint Louis, Missouri.

AMERICAN AGRICULTURIST*

The Indian Drum—By William McHarg and Edwin Balmer

"What is it you want to know?" Sherrill asked.

"What were the relations between Benjamin Corvet and Captain Stafford?"

Sherrill thought a moment.

"Corvet," he replied, "was a very able man; he had insight and mental grasp—and he had the fault which sometimes goes with those, a hesitancy of action. Stafford was an able man too, considerably younger than Corvet. We, ship owners of the lakes, have not the world to trade in, Father Perron, as they have upon the sea; if you observe our great shipping lines you will find that they have, it would seem, apportioned among themselves the traffic of the lakes; each line has its own connections and its own ports. But this did not come through agreement, but through conflict; the strong have survived and made a division of the traffic; the weak have died. Twenty years ago, when this conflict of competing interests was at its height, Corvet was the head of one line, Stafford was head of another, and the two lines had very much the same connections and competed for the same cargoes."

"I begin to see!" Father Perron exclaimed. "Please go on."

"In the early nineties both lines still were young; Stafford had, I believe, two ships; Corvet had three."

"So few? Yes; it grows plainer!"

"In 1894, Stafford managed a stroke which, if fate had not intervened, must have assured the ultimate extinction of Corvet's line or its adoption into Stafford's. Stafford gained as his partner Franklin Ramsdell, a wealthy man whom he had convinced that the lake traffic offered chances of great profit; and this connection supplied him with the capital whose lack had been hampering him, as it was still hampering Corvet. The new firm—Stafford and Ramsdell—projected the construction, with Ramsdell's money, of a number of great steel freighters. The first of these—the *Miwaka*, a test ship whose experience was to guide them in the construction of the rest—was launched in the fall of 1895, and was lost on its maiden trip with both Stafford and Ramsdell aboard. The Stafford and Ramsdell interests could not survive the death of both owners and disappeared from the lakes. Is this what you wanted to know?"

The priest nodded. Alan leaned tensely forward, watching; what he had heard seemed to have increased and deepened the priest's feeling over what he had to tell and to have aided his comprehension.

"His name was Caleb Stafford," Father Perron began. "(This is what Benjamin Corvet told me, when he was dying under the wreckage on the ferry.) 'He was as fair and able a man as the lakes ever knew. I had my will of most men in the lake trade in those days; but I could not have my will of him. With all the lakes to trade in, he had to pick out for his that traffic which I already had chosen for my own. But I fought him fair, Father—I fought him fair, and I would have continued to do that to the end."

"I was at Manistee, Father, in the end of the season—December fifth of 1895. The ice had begun to form very early that year and was already bad; there was cold and a high gale. I had laid up one of my ships at Manistee, and I was crossing that night upon a tug to Manitowoc, where another was to be laid up. I had still a third one loading upon the northern peninsula at Manistee for a last trip which, if it could be made, would mean a good profit from a season which so far, because of Stafford's competition, had been only fair. After leaving Manistee, it grew still more cold, and I was afraid the ice would close in on her and keep her where she was, so I determined to go north that night and see that she got out. None knew,

Father, except those aboard the tug, that I had made that change.

"At midnight, Father, to westward of the Foxes, we heard the four blasts of a steamer in distress—the four long blasts which have sounded in my soul ever since! We turned toward where we saw the steamer's lights; we went nearer and, Father, it was his great, new ship—the *Miwaka*! We had heard two days before that she had passed the Soo; we had not known more than that of where she was. She had broken

night was dark, Father—no snow, but frightful wind which had been increasing until it now sent the waves washing clear across the tug. We had gone north an hour when, low upon the water to my right, I saw a light, and there came to me the whistling of a buoy which told me that we were passing nearer than I would have wished, even in daytime, to windward of Boulder Reef. There are, Father, no people on that reef; its sides of ragged

following safe and straight at the end of its towline. I thought of my two men upon the tug who had been crushed by clumsiness of those on board that ship; and how my own ships had had a name for never losing a man and that name would be lost now because of the carelessness of Stafford's men! And the sound of the shoal brought the evil thought to me. Suppose I had not happened across his ship; would it have gone upon some reef like this and been lost? I thought that if now the hawser should break, I would be rid of that ship and perhaps of the owner who was on board as well. We could not pick up the towline again so close to the reef. The steamer would drift down upon the rocks—"

Father Perron hesitated an instant. "I bear witness," he said solemnly, "that Benjamin Corvet assured me—his priest—that it was only a thought; the evil act which it suggested was something which he would not do or even think of doing. But he spoke something of what was in his mind to Stafford, for he said:

"I must look like a fool to you to keep on towing your ship!"

"They stared, he told me, into one another's eyes, and Stafford grew uneasy."

"We'd have been all right," he answered, 'until we had got help, if you'd left us where we were!' He too listened to the sound of the buoy and of the water dashing on the shoal. 'You are taking us too close,' he said—'too close!' He went aft then to look at the tow line."

Father Perron's voice ceased; what he had to tell now made his face whiten as he arranged it in his memory. Alan leaned forward a little and then, with an effort, sat straight. Constance turned and gazed at him; but he dared not look at her. He felt her hand warm upon his; it rested there a moment and moved away.

"There was a third man in the wheelhouse when these things were spoken," Father Perron said, "the mate of the ship which had been laid up at Manistee."

"Henry Spearman," Sherrill supplied.

"That is the name. Benjamin Corvet told me of that man that he was young, determined, brutal, and set upon getting position and wealth for himself by any means. He watched Corvet and Stafford while they were speaking, and he too listened to the shoal until Stafford had come back; then he went aft."

"I looked at him, Father," Benjamin Corvet said to me, 'and I let him go—not knowing. He came back and looked at me once more, and went again to the stern; Stafford had been watching him as well as I, and he sprang away from me now and scrambled after him. The tug leaped suddenly; there was no longer any tow holding it back, for the hawser had parted; and I knew, Father, the reason was that Spearman had cut it!"

"I rang for the engine to be slowed, and I left the wheel and went aft; some struggle was going on at the stern of the tug; a flash came from there and the cracking of a shot. Suddenly all was light about me as, aware of the breaking of the hawser and alarmed by the shot, the searchlight of the *Miwaka* turned upon the tug. The cut end of the hawser was still upon the tug, and Spearman had been trying to clear this when Stafford attacked him; they fought, and Stafford struck Spearman down. He turned and cried out against me—accusing me of having ordered Spearman to cut the line. He held up the cut end toward Ramsdell on the *Miwaka* and cried out to him and showed by pointing that it had been cut. Blood was running from the hand with which he pointed, for

(Continued on Page 16)

The Story from the Beginning

UP in the country around the northern end of Lake Michigan, there is a legend that whenever a ship is lost on the lake, a sound can be heard like the beating of an Indian drum, one beat for each life lost. During a storm in December 1895, listeners counted twenty-four beats. The *Miwaka* with twenty-five people aboard never reached port and many relatives of those lost believed that one person survived and would some day return.

* * * * *

Alan Conrad a young Kansas farmer is endeavoring to solve the mystery of Benjamin Corvet, a member of the shipping firm of Corvet, Sherrill & Spearman, who mysteriously disappeared after summoning Conrad to Chicago. Last minute messages left by Corvet lead to the belief that Conrad is his son and Alan inherits the Corvet fortune and luxurious home. Just before Corvet disappeared he warned Constance Sherrill, his partner's daughter, to avoid Spearman to whom Constance becomes engaged. The first night in his new home Conrad surprises Spearman whom he finds searching Corvet's study. Spearman curses Alan, mentioning Corvet and the *Miwaka*, and then flees when Alan attacks him. Constance takes an interest in Alan's problem, much to Spearman's dislike. Conrad is mysteriously attacked and is threatened with blackmail by a drunken stranger named "Luke", who dies after demanding money to keep quiet. Alan finds a list of names in a secret drawer and he leaves for "the land of the drum" to investigate the clues they offer. Alan locates a car ferry pilot named Burr who he believes can solve the mystery and gets a job on the car ferry. He comes to believe that Burr is Corvet. On a winter's night, Burr, who is steering the ferry rams another vessel which he believes to be a ghost ship. The cars break loose and the ship founders. Rescue ships save some survivors. Constance waits for word of Alan. Spearman hopes that Alan is lost. Constance leaves for the north to watch Spearman and to locate Alan. She walks along the shore of the lake until exhausted. Twelve are rescued, the Drum beats for twenty that are lost, leaving seven unaccounted for. The count increases gradually until one only is unaccounted for. Constance finds Alan exhausted on the shore.

her new shaft, Father, and was intact except for that, but helpless in the rising sea . . ."

The priest broke off. "The *Miwaka*! I did not understand all that that had meant to him until just now—the new ship of the rival line, whose building meant for him failure and defeat!"

"There is no higher duty than the rescue of those in peril at sea. He—Benjamin Corvet, who told me this—swore to me that, at the beginning none upon the tug had any thought except to give aid. A small line was drifted down to the tug and to this a hawser was attached which they hauled aboard. There happened then the first of those events which led those upon the tug into doing a great wrong. He—Benjamin Corvet—had taken charge of the wheel of the tug; three men were handling the hawser in ice and washing water at the stern. The whistle accidentally blew, which those on the *Miwaka* understood to mean that the hawser had been secured, so they drew in the slack; the hawser, tightened unexpectedly by the pitching of the sea, caught and crushed the captain and

deckhand of the tug and threw them into the sea.

"Because they were short-handed now upon the tug, and also because consultation was necessary over what was to be done, the young owner of the *Miwaka*, Captain Stafford, came down the hawser onto the tug after the line had been put straight. He came to the wheelhouse, where Benjamin Corvet was, and they consulted. Then Benjamin Corvet learned that the other owner was aboard the new ship as well—Ramsdell—the man whose money you have just told me had built this and was soon to build other ships. I did not understand before why learning that affected him so much."

"Stafford wanted us" (this is what Benjamin Corvet said) 'to tow him up the lake; I would not do that, but I agreed to tow him to Manistique. The rock go straight down forty fathoms into the lake."

"I looked at the man with me in the wheelhouse—at Stafford—and hated him! I put my head out at the wheelhouse door and looked back at the lights at the new, great steamer,

To Boil An Old Fowl

A Pressure Cooker Would Reduce the Time

RUB the breast with a cut lemon, squeezing on a little juice. Wrap in buttered white paper and put in enough boiling water to cover. Boil for five minutes, remove the scum, then simmer for three or four hours, according to age. Cover entirely with white sauce and garnish with parsley and hard-boiled yolk of egg rubbed through a sieve over the breast. If the fowl is to be served cold dissolve one heaped tablespoonful of powdered gelatine in the stock with which the sauce is made. Coat the bird with this when it is nearly cold and when the sauce is cool but not quite setting.

Cooked en Casserole

Rub the fowl well with butter, season to taste with pepper and salt, fill it with seasoned oysters or mushrooms or your favorite stuffing. Put it in a casserole and cover with the lid. Set the dish in a pan of boiling water and allow the fowl to cook till perfectly tender. Now lift it out and keep it hot while you add to the liquor in the casserole two tablespoons of butter and one tablespoon of flour or cornstarch. Add milk enough to make a proper consistency—about half a cupful and a tablespoonful of chopped parsley. Boil for a quarter of an hour, add the fowl and three hardboiled eggs rubbed through a sieve. Serve very hot in the casserole.

Cooked with Macaroni

Soak half a cupful of bread crumbs in milk to cover them, add two ounces of chopped ham, four chopped mushrooms, one tablespoon chopped parsley

and seasoning of salt, pepper and sage if liked, stuff the fowl with this mixture and truss it for boiling. Melt three tablespoons of butter in a saucepan and when hot put in the fowl and fry a light brown color. Slice one onion, put it in a saucepan with two cupfuls of tomato pulp and one tablespoonful of vinegar, stir till it boils and then simmer for ten minutes. Mix two table-

Very French

2773

Little Girl's Dress Pattern No. 2773 is very French in style, but is just as practical as can be. The one-piece dress has inverted plaits below the buttoned applied tabs. The frilled organdie collar and cuffs are very dainty and sweet. Wool jersey, linen, gingham or print would be very attractive when made up by this pattern which cuts in sizes 2, 4 and 6 years. Size 4 requires 2½ yards of 39-inch material with ¾ yard of 35-inch contrasting. Price 15c.

TO ORDER: Write name, address, pattern sizes and numbers clearly and correctly and enclose with proper remittance in stamps or coin (although coin is sent at own risk). Add 12c for one of the new Fall Fashion catalogs and address to Pattern Department, American Agriculturist, 461 Fourth Ave., New York City.

spoons of flour with a little water to a smooth paste, add it to the tomato preparation and boil for five minutes longer stirring all the time. Season to taste, stir into a clean saucepan, add the fowl and simmer gently till the bird is tender. Cook a quarter of a pound of macaroni, broken into one inch pieces, in boiling salted water for half an hour, then drain. Melt one tablespoonful of butter in a saucepan, put in the macaroni, add three tablespoonfuls of grated cheese and toss over the fire till the cheese is melted. Season with salt and red pepper. Dish up the fowl on a hot dish, pour the sauce over and serve with the cooked macaroni.—Mrs. M. E. T.

A Framed Picture

PEGGY enjoyed her crayons very much, and could draw quite handily. So as an encouragement, I sometimes give her a picnic plate with a colored border, such as may be purchased at the five and ten. She draws a picture on the plate, and the colored border makes a satisfactory frame, and she feels that she has made an artistic plaque. This especially interests a child who is ill.—A.B.S.

TWO HELPERS INSTEAD OF ONE IN EVERY BAR

That's why

FELS-NAPTHA DISSOLVES GREASY DIRT AND BANISHES HARD RUBBING

THE MOMENT you take off the wrapper—the instant you smell its clean naphtha odor—you'll know why Fels-Naptha makes even stubborn grime vanish so quickly!

For there's naphtha in Fels-Naptha. Your nose tells you so—plenty of naphtha, the safe grease-dissolver. It's combined with good golden soap. Working together, these two cleaners search out clinging dirt. They loosen its grip and wash it away.

Thanks to this extra help, washing is easier—clothes come off the line sweetly fresh and clean, clear through. And because Fels-Naptha does away with hard rubbing, it saves both your clothes and your hands.

Next washday, be wise—get the real soap bargain! Get Fels-Naptha—it gives you not more bars, but more help.

Extra help in tub or machine. For soaking or boiling. In hot, lukewarm or even cool water. And for all household cleaning, too. Today, ask your grocer for a few bars, or the handy ten-bar carton.

• • •

SPECIAL OFFER—We'll be glad to send every user of laundry soap a Fels-Naptha Chipper. Many women who chip Fels-Naptha into their washing machines, tubs or basins find this chipper handier than a knife. Use it and Fels-Naptha to make fresh, golden soap chips (that contain plenty of naphtha!) just as you need them. Send only a two-cent stamp to help cover postage, and we'll mail you this chipper without further cost. Write today. Dept. 1-10-11 Fels & Company, Philadelphia, Pa.

The Indian Drum

(Continued from Page 14)

he had been shot by Spearman; and now again and a second and a third time, from where he lay upon the deck, Spearman fired. The second of those shots killed the engineer who had rushed out where I was on the deck; the third shot went through Stafford's head. The *Miwaka* was drifting down upon the reef; her whistle sounded again and again the four long blasts. The fireman, who had followed the engineer up from below, fawned on me! I was safe for all of him, he said; I could trust Luke—Luke would not tell! He too thought I had ordered the doing of that thing!

"From the *Miwaka*, Ramsdell yelled curses at me, threatening me for what he thought that I had done! I looked at Spearman as he got up from the deck, and I read the thought that had been in him; he had believed that he could cut the hawser in the dark, none seeing, and that our word that it had been broken would have as much strength as any accusation Stafford could make. He had known that to share a secret such as that with me would "make" him on the lakes; for the loss of the *Miwaka* would cripple Stafford and Ramsdell and strengthen me; and he could make me share with him whatever success I made. But Stafford had surprised him at the hawser and had seen.

"I moved to denounce him, Father,

as I realized this; I moved—but stopped. He had made himself safe against accusation by me! None—none ever would believe that he had done this except by my order, if he should claim that; and he made plain that he was going to claim that.

(To be Concluded Next Week)

STATEMENT OF THE OWNERSHIP, MANAGEMENT, CIRCULATION, ETC., REQUIRED BY THE ACT OF CONGRESS OF AUGUST 24, 1912.

Of American Agriculturist published weekly at 10 N. Cherry St., Poughkeepsie, N. Y., for October 1, 1930. State of New York, County of Dutchess, ss.

Before me, a notary public in and for the State and county aforesaid, personally appeared Henry Morgenthau, Jr., who, having been duly sworn according to law, deposes and says that he is the Publisher of American Agriculturist, and that the following is, to the best of his knowledge and belief, a true statement of the ownership, management (and if a daily paper, the circulation), etc., of the aforesaid publication for the date shown in the above caption, required by the Act of August 24, 1912, embodied in section 411, Postal Laws and Regulations, printed on the reverse of this form, to wit:

1. That the names and addresses of the publisher, editor, managing editor and business managers are:

Publisher, Henry Morgenthau, Jr., Hopewell Junction, N. Y.; Editor, Edward R. Eastman, 139 Caryl Avenue, Yonkers, N. Y.; Managing Editor, Edward R. Eastman, 139 Caryl Avenue, Yonkers, N. Y.; Business Manager, Henry Morgenthau, Jr., Hopewell Junction, N. Y.

2. That the owner is: (If owned by a corporation its name and address must be stated and also immediately thereunder the names and addresses of stockholders owning or holding one per cent or more of total amount of stock. If not owned by a corporation, the names and addresses of the individual owners must be given. If owned by a firm, company, or other unincorporated concern, its name and address, as well as those of each individual member, must be given.) American Agriculturist, Inc., 461, 4th Ave., New York, N. Y.; Henry Morgenthau, Jr., Hopewell Junction, N. Y.; Edward R. Eastman, 139 Caryl Avenue, Yonkers, N. Y.; Elinor P. Morgenthau, Hopewell Junction, N. Y.; E. C. Weatherly, 306 Elm St., Ithaca, N. Y.

3. That the known bondholders, mortgagees, and other security holders owning or holding 1 per cent. or more of total amount of bonds, mortgages, or other securities are: (If there are none, so state.) None.

4. That the two paragraphs next above, giving the names of the owners, stockholders, and security holders, if any, contain not only the list of stockholders and security holders as they appear on the books of the company, but also, in cases where the stockholder or security holder appears upon the books of the company as trustee or in any other fiduciary relation, the name of the person or corporation for whom such trustee is acting, is given; also that the said two paragraphs contain statements embracing affiant's full knowledge and belief as to the circumstances and conditions under which stockholders and security holders who do not appear upon the books of the company as trustees, hold stock and securities in a capacity other than that of a bona fide owner; and this affiant has no reason to believe that any other person, association, or corporation has any interest direct or indirect in the said stock, bonds, or other securities than as so stated by him.

That the average number of copies of each issue of this publication sold or distributed, through the mails or otherwise, to paid subscribers during the six months preceding the date shown above is (This information is required from daily publications only.)

Henry Morgenthau, Jr.,
Publisher.

Sworn to and subscribed before me this 29th day of September, 1930.

(Seal) Elizabeth Campbell.

(My commission expires March 30, 1931.)

HANDY ANDY Says "Here's How"

To Keep Your Chimneys Clean

By Ray Inman

No Guarantee of Sale

A man representing the National Business Brokers Association told us that he had two men to buy our business. So we paid him \$35 and have a receipt to show it. We have never heard from him since. We would like to get our money back and want to know if this company is reliable.

WE have never yet found a company that asked for an advance fee for selling any business that we would care to recommend to our subscribers. It is our belief that any reliable real estate company is perfectly willing to list property and take their fee after they have effected the sale.

Your Thanks Are Our Pay

I RECEIVED the clock on the 18th of September. Many thanks for your service in helping me to get it. I wrote four times and they never answered my letters. The clock was to have been shipped May 8th. I would never have got it without your help. I sure think it pays to be a paid-up subscriber to the American Agriculturist.

I received check from September 19th for \$50 and I wish to thank you very sincerely for your assistance as I feel very sure I would not have been able to collect more than \$32.50 without your help. I appreciate very much your prompt and courteous methods of handling the case.

So far as we have been able to discover, concerns which ask an advance fee are much more interested in getting their money than they are in rendering any service afterwards. You will doubtless find that the contract you signed does not guarantee the sale of the property.

Not All Luck Is Good

WE continue to get letters from readers who have had unsatisfactory experiences with firms that enlarge pictures. Many are roped in by the lucky number scheme whereby the agent tells them that if they draw a lucky number from a box they will be entitled to a free enlargement. Of course, everyone wins only to find that the free enlargement is dependent upon having another picture enlarged at a cost which may be more than its true value. In addition to the rather uniform poor quality of the work, our readers complain that the pictures, when they are delivered, are in a frame, and this frame must be paid for before the picture will be delivered.

When subscribers refuse to accept them they are threatened with legal action, but we have yet to find one case where legal action has been actually instituted. As a matter of fact we would rather welcome such legal action in American Agricultural territory, just to determine whether or not these concerns are operating legally, and whether they could actually collect money due them on such a scheme.

Does J. Smith Richardson & Company Owe You Money?

A NUMBER of subscribers have written us about nonpayment for produce sent to J. Smith Richardson & Co. of West Washington Market, N. Y. C. We have just received a letter from Herbert D. Banta, City Hall, Linden, Union County, N. J., in which he states that he is the executor of the Estate of Wilbur H. Blackford, proprietor of J. Smith Richardson & Company; and that he also represents

the surviving partner in liquidating the business.

If any of our readers have claims against this company we suggest that they write to Mr. Banta giving him all the information.

For Yates County Readers

"Two men who claimed to be representatives of the Fiber and Pulp Wood Producers' Association of 53 Park Place, New York City, have been in Yates County for several days and are coming back to establish a plant to produce pulp from hemp. They claimed that \$600,000,000 worth of fiber is imported each year and about the same amount of wood pulp. They want to raise at least \$70,000 to establish a local company and claim that they want farmers to grow hemp for them. What information can you give us about this company?"

AS we have never heard of this concern we asked the National Better Business Bureau for information. They attempted to locate the office of the company and were unsuccessful. Letters addressed to it were returned "Not found". The National Better Business Bureau is trying to get more information about this concern. Of course it may develop that they are entirely legitimate but it certainly will do no harm to wait until their standing is definitely determined.

Heavy Depreciation!

QUITE a number of readers have written asking about the value of stock of the Wrigley Pharmaceutical Company. Some of them wanted our help in getting money back which they had invested in this stock. The New York Better Business Bureau when commenting on this case states that this concern capitalized the similarity of its name and its trade mark to those of a prominent chewing gum manufacturer and which sold both its capital stock and its product on the false impression created by this similarity. We understand that close to 3,000,000 shares of capital stock in the Wrigley Pharmaceutical Company have been sold to investors at \$1.00 a share. But so far as we have been able to find, no dividends have ever been paid on any of this stock and the price of it has run down to 30 cents and even as low as 10 cents a share.

Last September an injunction was secured in the State of New Jersey restraining the company from further sale of its stock there. But so far as we know there is no such injunction which prohibits the sale of Wrigley Pharmaceutical stock in New York State.

Asthma Sufferer Wastes Money

I have been a constant reader of your paper for fifteen years. Will you write to the World's Medicine Co. for me asking them if they will return \$15 to me? A doctor of the World's Medicine Co. sold me some asthma cure saying that it would guarantee the cure or my money would be refunded. I have written them that it has not cured me but I can get no answer. I suffered more from asthma while I was taking the remedy than I did before.

OUR letters to the World's Medicine Co. remain unanswered. The American Medical Association reports on this concern as follows:

"The World's Medicine Co. of Indianapolis apparently puts out a product called 'World's Tonic.' It apparently is distributed, not very widely, through traveling medicine shows of the usual type.

In connection with its recent exploitation, we have learned from a Maryland physician that a man by the name of Dyar is acting as the itinerant with a minstrel show exploiting the World's Tonic for everything in general and

tapeworm in particular. This man, our records show, has long been in the medicine-show game. He is some times known as "Health Evangelist Dyar" and apparently runs to the piety racket as well as the medicine racket.

What is in the World's Tonic we do not know."

Certainly such a recommendation does not lend confidence to the remedy and as we have so frequently stated, it is our opinion that no one can afford to invest money in dope of this sort. If you are sick see the best physician available.

You Can't Always Tell By the Name

IN recent issues of American Agriculturist we have frequently referred to collection agencies which put out a contract peculiarly favorable to them but not so favorable to the person who gives them the account for collection.

Recently a subscriber asked concerning the standing of the National Board of Trade. Naturally we assumed that the National Board of Trade was an organization similar to the Chamber of Commerce and so we wrote for information as to its standing. We are informed that this collection agency was organized last January and that it is not a corporation but rather a trade name taken by a Mr. Irving M. Wieder who, we understand, is also President and Treasurer of the Hamilton Adjusting Association, New York City. Judging from letters we have received on the subject of collecting bad accounts we are inclined to believe that our subscribers will get better results by putting the accounts into the hands of local lawyers rather than by signing a contract with an out of town collection agency.

Enclosed please find receipt for your check for \$13.06.

I want to thank you very much for the same and you can count on me as a subscriber to your paper for all time.

Kill Rats Without Poison

A New Exterminator that
Won't Kill Livestock, Poultry,
Dogs, Cats, or even Baby Chickens

K-R-O can be used about the home, barn or poultry yard with absolute safety as it contains no deadly poison. K-R-O is made of Squill, as recommended by U. S. Dept. of Agriculture, under the Connable process which insures maximum strength. Two cans killed 578 rats at Arkansas State Farm. Hundreds of other testimonials.

Concerning Old Quebec

A Fireside Reflection on the Plains of Abraham

By JARED VAN WAGENEN, JR.

FROM Montreal to Quebec northeasterly along the great river is a run of some one hundred and eighty miles. There is a main highway on either bank of the stream but we took the north shore route which sometimes skirts close to the water's edge and again goes some distance inland.

Jared Van Wagenen, Jr.

According to our standards of age in the New World, this is one of the very oldest civilizations in America. The first adventurers found their way up the St. Lawrence more than three centuries ago and I suppose these little villages have a definite history of more than two hundred years. These first

comers were Frenchmen who laid so deep the foundations of French civilization that now after one hundred and seventy years of unbroken and undisputed English Sovereignty, the people are still in race, in language, in religion and in tradition a part of the old homeland.

At a very early date this valley was systematically laid out in "parishes" each having a frontage of about six miles on the river. So it is that today about every six miles you come to a very compact little village almost invariably named for some Saint. Surely we have nothing like these villages on our side of the line. Always the center of the village is the parochial school and the parish church—usually an unbelievably large and expensive edifice

to serve so small a community. But then we may remember that here there is absolutely nothing of that duplication and competition of churches which is so often the bane of Protestant communities. In many cases there will be a convent and a hospital. Often there is a so called hotel (with a French sign) but outside appearances lead me to suppose these are for the dispensing of liquid refreshments rather than the providing of bed and board for men. The little French houses, often with the curved roofs are set close against each other—I judge for the sake of convenient door step gossip. Add to this the fact that the streets are narrow. Add to this the fact that often the houses are set so close to the roadway that one must use care to avoid carrying away the tiny piazzas and the further fact that the streets swarm with children, and you have ample reason why this route is no place to break speed records.

It is commonly said that the French-Ca-

nadian—the Habitant—is the most prolific race left in the world. I am assured that a family of a dozen or fifteen children provokes no note or comment. In size—but I fear not in character—these families are of successors of those great broods of the days of Puritan New England.

I suppose there is no other region in America where the long generations have come and gone and brought so few changes as to this ancient valley. Men who ought to know soberly declare that the peasant life here today is closer to French life of the 17th century than can be found in France itself.

At any rate conditions are wonderfully primitive. The household handicrafts—the loom and the spinning wheel of the Home Spun Age which we are trying to preserve in the Museum at the State Fair can here be seen as a part of the every day life of the people. Here at least is a community where the rubber-tired age is just beginning to arrive.

I did not know that we still had thatched roofs in America but toward Quebec I found them not uncommon. Sometimes the Habitant rides abroad in a little cart drawn by a dog. I suspect that those we saw were being used for the amazement of tourists rather than as an every day means of locomotion. Still—I can certify that men do sometimes ride in carts drawn by dogs and we met a couple of such outfits where the dogs had heightened their charms by wearing a hat and spectacles while in their mouths they sedately carried a clay pipe. *I do not claim that it was lighted.*

When it comes to speak of agriculture of this region I am badly handicapped because I

The old fortress at Quebec, overlooking the mighty St. Lawrence, a point of interest to tourists and natives alike.

A tractor pulling a 3-furrow tractor plow like this one keeps in better "trim" when Socony Special Gasoline plus Ethyl and Socony Aircraft Oil are used.

BREAKING HARD SOIL IS EASY when your Tractor is powered with SOCONY

FOR a hard day's plowing with the tractor, Socony Special Gasoline plus Ethyl has the needed power and Socony Motor Oil keeps the engine cool. The use of these petroleum products keeps down repair bills, too.

New York and New England farmers have learned to appreciate other Socony products besides, such as:

Eureka Harness Oil, manufactured for oiling, blacking and preserving leather and harness. It is free from acids and will not become rancid. It prevents cracking of leather and breaking of stitches and penetrates the leather and lasts longer than any other oil.

Standard Hand Separator Oil is made for the lubrication of hand separators. It is free from gum, is anti-rust and anti-corrosive. It is a quick-acting oil adapted for the lubrication of close-fitting bearings.

Socony Lubricote (Household) Oil is made for all purposes where a light oil is required. It lubricates, it penetrates, it prevents rust. It is useful for lubricating lawn mowers, bicycles, guns, and all forms of light machinery.

In addition, we make many more products for use on the farm. How many of these are serving you?

Prairie Harvester Oil . . . Socony Turex Oil (for Diesel and Oil Engines) . . . Leather Dressing . . . Mica Axle Grease . . . Socony Disinfectant . . . Parowax . . . Socony Motor Oil . . . Socony 990A Motor Oil for Model A Fords . . . Dendrol Dormant Spray Oil . . . Verdol Summer Tree Spray Oil . . . Socony Banner Gasoline

Six Generations of the Same Family on the Same Farm

FOR over six generations, for a period of over 110 years, the Abbott family has lived on the dairy farm near the Cold Spring bridge in Syracuse, N. Y. Bradley Abbott, aged 5, son of Mr. and Mrs. J. J. H. Abbott is the representative of the sixth generation.

This is a country where it is quite natural for things to change rapidly. There are very few persons who can look back and say that they are living and playing on the land that was cleared up by their great, great, great grandfather. But this five year old boy can boast that much.

White was the name of this pioneer, and he traced his ancestry to the Mayflower. With the aid of boat and bullocks he came from Vermont to the shores of the Onondaga Lake in the year 1811 and cleared out 200 acres of land for use as homestead. In order to pay for the land he cut cord wood and hauled it for a mile or so to the banks of the Seneca River, where it was loaded on a boat and finally sold to a salt company in Salina at 50 cents a cord. Wood must have been very cheap then for the present price is more than \$9.

White also established the local church of that community, and it is still there. It is known as the White's chapel. He built a log cabin too, and in this cabin was born the great grandmother of Bradley, or the granddaughter of White. The present house on this farm was built during the civil war, although it is being rapidly modernized. This farmhouse is known as the Gah-Saw-Nis, or the Old Home Farm, in the oboriginal tongue.—Y. P. BHOSALE.

Unprotected Country Property

IS there any way that people in the country can be protected if their houses are left vacant for a part of the year? We, and some others in a radius of five miles, farmed as long as we were able, and now spend the winter months away from home. A gang of boys in the neighborhood looted every vacant huse until the ring-leader was caught, so for the present that is stopped—but we never feel safe.

On the state road, however, houses are entered and many things carried away in cars. In the country it is impossible to get regular caretakers unless one is a millionaire. When the State Troopers came into existence, we were told that the farmers now would have the same protection afforded to city people by their police system. Just what must one do to get this protection, and how far would it extend?

—C; New York.

EDITOR'S NOTE—Notify the state police when you leave your property. They will do their best but there is not enough of them to guard country property.

Why Not "Firecracker"

OVER two years ago I bought a good Guernsey cow from a neighbor, called "Merry Christmas" because she was born on "Merry Christmas Day." In a few months she presented us with a heifer calf born the day before Christmas which we promptly named "Holly", and last fall, Thanksgiving morning, she had a fine heifer calf which we all agreed should be called "Turkey." We presume her next calf will arrive July 4th but we are disagreed as to her name—either "Gunpowder" or "Independence"—which do you approve?

You know, I am fundamentally an apple man and this dairy business sometimes gets on my nerves!—J.R.S.

Can You Beat This?

A GOOD garden was raised last summer by G. O. Foster (a cripple that cannot take a step without two canes or crutches) of Orange, Massachusetts. He says he would like to hear through the paper from anyone who raised any better garden or any more kinds of fruit and vegetables than he did this summer from a piece of land 145x27

(Continued on Page 21)

What Will Your Cellar Hold This Winter?

A Few Store Groceries or Bins of Stuff Raised on the Farm

BEFORE the winter snows began to blow, our grandparents had stored away in the cellar most of the food supplies they would need until spring. Now many of us produce one or perhaps two or three farm products and buy almost everything for the table at the village store. "This is the age of specialization" some of us say and produce figures to show that it does not pay to grow a little of this and a little of that. There is doubtless much truth in such a claim yet we are not all specialists and for those of us who are not, we wonder if it does not pay to fill up the cellar and plan to feed the family so far as possible with products grown right on the farm. At any rate there can be no possible argument against storing as much as can be of those things already produced during the summer.

Different crops require different storage conditions. For example, potatoes keep best in a well ventilated, dark place where the air is fairly moist and the temperature is as near 35° F. as it is possible to keep it. Dry warm air causes them to shrivel rapidly and light develops chlorophyll—green coloring—which gives a bad flavor. Unfortunately, in one sense, many farm cellars now house a furnace. If yours does you will need a tight partition between it and your storage cellar if you expect to keep potatoes and a number of other products in the best possible shape. A good cellar will keep potatoes or other root crops in fine shape or better still is an outside underground storage cellar. The Portland Cement

Association of New York City has some valuable information for those who are interested in building such a storage place.

Good results have been reported from storage outdoors in a pile, choosing of course, a well drained spot and covering with alternate layers of straw and dirt. This, however, always seemed like a makeshift arrangement and certainly not handy for the housewife who wants a few potatoes every day.

The conditions necessary for storing apples are much like those needed by potatoes. Good ventilation is essential and a temperature between 40 and 50° F. is satisfactory. Uniformity of temperature seems to be more important than the exact degree. Darkness of course is not essential. In sections where winters are not too severe apples are often stored in a room in the barn.

There are a few crops which keep even when left in the ground. Among these are parsnips, horseradish and salsify, sometimes called vege-

table oysters. However, it is usually impossible to get them when they are needed so it pays to put them in a pile on the ground and cover with about six inches of dirt.

Celery can be kept easily for a long time. If your cellar has a dirt floor, just dig the plants with the roots on and stand them on the dirt floor, packing them close together. If your cellar has a concrete floor, store them in a box, first putting a little dirt on the bottom. In either case, the cellar must be fairly cool and the dirt around the roots should be kept moist. In wetting the roots avoid getting water on the tops of the plants.

Sweet potatoes, squash and pumpkins require storage conditions much different than most other crops. In contrast to apples and potatoes and other stuff which keeps best at relatively low temperatures, these require a relatively high temperature, a dry atmosphere and good ventilation. For example, sweet potatoes may be kept in the home in a crate close to a chimney in an upstairs room so that a warm temperature may be maintained at night as well as in the day time. Another good place to store them is in a basket hung from the ceiling in the furnace room in the cellar.

Onions require still different conditions being fond of a dry atmosphere and a low temperature. They can be kept in baskets hung from the joists in the cellar, preferably in a room which does not contain the furnace.

If you wish to take a little more trouble it is possible to have rhubarb during the late

A concrete underground storage cellar that will keep many farm crops in fine condition

Credit for the Farmer and His Organizations

The Second Prize Talk at the State Fair Contest for Agricultural Students

TONIGHT I am going to try to explain to you two ways in which the government has helped the farmer; first the Intermediate Credit Act, and second, the Federal Farm Loan Act.

In 1923 the Intermediate Credit Act was passed. The government set up twelve federal intermediate credit banks in different parts of the United States. These were furnished with government capital, but secured their other funds through the sale of short term bonds. In order to cut down expenses, the government housed the Intermediate Credit banks with the twelve Federal Land Banks, and gave them the same officers. In this manner they have run for five years. During this time they have lent money to eighty-five farmers' cooperative marketing associations. These associations in turn lend the money to their members as soon as they deliver their crops to them for marketing over a period of months. In this way, the farmer is able to secure at least a part of the money for his crops without waiting until they are sold.

The associations making use of this intermediate credit money include sixteen associations marketing cotton, seven marketing tobacco, ten wool, fourteen wheat, two rice, five beans, and twenty associations handling fruits. From this, you can see that the Intermediate Credit Banks play an important part in helping farmers market their products. Already they have loaned nearly five hundred million dollars to cooperative marketing associations. The loans offered by the

By HAROLD THOMPSON

Albion High School Department of Agriculture

Intermediate Credit Banks are for periods of not less than six months or more than three years. Cooperatives which move their products in less time than this usually obtain loans elsewhere. Those marketing a part of their products in less than six months get loans from the commercial banks, and they often supplement them with loans from the Intermediate Credit Banks. Ordinarily, the latter advance not more than 60% of the current value of the products on which the loan is made.

Another type of service performed by the Intermediate Credit Banks is that of discounting farmers' notes for local lending institutions. The proceeds of these notes must be used for agri-

cultural purposes, such as buying fertilizer, feeds, purchasing cattle, etc. Here again, the farmer is enabled to get credit which otherwise he would be unable to get.

As a result of the work of the Intermediate Credit Act, a large number of institutions have been set up in the United States for the purpose of lending to the farmer for periods of more than six months.

Now I am going to leave the Intermediate Credit Banks, and discuss the second way in which the farmer may secure credit. This is very closely related to the former but furnishes a different type of loan to the farmer. I refer to the Federal Farm Loan Act.

In the year 1917, the Federal Land Bank was organized and chartered at Springfield, Mass., under the provisions of the Federal Farm Loan Act. Its district which it serves is the States of Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, Connecticut, New York and New Jersey.

Under the provisions of this act, any farmer who works a farm, or owns a farm and has a hired man, has a chance of getting a farm loan, but he must own some real estate. These loans are not to be made on city property, wild lands, mortgages, livestock, or farming tools. They may be secured for the purpose of buying additional land to add to the farm, or for buying a farm, or for buying livestock and fertilizer. They may also be secured for paying debts owed by

(Continued on Page 10)

The Ability to Speak Convincingly

THE problem of farm credit is far from solved yet a beginning has been made. Seldom, if ever, have we found a clearer statement of the workings of the Federal Land Bank and the Intermediate Credit Banks, than in the article on this page. This article, or rather talk, won second place for Harold Thompson, a student in Albion High School, at a speaking contest at the New York State Fair.

Many of our high schools are doing an excellent job through courses in vocational agriculture, in training farm boys to become good farmers and citizens. Although the ability to speak convincingly in public may not be essential for producing a bumper crop or developing record cow, it is important when it comes to working for those things that make a community a good place in which to live.

Each year a number of boys in high school departments of agriculture in New York State, compete in several regional speaking contests. The winners in each of these contests travel to Syracuse during State Fair week to decide the State championship. The boys who competed this year were: Melvin Hall, Forestville; Harold Thompson, Albion; Edward Donderweiz, Bath; Leon Whittemore, Madison; and William Rothfuss, Webster.

Who Has the Best Plan for Dirt Road Improvement?

IF you live on a dirt road you probably were much interested in the article in the September 27th issue of A.A., which described the experiments now being conducted by the New York State Department of Public Works to determine the best and cheapest ways of improving dirt roads. If you have not already read this article, look up the September 27th issue and turn to Page 3, for it will interest you, and it affects your business. Out of these experiments and from the new interest that the State is taking in the dirt road situation, much improvement in the town roads is bound to come.

But it will take some time still to determine the result of the experiments, and the best way of improving dirt roads. In the meantime, however, there will be for most New York State towns greatly increased State aid for the town roads. Because of the legislation passed last year, this increased help from the State for many towns will be twice or three times as much as it was before. The question, then, facing road superintendents and citizens themselves on the dirt roads is, "How best to use this money?"

There has been more than a century of turn-piking and mud-wallowing. It is high time for a change and now there is money to make a change. We suggest that a small proportion of this money can be used on all of the highways in the township for keeping the dirt roads passable, and we firmly believe that this can be done, not so much by turn-piking the mud and stones into the middle of the road with a scraper as by going over the roads more frequently during the season and especially after heavy rains, with a heavy, power-drawn road hone.

However, no permanent progress in bettering dirt roads is going to be made unless some portion of the town roads are permanently constructed each year. In brief, keep all of the town roads passable, and spend the remainder of the money in building, annually, a stretch of hard road. It will take a lot of fairness and wisdom to decide in what part of the town this good road shall be built each year, and it will take a lot of skill and consulting with trained engineers to build these stretches of hard road cheaply and at the same time efficiently enough so that they will be a real lasting improvement and a credit to the superintendents who built them. Road superintendents and others who have had experience are welcome to the use of these columns

to pass on to others their experience in road-building. We will be glad to hear from you.

To Specialize or Not to Specialize?—A Contest

LAST week, we presented an argument concerning one of the major problems of agriculture in these modern, changing times: briefly, "To specialize, or not to specialize?" Some of our farmer friends have been most emphatic in their avowals that the only way for a modern farmer to succeed is to find a specialty and stick to it. Our whole modern world of industry and business, has gone in for specialization. Is that going to be the way of all agriculture in the future, or is it still necessary for the majority of farmers to farm along general lines with much diversification?

Let's have a round-up of this thought so that we can pass it on to our readers. For the best letter on the subject, "Specialist or Diversified Farmer—Which?" we will pay \$5.00, with \$2.00 for the second best and a dollar apiece for all the others we can find room to publish. Letters should not be over 300 words in length, should be written very plainly on one side of the paper only, and should be mailed to the Editor, American Agriculturist, 461 Fourth Avenue, New York City, on or before December 1st.

"Just David"

IS it possible to protect a child from all of the evils and hard facts of life until he is ten years old, letting him come into contact only with that which is beautiful and good and ideal? If it is possible, is it desirable, or should a child learn as soon as he learns anything that life has two sides, the bright and the dark, and that one must learn to live with both?

In the October 25th issue of A. A., we begin to publish in serial form a story called, "Just David", by Eleanor Porter, which tells what happens when a great violinist takes his baby son and lives the life of a hermit in order to protect that son from the evils of the world.

Perhaps many years ago you read "Just David". If you did, it is one of the few books that you will enjoy reading again. If you have not read it, certainly you will not want to miss this opportunity.

Why Not a Parent-Teacher Association for Your District?

ALL over America, our greatest national enterprise, that of education, is under way. In an address at King's Mountain recently, President Hoover said, "We have one-fourth more of our children in grade schools than the most advanced other country in Europe, and for every thousand of our young people we have six and one-half times as many in colleges and universities." The American parent has always believed in education for his children and today he is more firmly convinced of its necessity than ever before.

The editorial office of A. A. receives a great many letters from parents on school problems. Many of these letters complain of unsatisfactory conditions in the local school, or with the teacher. Some of these complaints are no doubt justified. We have found, however, that sometimes school troubles are based on plain misunderstanding between teachers and parents. Our suggestion is that at this time, the beginning of another school year, parents make an early attempt to get acquainted with the teacher and to talk over mutual problems. How many times last year did you visit the school? How do you know what goes on there without an occasional visit? If the teacher is any good, she is interested in the educational welfare of your children. So are you. With that mutual interest as a basis, parents and teachers should be good friends.

Cities and many villages have "Parent-Teachers Associations". Why not one for your district? Why not an informal organization where parent and teacher could meet, say, once a month, at the schoolhouse, and have a little pro-

gram treating of various school problems? The District Superintendent of Schools would help you, we are sure. School problems could be discussed and possibly an old-fashioned debate or spelling match might be put on occasionally, to increase the interest. Such a school organization could be made of interest and benefit to everyone in the district concerned with the proper education of boys and girls.

A Half Billion Baby Chicks a Year

THE old hen is losing her job as a mother. She never was much good on this job anyway. Left to her own devices, she usually stole her nest and some of the eggs became rotten before she got around to hatch them. She did well if she brought half of the eggs through to the chick stage, and better still if she finally raised half of the chicks. Even if her percentage was larger than this, she often made such a late start that few of her pullets ever got around to laying before the following spring.

The result of the hen's inefficiency was the loss of her job to the incubator, and it certainly is surprising to note how rapidly the baby chick industry has grown within the last decade. Even within the last two years the sale of hatchery chicks to farmers and poultry raisers was increased by almost 50%. About 500,000,000 baby chicks (and by the way, that's a lot of them!) were hatched in incubators last year, according to a report of the International Baby Chick Association. The most of these were produced in about 11,000 plants that are now in the business of hatching and selling chicks. When this Chick Association was organized in 1916, there were only seventy-five plants in this business, producing only a few thousand chicks per year.

The old setting hen, however, is still on the job, for she hatches another 500,000,000 chicks annually. She always will hatch some of course, but more and more farmers are coming to believe that when one buys chicks from a reputable and reliable hatchery, it is the cheapest and best way to get them.

Eastman's Chestnut

ONE of the best laughs I have had in years was over a joke my brother, George Duff, and my son, George, played on Orrin Terry this summer. George Duff writes stories each week for the Dairymen's League News, and Orrin Terry has printed that excellent paper ever since it was started. So George and Orrin are old friends and Orrin went down to George's farm at Thompson's Creek this summer to pay him a visit. Orrin is very fond of hunting woodchucks, so he wrote ahead ordering George "to be sure to have a woodchuck on hand and all ready staked out for me to shoot."

Next morning after Orrin's arrival, George said to him:

"Now, you know this is just the right time for woodchucks to be out. I know where there is a big fellow up on the bank the other side of the gully, and I have a hunch that if you sneak up there you might get a shot at him."

So Orrin took his rifle and spent a long, patient time crawling on his hands and knees through the tall wet grass to get within good range of the chuck. Finally, raising himself cautiously above the grass and weeds, he saw the woodchuck, big as anything, sitting on the edge of his hole. Bringing his rifle quickly into position, he fired, and had the satisfaction of seeing the woodchuck give a leap and roll over and over. With a shout of exultation, Orrin started on a run to take a close-up view of his deadly handiwork. Arriving on the scene, sure enough he found the woodchuck dead, but unfortunately a long time dead. His tail had been cut off, and to add insult to injury, around the dead woodchuck's neck was a collar, and attached to the collar was a string tied to a stake. Straightening up in disgust and hearing a distant shout, Orrin turned to see the two Georges on the opposite bank where they had had a good view of the proceedings, shouting, jumping up and down, and waving their hats.

Some New Laws and How They Work

Minor Farm Legislation Not So Minor

LAST week we reviewed the laws that have been passed in New York State during the last two years to improve rural schools and highways, and to reduce local farm taxation. Some of the laws have been in operation long enough so that it was possible for us to give you a printed table showing the saving in public money to each county, through these new farm relief laws.

But in addition to the new legislation actually reducing taxation, the State also put on its books many other laws relating to agriculture which will be of great benefit to the farmers of the State. In the next few paragraphs we call attention to some of this minor rural legislation about which not much has been said, but which may be of even more benefit to many farmers than the road and school laws.

Help for Potato Growers

Let us take first, the situation of the potato grower in New York State. Every grower knows that the problems surrounding the production of potatoes have in recent years increased far more rapidly than the knowledge of how to solve them. Such problems include the ravages made by new and old potato diseases, the development of better seed-potato stock, and better storage of potatoes. The case of the potato grower was presented to Governor Roosevelt's Agricultural Advisory Commission, made up, as you know, chiefly of leading farmers and representatives of leading farm organizations of the State. This Commission recommended a small State appropriation for the State College of Agriculture to be used specifically in the investigation and study of potato growers' problems.

The Legislature promptly cooperated by passing the needed appropriation, and under the leadership of Dean A. R. Mann of the State College, two investigators set to work immediately. Experiments were conducted to determine the merits of different pressures in the spraying of potatoes. Comparative tests of spraying and dusting are under way and a simpler and more effective method of potato seed treatment has been perfected. More than fifty experiments on as many different farms are under way.

For Better Seed Potatoes

Seed potato work was immediately started. First, to develop and maintain superior strains of potatoes by means of tuber-unit selection in seed plots maintained on growers' farms; Second, to encourage and assist those growers to develop a foundation seed stock; Third, to compare strains developed by this process in various sections of the State. Of course, such work with seed potatoes requires years of consistent effort.

On the job of finding out more about the storage of potatoes during the year 1929-30, a careful and thorough study was made of the storage methods of 260 potato growers. The records have been analyzed, and are now ready for publication. Experiments were also started in the fall of 1929 to determine the best storage conditions both for seed-stock and for table-stock potatoes.

Difficulties of Muck Land Farming

Another class of farmers suffering from lack of information on how to solve their increasing problems, are those who farm muck land. The Agricultural Advisory Commission recommended and the Legislature passed an appropriation to be used by the State College to study the soil and disease problems of muck farmers. Two scientists are now devoting their entire time to this work. Muck areas in all parts of the State have been examined and samples of material taken for laboratory studies. Incidentally there are tremendous areas of muck in the State about which there is little scientific knowledge. Some of the questions which scientists are now investigating

are the chemical composition of muck soils and the availability of nitrogen for the use of cover crops, losses by drainage, and also the whole field of disease problems of crops grown on muck soils.

Data on the cultural practices of muck soils was obtained this season from forty-six growers of carrots, 812 growers of celery, 90 of lettuce, and 110 of onions. This is being summarized and printed. Experiments have also been conducted on the use of fertilizers with muck crops.

Special Studies in Dairying

Dairymen and animal husbandmen of the State will be glad to know that their side of the industry was not neglected. The Legislature passed on recommendation of the Agricultural Commission several appropriations for the use of the College to aid the development of knowledge concerning dairy and animal husbandry. Under one of these appropriations scientists are now working to study the relation between problems of reproduction and milk production in dairy cows. The same men are studying the disease known as "stiff lamb", a serious problem for lamb raisers in New York State. They are also making an interesting investigation of the effect of fat in dairy rations on the amount and character of the milk produced. It is said that this work already indicates important new developments in the subject of feeding dairy cattle which is a leading project in New York agriculture. The whole question is raised as to whether or not it is important that dairy rations contain 3% of fat or more, or whether just as good results can be obtained with the other common nutrients lacking the fat. More will be printed about this in coming issues of A. A.

Cow-testing work in the State was given a boost with a special appropriation for more assistants and leadership. There are sixty-four cow-testing associations in the State with about 28,000 cows tested. 3,000 more cows are being tested in the Dairy Record Club work. An appropriation was also made to strengthen the whole Animal Husbandry Department including the building of necessary additional barns and the adding of more help in that Department. New York being one of the two leading dairy states of the nation,

it is highly necessary that its dairy and animal husbandry departments are put into shape to give the proper support to New York dairymen.

What Does It Cost a Farm Family to Live?

A small appropriation was recommended by the Commission and made by the Legislature to be used by the State College of Home Economics for determining some of the "dollars and cents" problems of farm families through the study of living costs. A survey of 3,000 farm families was made in the summer of 1929 in Livingston County. Reports of this extremely interesting survey will soon become available. One of the interesting questions which may be answered from this is, "How do the economic advantages in the average farm home compare with those in the average city home?"

For Better City Markets

Both the Governor's Commission and the Legislature recognized the fact that the biggest job of farmers is a selling one, that is, to get more for products after they are raised. Money was recommended and appropriated for the investigation of the problem of city markets. Studies have been made of the kinds and amounts of produce and its sources that are now going into the Buffalo, Rochester, Syracuse and Albany markets. How is this produce sold and distributed? Having this information is the first step toward building better city markets.

How Can the State Further Help Cooperative Marketing?

Along the same line, what about cooperative marketing? New York has already gone a long way towards supporting its cooperative organizations. What more could the State do? On recommendation of the Commission, the Legislature passed a small appropriation to study the many scattered local cooperatives in New York State in order to obtain accurate, up-to-date information on the type and volume of business, the financial condition, and the cost of operation. Such information has already been obtained on 175 cooperatives in New York State. Out of the summary of this information may

come for the first time some knowledge on how to build a really successful local cooperative.

Change to Meet Change

Another appropriation was made by the State to study the problems of readjusting the farming of any locality to the changing conditions. For example, what about sections that used to produce timothy hay for sale? With changing conditions, the demand for timothy hay has almost disappeared, but still many farmers continue right along to produce hay and grain, hoping that conditions will change back again. What can these farmers do? The State College, aided by this appropriation, proposes to find out, and help all kinds of farmers to adjust their business to the rapidly changing times.

Fruit Growers Not Neglected

A committee representing fruit growers came down to Albany to ask the Governor's Commission to recommend an appropriation for work against the Oriental peach moth and for studies of the whole fruit control problem. As a result, the State made such an appropriation and already studies of fruit diseases and insect control problems have been under way for over a year at the New York State Experimental Station at Geneva. We have already reported in American Agriculturist the great success which Geneva has already had in developing parasites that will help control the peach moth.

Most of the appropriations already referred to were recommended by the Governor's Commission and passed by the State Legislature a year ago this last winter. Further recommendations were also made and new farm relief laws were passed by the Legislature last winter but of course, very little time has been had by the College since the passage of this new legislation to put it into effect. Appropriations were made in 1930 and are now being used by the College for the following purposes:

A survey of the agricultural resources of the State. About half of the counties of the State have already had their soils surveyed and mapped. The purpose of the new appropriation is to hasten surveys of the rest of the farm counties. The fundamental idea is to prevent such sad mistakes as planting an orchard or any other crop on soil and under conditions where it cannot ever possibly prosper. The work under this new agricultural resources survey is already under way and will be reported in detail in a coming issue of American Agriculturist.

Second: Further investigations in behalf of potato growers of the State were provided for by appropriations made by the last Legislature under recommendation of the Governor's Commission. This work included the study of spraying and dusting potatoes on Long Island, the control of insects affecting potatoes, and general extension work in potato work from the State College.

Appropriations were made also to study the better grading and handling of vegetables, to investigate insects attacking muckland crops, and to determine the best percentage of protein in dairy rations. In other words, what is right, a 24% ration, a 20% ration, or a 16% ration?

The above summary gives you briefly a sort of bird's eye view of the tremendous impetus that has been put behind the State College and the State Experiment Station to aid farmers of the state with their various and ever-increasing problems.

We should not forget to mention, also, the splendid support that the State Government has given to the work of the State Department of Agriculture and Markets, under the leadership of Commissioner Berne. A. Pyrke. The tasks of the State Department are

(Continued on Page 23)

The Song of the Lazy Farmer

MY NEIGHBOR says that ev'ryone had ought to git his plowin' done up bright and early in the fall, it shouldn't be put off at all. He's turnin' furrows all day long, he likes to hear the tractor's song, a-chugin' up the hill and down, a-turnin' furrows long and brown. He does his chores by lantern light so's he can start to plowin' bright and early, by sunrise he is across the field and back, gee whiz. He works away from sun to sun, he hates to have his work undone, he never sits around his home when he could be a-turnin' loam, it makes him happy just to toil, a-turnin' over that there soil.

The ground won't freeze for quite a spell, my plowin' can wait, just as well, until I've rested up a bit, there ain't no use of doing it so far ahead, it will be spring before I need that soil, by jing. It's just as well off

right side up, so I'll go huntin' with the pup and let it lie, the hired man will git to plowin' when he can. There ain't no use to stew and fret because my work ain't done up yet, a farmer's work is never done, so if we are to have some fun, we have to take it when we can, and leave toil to the hired man!

Two profits are obtained from Park & Pollard feeds: (1) immediate production profits; (2) profits which come from better health and improved condition.

To be sure of profit making feeds ask for Park & Pollard's.

A.A.'s Western New York Farm and Home Talk

Crop Production and Farm Prices

By M. C. BURRITT

APPLE picking is progressing well. Practically all early and mid-season varieties, including Greenings, have been picked. The market—if it may be called that—continues very dull and prices low. Unless there is a strong rally in market conditions by early winter, those who sold at the opening prices, low as they were, will be the best off. The result is that most of the present harvest, not already sold is going into storage. Local markets are very slow also. With less than 25 per cent as many apples as were actually on the Rochester market last year, sales are very slow and at about half of last year's prices. Apparently people do not have the money to buy or are saving their money anticipating greater needs ahead.

M. C. Burritt

The cabbage situation is much the same. It is moving out at \$6. and \$7. per ton for Domestic and \$10 for Danish, but the demand is slow and the market dull. This is in spite of the drought which has reduced probable yield to about the total of last season. Tomato harvest is about over and yields have been somewhat better than was anticipated a month ago. Beans are about all harvested now and wheat has been sown. Egg prices are the lowest in years.

The Brighter Side

The fine prospects for good crops with fair prices which Western New York farmers had in June and early July, have been largely dissipated first by the prolonged drought—which still continues—and now by low prices. The grower who has a good crop of fruit is better off than the general farmer if he has sold his fruit. But growers who have light or poor quality crops and general farms will have another poor year. Of course, farmers are not alone in this situation for as everybody knows, business conditions are bad everywhere. Farmers should, I suppose, consider themselves fortunate that they have comfortable homes with plenty to eat and that they do not have in prospect a winter of unemployment and suffering ahead. That is after all one of the great advantages of farm life. Whatever the income disappointments, a good home, plenty to eat and reasonable comfort is practically assured to practically all of us.

There has recently come to this country for a six month's lecture tour, on Irish philosopher, George Russell, who writes under the pen appellation

of A E pointing out that an underlying philosophy upon which policies can be formulated and objectives based, is of at least as much importance as scientific expertness and practical application, both of which are the obsession of Americans, he is effectively calling out attention to the worth of rural character and the need of its conservation. What he is emphasizing is the fostering of culture, enlightenment, and contentment, with ample means of livelihood. There is a tendency for the crowded centers of population to monopolize these, when they should be as freely available as are the birds, the fields and trees. He would have our high economic standard of living include the social and the cultural.

A Larger and Better Life

There is need for this kind of emphasis by this kind of a teacher and leader. We have enough of political spouters who call the farmer the backbone of the nation at certain times of the year. And we have the hard, cold-blooded efficiency to whom economic success is sufficient. But the philosophy of a larger and better social cultural and intellectual life for farmers is just as essential to the permanency of our agricultural life and even of our democracy. Our efficiency as farmers has gradually reduced our numbers from more than half the population to about 20 per cent. Experts predict that 10 per cent of the population as farmers will eventually be able to support the whole. Mr. Russell maintains that a rural population below 20 per cent maintained upon a high cultural standard will mean the fall of our civilization because no purely urban civilization has been able to maintain itself without a sufficient rural reservoir from which to replenish itself.

The New York Evening Post wonders whether America has any such farm philosophers as George Russell. Indeed it has. Our L. H. Bailey has been pointing out these same facts and preaching this same philosophy for a generation. And many of our soundest, sanest developments are based upon his philosophy. Those who are interested will find his "The Holy Earth", "Wind and Weather", and "The Harvest" very worthwhile and interesting.—Hilton, N. Y., October 5, 1930.

What Will Your Cellar Hold This Winter?

(Continued from Page 3)

winter and early spring. Roots can be dug up in the fall, stored in the cellar and later moved to a warm location and sprayed with water. Under these conditions they will send out long succulent stalks that certainly do taste good.

"Pshaw!"

What Are Certified Seed Potatoes?

By KARL H. FERNOW

New York State College of Agriculture

THE potato is probably subject to a greater number of known diseases than any other agricultural plant. Fortunately most of these are not perpetuated in the descendants of diseased plants. There are certain diseases, however, which do not kill the plant but from which the plant and its progeny never recover. These are the so-called virus diseases of which leaf roll, mosaic, and spindle tuber are examples.

When a plant is affected with leaf roll it will only produce about a third as much as a healthy plant. If a potato grower is so unfortunate as to save the product of this hill and plant it all the resulting plants will also show leaf roll and only produce about a third of a crop. If healthy plants are growing nearby, insects moving about in the field are likely to carry the disease from plant to plant, so that the following year some of the potatoes from the healthy plants will produce leaf roll plants. It is not uncommon to see garden plots of potatoes in which all of the plants are affected with leaf roll. Commercial fields are not often so badly affected but these sometimes show 30 to 50 per cent leaf roll. If we grow potatoes on high priced land and give them the best fertilization, cultivation, and spraying it is easy to see why we do not want to plant such seed.

Growers Knew "How" But Not "Why"

Long before these diseases were named and studied the potato growers in certain sections like Long Island had found it profitable to use northern-grown seed without knowing why. We now know that the reason for the better results with northern grown seed is that virus diseases spread more slowly in the cooler northern climate. We sometimes accomplish the same results by growing the seed at a high elevation or late in the season.

As we learned more about the virus diseases we found that not all lots of northern grown seed were equally good. Some lots contained high percentages of disease or were badly mixed. As it was impossible to recognize the virus diseases by looking at the tubers there arose a demand for a service which should assure the grower that the seed he was using was from comparatively disease-free fields and relatively free from mixtures. In response to this demand the certified seed potato industry has arisen. This industry began to develop about 1915 and is now important throughout the United States and Canada. Most of the certified seed used in the North Eastern United States comes from Canada, Maine, New York, and Vermont. Some is also produced in New Jersey, Maryland, Pennsylvania, Ohio, and New Hampshire and some is brought in from states farther west.

How Fields Are Inspected

Certification is usually carried on under the supervision of some responsible state agency such as the State Department of Agriculture or the State Agricultural College.

In New York certification is regulated by a cooperative association working in conjunction with the State Agricultural College. The grower who wishes to sell certified seed potatoes must first submit a sample of his potatoes to the College in May. This sample will be planted and inspected from time to time. If it shows a large amount of virus diseases no inspection of the grower's fields will be made. The grower also makes application for inspection and pays fees to cover the cost of the inspections.

About the middle of June the grower goes over his field carefully and removes any plants showing symptoms

of virus diseases. This "roguing" is commonly repeated several times during the season. About the last of June a trained inspector from the College visits the grower's fields and determines the amount of virus diseases present. If the percentage of virus diseases exceeds that allowed in the College standard the field is disqualified. Usually two such inspections of the growing field are made. If the field passes these inspections certification tags are issued to the grower by the Association. When the stock is graded ready for shipment it is commonly inspected again to see that it is properly graded.

The system in use in different states varies somewhat in details but the general method is similar to that outlined above.

Disease from Spreading Pea Vines

Is there any danger of spreading disease where pea vines from a stack are spread directly on land where peas are to be grown?

It is generally believed that the fermentation through which the pea vines go destroys any disease organ-

isms which may be present, but there may be a chance that the disease organisms will not be destroyed on the outside of the stack.

At any rate, pea vine silage has a rather high feeding value to make it advisable to spread it on the soil. If it is to be spread on the soil we would prefer to use it on land where some other crop than peas are to be grown.

Cabbage Heads Crack Open

What can we do to prevent bursting of cabbage heads?

SOME claim that this is a characteristic of some varieties or strains but whether or not this is true it can be prevented to some extent by going through the field and loosening the plants which seem to be about mature. This slows down the rate of growth and seems to prevent cracking.

Tomatoes Set Early Yield Heaviest

FROM 1918 to 1920 the New Jersey State College of Agriculture secured some figures from nearly 900 growers of tomatoes for canning. One of the interesting things that developed was that early planting was one of the most important practices affecting yields.

Plants set in May produced from 5 to 9 tons during the four years, while those set from June 1 to 15, produced from 3½ to 6 tons and those set the last two weeks in June produced from 2½ to 5 tons per acre. In every year the plants set the first two weeks in May gave the best yield.

No other Farm Electric Plant Battery like it

**THIS NEW
Delco-Light IRONCLAD
Battery Will Modernize
Your Farm Electric Plant
and Give 50% More Service**

DELCO-LIGHT, pioneer of farm electricity, brings you today its latest development—the Delco-Light IRONCLAD Battery. Put a magnifying glass to the positive plate of this great new battery and you'll see why this is the most important news since Delco-Light developed the combination idea in electric plants.

Here's what the magnifying glass shows. Instead of pasted-on active material, attached to flat plates, you'll see row on row of tiny slotted hard rubber tubes—holding the material inside where it doesn't flake away.

This slotted tube principle—applied for the first time to farm electric plant batteries by Delco-Light, gives you half again more actual service than the ordinary battery. This marvelous Delco-Light IRONCLAD Battery will modernize your individual electric plant. It's a battery you can depend upon for super-service.

Tiny Tubes Revolutionize Battery Service

The secret of its unbelievably long life is the positive plate with those slotted rubber tubes. This revolutionary new type of construction makes the Delco-Light IRONCLAD good for over 4,000,000 watt hours of service! That means the Delco-Light IRONCLAD gives you more service for your money than any other battery.

Of course this marvelous new battery is different in many ways. It's built heavier all around with generous reserve power to meet any emergency. It lasts longer, gives better service and costs less to use.

Write for the Facts

This battery is now available for use with your farm electric plant. Before you get a battery, get all the facts about this great new

DELCO-LIGHT Ironclad Battery

The nearest distributors are listed below. In addition there is a Delco-Light Dealer in every community.

Domestic Electric Co., Inc.,
39 West 45th Street,
New York City, N. Y.

Henry Clayton,
600 S. Delaware Ave.,
Philadelphia, Pa.

Suburban Electric Development Co.,
5624 Penn Avenue, East End,
Pittsburgh, Pa.

You can get this famous battery from any authorized Delco-Light dealer. Be sure the battery you buy has "Delco-Light IRONCLAD" on the cover of the jar, on the battery strap, on the negative plates and on the glass battery jars.

Delco-Light IRONCLAD. They are contained in an interesting illustrated folder. It's free. Write for your copy today.

DELCO-LIGHT COMPANY

PREVENT high bacteria counts...

by cooling milk
ELECTRICALLY
for about 3 cents a can

A WELL-KNOWN milk authority has declared: "About 85% of high bacteria counts are the result of failure to promptly and properly cool milk." Why risk rejected milk, when you can cool it electrically for about 3c a can?

One New York State dairy farmer wrote that the value of the milk saved from rejection in a single summer amounted to half the cost of his electric milk cooler.

*Niagara Hudson electricity
serves thousands of farmers*

Already 57,000 New York State farms—more than one-third the total—enjoy the benefits of cheap, dependable electric service.

To enable farmers to make greater use of this cheap power, operating companies of the Niagara Hudson System offer to finance the purchase of wiring and equipment if desired. Ask our Rural Service Representative.

NIAGARA  HUDSON

With the A. A.
Dairyman

Saving Steps at Chore Time

IN order to carry on any kind of work or business one must have a system to get best results and this is just as important in doing the daily chores. During winter as well as summer we have followed a regular order in feeding stock for many years.

At our barn one comes to the cow stables first, coming from the house in the morning, so we feed the cows first their hay or shredded stover, next silage, then the grain feed on top of the silage. We then go to the horse entry and give the horses hay, after which we feed the pigs, then the chickens so that all animals have something to eat. Next the cows are bedded and milked and the milk taken to the milk house for cooling and straining as soon as it is milked. After the milk has been strained into cans it is placed in the concrete water tank for further cooling, which is done in summer by pumping cold water from the well into this tank, but during nine months of the year it is cooled by the water pumped by a ram from the run which is water from a number of springs.

Teams Ready Before Breakfast

When milking is done the teams are curried and harnessed for field work, after which they are all fed again. If there are enough milkers, one person curries and harnesses the teams, by which time breakfast is ready.

During most of the year, the chickens are watered when fed, but in cold weather they are given hot water after breakfast, when the horses are watered whether they are working or not.

While the horses are at the trough drinking, the stables are cleaned during the winter, while in summer we begin field work instead, doing the stables

and they are fed hay, then the horses are given their grain and the pigs fed, by which time dinner is ready.

The Evening Routine

After 4 o'clock the cows are bedded or have clean straw to be ready for the evening milking and the milk is cared for as in the morning. Then the cows are watered again and fed in the

Weight of Dairy Products

Article	Weight of gal. pounds	Weight of qt. pounds

Pure butterfat	7.591	1.898

same order as in the morning. Horses are watered and straw shaken up while they are drinking, then they are given hay, after which the pigs are fed. Before we begin the evening milking the chickens are watered, fed and the eggs gathered to be ready to take to the home after milking is done, and the milk utensils washed.

The last is to give the horses grain and to see if all animals are well and properly cared for for the night. This is the order we have followed for years in doing our chores all the year though they are greater during the winter when we always keep more cattle than we can pasture in summer.

When stock gets used to being fed in regular order or at a regular time, they are more quiet until their turn comes, than when fed in no order or system and one can do the chores in less time by having a regular order for doing each job.—J. N. G.

at noon, unless a boy is about the barn to do it and bed the horse stables for the night.

Coming in from the field the horses are watered and fed hay after which the cows are watered, when not in pasture and their stables cleaned, bedded

How to Treat Foot Rot

Could you kindly give me some information on what is known as foot rot among cattle, covering the following points? (a) cause, (b) symptoms, (c) extent of contagion, (d) effect on flow and sale of milk, (e) remedy, (f) danger to other dairies.

FOOT ROT is not strictly speaking a contagious disease, although it is classed as infectious and can spread from one animal to another.

Sometimes dairymen have what amounts to an epidemic. It is always more troublesome in muddy barnyards as the infection gets in the mud and it is very difficult to get rid of it. The

(Continued on Opposite Page)

"Which dog will you bet on—this one or that one?"—LIFE.

(Continued from Page 10)

first step in the treatment of the disease is to make sure that the animal has a dry place to stand on. It is, of course, desirable to fix the barnyard so that no mud is present, either by gravelling it or putting in a concrete barnyard. If this is impossible, it will help to remove animals as soon as the trouble is noticed and stake them out on dry meadow or feed them in the barn.

Treatment consists of thoroughly cleaning the diseased hoof, using a brush and soap suds. It then can be cleaned with a 20 per cent solution of creolin and if the infection is not too bad it will probably clear up. If it does not, we believe the best advice we can give is to call a veterinarian to handle the situation. One way to prevent the spread of foot rot is to have a box of air slaked lime so that every animal will walk through it coming in and out of the stable. Put about three inches of lime in it and stir it up every day before the cows come into the stable.

First Calf May Be Raised

One of our heifers just had a calf. We would be glad to find out if the first calf from a heifer will be a good cow. Some people say that the first calf from a heifer will be poor.—E.M., Conn.

ASSUMING that the heifer is well grown there is no reason why her calf should not make just as good a cow as one from an older animal.

Probably the idea originated because in the past, and to some extent at present, so many heifers freshen before they are fully grown. As a result, the first calf is likely to be small.

At the same time, you will have no information about the quality of the dam and it is always a little surer to raise a calf from a cow that you know is a good producer.

Milk and Health

WE have just received from the New York State Department of Health a book entitled "The Production and Handling of Milk As it Affects Public Health." Dr. Paul Brooks, deputy commissioner of health, writes that the Department will be glad to send a copy to a producer or distributor whose milk is being sold anywhere in the state outside of New York City. In New York City, of course, the City Department of Health has jurisdiction.

If you are interested in receiving a copy of this booklet, just mail a request to the State Department of Health, Albany, N. Y. or if you prefer we will be glad to have you send us requests and will forward them to the Health Department.

Estimating a Steer's Weight

I would like to know how to figure the weight of cow or steer by measuring them with a tapeline. If you know how, please send it to me.—T. L., N. Y.

THERE is no accurate way of determining the weight of a cow or steer by measuring with a tapeline. To be sure an estimate can perhaps be made, but I doubt if it is much more accurate than to estimate the weight with the eye.

The only formula that I have been able to define is the following. It is an old one and it took a long time to hunt it out.

"Paunch girth in feet squared times total length from point of shoulders to pinbone divided by four equals the weight in imperial stones."

An imperial stone is 14 lbs. Written as a formula the method would look like this:

(paunch)² x length = weight in stones
of 14 lbs. each.

4

—E. S. SAVAGE

Abortion Not Inherited

Do calves from a herd infected with contagious abortion always have the disease?

CALVES seldom contract a permanent infection. They may be raised but should have a blood test before being added to a disease-free herd.

These 2 Cows PLAY CHECKERS WITH THEIR MILK PRODUCTION...

FIRST down and then up—first up and then down—that's the way production runs for two Guernsey cows in two record years at the Research Farm of Dr. Hess & Clark. Guernsey Cow No. 6 produced 5359 lbs. milk the first year—then beat herself by producing 7149 lbs. the second year. But Guernsey Cow No. 16 gave 6484 lbs. milk the first year—then fell off to 5812 the second.

Both cows received the same feed both years—same care and attention. No variation there. But look at this: Cow No. 6 received Dr. Hess Improved Stock Tonic in addition to feed and care her second year—no Tonic her first year. Cow No. 16 received Dr. Hess Stock Tonic her first year—no Tonic the second! Now check the Stock Tonic years with the high production years for each cow in the figures above! Cow 6

produced considerably more, as you will see, her second year—that is her Stock Tonic year. Cow 16 did far better the first year—and that's the year she received Dr. Hess Improved Stock Tonic.

Eight months of milk production is a heavy drain on a cow. She needs extra minerals and vitality to help hold production up . . . especially during her last few milking months. Dr. Hess Improved Stock Tonic gives her the reserve she needs. That is why these two test Guernseys did far better the Stock Tonic years.

We play checkers with our cows at the Experiment Farm—so that you won't have to. You can put all your cows on Dr. Hess Improved Stock Tonic and get increased production from all of them. Use it the year round for best results. See your local dealer or write us direct. Dr. Hess & Clark, Inc., Ashland, Ohio.

BULL CALF For Sale

Born October 2, 1930

HIS SIRE, is KING PIEBE the 19th, an outstanding winner in the show ring, and whose ancestors have not only been famous show animals but outstanding individuals at the pail. His blood line makes him one of the greatest young sires in the East. The records of his three nearest dams average 1239.03 lbs. butter and 25,893.5 lbs. milk in 365 days.

HIS DAM, is a daughter of FISH-KILL SIR MAY HENGVELD DE KOL, a bronze medal sire born and developed at Fishkill Farms. She is a sister to the great champion cow at the Dutchess County Fair. Her dam has a semi official record of 12,620.8 lbs. milk and 444.6 lbs. fat in 305 days in Class "C".

Reviewing the Latest Eastern Markets

Milk Prices

Dairymen's League prices are based on milk testing 3.5%. Sheffield on the basis of 3%.

	Class	Dairymen's League	Sheffield Producers
1	Fluid Milk	3.37	3.17
2	Fluid Cream		2.00
2A	Fluid Cream	2.16	
2B	Cond. Milk		
3	Soft Cheese	2.41	
3	Evap. Cond.		
	Milk Powder		
	Hard Cheese	2.00	1.80
4	Butter and American Cheese. Based on New York City Market quotations on butter and American Cheese.		

The Class I League price for October 1929 was \$3.42 for 3.5% milk and Sheffield's \$3.22 for 3%.

The above prices in each class are not the final prices the farmer receives. The final price received from the dealer is the result of weighed average.

Fancy Butter Firm

CREAMERY SALTED	Oct. 10, 1930	Oct. 3, 1930	Oct. 11, 1929
Higher than extra	40 1/2-41	40 1/2-41	46 1/2-47 1/4
Extra (92 sc.)	40	40	46
84-91 score	32 1/2-39 1/2	33 1/2-39 1/2	40
Lower Grades	31	32	39

The fancier grades of butter, such as 92 score and higher, have been very firm. Movement into distributing channels has been exceptionally good and there have been times when it was necessary to do a little scouting to fill trade needs. To say that stocks cleared closely is to put it mildly. However, when we drop below 92 score, we have an entirely different story. In those lower classifications, there is a distinct pressure to sell and the situation is not so good. The butter market, as a whole, is registering considerable anxiety. The Chicago spot market is off one half cent to one and one quarter cents. At the same time, butter and egg futures show some recovery both in New York and Chicago. Statistically, the market is gaining strength. The out-of-storage movement continues heavy and the shortage compared with last year is increasing. In the four cities alone, a shortage is reported considerably over five million pounds compared with last year's

reserves and the out of storage movement in the same cities is almost 25% heavier than it was a year ago.

No Change In Cheese

STATE FLATS	Oct. 10, 1930	Oct. 3, 1930	Oct. 11, 1929
Fresh Fancy	20 1/2-22 1/2	20 1/2-22 1/2	
Fresh Average			
Held Fancy	24	26	27 1/2-29 1/2
Held Average			

There has been no change in the cheese market since our last report. Trade in fresh makes has been quiet but country markets hold prices full steady. Buyers are only taking necessary supplies for immediate trade needs. Everyone seems to be exerting unusual caution although we can see no reason why any anticipation should be felt when we consider the statistical condition of the market. The ten cities making daily reports have in cold storage over two million pounds less cheese than they had a year ago. Furthermore, the same cities reported an out-of-storage movement this year of over one quarter million pounds during the last week in September whereas during the same period last year holdings were increased over one third of a million pounds.

Fresh Nearby Eggs Make Big Gain

NEARBY WHITE	Oct. 10, 1930	Oct. 3, 1930	Oct. 11, 1929

Pewees	22-25	20-21	28-33
NEARBY BROWNS			
Hennery	38-50	34-44	38-51
Gathered	24-37	26-33	

An acute scarcity of fancy nearby and Pacific Coast whites has resulted in a sharp advance in prices since our last report. The large whites have been unusually scarce but due to the extreme advances the demand has slackened. This has swung buying interest over to the smaller sizes, which rule firmer. Due to the price advance the outlook on larger sizes is a little easier. The employment situation is having a very decided influence on the market, more so than supply and demand. Therefore, when prices reach a certain level, Mrs. John H. Housewife simply tightens up on the purse strings and starts looking around to find how to make her dollar go the farthest.

The future egg market suffered a very serious break during the week, November and December options falling to new low levels. At one time conditions were actually panicky. A meeting of the clearing house committee of the New York Mercantile Exchange was held with a representative of the Federal Farm Board. Acting under an emergency rule, special rulings were adopted covering short sales. The action of the committee steadied the market and relieved the selling pressure. The relief gave operators a little more confidence resulting in an advance on the future market.

Advices indicate a lighter movement of eggs from the Central West. Packing plants report heavy receipts which indicates the heavy marketing of fowls in the Western producing territories. This is to be expected to some extent when we consider the unsatisfactory situation in the future market.

Live Fowls Selling Well

FOWLS	Oct. 10, 1930	Oct. 3, 1930	Oct. 11, 1929
Colored	22-28	24-28	33-36
Leghorn	17-20	14-18	23-25
CHICKENS

TURKEYS	25-35	25-30	40-45
DUCKS, Nearby	21-27	19-26	22-30
GESE	19	18-19	

The fowl market has shown considerable improvement although colored fowls are a little too plentiful. On the other hand, Leghorn fowls have been very scarce and at this writing are trending upward. Chickens are just about holding their own while fancy broilers are doing very well. The market as a whole could be termed a quality market. Considerable stock has arrived showing poor preparation and prices vary widely. The quotations given above represent the bulk of

the trading. Considerable stock has been sold at prices below those given above due to the lack of proper finish.

Hay Supplies Heavier

Receipts of hay both by rail and boat have been heavy, more so in Manhattan and Brooklyn. However, slow demand has caused prices to decline \$1 per ton. At the decline the market steadied considerably and the situation as a whole is firmer as the market comes to a close for the week. Large bale offerings have been averaging of higher quality than small bales, which were mostly No. 3 mixtures of either grass or clover. Straight timothy brought \$27 in large bales with other grades and mixtures ranging down to \$22 for No. 3 mixtures in small bales, while sample hay brought \$20 to \$21. Oat straw closed at \$13 and rye at \$14.

The above quotations taken from the weekly feed letter of the N. Y. S. Dept. of Agr. and Markets are for straight carlots, f.o.b. Buffalo. Prices on mixed cars and less than carlots are higher. Consult your local freight agent for freight rates to your station.

Fruits and Vegetables

Again we urge the shippers of fruits and vegetables to stick close to the radio for the daily changes on perishables. WEAf broadcasts every noon and gives the most immediate information possible.

Apples in barrels and baskets hold steady with trade fairly good except on poor stock. Prices cover a wide range. Western New York R. I. Greenings in baskets bring from \$1.25 to \$1.50; 2 1/2 in. McIntosh from \$1.50 to \$2.; Twenty Ounce No. 1, 3 in., \$1.25 to \$1.50; Wealthies No. 1, 2 1/2 in. \$1 to \$1.25; larger up to \$1.50; smaller sizes lower. The movement of apples out of the Hudson Valley by truck has been heavy. Baldwins No. 1 have been bringing from \$1 to \$1.25 per bushel for 2 1/2 in. with larger up to \$1.50. As a matter of fact most varieties have been bringing \$1.25 for No. 1, 2 1/2 in. stock and \$1.50 for 3 in.

Cabbage has been moving slowly and prices have been barely steady ranging from \$19 to \$24.

The onion market has been rather dull. Western New York yellows range from \$1.15 to \$1.35 per hundred while Orange County yellows have been selling from \$1 to \$1.50.

Potato Market Dragg

The potato market is considerably off its feet, which is to be expected more or less, during the present digging season. Maines in 150 lb. sacks are bringing \$2.75 to \$3 with Long Islands at \$3 to \$3.25. Long Islands in bulk are generally quoted at \$3.40 to \$3.65 per 180 lbs. while Maines in the same class bring \$3.50 to \$4.

Meats and Livestock

CATTLE—Steers in light supply, weak to 25c lower. One load medium to good steers \$9.50; mediums mostly \$8.50-9.00; common to medium \$7.50-8.25. Cows steady, only few head offered. Bulls steady, mostly \$4.00-5.50. Few heavy sausage offerings \$6.25.

VEALERS AND CALVES—Vealers and calves in light supply, about steady. Good to choice \$12.00-14.50. Medium \$9.00-11.50. Culls and common \$6.00-9.00. Calves weak, mostly \$8.50-9.50. Few heavies \$7.50, medium grade.

HOGS—Supply light, steady. Light pigs around 120 pounds topped today's market

at \$10.25. Swill fed hogs \$9.00-10.10, according to weight.

LAMBS AND SHEEP—Lambs weak to 25 cents lower. Several loads good to choice \$9.50 with 30 lambs out at \$5.50. Good mostly \$8.00-9.00. Mediums \$6.50-8.00. Common \$5.50-6.50. Culls \$5.50. Ewes steady, mostly \$4.00 for choice. Outside sale up to \$5.00. Common \$1.50-2.50.

COUNTRY DRESSED CALVES—Receipts all through the week were liberal. Trading was fair in early part, slow at the end. Last week's prices held steady all through, but market was not cleaned up at close. Some extra fancy sold at premiums. Fresh receipts per pound: Choice 17-18c; fair to good 14-17c; small to medium 10-14c.

LIVE RABBITS—Fresh receipts light. Demand fair to good. Market steady and improved. By the coop, 15-20c per pound.

Wool

The wool market has shown improvement. It is steadier. New York better fleece wool, unwashed, fine, per pound, 21-30c; 1/2 blood 23-30c; 3/8 blood 24-29c; 1/4 blood 24-30c; low quarter blood 25-27c; common and braid 23-25c.

Credit for the Farmer and His Organizations

(Continued from Page 3)

the farmer. The advantages are that the Federal Farm Loan system provides a low rate of interest, and provides a long time, easy term mortgage loan to the farmer. This type of loan is a great deal of help to the farmer who is just getting established. A man who wishes to buy a farm, must have some money of his own, with which to help pay for the farm. When he secures one of these loans, he is required to keep the farm buildings in good order, and to pay strict attention to his farming business.

In a few words, I will attempt to tell you how a loan may be secured. I will say that I am a farmer of about thirty-five years of age, and own a farm of one hundred acres. I wish to get a loan in order to buy fifty acres of additional land to work. At \$100 per acre, this would be \$5000. I go to the Secretary of the local loan association, or to one of the directors and get an application blank. This blank calls for a great deal of information in regard to description and location of property, my farming status, the purpose for which I wish to secure the loan, the value of the property, my financial standing, the products raised on my farm, the stock kept, (and many other questions of a general nature). In all, there are 157 questions. I have to answer 127 of them. I then return the blank to the local association, together with a check of ten dollars application fee. The association then sends an appraiser to appraise the farm and the land. He also looks up my record very thoroughly. Then the application, together with the report of the appraiser is sent in to the association. If they approve it, they send it along to the Federal Land Bank. A federal appraiser is sent out to look at the farm. He makes a still more thorough examination and returns the application to the Bank, with his report. Here the application is examined still again by the executive committee of the bank. If approved, they write me that my application has been accepted, and direct me to see the association attorney and have him make a search of title. No further action will be taken by the Federal Land Bank until this abstract of title is received by them. As soon as it is received, it is examined, and if accepted, the papers, are prepared for closing. I am notified that the check is being sent to the attorney. All that remains is for me to see the attorney, sign the papers, and get the check. The loan is paid back in small payments every six months for thirty-three years.

Farmers often feel that the government is doing very little for them. Over a period of years, however, these two forms of (agricultural) credit, namely the intermediate credit loans, and the loans by the Federal Land Banks, secure millions of dollars for the farmer to use on reasonable, long time terms.

ANNOUNCING THE WORLD'S LOWEST PRICED VALVE-IN-HEAD STRAIGHT EIGHT...

FROM

\$1025

F. O. B. FACTORY

The
8
as
BUICK
B U I L D S I T

Here, unquestionably, is the most wonderful and welcome news Buick has ever had for the scores of thousands of Buick admirers in agricultural communities.

One of the four new series of Buick Valve-in-Head Straight Eights, now winning a record reception in all parts of the country, is priced as low as \$1025 at factory—fully \$200 less than any Buick six of recent years.

A Buick Eight at less cost than last year's six! A Buick Eight, with even more power, even more swiftness, even more stamina, even more endurance than enthusiastic owners have

always associated with Buick . . . at a price so low that it actually becomes expensive to buy lower priced cars!

And a big, roomy, luxurious Buick Eight as well, with plenty of

space, plenty of head and leg room, for passengers who are accustomed to space and demand it in their automobiles!

It is powered, like Buick's remaining three series, by a masterly new Valve-in-Head Straight Eight engine providing performance far surpassing that of any previous Buick. It introduces new Insulated Bodies by Fisher, upholstered in either broadcloth or mohair, and skillfully insulated like a fine home against heat, cold and noise. It provides new Engine-Oil Temperature Regulator—new Air Intake Silencer—new Ring-Type Torsional

Balancer and other features promoting maximum engine efficiency, smoothness and stamina.

Here, indeed, is the ideal car for discriminating farm motorists. Here is a car that combines the

greater luxury and performance of The Eight as Buick Builds It with exceptional economy and long life. Here is value that only Buick with its tremendous two-to-one leadership in fine car sales could possibly achieve.

Visit your Buick dealer—today! Note the size and strength of this car—the thoroughness with which every unit of body and chassis has been constructed to assure extra long life. Then drive it—test its thrilling performance—realize what an extraordinary value it is and how easily it can be yours on the special G.M.A.C. plan for farmers.

WHEN BETTER AUTOMOBILES ARE BUILT . . . BUICK WILL BUILD THEM

Whether you have electricity—or not...

RCA RADIOLA gives you the *Finest in Radio*

With electricity—the new RCA Radiola Super-Heterodyne Model 80—at a new low price! Screen-grid—9 tuned circuits—magnified, illuminated tuning dial accurately calibrated in kilocycles—volume control—local-distance switch—push-pull power amplifier—improved electro-dynamic speaker—handsome walnut cabinet—\$142.50 less Radiotrons. Also ask to see and hear de luxe model and Radiola with electric phonograph.

Without electricity—the RCA Radiola Model 22—operated by batteries—at a price all can afford! Screen-grid receiver for battery operation. With enclosed RCA loudspeaker. A wonderful value for the money. An excellent set for receiving your favorite station with amazing clearness and lifelike reproduction of tone.

THOUSANDS of farmers have declared that the radio news bulletins on crops and prices and weather are so valuable that they couldn't possibly afford to be without an RCA Radiola.

But even this important service to farmers is only a small part of the benefit and enjoyment that the whole family will get from either of these highly perfected radio instruments.

Special programs for mother... entertainment for children... educational hours for boys and girls... and then programs which cost millions of dollars to put on the air

... the highest priced orchestras and singers!

RCA Radiolas are designed by the same great staff of engineers which has built so many of the broadcasting stations of America. And they are built by the largest manufacturer of radio apparatus in the country.

Let your Radiola dealer demonstrate for you the rich, full tone of these instruments. Let him show you how they tune in programs from stations near and far. And ask him to tell you how easy it is to own one.

Radiola Division, RCA Victor Company, Inc.

RCA Radiola

There's a heap of troubles pecking at *feet*!

We remember the time when we were just about so tall, out scattering a bucket of corn to the chickens—*bare-footed!*

No one can tell us it doesn't hurt when you get your toes pecked by half a dozen old hens.

We know a lot of farmers who have *troubles* pecking at their feet. They shuffle around at the chores like they were walking on egg shells.

You know yourself that if your feet go bad, you can't work well—and your whole job is endangered. Your feet need the best care and protection.

One of the best ways in the world to give your feet the protection they need is to get the best boots you can find. Good-fitting, comfortable boots help protect your feet from all those troubles such as chilblains, blisters, itching feet, corns and bunions.

We realize that. So, when we build a pair of "U.S." Blue Ribbon Boots, we build them for foot comfort and health.

Each boot is built on a special aluminum last, right to the shape of your foot. There are 44 parts in every Blue Ribbon Boot, carefully put together by skilled craftsmen.

When it's finished and you slip it on, you find comfort at every point. Snug and comfortable around the ankle and heel—to prevent chafing. Soft, smooth flexing over the arches. Extra reinforcements at the wear points without too much weight. Rocking-chair soles with square, flat heels that put spring in your stride.

The boot that's comfortable is the boot that fits!

We'd like you to have this FREE book

Dr. Lelyveld, nationally-known foot-specialist, has written especially for the United States Rubber Company a little book entitled "The Care of Farmers' Feet." Mail the coupon for your copy today. It's free. You'll find it mighty handy to have around the house because it tells all about chilblains, bunions, itching feet, corns, excessive perspiration, etc., and suggests good common-sense remedies.

United States Rubber Company,

"U.S."
BLUE RIBBON

**foot-saving
footwear**

Rubber footwear for the entire family. For work, dress and play.

"U. S." Blue Ribbon Boots—You can wear the "U.S." Blue Ribbon Boot all day long in the greatest of comfort. Moulded precisely to the shape of your foot. Smooth, even flexing over the instep that puts comfort into walking. Red uppers with white soles or Ebony black with white soles. Three lengths—knee, medium, hip.

"U. S." Blue Ribbon Walrus (all-rubber arctic)—The Walrus is a heavy-duty overshoe built for the hardest usage and yet so light that it doesn't tire you when you have lots of walking to do. Washes off clean in a hurry. Four, five, or six buckles.

Stylish Gaytees—The modern farm wife wants style and color in her overshoes. And Paris style authorities say that Gaytees are the most stylish women's overshoes in the world. Many beautiful colors and fabrics to choose from. Gaytees come in cloth or all rubber—in high or low uppers. Snap fastener, Kwik-glide fastener, or 4 buckles. Look for the name "Gaytees" in the shoe.

Keds for growing feet—The fact that star athletes the country over choose Keds, proves their foot comfort and health qualities. For growing feet they give barefoot freedom and encourage the feet to healthy growth—yet they give the proper protection. Recommended by physicians and gymnasts.

"I've had the valves ground only once in six years . . . didn't need it then"

Mr. J. W. Devitt's farm is located in Pataskala, Ohio, and it's a mighty fine farm, too. We were wandering around the barnyards talking about crops and the weather and so on, when we came across Mr. Devitt's tractor. Naturally we stopped to look the machine over.

"By the way," we asked, "how old is that tractor?"

"Well, sir, she's about six years old now," replied Mr. Devitt. "And you might be interested in a report I got on her a while ago."

"I was grinding corn the other day, when a garage man from Pataskala stopped in. He said she ought to have the valves ground, carbon cleaned out, a new set of rings, in fact an entire overhaul after six years of heavy work. He finally talked me into having the job done."

"The next day he called me over the 'phone and said he had the motor torn down but it needed nothing done to it at all—he found it in wonderful shape. I told him to go ahead and grind the valves anyway, for his trouble."

"He was downright amazed, and wanted to know what kind of oil I had been using. Well, I told him Mobiloil, of course, and that I had never used any other kind of oil in my tractor and what was more—nobody would ever sell me anything but Mobiloil."

We ran across another interesting example in Ohio. A farmer we know there had been using Mobiloil in his tractor for three years. At the end of

that time, he put in new rings, the first repair the tractor ever had. He had another tractor before this one and used every kind of oil in it that came along. At the end of three years, the tractor was a wreck and had to be junked. He says, "No more bargain oils for me—nothing but Mobiloil for my tractor and automobile, too!"

When did you last drain the transmission case?

Every once in a while you ought to look over the instruction book that came with your tractor just to check up on yourself and find out if you are missing any bets that might make the machine work better.

You will note that the book instructs you to drain every 500 or 600 hours, which means *at least once every season*. If you are using your tractor a great deal, you should drain the transmission *twice* during the season. After draining, wash it out well with kerosene or a thin solution of oil and gasoline.

Farmers who let their tractors go into the next year without draining, find them losing pep and snap—and the active life of the machine is shortened.

Then, be sure that the new oil is the best you can find. We recommend Mobiloil "C" or Mobilgrease for the summer and Mobiloil "CW" for the winter, because they are exactly suited to the strenuous requirements of a tractor transmission. They will keep those gears running smoothly and quietly. There will be no danger of wear on gear teeth. And they will help lighten the load on the engine, which means added power.

Some new lubricants

When you apply the grease gun every morning, use Mobilgrease and every bearing *stays well lubricated* all day. Mobilgrease is the kind of lubricant that creeps readily to all parts and then *stays there to do a good job*. And it's important to know that Mobilgrease is not readily washed away by rain.

Then, we have Mobilubricant, made especially for grease cups.

And to prevent water pump leaks, there is Voco Waterproof Grease which will not wash off.

Ask your Mobiloil dealer or implement dealer to show you samples of these new lubricants and tell you how they work.

Why Mobiloil gives such remarkable results

In Mobiloil, **ALL** the essential properties of a full-duty oil are present in correct proportion. These properties are:

OILY CHARACTER—provides moving parts with rich lubrication and holds down wear.

HEAT RESISTANCE—lasts longer—keeps down oil consumption, and makes for economical use.

CARBON CONTROL—keeps carbon deposits from piling up in your cylinders.

OXIDATION CONTROL—keeps oil systems from clogging, and valves from sticking and gumming.

Have your dealer consult his complete Mobiloil Chart, just to check up on the proper grades of Mobiloil to fit your own particular needs. Also, have him tell you about the economy and convenience of getting Mobiloil in 55-gallon or 30-gallon drums.

VACUUM OIL COMPANY

Makers of high-quality lubricants for all types of machinery

"These drums of Mobiloil with their convenient faucets give me a mighty handy season's supply of oil."

Make this Chart your Guide

The correct grades of Gargoyle Mobiloil for engine lubrication of prominent passenger cars, motor trucks, and tractors are specified below. If your car is not listed here, see the complete Chart at your dealer's. Follow winter recommendations when temperatures from 32 F. (Freezing) to 0°F. (Zero) prevail. Below zero use Gargoyle Mobiloil Arctic.

"Getting the biggest percentage of profit from my farm these days means the adoption of big business policies. I've got to figure the fine points of costs and profits over a longer period of time."

Farm News from New York

Grange Officers Tour State and Confer Sixth Degree on Large Classes

READERS of the American Agriculturist realize what a large factor in the well-being of country life is the Order of Patrons of Husbandry, and will be interested in the remarkable page which is being written in the history of agriculture in New York State by the officers of the State Grange who are touring the State by special bus in order to hold a series of twenty-eight special State Grange sessions. These are for the purpose of conferring the sixth degree, or degree of Flora, on large classes preparatory for the great National Grange session to be held at Rochester, Nov. 12-21.

Readers of the Agriculturist will recall the fact that a former issue gave an interesting account of the first trip, the week of August 11, with the bus starting from Auburn, and traveling via Syracuse and Watertown to Canton, where the first special session was held and the 6th degree conferred upon a class of 503. Franklin County at Malone, Essex and Clinton at Plattsburg, Lewis at Beaver Falls, and Jefferson at Adams saw the numbers grow to 1694 who took this degree, conferred with dignity and beauty by the State Grange officers, Fred J. Freestone, Master, Interlaken; Overseer, Raymond C. Cooper, Oswego; Lecturer, Miss Elizabeth L. Arthur, Lowville; Steward, Van Whittemore, Canton; Assistant Steward, Dana P. Waldron, Wolcott; Chaplain, Rev. E. L. Tucker, Spencerport; Treasurer, Frank J. Riley, Senecton; Gatekeeper, George Ritter, Edmeston; Ceres, Mrs. Mary Stafford, Peru; Pomona, Mrs. Ida Potter, Hammondsport; Flora, Mrs. Blanche Clemons, Dansville; Lady Assistant Steward, Mrs. Mabel Cleveland, Bloomville; Chairman Executive Committee, Edson Walrath, Evans Mills; Drill Master, Harold Stanley, Skaneateles. Mr. A. L. Lawrence, of Springfield, Vt., who is Master of the Vermont State Grange and also High Priest Annalist of the Assembly of Demeter, National Grange was the speaker of the evening during this first week.

In Western New York

The second week of the tour came after a three weeks' recess, owing to State Fair and other activities. This time the bus started from Syracuse, and the party journeyed to Lockport, where Niagara and Orleans counties met in joint session. During this week the guest of honor was National Master Louis J. Taber, of Columbus, Ohio. The total of initiates during this week, when sessions were held at Lockport, Hamburg, Jamestown, Olean, Hornell and Perry, was 2,040.

The third special session week started at Batavia, and then to Rochester, Lyons, Canandaigua, Waterloo and Ithaca, with a total of 2915 initiates, with Rochester holding the high record of 611 from Monroe and adjoining

counties. Tuesday evening at Rochester, the speaker of the evening was Harry Caton, Secretary of the National Grange, and the three following nights the guest of honor was Charles M. Gardner, High Priest of Demeter, of Springfield, Mass. At Ithaca, the speaker was Dean Albert Mann, who commended the degree highly. Raymond Hitchings of Syracuse was drill master except at Canandaigua, where the work was in charge of Edson Walrath.

The fourth week the sessions were held at Oneonta, Walton, Liberty, Middletown, Rhinebeck and Hudson. The speaker of each evening was James Farmer, National Lecturer, of South Newbury, N. H. The degree was conferred upon a total of 2,149 during this week.

This brings the total number initiated during the special session to 8,737, who have witnessed real beauty of ritualism that will long be remembered. During the fifth week special sessions were held at Saratoga Springs, Whitehall, Mohawk, Oswego and Cortland, when this remarkable contribution to country life will be completed. There is cause for respect and admiration for the group of officers who are serving loyally during this trip, in cooperation with a wonderful group of splendid men and women in each county, under the leadership of the county deputies, who have sacrificed and worked hard in the effort to realize the great dream of Oliver Hudson Kelly, the splendid effort of National Master Louis J. Taber, and the great leadership of State Master Fred J. Freestone in securing the largest group of farm people ever assembled in one place,—that goal for the Rochester session of a class of 12,000 or more to take the 7th degree, the crowning degree of the Order. Behind this goal is the strengthening of rural organization, the promotion of better rural education and community life, and the building of a finer type of manhood and womanhood. In connection with this tour it is worth stating that the State Grange officers have not failed to attend church service in a body in whatever place they have paused for the Sabbath day. This impresses the observer with the fact that the Grange is a loyal supporter of church life, of rural betterment in every line,—social, moral, patriotic,—a true builder of character and community life.

Tariff Increase Aids Bean Men

WITH low bean yields in New York State, growers are hopeful for a profitable price this year because of equally low yields in Michigan and an increase in the tariff from 1½c to 3c a pound. Since the drought, the estimated

New York crop has been reduced to 1,116,000 bushels or an average yield of 9.3 bushels to the acre. A good yield is from 15 to 18 bushels and the five-year average for the state is 13.5 bushels.

Pea-bean yields are especially low in Orleans, Genesee, and Wyoming counties. The pea-bean yields ran from six to ten bushels to the acre, although the quality is good and the pick low. It is unusual for sunscald of the pods to be so severe as to injure the seed but this was actually true in some fields.

The yields of red kidney beans and white kidneys in Wayne, Seneca, Yates, Ontario, Steuben, and Allegany counties, where rainfall was more plentiful, will be better. Perry Marrows, grown mainly in Wyoming and Livingston counties, will yield below the average.

Supreme Court of Iowa Upholds Tuberculosis-Eradication Work

IN a 16-page decision, rendered September 22, the supreme court of Iowa sustained the law under which the eradication of bovine tuberculosis is being conducted in the State. The case before the court resulted from the efforts of certain cattle owners in Mitchell County to obtain an injunction against the State and county authorities to prevent the tuberculin testing of cattle. In rendering its decision, which in every particular was favorable to the continuation of

tuberculin testing in Iowa, the supreme court reversed the opinion of a local judge in Mitchell County. "Careful reading," the decision stated, "convinces us that the test is reliable, useful, and advantageous." The supreme court also upheld the view that bovine tuberculosis can be transmitted to human beings.

West Has Husking Contest

IN New York State we get quite excited over the annual Farm Bureau-American Agriculturist horseshoe pitching contest at the State Fair. Out West they get just as excited over their annual corn husking contest. Out in Kansas, the annual state contest will be held on November 5. Other states will have similar contests and then the state champions will gather at Norton, Kansas, on November 14, for what might be termed, the world series, so far as corn husking is concerned.

Out there, you know, they drive a team and wagon down through the field with a big baffle board on the side of the wagon opposite the husker. The husker goes down the row, then with one motion takes the ear off and strips the husks. Although we cannot vouch for this, we have heard that some of the experts are so fast that before one ear strikes the back board, two or three others are in the air on the way toward the wagon. The contest will be broadcast by the National Broadcasting Company.

New York County Notes

Columbia County—A week of dry weather with two windy days blew down many apples. Cold storage plants are unable to take all fruit. Apples are being made into cider. Five cents a hundred pounds is being paid for apples on the ground; 7½c a hundred pounds for apples in bags; 20c a hundred pounds delivered at the mill. The potato crop is very good, the price being 90c a bushel for them freshly dug. Cold storage peaches peddled for \$1.25 a bushel and they are a bad investment, every one being badly bruised. Tomatoes peddle for 75c a bushel either green or ripe. Grapes from \$20 to \$35 a ton. One grower allows the customer to cut his own at \$1.00 a bushel. These are fine ones. Butter, 47c a pound in trade at country stores.—MRS. C. V. H.

Saratoga County—We have had very nice weather—frosty nights and sunny days. They are very nice for working. Water is low, pastures dry and everyone is hoping for rain. There was no frost until October and this made it fine for harvesting crops and getting the full benefit of vegetable and flower gardens. Nearly all silos are filled. Potato digging, husking and plowing are going on now. Vegetables are cheap; eggs, 40c; butter doing a little better. There are the usual amount of chicken pie suppers. School taxes and insurance assessments are due now.—MRE. L. W. P.

Oswego County—It has been a nice season to harvest crops. The grain crop was good and oats went around 40 bushel per acre. There is a big crop of all kinds of fruit. Pears are selling for 25c per bushel; apples, 25c to 75c; potatoes, \$1.25. All kinds of vegetables are low. It has been a hard year for growers. There are acres of lettuce left to rot on the ground. Onions are selling at 50c per bushel; cabbage, \$9.00 per ton; eggs, 40c a dozen; live poultry, 25c a pound. We had some rain which has helped pastures.—J. S. M.

Franklin County—Our first killing frost arrived October 5. Farmers are busy harvesting their potato crop and a fair yield of fine tubers has been harvested, although dry rot has made its appearance in many fields. Prices range around 65c a bushel; most growers are storing. Most farm crops average about the same yield as last year. The Farm Bureau is making plans for their annual canvass. Farm Bureau Agent Radway is very busy these days and is doing some splendid work among the farmers in Franklin County. Some plowing has been done, but

it has been quite dry this fall. Eggs, 35c a dozen; live poultry, 18c a pound.—H. T. J.

Genesee County—A white frost this morning, October 4, put an end to the cucumber and tomato harvest. Potato digging and apple picking are in full swing. The blight cut short the yield of a number of fields of late potatoes. Medium and pea beans have dropped from \$6 to \$5 per 100 pounds. Late cabbage is quoted at only \$7 a ton. Wheat acreage will be short because the ground was too dry to plow. Members of the 4-H Club met at the home of Craig Ross, Corfu, New York, and were instructed by Professor B. Slocum, New York State College of Agriculture at Ithaca, on how to pack their bees by the tar paper method for winter storage.—MRS. R. E. G.

Chautauqua County—Farmers have had a wonderful fall to secure their crops. Practically no bad weather has been experienced although the past week has been rather cold and raw. Most of our rains have come during the night so that work has not been held up. Most silos have been filled, or rather partly filled. To have a full silo this fall is something of a distinction. Threshing is about over. Some more buckwheat to thresh. Other grains have been a fine crop, but buckwheat will be about half a crop. The yield will run from ten to fifteen bushels per acre. The apple crop is spotty in Chautauqua County, but generally they are a good crop. However, in some sections there are hardly any.

At the date of this report, October 3, we have had no killing frost, something almost unheard of. We are still picking red raspberries and strawberries from our everbearing plants. We have picked the raspberries even later than this by covering them when frost threatened, but never the strawberries. Potatoes are mostly dug and are not more than a half crop. A large percentage of the crop is too small to market. Farmers that are marketing their crop now are getting from \$1.25 to \$1.50 per bushel; some are holding for higher prices.

Cabbage is generally a poor crop. The worms have badly damaged some pieces, but occasionally we see a good piece. For some reason the price is low. Meadows and pastures are greening up nicely but very little fall feed and cows are not getting much feed in the pastures. This season has shown the value of alfalfa. We have a small piece from which we have taken three good crops. We have another piece seeded the last week in June that, in spite of the drought, is as pretty a piece as I ever saw. It doesn't seem to mind dry weather.—A. J. N.

Ayrshire Breeders Have Brisk Trade in Bulls

WITH four Ayrshire bull calves selling for an average of \$500 each and several others at from \$200 to \$500 each; Ayrshire breeders report a brisk demand for the bull calves from tested dams, which were exhibited in the futurity classes at the Eastern States Exposition and the New York State Fair. Wendover Coast Guard, the sensational winner of the Eastern futurity, was selected from the Wendover Farm, Bernardsville, New Jersey, by E. C. Blodgett of Bernardston, Massachusetts. Alta Crest Rainy Day, second prize winner at Syracuse and third at Springfield and the first bull calf to win a total of \$400 in a single show season, was purchased by B. F. Steele of Heuvelton, New York, from Alta Crest Farm, Spencer, Massachusetts.

Penshurst Farm, Narberth, Pennsylvania, sold Penshurst Jan, third prize calf, to the Rhode Island State College. Penshurst Cherub, a son of Penshurst Man O' War, was selected at \$500 to head the commercial herd of heavy producers owned by the Whiting Milk Company of Wilton, New Hampshire.

Lippitt Winbox, son of Iroquois Sally Winters, grand champion cow of the 1929 National Dairy Show, was sold by Lippitt Farm, Hope, Rhode Island, to Fred Por-

ter of Crown Point, New York. The Metropolitan Life Insurance Company of Wilton, New York, sold Metropolitan Traveller 13th, sixth prize calf at the New York State Fair, to G. L. Williams of Fort Edward, New York. Ellsworth Bunker of Putney, Vermont, selected Fillmore Absalom from the Fillmore herd of J. C. Colgate, Bennington, Vermont. R. R. Ness & Sons of Howick, Quebec, announced the sale of Burnside Top Grade's Pearlstone to Adam Robertson, Brigham, Quebec, Canada. S. N. Stimson of Spencer, New York, sold Toreador's Amos of Craigy Burn to Ray Van Skiver of South Canisteo, New York.

All of these bulls were shown in the futurities which have been promoted by the Ayrshire Breeders' Association as a special class for bull calves from high record cows. In addition to the nomination fees paid by the exhibitors, both the Ayrshire Breeders' Association and the fairs add to the premiums, bringing the futurity purses at the 1930 shows up to \$870, with the winner's share amounting to about \$170. With three entries, Alta Crest Farm of Spencer, Massachusetts, was the heaviest money winner. Alta Crest entries were first and second at Syracuse and second, third and fifth at

IRON BAR MACHINE

LOOK at these extra bars
on the new Weed American Tire Chains. No other tire chain offers this extra wearing and gripping surface. No other chain can offer these electrically welded reinforcing bars across the contact links. They were invented by Weed Tire Chain engineers. They are patented as another exclusive Weed feature.

How to Charge Your Radio Battery

By I. W. DICKERSON

IT is a simple matter to charge the radio or automobile battery by using a small 6-volt generator from a discarded automobile, and driving it from the pumping or washing machine engine. If the engine has to be run especially to do the charging work, the fuel and oil and time for looking after it will probably cost as much as to have two batteries and have the charging done at the battery service station; but if the generator is driven off the flywheel of the engine so the charging can be done while the engine is used at its regular job, the extra fuel and time required can hardly be noticed. Thousands of farmers are already doing this with entire satisfaction. Any gas engine from 1½ H.P. up should have plenty of extra power to drive the small generator, which ordinarily does not take more than one-sixth horse power; but often the little ¾ H.P. washing machine engines may not be able to do this, especially if they are worn or not in very good condition. If this is the case, it may be advisable to trade in the engine for a larger size. Whatever you do, don't waste your time and money and everybody's patience trying to rig up a wind driven outfit to charge the storage battery. You will almost surely fail; and if you succeed, it will cost you many times what a small engine would, and will not work very satisfactorily at its best.

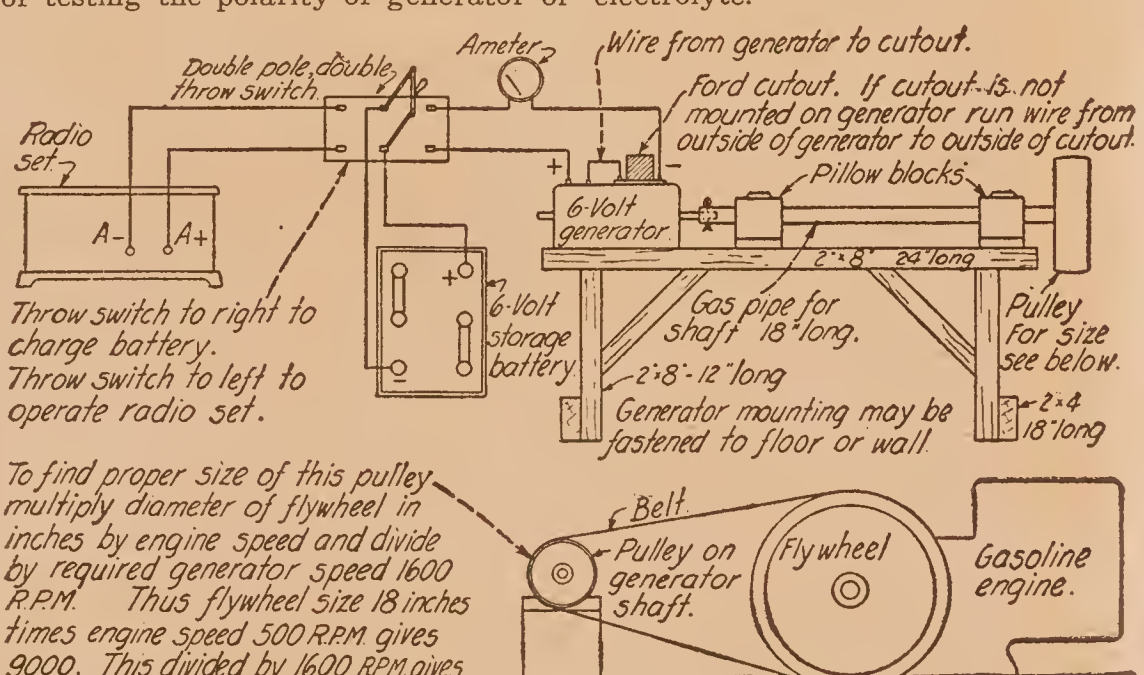

The Generator

Any 6-volt battery charging generator in good condition can be used for this purpose. The Ford magneto type cannot be used, because it gives alternating current; nor will it pay to waste time and money changing over a starting motor or a 12-volt generator to do this work. These old generators can be secured very cheaply from the auto wrecking concerns, and it will be better to trade your unsuitable one in on one of the right kind than to try to change it over. The ammeter and cut-out should also be secured, since the ammeter is very desirable to show just what the generator is forcing into the battery; and the cut-out is helpful in protecting the battery in case the engine stops for any reason. It is well to take the generator to a battery service man to see that it works properly and that the cut-out closes and opens as it should.

The method of driving the generator, of figuring the proper size of pulley, of testing the polarity of generator or battery, and of connecting in ammeter and cut-out and battery are all shown quite clearly in the diagram (D-694). The method shown of using a pulley or an extension of the generator shaft has some advantages, since it takes all the pull off the generator shaft and makes it easier to attach and balance the larger pulley. Touch two wires from a 6-volt storage battery to the terminals of the generator to see what direction it motors, then drive it in the same direction as a generator. Multiplying the speed of the engine by the diameter in inches of its flywheel or pulley, and divide this by 1200 will give the approximate diameter of the pulley to be used on the generator. This does not need to be very exact, since the charging rate can be adjusted by means of the third brush. A speed of 1200 will usually give pretty satisfactory results.

Charged Battery will Not Freeze

The diagram also shows how to arrange a two-pole double-throw switch for connecting battery either to generator or radio. One distinct advantage of this switch is that it avoids any possibility of turning the battery on to the set while it is being charged, which would likely burn out the tubes. Care should also be taken not to run the generator very long at a time without the battery being connected to it, as this is likely to burn out the field coils. The battery preferably should be close to the generator with heavy wires connecting it to prevent the voltage from dropping due to wire resistance, but the receiving set may be 100 feet or more away, if a No. 14 or larger wire is used for connecting it to the battery. As long as the battery is kept reasonably well charged there is but little danger from freezing. Test the specific gravity every few days and be sure the battery does not stand any length of time after it reaches 1.175. The battery is fully charged when it reaches 1.280 to 1.300 or when the cells gas freely and the gravity readings no longer increase. Add nothing but pure distilled water or water caught in the open in a glass or earthenware vessel and keep tops of plates covered about one-half inch. If the battery temperature is below freezing, do not add water until the battery has been charged a little while and then keep charging until the added water has been well mixed with the electrolyte.

Double pole, double throw switch. Ammeter. Wire from generator to cutout. Ford cutout. If cutout is not mounted on generator run wire from outside of generator to outside of cutout. 6-Volt generator. Pillow blocks. 2" x 8" 24" long. Gas pipe for shaft 18" long. 2" x 8" 12" long. Generator mounting may be fastened to floor or wall. Pulley for size see below. 2" x 4" 18" long. Belt. Pulley on generator shaft. Flywheel. Gasoline engine.

To find proper size of this pulley multiply diameter of flywheel in inches by engine speed and divide by required generator speed 1600 R.P.M. Thus flywheel size 18 inches times engine speed 500 R.P.M. gives 9000. This divided by 1600 R.P.M. gives 5½ inches. Use 5½ inch or 6 inch pulley.

Wires from generator. Positive wire goes to positive side of battery. Glass containing salty water. Most bubbles will appear around negative wire.

Use this same test if necessary to determine polarity of storage battery.

Use 6-Volt automobile generator with cutout. Generator should turn in same direction as it did while in automobile. To find which wire from generator is positive and which is negative proceed as shown in sketch at left while generator is running. Regulate generator to charge at 15 amperes or less. Test battery with a hydrometer. A fully charged battery will test 1.280. Do not allow battery to get below 1.200. Remove filler caps from top of cells while charging. Keep top of battery clean. Add distilled water whenever necessary to keep solution in cells above top of plates.

Curing Cannibal Hens

By L. E. WEAVER

A. A. Poultry Editor

DID you ever put a fine lot of early-hatched pullets in a nice clean pen in the fall, and then watch them day by day with a feeling of satisfaction and perhaps just a little pride as their production climbed steadily upward?

And then did you ever go into the pen one day and find, with very different feelings this time, a fine big pullet stretched out dead as a door nail, her comb pale and bloodless, bloody feathers around the vent, and on picking her up discover there had been a complete disemboweling? Perhaps a few pullets were still picking at that bloody cavity when you found her. If you have had that experience you have seen cannibalism of poultry in its worst form. Chicks and the growing young stock sometimes turn cannibal and eat each other's toes or even kill each other, but that is not such a loss as when the victims are full-grown pullets. It always seems as though it is the very best pullets that are taken.

It might well be mentioned here that the birds are not a complete loss since bleeding has usually been as thorough as though their heads had been cut off, and no more tender and delicious chicken could be put on a table than these pullets in the pink of health and good flesh. But they were raised to lay eggs and not to be eaten, and their loss is a serious matter particularly when the trouble continues week after week with daily losses of from one to a half dozen birds, and when it recurs year after year.

A Sure Way to Stop It

Many times we are asked the questions, "What causes the trouble and how can it be stopped?" The only sure way of stopping the habit without killing the birds that I know of, is to clip off the tip of the beak of every pullet in the pen. Use a knife or tinner's snips and clip only the upper mandible. Clip it as close as you can without drawing blood. This does not interfere with the birds' eating, but they can no longer get a good hold on feathers or flesh. To run all that flock of pullets through the catching crate may seem like a lot of work, but wait until I tell you the rest of it. It will all have to be done over again in about three weeks when the beaks have grown out again, unless the habit has been forgotten by that time. But even if two clippings are necessary the saving of only a few pullets will pay good wages for the time spent.

But what causes the trouble in the first place? I asked that question of Professor Halpin of Wisconsin and he simply said "I don't know". Then he went on to say, "When we can produce the trouble at will in a flock we will know more about the cause and can probably find a cure". To date no one has been able to do that though several have tried to. Many times people have thought they had found the solution and their suggestions have even worked out in some flocks where they have been tried, but invariably they have fallen down eventually.

There are many apparently contradictory facts about cannibalism that leave the student in a confused state of mind. For instance, the trouble is not noticed as a rule until production has increased to fifty per cent or more, and it becomes more severe as production goes higher and decreases as production goes down. Yet there are

(Continued on Page 22)

SAVE Labor and Money with these handy machines

THE saving in time and labor, the economy, and the convenience of being able to grind your own feed and shell your own corn whenever you want to more than justifies owning a McCormick-Deering Feed Grinder, Corn Sheller, and Engine. The small investment required to put these machines to work on your farm is offset many times over by the many advantages they offer the year around, and by the savings they effect.

Examine the models the McCormick-Deering dealer has on display. Ask him to point out the exclusive features, quote prices, and demonstrate for you.

INDOORS and OUT the McCormick-Deering Engine is one of the most useful machines on the farm. Made in 1½, 3, 6, and 10 h. p. sizes.

A McCormick-Deering Corn Sheller will enable you to shell corn for seed, feed, or market at low cost. Built strong to give long service. The line includes shellers for hand, engine, or tractor power.

McCormick-Deering Feed Grinders with reversible double-faced grinding plates are obtainable in 3 sizes for engine or tractor operation.

Write for illustrated folders and read about the many features of these money-saving machines.

POST YOUR FARM And Keep Trespassers Off

**Reduced Prices on
TRESPASS SIGNS**

Effective October 1, 1930, trespass signs are offered to subscribers of American Agriculturist at new reduced rates in quantities of fifty or more. The new rates are as follows:—

Per Dozen	\$ 1.00
Per Fifty	3.50
Per Hundred	6.50
Per Thousand	60.00

The price for smaller quantities remains at \$1. per dozen.

Specially worded signs will be made up at slight additional cost. Names and addresses will be imprinted at \$2.00 for the first one hundred and \$1.00 for each additional one hundred.

These signs are made up of extra heavy cloth material that will withstand the severities of the weather.

We unreservedly advise farmers to post their land. The signs we have prepared are worded to comply with Conservation Law.

Cash must accompany order.

American Agriculturist
461 Fourth Ave., New York, N. Y.

IN my childhood home if there were guests for dinner Mother always saved a share of the good things until we raced home in the evening from the little country school house. We could count on chicken and pie and cake and pudding which if not in its prime from the long wait, was delicious to us for we were hungry from work and play. But Mother went farther than that for often we had company dinners just for ourselves, planned for a day when work was not so pressing, and also planned to include the favorite dishes of the children as well as grown-ups. On the spotless table cloth were placed the company viands for the family, because often the children missed the big

folks improves table manners, teaches many wholesome lessons, gives the children real thrills and makes the grown folks happier. A good chicken dinner served on the best china with a fancy dessert and something extra in the way of a spread or salad tastes better than the everyday way of serving even though the same food be used.

If you don't believe this make a company dinner and tell your family it is for them alone because you love them and get pleasure out of making them happy. If the mother of the family is not surprised and delighted at what she hears and sees it will be the exception to the general rule. "Folks like to have a fuss made over them" is the way an old lady puts it, and it is the truth. And Mother gets her joy second hand perhaps, but she gets it just the same, for the sight of her best loved ones enjoying her good meal is reward enough for any mother.

—Hilda Richmond.

Easily Made Gifts

TAKE a wooden coat-hanger, one of the cheapest, almost straight ones, and a piece of heavyweight, unbleached cotton cloth as wide as the hanger and about three times as long. Fold one end of material up to form deep pocket, bind sides and across top and bottom of pocket for added strength, and attach upper end of material to a coat hanger. This makes a splendid clothespin bag which may be hung on the line and pushed along as needed.

The word "clothes-pins" may be outlined on the pocket in color to match binding. This is a very practical and attractive gift.

For a little or big girl a nice gift may be "assembled" as follows: Get three turkish towels from the five and ten, and two washcloths matching color design. Fold one of the towels both ways to find exact center, cut round opening just large enough for neck, slash towel to hem from center of neck

and bind raw edges. Add tape in matching colors for ties and you have a shampoo or combing jacket. A cake of soap and a bottle of shampoo from

This cunning "Bunny" No. B5427 comes stamped on two-tone pink and white terry cloth, with the jacket of blue and white. Floss and "Squeak" included in package, 50 cents. Order from Embroidery Department, American Agriculturist, 461 Fourth Avenue, New York City.

the five and ten complete an inexpensive and welcome "set" which will have special appeal to a little girl just beginning to take extra interest in matters of the toilet.—Mabelle Robert.

Attractive hot plate mats for use at meal times may be had by lacquering or enameling odd shapes of celotex, or some similar material, in the desired colors. These are also useful for placing on table when serving cold drinks to prevent the formation of unsightly rings on varnished surfaces. Or you could cut the celotex into playing card motifs, lacquer them in black and red, and use them for gifts at bridge and other card games.

MODERN QUILT BLOCK DESIGNS
Nos. C3311-12-14-15-19-23 are exceedingly pretty designs for patchwork quilts. All are very easy to make as the most simple stitches such as darning, lazy-daisy, cross and outline stitches are used exclusively. Come stamped on fine quality white embroidery cloth, size 18 X 18 inches. Twelve of these blocks are required for making quilt size 90 X 90 inches and 3 1/2 yards of fast color star cloth is necessary for making the contrasting blocks. The material for these contrasting blocks we can furnish in rose, blue, lavender or tangerine. Stamped blocks are 15c each if ordered singly; 1/2 dozen 60c; one dozen \$1.00. Price for 3 1/2 yards of colored material is \$1.65 or \$2.65 for all of the material to make blocks for entire quilt. Order from Embroidery Dept., American Agriculturist, 461 Fourth Ave., New York City.

dinners cooked for guests until evening.

The happy memories of those feasts which lured us from play to walk around the table and anticipate the good things to come almost as much as the real feasting made me carry the custom into my own home with profit and pleasure. Perhaps the rich pies and heavy meats and many preserves and pickles and jams of my memory are not there, but the things children like now and that were not known then are used. Plum pudding rich and heavy has given place to gelatine with fruit, the two kinds of pie that was always served at company dinners of the past may be absent, but there are other good things such as ice cream and fresh berries and fruit in season. The home table never boasted candy among its many dishes, but we have homemade fudge and even taffy, though taffy can hardly be called a company dish.

Some people laugh at the idea of a company dinner when only the family is present, but the idea takes with the home folks all right. Some people think it extravagant to set out any but plain food when the family is alone, but let those who will cheat the family out of sweet, simple good times now to save for them hereafter. For me and my house we will take the little things as we go along and let the big ones take care of themselves if they ever come. Having company dinners for the home

Athletic Posters

The athletic posters for a boy's room are all of rich heavy felt and much more stunning than ever were those popular pennants embellished by printing only. There is an excellent money-making idea in these for supplying student trade with seasonable posters. Football, basket ball or track on a special background of school colors. Tan or sand color complexion, grey and black are used on all with your choice of color for background and initial. These individual initials and the background color choice selected especially for each order make the felt posters really desirable for one's own school.

The colors we have stocked in felt for these are: red, orange, old gold, cadet, navy, green, maroon, purple and orchid as well as the grey, sand and black used in the figures. The background is about 15 by 21 inches, right size for a wall hanging or a pillow, to wave from a cane or wear to the game dangling from the shoulder blades.

They are number M627 for football or M628 for basket ball or track. This includes all felt parts of the figure with the initial swatch and background in the color stated in your order. In ordering, say number 627H in green or whatever letter and color you want.

M627 Football Poster Materials in Felt80c
M628 Basket ball or Track Poster.....80c

Order from American Agriculturist, 461 Fourth Ave., New York City.

The Prophetic Pie

A New Way to Tell Your Fortune on Hallowe'en

THE Prophetic Pie which may grace the Hallowe'en table is of course, a plum pie, like Jack Horner's famous pastry. It is a round pan in which are placed a number of stuffed prunes, wrapped in paraffin paper, a couplet being enclosed with each. The top of the pie is covered with unbleached muslin, liberally slashed, so that the guests may "Stick in a thumb and pull out a plum!"

The following fortune rhymes may be used with the prunes:

- 1 A plum of wealth is just ahead
So poverty you need not dread!
- 2 In the prophetic pie for you,
Assurance of a love so true.
- 3 A plum of luck indeed you find,
A job that's suited to your mind.
- 4 A plum of happiness is yours,
You'll form a friendship that endures.
- 5 A plum that means decided change,
You'll have adventure new and strange.
- 6 Within this pie of prophecy,
A plum, a brand new car will be!
- 7 Here is a plum that you've pulled out,
A fine new home, beyond a doubt.
- 8 For you there is a juicy plum,
A raise in salary will come.

The Daytime Frock

2744

Dress Pattern No. 2744 meets day time needs admirably, especially when made up in the pretty brown, green or red crepe wools or woolen-textured silks. The plaits are not only smart but add ease to walking. The pattern cuts in sizes 14, 16, 18, 20 years, 36, 38 and 40 inches bust measure. Size 16 requires $3\frac{1}{4}$ yards of 39-inch material with $\frac{5}{8}$ yard of 39-inch contrasting. Price 15c.

TO ORDER: Write name, address, pattern sizes and numbers clearly and correctly and enclose with proper remittance in stamps or coin (although coin is sent at own risk). Add 12c for one of the new Winter Fashion Catalogs and address to Pattern Department, American Agriculturist, 461 Fourth Avenue, New York City.

- 9 A lucky deal—this is the plum
Pulled out by your inquiring thumb!
- 10 A plum that will surprise, perchance,
A most propitious business chance.
- 11 Within this pie, a plum of size,
You'll have good news that will surprise.
- 12 Here is a plum that joy will bring
For you the wedding bells will ring.
- 13 A plum is here, a plum to please,
A voyage far upon the seas.
- 14 A good luck plum, a plum for fair,
You'll cross the U.S.A. by air.
- 15 Put in your thumb, your plum to take,
A lot of money you will make.
- 16 So here's your plum, enjoy the same,
You soon will have no end of fame.

—Elsie Duncan Yale.

Change in Meeting Place

THE annual meeting of both the Home Bureau and Farm Bureau Federations of New York State will be held in Albany, November 5, 6 and 7th at the Hotel Ten Eyck. The leaders call especial attention to the place of meeting, as it has become customary in previous years to gather in Syracuse. The program is not yet ready for publication but the meetings will be well worth attending.

Pasteurize Cider

PASTEURIZING is most satisfactorily accomplished by heating cider in capped bottles or sealed jars placed in a boiler or other large vessel of water heated to about 185 degrees. A false bottom of wooden slats must be placed in the bottom of the boiler to prevent cracking of bottles by direct heat. The temperature of the cider must reach 160 degrees and be held at that point for 30 minutes. To determine when the cider has been heated to the proper temperature, place a thermometer in an uncapped bottle of cider in the hot water.

Cider can also be preserved by heat-

ing in a kettle directly over fire to 180 degrees, and then pouring into sterilized containers and sealing air tight while hot. Direct heating in an open kettle, however, will injure the flavor to some extent. When the pasteurizing process is carefully carried out, cider will not ferment and will retain most of the natural flavor.

To Bone a Leg of Lamb

MANY people always have a leg of lamb boned for roasting. They say it is surprising how many attractive servings can be made from either a hot or a cold boned leg that can be

Decidedly Voguish

2708

Dress pattern No. 2708 is exactly what the mature figure is looking for, with its slimming lines and its air of smartness. The silk is tweed effect and is very popular and has the necessary appearance of body, being especially effective in this semi-tailored design. The pattern cuts in sizes 36, 38, 40, 42, 44, 46 and 48 inches bust measure. Size 36 requires $4\frac{1}{4}$ yards of 39-inch material with $\frac{5}{8}$ yard of 32-inch contrasting. Price 15c.

sliced evenly from end to end. Any butcher can bone a leg of lamb for you, or you can do it yourself. The United States Department of Agriculture tells how it is done.

"In boning, first take out the irregular aitch or pelvic bone at the large end. Cut into the meat on the thinnest or 'stifle' side and lay back a flap of meat deep enough to expose the leg bone and permit its removal. You will have a pocket here for stuffing, or the leg may be sewed together and roasted without stuffing. A good sharp, thin knife is needed for boning."

Anybody can carve a roast prepared in this way, and serve it much more quickly than the ordinary leg roast. For sliced cold cuts the meat is much more shapely than when the leg is carved with the bones in.

FYR-PRUF

(pronounced Fire-Proof)

THE SAFE CLEAN STOVE and NICKEL POLISH

Fyr-Pruf is absolutely safe because it cannot burn or explode . . . and also because it will not stain or irritate your skin. Simply use cold water and soap to quickly wash all trace from your hands. Fyr-Pruf is clean . . . never creates dust or leaves an odor. And Fyr-Pruf is really two polishes in one, for it cleans and polishes both stove and nickel parts in a single operation.

Ask your dealer for Fyr-Pruf stove polish . . . say "Fire-Proof" . . . and see how easily you can keep your stove looking like new.

The Indian Drum—By William McHarg and Edwin Balmer

He called me a fool and defied me. Luke—even my own man, the only one left on the tug with us—believed it! And there was murder in it now, with Stafford dying there upon the deck and with the certainty that all those on the *Miwaka* could not be saved. I felt the noose as if it had been already tied about my neck! And I had done no wrong, Father! I had only thought wrong!

"So long as one lived among those on the *Miwaka* who had seen what was done, I knew I would be hanged; yet I would have saved them if I could. But, in my comprehension of what this meant, I only stared at Stafford where he lay and then at Spearman, and I let him get control of the tug. The tug, whose wheel I had lashed, heading her into the waves, had been moving slowly. Spearman pushed me aside and went to the wheelhouse; he sent Luke to the engines, and from that moment Luke was his. He turned the tug about to where we still saw the lights of the *Miwaka*. The steamer had struck upon the reef; she hung there for a time; and Spearman—he had the wheel and Luke, at his orders, was at the engine—held the tug off and we beat slowly to and fro until the *Miwaka* slipped off and sank. Some had gone down with her, no doubt; but two boats had got off, carrying lights. They saw the tug approaching and cried out and stretched their hands to us; but Spearman stopped the tug. They rowed towards us then, but when they got near, Spearman moved the tug away from them, and then again stopped. They cried out again and rowed toward us; again he moved the tug away, and then they understood and stopped rowing and cried curses at us. One boat soon drifted far away; we knew of its capsizing by the extinguishing of its light. The other capsized near to where we were. Those in it who had no lifebelts and could not swim, sank first. Some could swim and, for awhile they fought the waves."

Alan, as he listened, ceased consciously to separate the priest's voice from the sensations running through him. His father was Stafford, dying at Corvet's feet while Corvet watched the death of the crew of the *Miwaka*; Alan himself, a child, was floating with a lifebelt among those struggling in the water whom Spearman and Corvet were watching die. Memory; was it that which now had come to him? No; rather it was a realization of all the truths which the priest's words were bringing together and arranging right-ly for him.

He, a child, saved by Corvet from the water because he could not bear witness, seemed to be on that tug, sea-swept and clad in ice, crouching beside the form of his father while Corvet stood aghast—Corvet, still hearing the long blasts of distress from the steamer which had gone, still hearing the screams of the men who were drowned. Then, when all were gone who could tell, Spearman turned the tug to Manitowoc. . . . Now again the priest's voice became audible to Alan.

Alan's father died in the morning. All day they stayed out in the storm, avoiding vessels. They dared not throw Stafford's body overboard or that of the engineer, because, if found the bullet holes would have aroused inquiry. When night came again, they had taken the two ashore at some wild spot and buried them; to make identification harder, they had taken the things that they had with them and buried them somewhere else. The child—Alan—Corvet had smuggled ashore and sent away; he had told Spearman later that the child had died.

"Peace—rest!" Father Perron said in a deep voice. "Peace to the dead!"

But for the living there had been no peace. Spearman had forced Corvet

to make him his partner; Corvet had tried to take up his life again, but had not been able. His wife, aware that something was wrong with him, had learned enough so that she had left him. Luke had come and come again for blackmail, and Corvet had paid him. Corvet grew rich; those connected with him prospered; but with Corvet lived always the ghosts of those he had watched die with the *Miwaka*—of those who would have prospered with Stafford except for what had been done. Corvet had secretly sought and followed the fate of the kin of those people who had been murdered to benefit him; he found some of their families destroyed; he found almost all poor and struggling. And though

back, under the name of one of those whom he had wronged, to the lake life from which he had sprung. Only now and then, for a few hours, he had intervals when he remembered all; in one of these he had dug up the watch had taken from Captain Stafford's pockets and written to himself directions of what to do with them, when his mind again failed.

And for Spearman, strong against all that assailed Corvet, there had been always the terror of the Indian Drum—the Drum which had beat short for and the ring and other things which he the *Miwaka*, the Drum which had known that one was saved! That story came from some hint which Luke had spread, Corvet thought; but Spearman,

The name—the new name that had come to him—he knew what that must be: Robert Alan Stafford; and there was no shadow on it. He was the son of an honest man and a good woman; he was clean and free; free to think as he was thinking now of the girl beside him; and to hope that she was thinking so of him.

Through the tumult in his soul he became aware of physical feelings again, and of Sherrill's hand put upon his shoulder in a cordial, friendly grasp. Then another hand, small and firm, touched his, and he felt its warm, tightening grasp upon his fingers; he looked up, and his eyes filled and hers, he saw, were brimming too.

They walked together, later in the day, up the hill to the small, white house which had been Caleb Stafford's. Alan had seen the house before but, not knowing then whether the man who had owned it had or had not been his father, he had merely looked at it from the outside. There had been a small garden filled with flowers before it then; now yard and roofs were buried deep in snow. The woman who came to the door was willing to show them through the house; it had only five rooms. One of those upon the second floor was so much larger and pleasanter than the rest that they became quite sure that it was the one in which Alan had been born, and where his young mother soon afterward had died.

They were very quiet as they stood looking about.

"I wish we could have known her," Constance said.

The woman, who had showed them about, had gone to another room and left them alone.

"There seems to have been no picture of her and nothing of hers left here that any one can tell me about; but," Alan choked, "it's good to be able to think of her as I can now."

"I know," Constance said. "When you were away, I used to think of you as finding out about her and—and I wanted to be with you. I'm glad I'm with you now, though you don't need me any more!"

"Not need you!"

"I mean—no one can say anything against her now!"

Alan drew nearer her, trembling.

"I can never thank you—I can never tell you what you did for me, believing in—her and in me, no matter how things looked. And then, coming up here as you did—for me!"

"Yes, it was for you, Alan!"

"Constance!" He caught her. She let him hold her; then, still clinging to him, she put him a little away.

"The night before you came to the Point last summer, Alan, he—he had just come and asked me again. I'd promised; but we motored that evening to his place and—there were sunflowers there, and I knew that night I couldn't love him."

"Because of the sunflowers?"

"Sunflower houses, Alan, they made me think of; do you remember?"

"Remember!"

The woman was returning to them now and, perhaps, it was as well; for not yet, he knew, could he ask her all that he wished; what had happened was too recent yet for that. But to him, Spearman—half mad and fleeing from the haunts of men—was beginning to be like one who had never been; and he knew she shared this feeling. The light in her deep eyes was telling him already what her answer to him would be; and life stretched forth before him full of love and happiness and hope.

The End

"Just David" Comes to You Next Week

IN this issue the Indian Drum, which so many of our readers have been following with exceptional interest, reaches its conclusion. By the way, we trust that you are all pleased with the ending. Next week, we give you the first installment of our new serial, "Just David", by Eleanor Porter. Although it is an entirely different type of book from the Indian Drum, we feel certain that you will enjoy it just as much.

The author tells in a most appealing manner of the trials and joys of a young lad, the son of a violinist, who, to keep him unspoiled, took him to a mountain cabin away from his friends and relatives for a number of years. His father dies suddenly, unrecognized, and David is left to work out his own salvation in the family of a hard-headed, practical farmer who looks upon music as something closely akin to sin.

However, we will not tell you too much about the story for you will want to read it yourself. We are certain, if you will read the first chapter, that you will await each week's new installment with impatience and great anticipation.

Corvet paid Luke to keep the crime from disclosure, yet Corvet swore to himself to confess it all and make such restitution as he could. But each time that the day he had appointed with himself arrived, he put it off and off and paid Luke again and again. Spearman knew of his intention and sometimes kept him from it. But Corvet had made one close friend; and when that friend's daughter, for whom Corvet cared now most of all in the world, had been about to marry Spearman, Corvet defied the cost to himself, and he gained strength to oppose Spearman. So he had written to Stafford's son to come; he had prepared for confession and restitution; but, after he had done this and while he waited, something had seemed to break in his brain; too long preyed upon by terrible memories, and the ghosts of those who had gone, and by the echo of their voices crying to him from the water, Corvet had wandered away; he had come

born near by the Drum, believed that the Drum had known and that the Drum had tried to tell; all through the years Spearman had dreaded the Drum which had tried to betray him.

So it was by the Drum that, in the end, Spearman was broken.

The priest's voice had stopped, as Alan slowly realized; he heard Sherrill's voice speaking to him.

"It was a trust that he left you, Alan; I thought it must be that—a trust for those who suffered by the loss of your father's ship. I don't know yet how it can be fulfilled; and we must think of that."

"That's how I understand it," Alan said.

Fuller consciousness of what Father Perron's story meant to him was flowing through him now. Wrong, great wrong there had been, as he had known there must be; but it had not been as he had feared, for he and his had been among the wronged ones.

The Story from the Beginning

UP in the country around the northern end of Lake Michigan, there is a legend that whenever a ship is lost on the lake, a sound can be heard like the beating of an Indian drum, one beat for each life lost. During a storm in December 1895, listeners counted twenty-four beats. The *Miwaka* with twenty-five people aboard never reached port and many relatives of those lost believed that one person survived and would some day return.

* * * * *

Alan Conrad a young Kansas farmer is endeavoring to solve the mystery of Benjamin Corvet, a member of the shipping firm of Corvet, Sherrill & Spearman, who mysteriously disappeared after summoning Conrad to Chicago. Last minute messages left by Corvet lead to the belief that Conrad is his son and Alan inherits the Corvet fortune and luxurious home. Just before Corvet disappeared he warned Constance Sherrill, his partner's daughter, to avoid Spearman to whom Constance becomes engaged. The first night in his new home Conrad surprises Spearman whom he finds searching Corvet's study. Spearman curses Alan, mentioning Corvet and the *Miwaka*, and then flees when Alan attacks him. Constance takes an interest in Alan's problem, much to Spearman's dislike. Conrad is mysteriously attacked and is threatened with blackmail by a drunken stranger named "Luke", who dies after demanding money to keep quiet. Alan finds a list of names in a secret drawer and he leaves for "the land of the drum" to investigate the clues they offer. Alan locates a carferry pilot named Burr who he believes can solve the mystery and gets a job on the carferry. He comes to believe that Burr is Corvet. On a winter's night, Burr, who is steering the ferry rams another vessel which he believes to be a ghost ship. The cars break loose and the ship flounders. Rescue ships save some survivors. Constance waits for word of Alan. Spearman hopes that Alan is lost. Constance leaves for the north to watch Spearman and to locate Alan. She walks along the shore of the lake until exhausted. Twelve are rescued, the Drum beats for twenty that are lost, leaving seven unaccounted for. The count increases gradually until one only is unaccounted for. Constance finds Alan exhausted on the shore.

the fall and for the table Thanksgiving day. Just as fast as one crop came off he would plant another.—M.A.F.

"Whitfield Elm"

WAS quite interested in the "Two Bibles" printed in the A.A. and written by Dr. Holland, especially so as the "Whitfield elm" under which George Whitfield preached to the early settlers of our town, is still standing near our home.

This tree is in the town of Stonington and duly marked with a tablet.
—MRS. C.A.M.

No More Oleo for This Lady

I'VE been reading some of the A. A. readers' letters for and against the use of butter substitutes and thought you might like to hear of my experience.

We live on a large estate in the mountains but do no farming. We got tired of poor butter and after asking our school teacher what she thought of oleo we started using it as she said it was as healthful as butter.

We used it for several months and our three children and ourselves all had miserable colds and seemed to lose all our pep. Then I read an article telling about the essential vitamins contained in butter alone, and how people using plenty of butter rarely had colds.

Well, we use butter now and always will for we haven't had one bad cold among us this winter.—MRS. P.R.G.

EDITOR'S NOTE—Butter, of course, is not a sure preventive of colds but there is no doubt that it helps to maintain good health.

HANDY ANDY Says "Here's How"

To Lay a Pipeline

By Ray Inman

WHEN putting an underground pipeline from your well to the barn, remember 2 things:

1st. Slope pipeline up-ward slightly from well to barn so that when tank is shut off in freezing weather water will drain back into well.

2nd. Pack clay around the pipeline so impure water from outside will not seep into well.

Plastic clay tamped tightly to about 2 feet around the line will work effectively.

Concerning Old Quebec

(Continued from Page 1)

could not, according to my want, stop and talk with the men working in the fields. Workers there were in plenty but they speak no word of English. However, some things I could see. There were some neat and well kept gardens but the fields as a whole showed a careless and slovenly husbandry.

The Madam who has a keen eye for such details declared that it was the men who sat on the porches gossiping and smoking while it was the women and the children who carried on the farm. The barns are typically very low, long, whitewashed rather than painted and occasionally thatched roofed. The fields in shape are veritable shoe strings, running far back from the road but only a few rods in width—the result I am told of progressive subdivisions to provide a heritage for successive generations. By the way, you may find something of the same condition due to the same cause along the north side of Sound Avenue road on Long Island.

My impressions of the nature of this region are mixed. Much of the way the land is almost perfectly level and, I think poorly drained. Sometimes the road climbs over low hills that are evidently very sandy and poor. A few miles beyond Montreal and again near Quebec a good deal of tobacco is grown and great quantities of twisted native leaf was displayed in the Quebec public market.

It is a favorite declaration of mine that in my rather limited travels, I go to *people-see* rather than *sight-see*. Thirty-five miles below Montreal we found it was nearing evening. We knew nothing of the country ahead so when we saw one of the comparatively few "Tourists Accommodated" signs as yet displayed along this road, we took a chance. The house was much above the average. There was a clipped lawn with flower beds and a wayside shrine with a graveled path leading to it and later we found that above our bed hung the crucifix which has comforted millions of troubled hearts through many centuries. Our hosts spoke only the scantiest English—the elders none at all—but we found what may properly be described as shining, spotless cleanliness which immediately captured the heart of the Madam. My daughter Margaret, and a son of the house and I went boating on the river in the after glow.

The great stream is here a mile wide with a channel fifty feet deep and it goes sweeping to the sea at six miles per hour. We stayed out until dark when the Montreal-Quebec steamer—a really big boat of her class—came down and we had the fun of riding her swell.

Real Maple Syrup

In the morning for breakfast there were bananas, bacon-and-eggs, delicious toast from home-baked bread and a sort of pancake concerning whose composition the professional dietitian member of our party refused to guess. Also there was maple syrup which in color and flavor was of the highest possible quality. We left amid kindly smiles and goodbyes in broken English. There is no incident of our trip that has for us as many pleasant memories as this one night in a habitant home.

By the way, this particular man was a considerable farmer and was planning on the morrow to set six acres of tobacco using the regulation setting machine. I feel sure that he was a most outstanding farmer among his neighbors.

* * *

So many volumes have already been written and it is so fully described in the voluminous tourist publications everywhere given away that I do not propose to try to speak at length of Quebec.

May I say, however, that the city and citadel clusters around and clings to the sides of and crowns the bold, triangular, semi-precipitous promontory formed by the junction of the St. Lawrence and the St. Charles. The navigator and adventurer, Jacques Cartier, reached here in 1534 and the traditional site of his landing is occupi-

ed by the great church of Notre Dame—a structure in which four thousand worshippers may be seated.

On the narrow stretch of level ground between the river and the cliff is built the Lower Town while above and almost overhanging it is the Upper Town with the grey walls of the Citadel crowning and dominating everything. I am prepared to accept the usual declaration of those who have traveled much that in all the world there is no other great city so magnificent for situation.

Quebec is commonly referred to as the Gibraltar of America and I suppose it is unquestionably true that at no other point in the New World has there been expended through many years such vast sums for fortifications. Today this imposing Citadel, wonderful to look upon, is obsolete for purpose of defence because high explosives would very quickly crumble it to dust and within it bury its defenders.

Where Romance Lies

It hardly seems possible to me that there can be any other spot in America where history lies as thick as it does around this ancient stronghold. Certain names and phrases there be in the mere sound of which there is for me strange magic. One of them is "The Field of the Plains of Abraham"—that open spot hard by the Citadel where in September 1759 was fought one of the few decisive battles of history. Most school boys will remember how the English forces were led by Wolfe and the French by Montcalm. Wolfe was killed at the very moment of victory. Just at the last he heard the English cheers as the French broke and fled. Being told what it meant he murmured "I die happy", "And so passed to where beyond these voices there is peace". Many years ago the spot where he fell was marked by a monument with the inscription "Here Wolfe died victorious".

Montcalm had a less happy fate. Wounded unto death he was laid on a shutter and carried within the city gate to a house where he died next morning. Being told by the surgeon that there was no hope for his life he groaned in bitterness of spirit "It is well for then I shall not live to see the surrender of Quebec", and so passed to be with Wolfe. Four days later the city was formally surrendered to the English and so France lost an Empire and French dominion in the North passed away for ever.

Our Two Walled Cities

There are two walled cities in North America—St. Augustine, Florida and Quebec. The wall at Quebec was originally about two and one quarter miles in extent, forming one side of a triangle while the two rivers gave protection on the other sides but the city long since out grew the space within. Until about twenty-six years ago the city gates were still in place. They have since been removed but St. John's and St. Louis' Gates are still the principal avenues leading from the city and

it was through these same ancient portals that the French legions poured forth marching to fight the English in what is now the State of New York.

Down on the flats by the riverside are great railroad yards and long lines of towering concrete grain elevators where the Canadian wheat is spouted into the waiting ships but close under the shadow of the cliff we were driven through what is proclaimed to be "The narrowest street in North America", where the tall stone buildings crowd each other so closely that the automobile fenders fairly graze them as you pass. Such dark, narrow alleys are survivals of the old days when space was an exceedingly precious thing because there was so little room within the walls. Our modern cities with broad open streets are the visible signs of the fact that in these happier days we no longer find it necessary to coop ourselves up within stone walls and behind barred gates.

The Shrine of Good Saint Anne

I would not like to leave Quebec without at least a reference to the world famous shrine of St. Anne de Baupre, which lies by the river some twenty miles below Quebec. The story runs that long ago—so long that men have forgotten just when—a French ship beating her uncertain way across the Atlantic fell into a great tempest of many days' duration until all hope was taken away and they seemed about to be swallowed up. In their dire need, the crew made a solemn vow that if God would preserve them and bring them safe to land, they would build there a shrine and a chapel to the Good Saint Anne. Their prayer was heard and in due time their vow took form as a tiny chapel and shrine beside the great river. All this, as I have said, was in the long ago.

The Jesuit Fathers

The first French adventurers to Canada had among their number certain brothers and priests of vast religious fervor and enthusiasm. In all the world there is no more romantic story than the history of the Jesuit Fathers in America.

They were far and away the greatest of American explorers lured on always by the vision of winning the Indians to Christianity. In pursuit of this high ambition they traversed the Great Lakes and much of the Mississippi Valley a thousand miles and a hundred years ahead of any followers until they established their furthest outpost in what is now the State of Arkansas. Separated by long months of journeying from any builded church, they spread an altar cloth and above it made the sign of the Cross. There they pressed the wild grapes of the river banks for sacramental wine and so baptised and gave communion to their savage converts and then pressed on still further from their homes—these weather beaten Ambassadors of Zion.

Many of these explorer-missionary-priests were by birth aristocrats and the great—almost the only—scholars of

their time. In their furthest wanderings they carried in their scanty baggage, ink horn and parchments and in the heart of the continent—often times in an Indian wigwam by the light of a dying fire, with frost stiffened fingers they set down in scholarly phrases the story of their undertakings. These journals have been preserved and finally brought together in a monumental publication of seventy volumes "The Jesuit Relations in North America".

In all the many histories of devoted men, there is none more inspiring than the heroic story of Father Isaac Jogues who in 1646 suffered martyrdom in our own Mohawk Valley at Auriesville. He was only one of many others and I am sure that in that New Jerusalem of which we speak, some of these French Fathers of Quebec will have seats very near the Throne.

But if I write more of Canada the editor will not—as they say in Congress—give me "leave to print".

May I say that we left Quebec by the back door, ferrying the St. Lawrence to Levis and going over land to New Hampshire. Our way lay through undeveloped country, with a poor and primitive agriculture of stony fields and tiny villages where English is almost unknown. We spent a day in the White Mountains and turned the car "west-by-south"—as my fresh-water-sailor friend, James Barker would have said and so came in the phrase of the Dairy of Samuel Pepys' "Safe home and to bed."

Curing Cannibal Hens

(Continued from Page 17)

flocks where losses are common even when there is but little laying, and there are any number of flocks going at a sixty or seventy per cent rate that never have a case. Also as a rule, the heavy feeding of green feed or the employment of any other means of cutting down production will tend to check the losses, yet the feeding of additional protein which stimulates production is seriously advised by some poultrymen and actually seems to check the trouble in some cases. The heavy feeding of corn has been blamed but in tests where nothing but corn was fed at both Cornell and Wisconsin not a single case was produced. Nearly everyone takes it for granted that the trouble is associated in some way with feeding, yet Professor Halpin says that he has no proof that feeding has a thing to do with it.

This much we do know. Cannibalism is a habit, not a disease. Once it has started it may continue even after the original cause has been removed. Chickens are naturally fascinated by the sight and taste of blood. Even at a few days of age let a drop of blood appear from an injury and that chick is doomed unless it is removed from the flock. So with the mature pullet. The instant a bloody vent is sighted a mob of excited pullets gather and trail the luckless victim about the pen to her death. Usually the cause of the first case is an eversion of the oviduct, sometimes called prolapsis, or just plain "blow-outs". The egg is not expelled normally. The oviduct protrudes from the vent with the laying of the egg, or even before it is laid. The other birds see the inflamed mass and go after it. A few such cases and the habit is established. The pullets go about the pen peering and picking at perfectly normal vents until they start the blood. Then there is soon another "pick-out".

The real problem seems to be to find the cause of the eversions. Knowing that, we may be able to prevent the starting of cannibalism. Many poultrymen and experimenters are working on the subject and we may be sure that sooner or later we will find a solution. In the meantime, it seems wise to do everything we can to keep the pullets in a normal and contented frame of mind and condition of body. For instance, uncrowded and airy quarters, complete rations including milk, cod liver oil and green feed. And be sure to provide plenty of nests in a semi-darkened place.

"Look here, my man, this is no way to get new members!"—JUDGE.

The Service Bureau

A Department Devoted to the Interests, Welfare and Protection of A. A. Readers

He "Saved" Ten Per Cent

I am sending you a contract made out with the Weather Advertising Clock Service. I paid them fully in advance in order to take advantage of the 10 per cent discount for cash. The clock which they were to furnish has never been installed and I have never heard anything from them. This was about the 16th of June. A man named Rodgers was here and he agreed to have the clock erected not later than 30 days. Is there anything you can do to help me get my money back?

Up to date, the letter which we wrote to the Weather Advertising Service of Erie, Pennsylvania, has not been answered. In the meantime we have learned that a Mr. R. Q. Rodgers, who is said to be the owner and manager of the Weather Advertising Service, did maintain a post office box in Erie, which, however, was suddenly given up about the last of June. Unless Mr. Rodgers can be located, the chances for securing a refund for our subscriber do not appear to be very bright.

How to Check on Pennsylvania Buyers

We have repeatedly called attention to the fact that our readers can get a list of licensed and bonded commission men in New York State by dropping us a line or by making requests to the Department of Agriculture and Markets at Albany.

Other states do not always have a license and bonding law and recently we have had a number of complaints of New York subscribers who sold produce to dealers in Pennsylvania and have been unable to get their money. We are glad to note that Mr. H. A. Hanemann, Market Analyst of the Department of Agriculture of Harrisburg, Pa. tells us that he will be glad to sup-

ply any of our readers with a list of reliable commission men in any Pennsylvania city upon request.

Do Olivit Brothers Owe You Money?

Olivit Brothers, Inc., Commission Merchants at 202-4 Franklin Street, New York City, recently have gone out of business. This firm was licensed by the State of New York and took out a bond of \$3,000 to protect shippers. Any of our readers who shipped to Olivit Brothers and have not received their pay have until December 24th to file a verified claim with the Commissioner of Agriculture and Markets, State Office Building, Albany. Each claim must give the name and Post Office address of the consignor-creditor, together with the amounts due him by Olivit Brothers. Blanks for making claims may be secured on request to the Commissioner of Agriculture and Markets at Albany.

Pennsylvania Has New Milk Dealer Law

I am selling a quart of milk a day to a neighbor and she has no way of getting milk if I do not deliver to her. There is considerable discussion around here. Some people tell me that I do not have the right to sell milk in this way unless I have a pasteurizer. Some of the folks around here say they are going to have me arrested and fined \$100. I am living in Pennsylvania.

I have referred this question to the Pennsylvania Department of Health who replied that "It is true that anyone selling milk must obtain a permit and we are inclosing an application for your subscriber which

should be filled out and returned to us. After we receive his application a district representative will call upon your subscriber and be of any assistance possible to help him to comply with this act." This law was signed by the governor May 1, 1929 but did not become effective until September 1, 1930. Under this new Pennsylvania law it is important that every person selling milk to consumers get in touch with the State Department of Health and get an application for a permit.

Information About Repair Parts for Farm Machinery

Quite often readers ask us for information about repair parts for farm machines. Sometimes, of course, a machine is so old that repair parts are no longer manufactured. With most machines it is still possible to get repair parts even though the company that originally manufactured the machine has gone out of business. So far as we are able we will be more than glad to supply this type of information to our subscribers. Address your requests to the Editorial Department, American Agriculturist, 461 4th Ave., New York City.

Another Subscriber Who Shipped Before Investigating

Will you help me collect for three cases of eggs shipped to H. C. Bowen, 2750 West Fifth St. Brooklyn, N. Y. I have shipped to him before and he always settled promptly but this time I get no reply from him.

We wrote to Mr. Bowen and the letter was returned marked "Moved, left no forwarding address." We are mentioning this just to emphasize again the risk our subscribers take when they ship to grocerymen or other small dealers who are not licensed or bonded or who are not given a credit rating. Such a man may have very little capital and usually rents his place of business. If he fails or moves there is about as much chance of locating him as there is of finding a needle in a hay stack. Even if he could be located, there is a fairly good chance that he would have no property against which such a bill could be collected. We have mentioned this time and time again but as long as we get this kind of complaint, we figure that it is worth while to continue to warn our subscribers about it.

New Laws and How They Work

(Continued from Page 5)

many and manifold, and while farmers do not so often hear so much of this work, it is difficult to see how either farmers or consumers could get along without the constant safeguarding of their interests by the Department.

Outstanding in this service to both the city and country is the splendid financial support which the State has given in appropriations for indemnities and for the other work of carrying on the campaign for the control of bovine tuberculosis. The problems of leadership and administration of this eradication work have been the responsibility of the Department of Agriculture and Markets.

So in conclusion it is worth repeating that never before in the history of New York State agriculture has any governor or any legislature given such sympathetic and practical help for the solving of rural problems than has been given by the Governor and the Legislature of New York during the last two years. It may be further added, also, that one of the reasons for such a fine legislative program of rural development, is the cooperation among farm organizations, the agricultural departments and institutions, and the farm leaders, all working together in support of the Governor's Agricultural Advisory Commission and the Legislature to advance the agricultural welfare of this State.

"I will always take American Agriculturist as long as I live as I think it is the best farm paper out." L. A. W.

When your hand is put to the plow—don't turn back!

Once having put your hands to the cooperative plow, you, the farmers of the New York Milk Shed, cannot afford to "look back". To listen to the persuasive tongue of the salesman who is sent out to divert your buying from cooperative channels, is likely to surrender whatever advantage you have already gained in influencing the cost of your feed. To accept the temporarily highest bid for your milk may lose you a long time advantage of honest test, sure payment, and a market every day of the year.

As a business man, weigh the future; be honest with yourself and your children. What is there in a non-coopera-

tive system of farming which holds forth the slightest hope? But do not quality goods, no salesmen, running mills to capacity night and day, and the non-profit character of the G. L. F. practically guarantee you savings on farm supplies? Has not much been accomplished already? Did not the Dairymen's League single handed demonstrate its ability to secure a fairer price for milk this fall?

Thousands of earnest men and women believe so. They are determined to win for themselves and their children a more independent position in life through cooperative effort. They are plowing straight ahead.

What Chance Has a Dairyman This Winter?

Some Facts and Figures on Both Sides of the Dairy Situation

EVERY dairyman is rather anxiously asking himself what the outlook is for the winter and for the coming year. It is time to take stock. No one can say for sure, of course, as to what lies ahead, but something may be prophesied from the past and present dairy situation.

First, let us look at the markets. Taking the worst first, the fact that consumption is not increasing is what should cause dairymen the most worry. For many years the consumption of fluid milk and all of its by-products has been rather rapidly increasing, caused both the larger number of people in cities and by more per capita consumption. While this demand continued to increase there was not much to worry about. There would be temporary fluctuations in prices but the general trend could be counted upon to be good. As long as this sure market continued, we continued to raise more and more cows not always paying very much attention to their quality, and we continued to go further afield to bring more dairies into the market for fluid milk.

Demand Fell Off

Along came hard times, and one of the first things that many consumers did was to cut down on milk and substitute oleo for butter. The old cow kept right on producing, of course. It takes four or five years to turn production either up or down, and the first thing we knew, the markets were wallowing in over-production of dairy products. More butter piled up in cold storage than ever before. Prices of all manufactured dairy products began to tumble, and it was only through good organizations of producers that the price of fluid milk

has been fairly well maintained. All the older dairymen will remember before they were organized, that when butter prices went down milk prices followed them mighty fast.

Many dairymen will not agree to this, but for the dairy farmer as a whole, the drought was a real friend. O. M. Kile, AMERICAN AGRICULTURIST's Washington representative, writes: "It seems evident that we would be wallowing now in the midst of extreme over-production of dairy products had it not been for the drought. It is true that consumption may be expected to pick up again as general business conditions improve, but even so, the dairy industry must suffer severely from over-production unless rigid culling is practiced." The U. S. Department of Agriculture gives the same advice, and warns that there is too much of a tendency to save heifer calves without regard to their quality. Even with good times the Department reports: "The dairy industry cannot count on big annual increases in the per capita consumption of dairy products as it did three or four years ago."

The drought shut down on production, and butter has been working out of storage very rapidly this fall. As a result, the amount in storage is very much less than it was last year, and therefore from the angle of amounts of butter on hand, the situation is much better than it

was a year ago. A report of September 1st shows that the storage reserves are over 25,000,000 lbs. below last year. Remember, however, that stocks last year were abnormally high.

Plenty of Milk

All those familiar with the fluid milk situation agree that there is plenty of it on hand. During this fall there will be little or no shortage during the usual short periods, and there will be a sizeable surplus during the winter months.

Again we point out that the plentiful supply of all dairy products is caused by the falling off in demand. As a matter of fact, production is considerably less than it was last year. For the entire United States, the milk production per cow was 6.4 per cent below September 1st of last year. The State Department reports that in New York State, production per cow on the farms of crop reporters averages lower than any September 1st since milk production reports were started regularly in 1925. We believe this production per cow will be higher, however, say, on November 1st, than on September 1st because the cows are now off from the poor pastures and are receiving better feed and care.

The hay crop in New York is rather short, being about 5,888,000 tons compared with 6,653,000 tons last year, and a five year average of 6,841,000 tons. Hay promises to be rather high this year. Silage, of course, is also none too good being considerably under the five year average of production.

On the other hand, with commercial feeds, that item that runs into money so rapidly, the situation is good. Feed is costing the dairyman

(Continued on Page 7)

Kill-a-Kow

IF you read the article on this page summing up the facts both encouraging and discouraging on the present dairy situation, you will be convinced of one thing at least, and that is, that a cow of low production is going to be a heavy burden for you during the next several months. Why not fat her, and give your family a treat with first-class, home-made beef during the early winter? If you do this you will take a little milk off from a market that is over-supplied, and you will save yourself a net loss by keeping a cow that is no longer paying her way.

What to Do When the Pullets Go Lame

Worms and Coccidiosis Are the Two Most Common Causes

By L. E. WEAVER

Poultry Editor, American Agriculturist

MANY of our eastern flocks have had more or less trouble in recent years from lameness among the fall pullets. It has been so very serious in some cases as to force the owners out of business. In other flocks only a few cases have occurred with no further loss. That the topic is a live one is indicated by the many inquiries we have received from A. A. readers. They want to know what is the cause and the cure.

Not being a student of medicine or of disease, I will have to rely very largely, in this discussion, on quotations from other authorities. At the start it should be made clear that lameness may be a symptom of several different diseases. For instance, tuberculosis will sometimes cause lameness in hens, but almost never in pullets. A lack of Vitamin D in the ration may cause leg-weakness and cause the pullet to appear lame. But that could scarcely occur in the ordinary range-reared pullet where the sunshine provides Vitamin D in abundance. Also intestinal worms may cause lameness, and coccidial infection may do it. One may readily see that in all the four instances mentioned lameness is merely a symptom of a more deep-seated trouble. The bird is not killed by the lameness but by the thing that causes the lameness. It is, of course, possible that there is a true paralysis, a specific disease. The investigators do not agree on that point. Most of the evidence points to the conclusion that range-paralysis, as it is commonly called, is caused by either worms or coccidia in the intestines, or by both of them at the same time.

There is no question about worms in the intestines causing lameness, but it is not known just how it is done. Probably the worms produce poisons which destroy the nerves which control certain of the muscles. So the first thing to do when pullets go lame is to determine if worms

are present. If they are, the entire flock should be given individual treatment to rid them of the worms. A veterinarian who is experienced in poultry diseases should make the post-mortem examination. Most anyone can see the large

This fine bunch has been kept free of worms and coccidiosis and will bring returns to their owner this winter.

round-worms or large tape-worms, but even veterinarians have been known to overlook the microscopic tape-worms. And they are the ones most commonly at fault.

If no worms are found it can pretty safely be assumed that coccidia are guilty of causing the trouble. Such a verdict seems to be justified from the evidence submitted by several authorities, and by experience. We have heard a great deal about coccidiosis in recent years, but mostly as a disease of small chicks. Apparently the same organism that causes the trouble in the chick takes on a slightly different form and comes back to produce what is known as chronic coccidiosis in the fall pullets. However, the trouble may be acute even in the adult pullet. Dr. Beaudette of the New Jersey Experiment Station, a prominent investigator in poultry diseases, says, "In practically all cases under the writer's observation, a partial paralysis of one leg was noted. Such paralysis is also seen in worm infestations so the symptom alone can not be used in making a diagnosis. On post mortem examination it is only possible to find a thickening of the duodenal portion of the intestine." And here is what Dr. Johnson of the Western Washington Experiment Station says: "Any point in the intestinal tract is subject to attack. The most commonly selected points are the ceca in young fowls showing acute infection and the duodenum in older fowls although this rule does not always hold true. A thickened small intestine with a more or less pale mucus membrane extending the entire length of this organ is probably due chiefly to chronic coccidian invasion." Other facts of importance pointed out by these men are: About five days after the organism enters the bird's system resistant forms have been developed and are passed out in the droppings. Outside of the

Always Something to Eat Anyway

AS one travels through the eastern farm country during the early fall he is always impressed with the large amount of stuff that nearly every farm family grows for its own consumption. The variety and amount of vegetables and fruit for home use vary greatly with different sections and many farmers could live better with more attention to garden and small fruits.

There are few parts of America that equal some of the counties and communities of western New York at this time of the year for the variety and extent of the products grown on nearly every farm. We have seen literally hundreds of roadside markets in western New York where practically everything on the stand was grown on the home farm. These included almost every variety of fruit that can be produced in this climate, and a list of vegetables, as the auction bills say, "too numerous to mention". Best of all is the quality of these fresh-grown, freshly harvested food products. No city person ever knows, how good real sweet corn, tomatoes and other vegetables really are when brought directly from the field or garden.

It is well sometimes, when counting troubles, to remember some of these little blessings that go with life on a farm.

Is American Law Breaking Down?

LET a decent citizen unintentionally make a wrong turn at a corner, or in some other way infringe the traffic rules and a policeman will either arrest him, or insult him with a string of language not permitted in any other country in the world. But let a gunman or a set of gangsters shoot up a whole street with a machine gun, and if they are caught some lawyer will find a technicality to free them.

As we write this, "Legs" Diamond, notorious crook and gunman, lies dying in a New York hospital. Did the police put him there? No, the world is well rid of him by the hands of other crooks, who probably never will be caught. Diamond has been arrested ineffectively twenty-one times and always with the help of lawyers he has wiggled out of the clutches of the law. It would be hard to find a more terrible indictment against our police and our whole system of law enforcement, than this. Either Diamond is an innocent man wrongly arrested, or he is a super-criminal. No matter which he is, the police are sadly at fault.

Recently in Chicago indignant citizens formed a committee to drive out gangsters. Dozens of them were arrested and then comes forward

Clarence Darrow, Chicago's most prominent lawyer, to put his name and influence back of the defense to set the gangsters free. How long do you suppose such conditions would be permitted in even the so-called more backward countries of Europe? The "English Bobby", for example, carries no weapon and is one of the most polite public officials in the world. Yet so prompt and efficient is English justice that practically every lawbreaker receives quick and effective punishment.

Conditions will go on in this country until all good citizens are aroused to the point that we will demand a new deal with less law and more justice.

Do You Believe in Specializing?

SHALL the modern and the future farmer diversify or specialize? Some say that the only way to make money on the farm today is to learn all there is to know about one kind of farming, buy the necessary equipment to do that job right, and stick to it. Others claim that the farmer who "carries all of his eggs in one basket" is nothing but a gambler and is headed straight for trouble. What do you think about it? For the best letter on the subject, "Specialist or Diversified Farmer—Which?" we will pay \$5.00, with \$2.00 for the second best and a dollar each for all the others we can find room to publish. Letters should not be over 300 words in length, should be written very plainly on one side of the paper only, and should be mailed to the Editor, American Agriculturist, 461 Fourth Avenue, New York City, on or before December 1st.

The Flaming Forests (See Cover Picture)

ON one of these beautiful fall days a week or so ago, it was our privilege to travel by automobile from one end of Vermont to the other. Surely there are few sections that can surpass in simple beauty the Green Mountain State, and for that matter the whole North Country, at this time of year.

To the west of us in New York, reared the wooded peaks of the Adirondacks. Around us and to the east, were the rolling ranges of the Green Mountains, while near us and in sight much of the time stretched that historic "Gateway of the North", Lake Champlain. Best of all was the glorious, "coat of many colors" with which nature, especially in this climate, adorns herself at this time of the year. Extending to the distant horizon was a perfect riot of color, varied with a million tints and shades, all blended into the perfect harmony which only nature herself knows how to paint.

No one can "lift up his eyes unto the hills" at such a time without a lightening of spirit and a feeling that all is well with the world, if one is only wise enough to see and to appreciate all the good and the beautiful with which we are surrounded.

Mediterranean Fly Destroyed

YOU will remember the newspaper accounts of the great excitement that prevailed in Florida a year ago last spring when the Mediterranean fruit fly was discovered there. It was realized that if this pest was allowed to spread, it would not only destroy the oranges of Florida, but would make great inroads on all fruits.

The U. S. Department of Agriculture, cooperating with the Florida State Department, got on the job with very drastic measures. Millions of dollars worth of infested fruit was destroyed, some fine orange groves were uprooted and burned, and whole sections were quarantined with great loss to the growers.

You will be glad to learn, now, that all of this great effort and sacrifice brought results. Our friend, C. A. Cobb, of Atlanta, Georgia, one of the editors of The Progressive Farmer, was just in the office, and told us that the Mediterranean fruit fly had been completely eradicated with great credit to the departments of agriculture

and to the farmers of Florida who cooperated. Quarantines have been lifted; "and best of all, Florida this year", says Mr. Cobb, "has a very splendid crop of approximately 20,000,000 boxes of oranges and grapefruit".

Why Not Take a Short Course?

ONE of the best jobs that colleges of agriculture do is the training that they give to farm boys by short courses offered during the winter months. The State College at Ithaca, for example, arranges these short, practical courses each year for farmers and older farm boys who are not able to leave the work of the farm except during the winter. The work this year begins on November 5th and continues until February 13th, with about a week's vacation at Christmas time. Courses offered include General Farming and Stock Raising, Poultry Farming, Vegetable Growing, Fruit Growing, Milk Plant Management, Horticulture, and Flower Growing.

In no time in the history of farming has scientific training and business management been so necessary as they are at the present time. These short courses offer, at small expense, both practical and scientific facts which will be of inestimable value to farmers as long as they stay in the business.

Hotels Versus Tourist Homes

SOME of the hotel associations are trying to get legislation which will make it more difficult for tourist camps and tourist homes. Such efforts are prompted by pure jealousy. Thousands of travelers, unable to pay the exorbitant rates charged by many hotels, welcome a good, clean, well-conducted camp or tourist home as a Godsend. Hotel proprietors claim that many tourist homes and camps are not well conducted morally. It would be well for those who make such complaints to get their own houses in order first. When it comes to choosing on a moral basis, between a nice country home which takes in a few tourists occasionally and some hotels, we will take the homes.

A Year When Legumes Are Most Needed

THIS is the year when alfalfa and sweet clover emphatically demonstrate their great value.

There has been a tendency in recent years, particularly in those sections of the East where pastures can be rotated, to try out sweet clover for pasture. We have talked with many farmers during the past summer who have done this, and nearly all of them are enthusiastic about the possibilities. During one of the hot weeks near the last of the dry spell, we called on a man with a large dairy turned into a lot where alfalfa stood six inches high. No need to ask him whether his production has shrunk because of the dry weather!

Those farmers who have a goodly amount of alfalfa stored away in their mows for winter feeding, are patting themselves on the back, especially where they do not have enough silage corn to last through.

It sounds like preaching to say that legumes are the basis of good farming, but the proof of this statement is that nearly every good farmer is constantly making more efforts to increase his sweet clover, alfalfa or clover acreage.

Eastman's Chestnut

TWO Swedes were walking on a railroad track, when a train came along behind them.

One of them was lucky enough to jump off the track in time; the other was not so fortunate. The survivor told about it later:

"After I yump," he said, "I run a leetle way, and then I go back to see 'bout Ole. Putty soon I come 'cross an arm on the track, an' soon I see one of Ole's legs. Nex' t'ing I see Ole's head. Then I say, 'By jolly, somet'ing must 'a' happened to Ole!'"

Have You a Friend in These Lists?

Why We Are Proud of American Agriculturist Insurance Service

By E. R. EASTMAN

A FEW days ago, Curry Weatherby, Circulation Manager of A.A., and myself, were driving along one of the beautiful highways of central Vermont when we noticed a number of cars and a crowd around another car in the ditch. Coming closer, we found a brand new car which had crashed into a tree with such terrible momentum that the front end of the car was completely demolished. One of the passengers sat on the running board mopping the blood from his face. Such accidents are always depressing, so we did not linger to learn how many more had been hurt. On the same trip a local Vermont man riding with me, pointed out time and again where somebody he had known had been killed or injured. It seemed that nearly every crossroad had its tragic history. Coming back, I drove from Albany to Schenectady and was told that this particular stretch of road was so dangerous and had been the scene of so many deadly accidents that it was known locally as the Death Highway. Within the space of a short twenty years all highways have become "Death Highways" and the scenes of casualties almost as great as a battlefield. Read the newspapers following any holiday or weekend and see the list of accidents on the highways, and note the long list of killed and injured.

A Glimpse Behind the Scenes

Now let me take you behind the scenes in the publishing business for a few moments, and give you a bit of interesting A.A. history. Shortly after Henry Morgenthau, Jr., E. C. Weatherby and myself began to work to make the AMERICAN AGRICULTURIST an even greater service institution, we found that there was a great and growing demand by farm people for some kind of insurance protection against travel accidents. It was constantly brought to us that there were few things we could do for rural people that would be of more help than to provide for them and their families some kind of protection against the increasing number of travel accidents, at small cost. Accordingly, we began to study the accident insurance companies and found that the North American Accident Insurance Company of Chicago was the oldest company writing this business in America. All of our investigations showed that its financial standing and its reputation in general for doing business "on the square" was not excelled by any other insurance company. AMERICAN AGRICULTURIST is in business to stay. When we make a friend we expect to maintain that friendship not for one year but for a lifetime. Purely from a selfish standpoint we could have nothing to do with any proposition that would not make and keep friends for us over a long term of years. Hence, our great care in selecting an insurance company on which we could depend.

Events over the past several years have completely demonstrated, first, our conclusion that farm people need travel accident insurance at a low price, and second, that the North American Company was the best that we could find to render this service.

We Are Proud of the Service

As a matter of simple fact, I am personally proud of our insurance record of help for members of the A.A. family who have met with accidents. It is one of the best things that we do for our people. That it is appreciated is shown by the tremendous growth. Nearly everyone who takes the paper also takes the insurance, and thousands voluntarily renew it year after year. To be sure, it is a limited policy. One does not expect to get complete insurance coverage for a dollar a year, nor for many times a dollar. What we do maintain is that it is the best coverage for the price that we know of anywhere, and the best proof of this statement is the fact that located in every county in A.A. territory and in practically every farm neighborhood, there are many who have collected on this policy and at a time when the money received was a godsend. In our files

are hundreds of letters of appreciation for the help received when help was most needed.

In the list of the many hundreds who have profited from the American Agriculturist-North American Accident Insurance Policy, there are sure to be friends and acquaintances of yours, so as a matter of interest you may want to look over the names and addresses that are given below, of A. A. folk who have collected on our Travel Accident Policy. Space will not permit giving all of the counties this time, but the lists for all the other counties will be published in succeeding issues. We ask you frankly, after you have looked over these names, remembering that there are similar lists for every county where the A.A. circulates, if you would not be proud to be associated with a service that is of such great help to people when they are in trouble?

Just David--By Eleanor Porter

CHAPTER I

THE MOUNTAIN HOME

Far up on the mountain-side the little shack stood alone in the clearing. It was roughly yet warmly built. Behind it jagged cliffs broke the north wind, and towered gray-white in the sunshine. Before it a tiny expanse of green sloped gently away to the point where the mountain dropped in another sharp descent, wooded with scrubby firs and pines. At the left a footpath led into the cool depths of the forest. But at the right the mountain fell away again and disclosed to view the picture David loved the best of all: the far-reaching valley; the silver pool of the lake with its ribbon of a river flung far out; and above it the grays and greens and purples of the mountains that climbed one upon another's shoulders until the topmost thrust their heads into the wide dome of the sky itself.

There was no road, apparently, lead-

ing away from the cabin. There was only the footpath that disappeared into the forest. Neither, anywhere, was there a house in sight nearer than the white specks far down in the valley by the river.

Within the shack a wide fireplace dominated one side of the main room. It was June now, and the ashes lay cold on the hearth; but from the tiny lean-to in the rear came the smell and the sputter of bacon sizzling over a blaze. The furnishings of the room were simple, yet, in a way, out of the common. There were two bunks, a few rude but comfortable chairs, a table, two music-racks, two violins with their cases, and everywhere books, and scattered sheets of music. Nowhere was there cushion, curtain, or knickknack that told of a woman's taste or touch. On the other hand, neither was there anywhere gun, pelt, or antlered head that spoke of a man's strength and

skill. For decoration there were a beautiful copy of the Sistine Madonna, several photographs signed with names well known out in the great world beyond the mountains, and a festoon of pine cones such as a child might gather and hang.

From the little lean-to kitchen the sound of the sputtering suddenly ceased, and at the door appeared a pair of dark, wistful eyes.

"Daddy!" called the owner of the eyes.

There was no answer.

"Father, are you there?" called the voice, more insistently.

From one of the bunks came a slight stir and a murmured word. At the sound the boy at the door leaped softly into the room and hurried to the bunk in the corner. He was a slender lad with short, crisp curls at his ears, and the red of perfect health in his cheeks. His hands, slim, long, and with tapering fingers like a girl's, reached forward eagerly.

"Daddy, come! I've done the bacon all myself, and the potatoes and the coffee, too. Quick, it's all getting cold!"

Slowly, with the aid of the boy's firm hands, the man pulled himself half to a sitting position. His cheeks, like the boy's, were red—but not with health. His eyes were a little wild, but his voice was low and very tender, like a caress.

"David—it's my little son David!"

"Of course it's David! Who else should it be? laughed the boy. "Come!" And he tugged at the man's hands.

The man rose then, unsteadily, and by sheer will forced himself to stand upright. The wild look left his eyes, and the flush his cheeks. His face looked suddenly old and haggard. Yet with fairly sure steps he crossed the room and entered the little kitchen.

Half of the bacon was black; the other half was transparent and like tough jelly. The potatoes were soggy, and had the unmistakable taste that comes from a dish that has boiled dry. The coffee was lukewarm and muddy. Even the milk was sour.

David laughed a little ruefully.

"Things aren't so nice as yours, father," he apologized. "I'm afraid I'm nothing but a discord in that orchestra to-day! Somehow, some of the stove was hotter than the rest, and burnt up the bacon in spots; and all the water got out of the potatoes, too,—though that didn't matter, for I just

(Continued on Page 12)

The Church Habit

By DR. J. W. HOLLAND
The A. A. Philosopher

THERE was once a man who went to church three times in his life, and each time he was sprinkled. The first time with water, the second with rice, and the third time with dirt. Each time he went he was taken. First his parents, then his bride, and lastly the pall bearers took him to church.

Dr. John W. Holland

While church going is a habit, in America it seems to be a habit that is going.

Is there any value to church attendance? Some one will say, "We would expect a minister to advise church attendance." Well, I got the habit from a farmer and his wife, who were my father and mother. They laid me under eternal obligations to them for trying to start me right. Church attendance was a rule of the home, just as were washing one's face or coming to the table on time.

Church attendance will help to tone up the individual. A young man said to me recently, "If I did not go to church, I would get run down on the inside." A mutual friend said to me of this same young man, "He has the

finest character of any young man that I know."

This is not an easy world in which to go straight. Good thoughts no not flutter to us like doves from heaven. It is our business to kill off the hawks or they will not come at all. After long experience I can say that the habit of attending public worship will work miracles in the inner life of young people. Art students learn from artists, musicians learn from each other, farmers learn from other farmers, and so the builders of Christian Character must be with other Christian people. Only last week a mother wrote to me, "My son.....is working in your city. I am anxious that he shall not break his church going habit." That mother has a sensible piety. She knows.

Church going is good for the home. Do you know that the greatest attack against the morality and spirituality of America is centered upon the home. If religion dies in our homes, it will soon be cold upon church altars. We may build great cathedrals, but religion as a vital power in life will be gone.

A church going rural community is desirable in many ways. The people who allow their churches to fall into disuse or dis-repair will find that the moral edge of their community life is dulled.

Let us get and keep the church going habit, and God will help us through the power of this habit. Let no man wait to attend church until six of his neighbors carry him there.

FEED for GREATER PROFIT DRIED MOLASSES BEET PULP

Dried Molasses Beet Pulp gets more milk from dairy cows—faster, more economical gains from beef cattle and sheep. **No other feed can do the same work for you**—Dried Molasses Beet Pulp is a vegetable feed—the only one of its kind distributed commercially!

Dried Molasses Beet Pulp strengthens the animal's constitution—adds variety to the ration and **aids the digestion of other foods**—regulates the bowels and eliminates those "off-feed" days. There's nothing better for profitable milk production.

PRICES LOW

Dried Molasses Beet Pulp is always profitable to feed but with present low prices it is the most economical and profitable supplemental feed to be obtained. Dairy men and feeders are using it in great quantities—see your dealer and get started on Dried Molasses Beet Pulp—your profits will increase.

Mulch the Strawberries This Fall

A GOOD, heavy mulch applied to the strawberry bed this fall will increase your chances of harvesting a satisfactory crop next summer. It is not, as some suppose, the protection against freezing that helps, but rather the prevention of alternate freezing and thawing both in the fall and early spring.

This freezing and thawing, when it is allowed to occur, damages the plants in several ways. On some soils it may actually lift the plants out of the ground to an extent that causes them to dry out or even to die. At other times warm days early in the spring will cause the plants to start growth and freezing weather later will kill the buds. A mulch properly applied will prevent growth too early in the spring.

Another benefit which comes in the spring is that weeds are smothered out and berries as they begin to ripen are kept clean. Eventually when the bed is plowed up the vegetable matter will be mixed with the soil and add the supply of humus which helps to hold water and help to prevent damage from drought.

When to Apply

The mulch can be applied any time after the ground freezes in the fall. If it is applied evenly over the ground at a depth of from two to three inches, it will require from three to four tons of straw or other material per acre.

Some experiences reported indicate that proper mulching may increase the strawberry yield as much as four or five hundred quarts per acre. Mulching can also be applied to some other crops. In sections where winters are rather severe for grapes but where a few are grown for home use, the canes can be laid on the ground and covered with straw. It also helps to apply a mulch along the rows of bush fruits as well as currants and gooseberries.

Spray for Peach Leaf Curl

What causes the curling of peach leaves? Is there any way in which this trouble can be stopped?

THIS is doubtless caused by a disease known as peach leaf curl. This is a fungus disease which lives over the winter on the trees. It can be controlled by spraying any time after the leaves fall until they begin to swell in the spring. Spray, of course, should be put on before temperatures get too low.

The material recommended is concentrated lime sulphur 1 to 15, or a 4-4-50 Bordeaux mixture. Although spraying can be delayed until spring, applications put on after the buds begin to swell cannot be depended on to give control.

Buying Berry Plants this Fall

THERE is probably more just cause for complaint about raspberry and blackberry nursery stock than about

tree fruit nursery stock. Most of this is because fewer nurseries grow their own raspberry plants and, moreover, this kind of stock dries out much more quickly in storage than do trees of peach, apple, or other fruits.

Best results will ordinarily be obtained by buying in the fall directly from an individual or a firm which grows the plants it sells. There is less chance of mixture, the plants will be freshly dug, and the early buyer will get the pick of the lot. The plants will keep well if carefully heeled in until spring, but fall planting, especially of red raspberries and blackberries, will give results as good as or better than spring planting. Plants should be dug as soon as the leaves fall and they should be planted before extremely cold weather sets in. Late October or early November is the most satisfactory time in New Jersey.—J. H. CLARK, New Jersey Agriculture.

Crown Gall of Raspberries

Can you tell us what is wrong with our raspberries? Just at the surface of the ground there is a large swelling which is rough and the plants themselves seem to be dwarfed.

PROBABLY this trouble is a disease known as crown gall, which is caused by a certain type of bacteria. The only way to control this trouble is to plant berries entirely free from this disease. The bacteria which cause crown gall may live in the soil for several years so that it is necessary to set out new fields on soil where this disease has not been prevalent. Also it is necessary to know the source of your plants. If you buy plants from a grower who has had this trouble, the dirt around the new plants may spread the disease even though the plants themselves may not have the disease when they are set out. You should pull up and burn all plants which show these symptoms and use the preventive measures outlined to stop the trouble in fields where you set out new bushes.

Drainage Lessens Winter Injury of Grapes

ON certain soils grapes suffer from winter injury. It is believed that this is caused by too much water which causes the vine to grow until late in the fall and to fail to develop sufficient maturity to enable it to stand cold weather. Up to date this summer and fall has been unusually dry and it would appear that there would be little damage from winter injury this year.

Where vineyards have been set on soil that is inclined to be wet, tile drainage will go a long way toward stopping this trouble. Other suggestions frequently made are to discontinue cultivation in July or August and either let the weeds grow or sow a cover crop to use up moisture that otherwise might be used by the grapes.

With the A. A.
DAIRYMAN

What Chance Has a Dairyman This Winter?

(Continued from Page 3)

less than last year and less than usual. Bran prices about the middle of October were 67 per cent of quotations a year ago, and 76 per cent of the five year average. Cottonseed meal prices are 71 per cent of those prevailing at this time last year, and 82 per cent of the average while the corresponding prices for linseed meal are 72 per cent and 85 per cent. Corn is selling close to the average bringing about 80 per cent of those that prevailed a year ago. Wheat is 60 per cent of last year's prices and of the five year average. Oat prices are 75 per cent of those of a year ago and 86 per cent of the five year average. There is comparatively little exporting of food stuffs which is another factor making for cheaper feed prices to dairymen and poultry raisers.

No Time for Discouragement

Summing it all up, it does seem that the good dairyman need not be discouraged about the outlook, but that it is a time to go carefully over the whole business and see where the cost of production can be cut down and everything tightened up. A. M. Loomis, Secretary of the National Dairy Union, says: "As usual, the dairy farmer seems to be in a better position than most of the other farming groups. Heavy as the drought damage may be, the dairy farmer is better off than the farmer who has no cows to milk. The farmer with a productive dairy herd has always fared better during hard times than the man with no milk or cream to sell each day."

Time to Advertise Dairy Products

If we were going to state in a few words what might be done to build for the future, we would say, first, that now is the time, as never before, to advertise dairy products. If milk, butter, and cheese are healthy, cheap foods in prosperous times, they are all the more so for consumers when money is scarce. Why is it not the time for dairy organizations and the large milk dealers to get back of a general fund to carry on a good campaign among consumers to increase the use of dairy products?

As for the farmer himself, he is going to find it a hard winter to make anything out of his dairy if he is carrying from one to a half dozen cows that are not much good. Cow-testing and record-keeping are growing very rapidly among dairymen, and they are especially valuable at this time. It is a very good time, also to fat a cow and kill her for beef. We have not had a winter in years when the good feeding and care of the good cows is so essential as it will be during the coming months, and good feeding, in our opinion, does not mean cutting down the rations of the good producers. Last, but not least, let us stop raising every heifer calf than can stand on its four legs whether it has any qualities for the making of a good dairy cow or not.

In conclusion, may we tell you that the staff of this publication is back of you dairymen. We wish you luck with all of our hearts, and we are here to serve your interests in every way we can.

Something for Co-op Members to Think About

AFTER interviewing a considerable percentage of the members of the Dairymen's Cooperative Sales Company, a cooperative dealing in the Pittsburgh area, a member of the staff of the Pennsylvania State College of Agriculture reaches some rather interesting conclusions. In some sense one might be justified in being a little pessimistic after reading the conclusions,

A County Record of 81.3% Lay

"I began feeding B-B Laying Mash early last spring," says Mr. Waldron, "and during the month of April made a County record of 81.3% lay or an average of 24.4 eggs per bird for the month. During May I again won the County contest with a 250-bird pen laying 5,818 eggs, a percentage of 75.2% or an average of 23.3 eggs per bird. For June, my average was between 23 and 24 eggs per bird.

"B-B Feeds are exceptionally well balanced, are of excellent quality and uniformity and are the most productive feeds I have ever used."

Like Mr. Waldron, thousands of other poultrymen have found through careful tests that B-B Feeds produce the most eggs per dollar of feed cost.

W. A. Guthrie, of Butler, Pa., says: "Since feeding B-B, my hens have averaged 70% production and I never had lower feed

costs." "I fed B-B Laying Mash to 124 hens and got as many as 97 eggs a day during November," writes M. Alvater, Brooklyn, Md. "My hens, fed on B-B, took first prize for best laying condition at the Fairs," reports H. P. Birden, Barkhamsted, Conn.

B-B Will Give You Most Eggs Per Dollar of Feed Cost

But only by making a test yourself will you know what B-B feeds can do for you. Get enough B-B Laying Mash, *vitaminized with Cod Liver Oil*, and B-B Scratch Feed to last one pen 30 days. Write to me if your dealer can't supply you. At the end of the test period compare the egg production, the size and shell of the eggs, the condition of the birds, and the feeding cost. If B-B doesn't come through, take the empty bags back to your dealer and he'll return your money without question.

Valuable Poultry Book, FREE!

Professor L. N. Gilmore, of Syracuse University, has written a book for us that includes the latest information on poultry raising and care. It's the most helpful thing I've seen on the subject. It's just chock full of "hows" and "whys." I'd like to send you a copy, free. Just fill out and mail the coupon below.

"UNCLE CHARLIE,"
Care of MARITIME MILLING CO., INC.,
1107 Chamber of Commerce Bldg., Buffalo, N. Y.
Send me at once a copy of Professor Gilmore's 64-page book, "Making Poultry Pay a Profit." There is no charge or obligation to me.

Reviewing the Latest Eastern Markets

Milk Prices

Dairymen's League prices are based on milk testing 3.5%. Sheffield on the basis of 3%.

Class	Dairymen's League	Sheffield Producers
1 Fluid Milk	3.37	3.17
2 Fluid Cream		2.00
2A Fluid Cream	2.16	
2B Cond. Milk		
Soft Cheese	2.41	
Evap. Cond. Milk Powder		
Hard Cheese	2.00	1.80
4 Butter and American Cheese, Based on New York City Market quotations on butter and American Cheese.		

The Class 1 League price for October 1929 was \$3.42 for 3.5% milk and Sheffield's \$3.22 for 3%.

The above prices in each class are not the final prices the farmer receives. The final price received from the dealer is the result of weighed average.

* * *

September Prices Announced

The Dairymen's League announces the following pool prices for September for 3.5% milk.

Gross	\$2.70
Expenses06
Net Pool	2.64
Certificates of Indebtedness10
Net Cash Price to Farmers	2.54
	Net Cash Net Pool
September 1929	2.63 2.78
September 1928	2.68 2.78
September 1927	2.55 2.65
September 1926	2.36 2.46

The Sheffield Producers announce the

cash price to producers for 3% milk in the 201-210 mile zone, as 2.56 per hundred, (2.76 for 3.5% milk).

	3%	3.5%
September 1929	2.74	2.94
September 1928	2.74	2.94

September 1926	2.53	2.73

Butter Holds Steady

CREAMERY SALTED	Oct. 17, 1930	Oct. 10, 1930	Oct. 18, 1929
Higher than extra	40 1/2-41	40 1/2-41	46 1/2-47
Extra (92 sc.)	40	40	45 3/4-46
84-91 score	31 -39 1/2	32 1/2-39 1/2	39 -45
Lower Grades	29 1/2-30 1/2	31 -32	38 -38 1/2

The butter market has held a good, steady, firm tone every day since our last report. It has been one of the best weeks for consistent, steady performance that we have had in some time. Of course, this goes for the better grades of fresh butter which have not been over plentiful. In fact, at times they were short of trade needs. However, butter users have supplied their current requirements from storage reserves. At times lower grades have been easy. As the week draws to a close undergrades are moving better with a generally improved tone. Prices have not changed although if the present trend continues we would not be surprised to see an upward revision. The trade is a little hesitant about boosting prices fearing to disturb the present situation.

On October 1, U. S. storage stocks totaled 130,753,000 pounds compared with holdings on October 1, 1929 totaling 158,541,000 pounds. From September 1 to October 1 this year our holdings were reduced 12,338,000 pounds whereas during the same period a year ago holdings were reduced 10,411,000 pounds.

Cheese Prices Down

STATE FLATS	Oct. 17, 1930	Oct. 10, 1930	Oct. 18, 1929
Fresh Fancy	20 -21 1/2	20 1/2-22 1/2	
Fresh Average			
Held Fancy	24 -26	24 -26	27 1/2-29 1/2
Held Average			

The price on fancy, fresh whole milk State flats has been reduced approximately one whole cent following a general easier tone that developed in the cheese market about the middle of October. Western markets have shown a somewhat easier trend and there has been some price cutting. The reduction in State cheese prices brings them closer in line with Wisconsin goods. In spite of the reduction, trade is quiet which may mean that another slight reduction is in order to stimulate buying. The storage situation is such that there is no cause for worry for future supplies. Buyers know that there is plenty of cheese so are showing no great anticipation. On October 1, U. S. storage stocks totaled 85,108,000 pounds whereas a year ago U. S. storage stocks totaled 84,815,000 pounds. From September 1 to October 1, this year our cold storage holdings have been reduced 2,113,000 pounds, while during the same period last year holdings were reduced 1,743,000 pounds.

Egg Prices Turn Easier

The bulge in the egg market which we reported last week was obviously too severe and slapped back like a huge boomerang. By the 14th, prices had dropped 7c on closely selected extras, but they have held fairly steady since that time. The extreme advances curtailed consumption to the extent that there were heavy accumulations of fancy, large white eggs. Accordingly, it was necessary to lower the market in order to find a level at which the trade would take hold.

Another factor that entered into the picture was the publication of the U. S. storage stocks on hand October 1, which totaled 9,169,000 cases. On October 1, last year the storage stocks totaled 7,195,000 cases. From September 1 to October 1 this year holdings have been reduced 1,206,000 cases, whereas during the same period last year stocks were reduced 1,352,000 cases. The frozen egg market is a problem. On October 1 this year U. S.

storage stocks totaled 106,447,000 pounds compared with holdings on October 1, 1929 totaling 81,541,000 pounds.

Supplies of nearby fancy whites are not burdensome and accordingly, the market on them is holding fairly steady in spite of the resistance of the trade to existing price levels. Fancy Pacific Coast whites are having a harder time of it. Under the circumstances in the market it is very essential that egg producers use extreme caution in grading their eggs which they ship to New York City. In many cases local markets are better for off sizes.

Live Fowl Market Closing Better

During the earlier part of the week ending October 18, the live poultry market looked like a sorry proposition. On Tuesday it seemed sure to a great many that the market was headed downward. It was not until the latter part of the week that a turn for the better developed. The bulk of the demand was for fancy colored fowls for which premiums were being paid. Leghorn fowls were having a hard time of it, although a few fancy express stock brought premiums. Fancy fowls were used to help chickens which were dull and weak. There was a lot of undesirable stock on the market which very obviously hurt trade. Broilers have held steady. Some small chickens have been palmed off as broilers and these have been bringing premiums over chicken prices.

Early reports are still very mixed concerning the turkey crop. Turkeys in Texas are not up to standard at this time due to the backward season. Recent improvements in the weather are expected to help matters. It is generally believed that offerings for Thanksgiving will run considerably behind the average for the last five years. Other sections report conditions all the way from very bad to better than last year. During the next two weeks the situation will shape up a great deal better.

Hay Prices Unchanged

Hay prices are the same as they were a week ago in spite of the more liberal receipts both in Manhattan and Brooklyn. A very brisk demand was equal to the supply which left the level of prices unchanged. Stocks cleared well and the market closes steady. Straight timothy grading No. 1 still brings \$27 in large bales with other grades ranging down to \$20. Timothy carrying a mixture of clover also brings \$27 for No. 1 while No. 2 and 3 sell \$1 below straight timothy prices. Grass mixtures are \$1 below timothy prices all along the line.

Fruit and Vegetable Notes

The weather has been a little bit too mild to be good apple weather. Apples in barrels and baskets have been slow except for the fanciest selected marks, and prices have varied widely. For instance, McIntosh range all the way from 75c to \$2.25 per basket while barreled goods have ranged from \$2.50 to \$7.

Pears are selling at fairly well sustained prices, Bartlets and Clapps Favorite bringing anywhere from 75c to \$1.75 per basket. Keiffers range from 75c to \$1.25 per bushel and Seckels from \$2.50 to \$6.50.

Western New York quinces have been bringing from \$1.50 to \$2.50 per bushel basket.

The cabbage market has not been doing so well. Three carloads of Domestic cabbage, more or less yellow, are reported to have changed hands at \$75 per car. Bulk Danish cabbage has brought anywhere from \$18 to \$22 per ton.

State carrots have been slow, ranging from 50c to 85c per bushel.

Nearby pumpkins are bringing from 50c to \$1.50 per barrel, with Jumbos at 25c to 30c each.

Nearby Marrow squash are quoted any-

where from \$1 to \$1.50 per barrel with Hubbards at \$1 to \$1.75.

Rutabagas from nearby points generally bring \$1 to \$1.50 per 100 pound bag.

Parsnips range from 50c to \$1 per bushel.

Purple top turnips, washed, from Western New York are selling anywhere from 75c to \$1 per bushel.

Cauliflower has been a shade easier. A few special lots have brought as much as \$3.50. A No. 1 stock has brought from \$2.25 to \$3. Last week we bought nice cauliflower at 10c per head and it was going like hot cakes.

Meats and Livestock

CATTLE—Steers slow, fully steady. Medium grassers \$9.25-9.50. Cows slow, steady. Common to Medium \$4.00-5.00. Low cutters and cutters \$1.50-3.50. Bulls nominal.

VEALERS AND CALVES—Vealers steady. Good to Choice \$12.00-14.00; medium \$9.00-11.50; cull and common \$6.00-8.50. Calves steady.

HOGS—Steady. Good to choice 200 pound weights \$10.40.

LAMBS—Strong to 50c higher; good to choice \$8.00-9.00. Medium Pennsylvania lambs \$7.25. Choice State Lambs \$7.00-7.50, few late arrivals not sold.

COUNTRY DRESSED CALVES—Receipts throughout the week were moderate to liberal. Trading was very slow; the market took a downward trend and closed weak. Fresh receipts per pound: Choice 15-18c; fair to good 11-14c; small to medium 7-10c.

LIVE RABBITS—Fresh receipts light Demand slow. Market steady. By the coop, 12-18c per pound.

Wool

The wool market has been steady. New York better fleece wool, unwashed, fine, per pound 21-30c; 1/2 blood 23-30c; 3/8 blood 24-29c; 1/4 blood 24-30c; low quarter blood 25-27c; common and braid 23-25c.

Radio Discusses Animal Diseases

ON Wednesday of each week at twenty minutes before one o'clock, radio station WEAI at Cornell University, has been broadcasting a series of talks from the New York State Veterinary College. These talks will be continued during the months of November and December.

Dr. R. R. Birch of the Veterinary College is giving the talks, which will include such subjects as bovine tuberculosis, against which federal and state agencies have been waging a relentless war until now only about three per cent of the animals in this country have a tuberculosis infection, as compared with about thirty per cent in Europe.

On November 5, the broadcast will be on the topic of animal parasites, and the final discussion in this series, November 12, will tell of meat inspection in the United States and, will show what the government is doing to protect its citizens from diseases which may be transmitted from animals.

New York Farm News

A Summary of the October Crop Report

THE October 1 crop report, which has just been released by the New York State Department of Agriculture and Markets shows some increase over the predicted potato crop on September 1. The estimated potato crop for New York is 28,885,000 bushels as compared with the September 1 estimate of 28,355,000 bushels, and last year's crop of 24,840,000 bushels. The five-year average for New York is 31,046,000 bushels. The upstate crop is very close to last year's figure, while the Long Island crop is approximately twice that of last year. For the country as a whole, the October 1 estimate is 352,206,000 bushels as compared to last year's crop of 359,796,000 bushels and a five-year average of 392,605,000 bushels.

Corn—The corn crop is light this year but fortunately all other grain crops gave a good crop. New York State, of course, does not cut much figure when it comes to corn for grain. What the state has will yield, it is estimated, 29 bushels per acre, as compared with 31.1 bushels last year. Silos in many sections of New York State are only partially full this year. The U. S. corn crop on October 1, was estimated at 2,046,716,000 bushels, as compared to last year's crop of 2,614,307,000 bushels and a five-year average of 2,699,809,000 bushels.

Spring Wheat—New York State's crop is estimated at 76,000 bushels, compared with last year's crop of 136,000 bushels. The spring wheat crop for the whole country is estimated at 242,120,000 bushels, compared with last year's crop of 228,006,000 bushels.

Oats—Throughout the state, oats have given the highest yield per acre in years, averaging about 42.0 per acre; making a state production of 45,696,000 bushels, compared with 24,626,000 bushels last year. Quality is exceptionally high. The total United States oat crop amounts to about 1,410,761,000 bushels, compared with 1,233,574 bushels in 1929.

Barley—Barley has also given a good account of itself, with a yield of about 32 bushels per acre, compared with 22.1 bushels last year, and a total production of 5,280,000 bushels, compared with 3,514,000 last year. The national barley crop amounts to about 328,020,000 bushels, compared with 303,552,000 last year.

Buckwheat—The buckwheat crop is very spotted though it has shown slight improvement. Through central New York, where there has been more rainfall than through the western portion of the state, the production promises to be much higher than the average for the state. In those sections where the drought has been the most severe, the straw is short and the yield will be light. Production for the state is now estimated at 3,074,000 bushels, compared with 3,168,000 bushels harvested last year, and 4,098,000 bushels, the average of the previous five years. Pennsylvania, the other important buckwheat growing state, promises a production of 2,256,000 bushels, compared with 3,383,000 bushels produced last year. Buckwheat production for the entire United States promises about 8,732,000 bushels, compared with 11,520,000 bushels harvested last year and the five-year average of 13,786,000 bushels.

Beans—New York's bean crop, it is estimated, will yield at the rate of 9.3 bushels per acre, as compared with last year's acre yield of 12½ bushels. However, on an increased acreage, the New York crop is estimated at 1,116,000 bushels, as compared with last year's crop of 1,250,000 bushels and a five-year average of 1,358,000 bushels. Due to increases principally in the crops in Idaho, Colorado, and California, the entire U. S. crop is estimated at 20,834,000 bushels, compared with last year's crop of 19,693,000 bushels, and a five-year average of 17,323,000 bushels.

Hay—New York State's hay crop this year is estimated at 6,069,000 tons

as compared with 6,653,000 tons last year and a five-year average of 6,841,000 tons. For the entire United States, this year's crop is slightly over 84,000,000 tons, as compared with nearly 102,000,000 tons last year.

Cabbage—The Domestic cabbage crop for New York State is predicted at 84,600 tons, as compared with 97,200 tons last year. Figures for Danish cabbage for New York are 54,800 tons, as compared to 156,000 tons in 1929. The total United States figures for both domestic and Danish cabbage are 550,700 tons as compared to 1929 figures of 524,200 tons.

Fruit—New York State fruit production is fairly good, with the exception of grapes, according to the state-federal crop report for October issued from the New York State Department of Agriculture and Markets.

Pears—All harvested except Keiffers and minor late varieties, turned out the heaviest crop in years, amounting to about 3,204,000 bushels, compared with 1,152,000 bushels last year.

Grapes—Gave fair to good production except in the Chautauqua-Erie section where severe drought reduced the yield below earlier expectations. Sugar content is very high. The crop of 69,300 tons, for the state, compared with the estimate of 81,030 tons last year, and the five-year average of 75,106 tons.

Apple—Production, somewhat heavier than anticipated earlier in the season, is estimated at 25,004,000 bushels compared with 16,520,000 bushels last year and 26,075,000 bushels, the five-year average. Baldwin, the main winter variety, is light but Greenings, McIntosh and other earlier varieties were excellent to heavy. This means that more than the usual percentage of the crop was made up of early varieties and less than usual of winter varieties.

There was general improvement in the apple crop in most states, the total United States production amounting to 153,369,000 bushels, compared with 142,078,000 bushels last year and 180,262,000 bushels, the five-year average.

County Notes

GENESEE COUNTY—The potato crop will not be heavy, but the quality is good and will bring a good price. Potatoes are fair sized but not many in a hill. Buckwheat which was short on the stalk in most instances, is yielding better than was expected. Another rain Tuesday helped the winter wheat and aided fall plowing. Pheasants are very plentiful this year. Eggs are now 38c to 40c a dozen. Six banks in Genesee County will charge a checking account fee on accounts below \$50. after November 1, to cover the cost of handling.—Mrs. R. E. G.

ST. LAWRENCE COUNTY—It has been the best weather possible for harvesting; just a slight frost up to this 12th day of October. This Indian summer is just glorious. Silo filling is just finished. Many dairy farmers have refilled so silos are full to overflowing. Potatoes are turning out a bumper crop. Prices are ranging \$1.25 a bushel. The purebred Holstein-Friesian sale was called off on account of not getting enough stock consigned for a good sale. There will be a Holstein-Friesian Breeders' Club meet in the near future.

Mrs. James Armstrong and her daughter, Janet, left for the National Dairy Show Friday, October 10. Mrs. Armstrong is vice-president of the 4-H Council of St. Lawrence County, and Janet goes with her Jersey calf to show it at the National. Reginald Drake of Potsdam and Everett Parr of Winthrop, are also going with their calves, Guernsey and Holstein, respectively. Farmers' Week at St. Lawrence University Agricultural School is held early this year—October 29-31—on account of the National Grange meet. Charles M. Gardner, High Priest Demeter, National Grange, will speak on Grange Day. Silas Wright Grange officers had their pictures taken. You'll see them in the National Grange monthly. Every one of them have taken the sixth degree. On to Rochester is their cry! The St. Lawrence Patrons will make the air ring at Rochester. No after feed for the dairy cows and it is so dry that it is even hard to plow with tractors and on clay ground you can't.—H.M.K.

Power for the Farm

*This booklet,
a thorough discussion
of Power in Agriculture, is
free upon request*

American agriculture and the electric light and power companies are engaged in a great cooperative venture—the application of electric power to farming.

The use of power—animal and mechanical—on American farms already exceeds the power capacity of all the nation's factories. But not all of this is power which can do small, scattered jobs with a minimum of human attention. Most of the power now at work on farms cannot work at a high percentage of its capacity, as an interconnected electric system can.

Electric power brings to the farm a cheap, reliable and automatic substitute for human nerves and muscular power in that vast department of agricultural effort called "chores."

Electric power is making an outstanding contribution to agriculture, while encouraging one of agriculture's most valuable characteristics—the operation of the farm by the owner and his family.

One-tenth of the farms of the United States are now receiving electric service—about six hundred thousand out of six million. The Middle West Utilities System is now serving about the same proportion of the 800,000 farms in its territory.

The possibilities of further extension of electric service in agricultural regions are fully discussed in the 112-page booklet "Harvests and Highlines," published by the Middle West Utilities Company. The Company will be glad to send you a copy free upon request. Address Public Information Department, Middle West Utilities Company, 20 North Wacker Drive, Chicago, Illinois.

MIDDLE WEST UTILITIES COMPANY

"Not one poor cake since I discovered Calumet"

And here's the secret ... Calumet's DOUBLE-ACTION

EVERYWHERE, delighted women are finding out—Calumet makes baking success easy and sure!

The secret?—it's simple! Calumet acts *twice*, not just *once*. And this remarkable Double-Action makes the greatest difference in baking. It adds to your baking a touch of genius! Special lightness! Extra delicacy and fineness of texture. Such unusual perfection that you'll enjoy new pride in everything you bake.

Calumet's *first* action begins in the mixing bowl. It starts the leavening. Then, in the oven, the *second* action begins. It continues the leavening. Up! . . . up! . . . it keeps raising the batter and holds it high and light. Cakes, muffins, quick breads bake beautifully, even though you may not be able to regulate your oven accurately.

All baking powders are required by law to be made of pure, wholesome ingredients. But not all are alike in their action nor in the amount that should be used. And not all will give you equally fine results in your baking. Calumet is scientifically made of exactly the right ingredients, in exactly the right proportions to produce perfect leavening action—Double-Action!

Make a Calumet cake to-day. Taste it—compare! Then you'll know why Calumet is the largest-selling baking powder in the world. Remember to use only *one* level teaspoon of Calumet to each cup of sifted flour. This is the usual Calumet proportion and should be followed for best results—a splendid economy which the perfect efficiency of Calumet's leavening action makes possible. Send for the wonderful new Calumet Baking Book. Mail coupon NOW!

1st ACTION 2nd ACTION

MAKE THIS TEST

Naturally, when baking, you can't see how Calumet's Double-Action works inside the dough or batter to make it rise. But, by making this simple demonstration with Calumet Baking Powder and water in a glass, you can see clearly how Calumet acts twice to make your baking better. Put two level teaspoons of Calumet into a glass, add two teaspoons of water, stir rapidly five times and remove the spoon. The tiny, fine bubbles will rise slowly, half filling the glass. This is Calumet's first action—the action that Calumet specially provides to take place in the mixing bowl when you add liquid to your dry ingredients.

After the mixture has entirely stopped rising, stand the glass in a pan of hot water on the stove. In a moment, a second rising will start and continue until the mixture reaches the top of the glass. This is Calumet's second action—the action that Calumet holds in reserve to take place in the heat of your oven. Make this test to-day. See Calumet's Double-Action which protects your baking from failure.

One Baby Saved

Bravery and Quick Thinking in a Crisis

WHEN driving past the farm next to ours, on my way to get the mail at a small village in Orange County, I sometimes see a yellow-haired baby playing near the house. Whenever I see him my thoughts go back to what happened last February. It was due to his mother's more than human bravery that he is alive and well today.

This true story of what happened is no different in its essentials from stories that have been told of the heroic deeds of other mothers. But it has an

The cries rang in the ears of the stunned girl and somehow woke her, and made her realize the danger he was in.

The fire that was burning around her was spreading. It would burn him, —what should she do?

Pick him up and run outdoors away from this horror and flame? No, that was the worst possible thing she could do. Her burning clothes would set fire to his.

She must put the fire out. The only hope of saving him was to put the fire out.

But what if the fire was too much for her? The first thing to do was to phone for help.

She got to her feet and made her way to the telephone.

She called her mother-in-law who lived nearby but their phone was out of order. Then she called her own mother, three miles away.

"Ma, come quick—the kitchen's on fire!"

Yes, her mother answered she'd come as soon as she could run to the barn and get one of the boys to bring her.

"English Manor" Picture No. B.5482 comes hand tinted in actual colors on canvas showing exactly where to place the colorful wools which make up the English scene. Colors are softly blended for simple embroidery canvas, yarn included \$1.40. Frame and mat are not included. Order from Embroidery Department, American Agriculturist, 461 Fourth Avenue, New York City.

appeal that goes deep for the great number of us who can look back on our own childhood, and know that the reason we are living and thriving today is because of a woman's heroism shining out in a single deed or multiplied over a period of years.

The farmhouse of which I spoke, is the home of Mr. and Mrs. John Mabee who have brought up eight sons and daughters, all of them married. It is a sight to remember to see them gathered on a Sunday afternoon in a big circle that fills the living-room, young husbands and wives and babies and older youngsters.

The youngest of the family, Flossie, was married two years ago at the age of 19, to Ralph Shader, a young managing farmer. For the first few months of their marriage they lived at the Mabees. As she was the youngest of the family it was hard all around to have her go but later on they moved into the tenant house, three miles from her old home, on the farm where her husband worked.

A son was born about a year ago and he is the yellow-haired baby that I sometimes see playing outside the Mabee house.

It was in the cold dark of early morning that what happened last February occurred in the kitchen of Flossie's new home. Her husband had gone to the cowbarns at some distance from the house, and she was getting breakfast.

The baby had insisted on getting up too, when he might just as well have stayed in bed. That is the way babies have, so utterly incomprehensible to adults who would like to lie late on a cold morning and can't. Flossie had wrapped him up and put him in his high chair in the kitchen.

To hurry up the fire, she poured on a little kerosene from a nearly empty can. The flames leaped up, setting fire to the kerosene in the can which exploded, knocking the girl unconscious, throwing flaming oil on her clothes and setting fire to the floor and woodwork.

The baby in his high chair, startled by the loud noise and smoke and flame, cried for his mother but she did not hear. He yelled louder and louder.

Smart—Wearable

2709

Dress Pattern No. 2709 has a smart touch in its softly falling jabot which contrasts pleasantly with the darker color of the dress itself. Flecked tweed, a tweed-patterned silk or flat crepe would lend itself nicely to this pattern which cuts in sizes 36, 38, 40, 42, 44, 46 and 48 inches bust measure. For the woman of average figure, 3¾ yards of 39-inch material with ½ yard of 39-inch contrasting is sufficient to copy it exactly. Price 15c.

TO ORDER: Write name, address, pattern sizes and numbers clearly and correctly and enclose with proper remittance in stamps or coin (although coin is sent at own risk). Add 12c for one of the new Winter Fashion Catalogs and address to Pattern Department, American Agriculturist, 461 Fourth Avenue, New York City.

AND YOU!

(C) 1930
G. F. Corp.

(Continued from Opposite Page)

That done, Flossie went to work and put the fire out herself, smothering it with pieces of carpet and beating it out with the broom.

She put on a fresh nightgown over her burned body and only then did she go to her baby and pick him up and comfort him.

When she heard her brother's car drive up she thought how steep and dangerous the steps up the bank were for her mother to climb in the dark. With the baby on one arm she carried a lighted lamp in the other hand to the window to let the light shine on the path to the house.

That same afternoon at five o'clock she died as a result of burns, at the hospital to which she had been rushed in an effort to save her life.

Now when I see the yellow-haired baby playing around the Mabree house under "Ma's" watchful eye, I think of what happened last February.—D.C.H.

Tested Recipes

CORN is the most versatile of garden products and connected as it is with the early history of America it should have recognition as the national vegetable. All who taste any of the following will at once vote in the affirmative.

Corn Omelet

- | | |
|------------------------|-------------------------|
| 1 cupful corn | 2 tablespoonfuls butter |
| 4 tablespoonfuls cream | 1/2 teaspoonful salt |
| 4 eggs | 1/4 teaspoonful sugar |

Cut corn from the ears and cook fifteen minutes. Beat the whites of the eggs very stiff. To the egg whites add the beaten yolks and the cream, stir in one cupful cooked corn seasoned with the salt and sugar. Put the butter in pan, pour in the omelet and cook until top will not stick when lightly touched with the index finger. Fold over, garnish with parsley and serve.

Attractive Model

2712

Dress pattern No. 2712 is a smart all-day model shown here in Patou green with a deep V-yoke of lighter green crepey woolen. Canton or flat crepe or lightweight tweed would be excellent for this design. The pattern comes in sizes 14, 16, 18, 20, 22, 24, 26, 28, 30, 32, 34, 36, 38 and 40 inches bust measure. Size 16 requires 3 3/4 yards of 39-inch material with 1/2 yard of 35-inch contrasting and 1/8 yard of 39-inch dark material. Price 15c.

TWO HELPERS  INSTEAD OF ONE  IN EVERY BAR 

That's why

FELS-NAPTHA BRINGS EXTRA HELP TO EVERY SOAP-AND-WATER JOB

WEEKLY WASHING or daily household cleaning—there isn't a single soap-and-water task that can't be done easier and quicker with the aid of Fels-Naptha.

Just smell a Fels-Naptha bar—and you'll know why. There's naptha in Fels-Naptha—your nose proves it. Plenty of naptha combined with good golden soap. So you get *two* cleaners instead of one. And working together, they give you *extra* help that loosens the most stubborn dirt and washes it away without hard rubbing.

In tub or machine; hot, lukewarm or even cool water; and whether you soak or boil your clothes, Fels-Naptha works splendidly—bringing you fresh, sweet, clean home-washed clothes. Try it for household cleaning, too. It's gentle to hands. For it loosens dirt so quickly

that it gets them out of water sooner.

Ask your grocer for Fels-Naptha today and get a real washday bargain. A bargain that brings you not more soap, but more help. *Extra* help that saves you!

SPECIAL OFFER—We'll be glad to send every user of laundry soap a Fels-Naptha Chipper. Many women who chip Fels-Naptha into their washing machines, tubs or basins find this chipper handier than a knife. Use it and Fels-Naptha to make fresh, golden soap chips (that contain plenty of naptha!) just as you need them. Send only a two-cent stamp to help cover postage, and we'll mail you this chipper without further cost. Write today. Dept. 1-10-25 Fels & Company, Philadelphia, Pa.

THE GOLDEN BAR WITH THE CLEAN NAPTHA ODOR

FELS-NAPTHA

Stubborn Coughs Ended by Recipe, Mixed at Home

Here is the famous old recipe which millions of housewives have found to be the most dependable means of breaking up a stubborn, lingering cough. It takes but a moment to prepare and costs little, but it gives real relief even for those dreaded coughs that follow severe cold epidemics.

From any druggist, get 2 1/2 ounces of Pinex, pour it into a pint bottle and fill the bottle with plain granulated sugar syrup or strained honey. Thus you make a full pint of better remedy than you could buy ready-made for three times the cost. It never spoils and tastes so good that even children like it.

Not only does this simple mixture soothe and heal the inflamed throat membranes with surprising ease, but also it is absorbed into the blood, and acts directly upon the bronchial tubes, thus aiding the whole system in throwing off the cough. It loosens the germ-laden phlegm and eases chest soreness in a way that is really astonishing.

Pinex is a highly concentrated compound of genuine Norway Pine, containing the active agent of creosote, in a refined, palatable form. Nothing known in medicine is more helpful in cases of distressing coughs, chest colds, and bronchial troubles.

Do not accept a substitute for Pinex. It is guaranteed to give prompt relief or money refunded.

POST YOUR FARM And Keep Trespassers Off Reduced Prices on TRESPASS SIGNS

Effective October 1, 1930, trespass signs are offered to subscribers of American Agriculturist at new reduced rates in quantities of fifty or more. The new rates are as follows:—

Per Dozen\$ 1.00
Per Fifty 3.50
Per Hundred 6.50
Per Thousand 60.00

The price for smaller quantities remains at \$1. per dozen.

Specially worded signs will be made up at slight additional cost. Names and addresses will be imprinted at \$2.00 for the first one hundred and \$1.00 for each additional one hundred.

These signs are made up of extra heavy cloth material that will withstand the severities of the weather.

We unreservedly advise farmers to post their land. The signs we have prepared are worded to comply with Conservation Law.

OKLA. FARMER KILLS 172 RATS IN ONE NIGHT

K-R-O (Kills Rats Only), writes Mr. —, Hulbert, Okla., brought this remarkable result. K-R-O is the original product made from squill, an ingredient recommended by U. S. Government as sure death to rats and mice but harmless to dogs, cats, poultry or even baby chicks. You can depend on K-R-O (Kills Rats Only), which has become America's leading rat exterminator in just a few years. Sold by all druggists on a money back guarantee.

Just David--By Eleanor Porter

(Continued from Page 5)

put more cold in. I forgot and left the milk in the sun, and it tastes bad now; but I'm sure next time it'll be better—all of it."

The man smiled, but he shook his head sadly.

"But there ought not to be any 'next time', David."

"Why not? What do you mean? Aren't you ever going to let me try again, father?" There was real distress in the boy's voice.

The man hesitated. His lips parted with an indrawn breath, as if behind them lay a rush of words. But they closed abruptly, the words still unsaid. Then, very lightly, came these others:—

"Well, son, this isn't a very nice way to treat your supper, is it? Now, if you please, I'll take some of that bacon. I think I feel my appetite coming back."

If the truant appetite "came back," however, it could not have stayed; for the man ate but little. He frowned, too, as he saw how little the boy ate. He sat silent while his son cleared the food and dishes away, and he was still silent when, with the boy, he passed out of the house and walked to the little bench facing the west.

Unless it stormed very hard, David never went to bed without this last look at his "Silver Lake," as he called the little sheet of water far down in the valley.

"Daddy, it's gold to-night—all gold with the sun!" he cried rapturously, as his eyes fell upon his treasure. "Oh, daddy!"

It was a long-drawn cry of ecstasy, and hearing it, the man winced, as with sudden pain.

"Daddy, I'm going to play it—I've got to play it!" cried the boy, bounding toward the cabin. In a moment he had returned, violin at his chin.

The man watched and listened; and as he watched and listened, his face became a battleground whereon pride and fear, hope and despair, joy and sorrow, fought for the mastery.

It was no new thing for David to "play" the sunset. Always, when he was moved, David turned to his violin. Always in its quivering strings he found the means to say that which his tongue could not express.

Across the valley the grays and blues of the mountains had become all purples now. Above, the sky in one vast flame of crimson and gold, was a molten sea on which floated rose-pink cloud-boats. Below, the valley with its lake and river picked out in rose and gold against the shadowy greens of field and forest, seemed like some enchanted fairyland of loveliness. And all this was in David's violin, and all this, too, was on David's uplifted, rapturous face.

As the last rose-glow turned to gray and the last strain quivered into silence, the man spoke. His voice was almost harsh with self-control.

"David, the time has come. We'll have to give it up—you and I."

The boy turned wonderingly, his face still softly luminous.

"Give what up?"

"This—all this."

"This! Why, father, what do you mean? This is home!"

The man nodded wearily.

"I know. It has been home; but, David, you didn't think we could always live here, like this, did you?"

David laughed softly, and turned his eyes once more to the distant sky-line.

"Why not?" he asked dreamily. "What better place could there be? I like it, daddy."

The man drew a troubled breath, and stirred restlessly. The teasing pain in his side was very bad to-night, and no change of position eased it. He

was ill, very ill; and he knew it. Yet he also knew that, to David, sickness, pain, and death meant nothing—or, at most, words that had always been lightly, almost unconsciously passed over. For the first time he wondered if, after all, his training—some of it—had been wise.

For six years he had had the boy under his exclusive care and guidance. For six years the boy had eaten the food, worn the clothing, and studied the books of his father's choosing. For six years that father had thought, planned, breathed, moved, lived for his son. There had been no others in the little cabin. There had been only the

and it isn't coming back. And it leaves its little cold ice-coat behind it just as the squirrel did, too. It doesn't need it. It can go without it. Don't you see? And it's singing—listen!—it's singing as it goes. It *wants* to go!"

"Yes, David." And David's father had sighed with relief that his son had found his own explanation of the mystery, and one that satisfied.

Later, in his books, David found death again. It was a man, this time. The boy had looked up with startled eyes.

"Do people, real people, like you and me, be dead, father? Do they go to a far country?"

"Just David"—Our New Serial

HERE is the first chapter of our new serial "Just David." If you like boys you will like this story. You may find that David is a little different from the boys we know, but then David was not brought up as most boys are and besides he was a genius and no one expects a genius to behave just as other folks do.

The thing that caused all the trouble and unhappiness for David was the fact that no one recognized his talent, nor could they understand the things he did. In spite of his apparent weakness, his childish logic, not to mention the things he did, changed several lives for the better, while efforts of others to change him made no impression whatever.

We are telling you too much about the book. Read it yourself and you will agree with us that it is one of the best we have ever given you.

occasional trips through the woods to the little town on the mountain-side for food and clothing, to break the days of close companionship.

All this the man had planned carefully. He had meant that only the good and beautiful should have place in David's youth. It was not that he intended that evil, unhappiness, and death should lack definition, only definiteness, in the boy's mind. It should be a case where the good and the beautiful should so fill the thoughts that there would be no room for anything else. This had been his plan. And thus far he had succeeded—succeeded so wonderfully that he began now, in the face of his own illness, and of what he feared would come of it, to doubt the wisdom of that planning.

As he looked at the boy's rapt face, he remembered David's surprised questioning at the first dead squirrel he had found in the woods. David was six then.

"Why, daddy, he's asleep, and he won't wake up!" he had cried. Then, after a gentle touch: "And he's cold—oh, so cold!"

The father had hurried his son away at the time, and had evaded his questions; and David had seemed content. But the next day the boy had gone back to the subject. His eyes were wide then, and a little frightened.

"Father, what is it to be—dead?"

"What do you mean, David?"

"The boy who brings the milk—he had the squirrel this morning. He said it was not asleep. It was—dead."

"It means that the squirrel, the real squirrel under the fur, has gone away, David."

"Where?"

"To a far country, perhaps."

"Will he come back?"

"No."

"Did he want to go?"

"We'll hope so."

"But he left his—his fur coat behind him. Didn't he need—that?"

"No, or he'd have taken it with him."

David had fallen silent at this. He had remained strangely silent, indeed for some days; then, out in the woods with his father one morning, he gave a joyous shout. He was standing by the ice-covered brook, and looking at a little black hole through which the hurrying water could be plainly seen.

"Daddy, oh, daddy, I know now how it is, about being—dead."

"Why—David!"

"It's like the water in the brook, you know; *that's* going to a far country,

"Yes, son, in time—to a far country ruled over by a great and good King, they tell us."

David's father had trembled as he said it, and waited fearfully for the result. But David had only smiled happily as he answered:

"But they go singing, father, like the little brook. You know I heard it!"

And there the matter had ended. David was ten now, and not yet for him did death spell terror. Because of this David's father was relieved; and yet—still because of this—he was afraid.

"David," he said gently. "Listen to me."

The boy turned with a long sigh.

"Yes, father."

"We must go away. Out in the great world, there are men and women and children waiting for you. You've a beautiful work to do; and one can't do one's work on a mountain-top."

"Why not? I like it here, and I've always been here."

"Not always, David; six years. You were four when I brought you here. You don't remember, perhaps."

David shook his head. His eyes were again dreamily fixed on the sky.

"I think I'd like it—to go—if I could sail away on that little cloud-boat up there," he murmured.

The man sighed and shook his head.

"We can't go on cloud-boats. We must walk, David, for a way—and we must go soon—soon," he added feverishly. "I must get you back—back among friends, before—"

He rose unsteadily, and tried to walk erect. His limbs shook, and the blood throbbed at his temples. He was appalled at his weakness. With a fierceness born of his terror he turned sharply to the boy at his side.

"David, we've got to go! We've got to go—to-morrow!"

"Father!"

"Yes, yes, come!" He stumbled blindly, yet in some way he reached the cabin door.

Behind him David still sat, inert, staring. The next minute the boy had sprung to his feet and was hurrying after his father.

* * *

CHAPTER II

THE TRAIL

A curious strength seemed to have come to the man. With almost steady hands he took down the photographs and the Sistine Madonna, packing them neatly away in a box to be left. From beneath his bunk he dragged a large,

dusty traveling-bag, and in this he stowed a little food, a few garments, and a great deal of the music scattered about the room.

David, in the doorway, stared in dazed wonder. Gradually into his eyes crept a look never seen there before.

"Father, where are we going?" he asked at last in a shaking voice, as he came slowly into the room.

"Back, son; we're going back."

"To the village, where we get our eggs and bacon?"

"No, no, lad, not there. The other way. We go down into the valley this time."

The valley—*my* valley, with the Silver Lake?"

"Yes, my son; and beyond—far beyond." The man spoke dreamily. He was looking at a photograph in his hand. It had slipped in among the loose sheets of music, and had not been put away with the others. It was the likeness of a beautiful woman.

For a moment David eyed him uncertainly; then he spoke.

"Daddy, who is that? Who are all these people in the pictures? You've never told me about any of them except the little round one that you wear in your pocket. Who are they?"

Instead of answering, the man turned far-away eyes on the boy and smiled wistfully.

"Ah, David, lad, how they'll love you! How they will love you! But you mustn't let them spoil you, son. You must remember—remember all I've told you."

Once again David asked his question, but this time the man only turned back to the photograph, muttering something the boy could not understand.

After that David did not question any more. He was too amazed, too distressed. He had never before seen his father like this. With nervous haste the man was setting the little room to rights, crowding things into the bag, and packing other things away in an old trunk. His cheeks were very red, and his eyes very bright. He talked, too, almost constantly, though David could understand scarcely a word of what was said. Later, the man caught up his violin and played; and never before had David heard his father play like that. The boy's eyes filled, and his heart ached with a pain that choked and numbed—though why, David could not have told. Still later, the man dropped his violin and sank exhausted into a chair; and then David, worn and frightened with it all, crept to his bunk and fell asleep.

In the gray dawn of the morning David awoke to a different world. His father, white-faced and gentle, was calling to get ready for breakfast. The little room, dismantled of its decorations, was bare and cold. The bag, closed and strapped, rested on the floor by the door, together with the two violins in their cases, ready to carry.

"We must hurry, son. It's a long tramp before we take the cars."

"The cars—the real cars? Do we go in those?" David was fully awake now.

"Yes."

"And is that all we're to carry?"

"Yes. Hurry, son."

"But we come back—sometime?"

There was no answer.

"Father, we're coming back—sometime?" David's voice was insistent now.

The man stooped and tightened a strap that was already quite tight enough. Then he laughed lightly.

"Why, of course you're coming back sometime, David. Only think of all these things we're leaving!"

When the last dish was put away, the last garment adjusted, and the last look given to the little room, the trav-

OF THE
AMERICAN AGRICULTURIST

Just David

(Continued from Opposite Page)

elers picked up the bag and the violins, and went out into the sweet freshness of the morning. As he fastened the door the man sighed profoundly; but David did not notice this. His face was turned toward the east—always David looked toward the sun.

"Daddy, let's not go, after all! Let's stay here," he cried ardently, drinking in the beauty of the morning.

"We must go, David. Come, son."

And the man led the way across the green slope to the west.

It was a scarcely perceptible trail, but the man found it, and followed it with evident confidence. There was only the pause now and then to steady his none-too-sure step, or to ease the burden of the bag. Very soon the forest lay all about them, with the birds singing over their heads, and with numberless tiny feet scurrying through the underbrush on all sides. Just out of sight a brook babbled noisily of its delight in being alive; and away up in the treetops the morning sun played hide-and-seek among the dancing leaves.

And David leaped, and laughed, and loved it all, nor was any of it strange to him. The birds, the trees, the sun, the brook, the scurrying little creatures of the forest, all were friends of his. But the man—the man did not leap or laugh, though he, too, loved it all. The man was afraid.

He knew now that he had undertaken more than he could carry out. Step by step the bag had grown heavier, and hour by hour the insistent, teasing pain in his side had increased until now it was a torture. He had forgotten that the way to the valley was so long; he had not realized how nearly spent was his strength before he even started down the trail. Throbbing through his brain was the question, what if, after all, he could not—but even to himself he would not say the words.

HANDY ANDY Says "Here's How"

To Stop Tank Leaks

By Ray Inman

TO STOP LEAKS IN A WOODEN WATER TANK YOU CAN USE CLAY, CEMENT OR ASPHALT BUT HERE'S A MUCH SIMPLER METHOD

ORDINARY CLAY MIXED WITH WATER AND FORCED INTO THE JOINTS WILL WORK TEMPORARILY.

FOR PERMANENT STOPPAGE USE EMULSIFIED ASPHALT, PUTTING STIFF TROWEL ASPHALT INTO THE CRACKS AND BRUSH-ASPHALT PAINTED ON INSIDE.

ROOFING CEMENT CAN BE USED BUT IT WILL GIVE WATER A SLIGHT TASTE.

What to Do When the Pullets Go Lame

(Continued from Page 3)

body under favorable conditions of moisture and air these continue to develop to the stage where they will give the disease to birds which pick them up. In cold weather or in periods of dryness the organism does not develop, but lies in a dormant and harmless state until conditions are again favorable.

Constant Reinfestation Increases Losses

The authorities point out two important facts that seem to give the clue to the control of the trouble. First, that the severity of the trouble in a given bird is largely dependent on how large a dose of the infection she got, and second, that the disease runs a self-limiting course. That is, unless the dose is too large the bird will recover after the disease has run its course, unless she continues to get new doses. Dr. Beaudette says: "Fatal cases are probably only those in which reinfestation has constantly taken place, and if such infestation could be prevented it might be possible to materially reduce the mortality of the disease."

It has been observed as a matter of experience that this trouble almost never attacks birds after they are a year old. There is evidence that they have developed complete immunity. An outbreak spreads slowly through the flock, only a few birds are sick at a time, it may continue all winter. Not all the affected birds go lame; some go blind, and some merely waste away. A gray or whitish cast to the eye is typical of affected birds.

On range, wet weather increases the rate of the spread of the trouble. Outbreaks seem to be worse on flat land or on heavy soil than on sloping ground or gravelly soil. In other words, drainage is an important factor in control.

Do Not Try to Cure Them

Pullets that go lame are too badly affected to recover. They continue to eat ravenously yet they actually starve to death. Their intestines have been so badly damaged by the coccidia that they cannot digest the food. New ranges do not always protect against the trouble. But on the other hand, there are numerous instances of flocks where a few cases have appeared one season and that was the end of it. Apparently careful sanitary measures can control the trouble.

Here is what I get out of all this information. The infection is almost everywhere. As a rule, a bird picks up only a little. She has a mild attack, it runs its course, and the owner never

knows she had it. But more infection has been added to the premises. The more birds there are the faster the infection will accumulate. During dry weather the infection lies dormant. Along comes a wet spell, the infection becomes active. A few birds pick up doses too large to be thrown off. Paralysis results. The obvious move for the owner is to break up that cycle of infection. Remove and dispose of lame birds the minute they are seen. Move the flock to the house and use all the sanitary measures possible to prevent reinfestation. Screen the dropping boards, prevent wet spots around the drinking fountains, and clean out the litter frequently.

If, in spite of all precautions the trouble continues, there is still another way open. The young stock may be reared in confinement on floors of wire screen. This quite effectively separates them from infection and is being done very successfully by a number of large poultrymen.

Vaccinating Poultry in New Jersey

Are poultry owners in New Jersey permitted to vaccinate their fowls against chicken pox?

POULTRY owners may obtain a permit from the New Jersey Department of Agriculture at Trenton, which will allow them legally to inoculate their poultry against chicken pox, but the law does not allow them to vaccinate their neighbors' chickens.

With the A. A.

FARM MECHANIC

Electricity for Cooling Milk

INTEREST in the use of electricity for cooling milk is increasing rapidly as equipment is improved and electric lines are extending into rural territory. As might be expected with a new thing like this, there are many problems to be solved and as usual the New York State Agricultural Experiment Station at Geneva, has been busy getting the facts.

Readers who are interested should write to the Station and ask them for a copy of bulletin 581, "Electric cooling of milk on the farm." This bulletin gives rather detailed plans for building an insulated tank and also gives some rather surprising results secured from experiments at the Station. Some of the conclusions reached from the experiment are:

1. The cooling tank should be large enough so that when filled with cans

of milk there will be twice as much ice and water as milk. Although this means a large tank, it is necessary for can cooling.

2. Insulation with 3 inches of cork, or its equivalent, protected against moisture, saved more than its cost in refrigeration in one summer. The insulation is essential for maintaining a low temperature, although three inches may not be necessary.

3. Milk can be satisfactorily cooled by placing it immediately after the can is filled at milking time in cold water at 40° F, providing the tank is of ample size, well insulated, and a large enough source of refrigeration is available. The milk need not be stirred or surface cooled. Should stirring be thought desirable, one stirring after one or two hours in the water is ample. For milk of bad flavor, such as absorbed feed flavor, aeration may be desirable.

Something for Co-op Members to Think About

(Continued from Page 7)

yet when the whole situation is considered from a long-time point of view, it is certain that some progress has been made. Certainly the membership of a cooperative association forms the chief asset of the association. We are wondering how many of the conclusions reached would apply to the members of milk marketing organizations in American Agriculturist's territory. The following are the conclusions reached by this Pennsylvania professor:

Members reported generally that a safe market and higher prices were the benefits they have received. However, 23 per cent reported that they have received no benefits as members of the organization.

The house organ is read regularly by only 42 per cent of the members, while only 32 per cent of them attend local meetings.

Only 18 per cent of the members attend Agricultural Extension meetings and only 14 per cent of them attend Grange meetings regularly.

Much dissatisfaction results because too many farmers have expected that the marketing organization was all that was needed in order to make their dairies profitable. Cooperative marketing will never return good profits to uneconomical producers.

Less than one eighth of the members spoke of the organization as though they were part of it.

Eighty six per cent of the men who were members of cow testing associations at the time they were interviewed were satisfied with their butterfat tests. This is a fair indication that most of the members who know what their test is, are satisfied, and that the majority of complaints come from men who really do not know what their herds test.

Some of the problems presented here are even now on the way to successful solution. With an awakened, informed and enthusiastic membership, this organization can face the future with confidence.

Your Independent
Shoe Merchant
SAVES you **MONEY**
by selling
LONG-WEARING
Rubber Footwear

A mighty good place to get your money's worth is the independent shoe store in your town. When it prospers the town prospers. The owner and his customers are his only bosses. He has built his own business by selling what the folks of his town need.

We think it is good business to co-operate with the independent shoe merchant. His motives and his conscientious methods have just naturally pointed him toward Top Notch Rubber Footwear. For downright money's worth, for top-to-bottom strength and knock-about "guts", he thinks of Top Notch. And he ought to know. Is it any wonder we "play ball" with him!

If he has searched the country for better values, he'll probably tell you that Top Notch is the longest wearing rubber footwear that anyone ever put a foot into. He says that because his customers have told him so when they come back for more.

Next time you want rubber footwear, swing the door of your independent shoe store. Say "Top Notch", and get the best money's worth in town. Boots, arctics, and rubbers (heavy and light) for men, women and children. Beacon Falls Rubber Shoe Company, Beacon Falls, Connecticut.

● Put your foot into a Top Notch Buddy Boot. Feel those "muscles" of tough live rubber. Get a lot of wear without a lot of weight.

● A Man's rubber with a man's strength, built to stand up under the roughest kind of punishment. The Top Notch "Topeka".

● Top Notch Women's All-Rubber Smartie gives real protection against slush and rain and cold. Designed to make feet look smaller.

TOP NOTCH
A GUARANTEE OF SERVICE

Sooner or Later

EVEREADY PRESTONE OR A FROZEN RADIATOR

NO NEED to enlarge on the bother, expense and danger that can come of a frozen radiator on your car or truck. It's one of the things that many farmers have had to contend with in winter. But it is important to know about the most effective and economical means of avoiding such danger.

This winter, you can protect your car absolutely . . . with very little trouble or expense. A single filling of Eveready Prestone, the ONE-SHOT anti-freeze, and your car is proof against freezing for the entire season. Only one investment to make . . . only a single operation required. Eveready Prestone is *preparedness*, because you can put it in *before* freezing weather comes. It's immune to heat and cold alike, so it won't boil off or overheat your engine.

It's needless to fuss around any longer with makeshift methods that may be mighty costly . . . methods you can seldom depend on completely. For Eveready Prestone is tried and proved, used by motor-authorities everywhere, tested successfully under more severe conditions than any car will ever meet. The Byrd Antarctic Expedition used it at the South Pole, where it gave perfect satisfaction.

Eveready Prestone is different from all other anti-freezes. It was developed by Union Carbide and Carbon Corporation, and is distributed by National Carbon Company, Inc., makers of Eveready Flashlights and Batteries. It contains no alcohol or glycerine.

Eveready Prestone is economical because one filling is all that's needed, and because it comes to you undiluted. Compared with other anti-freezes, a smaller quantity is required. It will give you protection from frost to thaw at a cost of \$2.50 to \$7.50, depending on whether you live in a moderate or extreme climate.

This year, Eveready Prestone has been further improved. It is now *green* in color, so that you may easily identify it. Take the few simple precautions necessary to make your cooling-system water-tight, then put in your winter's supply of Eveready Prestone. You can do it now . . . today.

★ ★ ★

Tune in the Eveready Hour, every Tuesday evening at nine (Eastern standard time) over the N. B. C. network.

In Conclusion

THERE are a number of other fine old songs that mother sang and that are still favorites. Then, too, there are some songs that father sang—Sweet Adeline. In this story, page 2, Dave Thompson gives you a brief summary of some of them. Here we have pictured the house at Rushville, Ohio, where B. R. Hanby is said to have written "Darling Nellie Gray," and photo of J. J. Malloy, author of "Love's Old Sweet Song"

Songs that Mother Used to Sing

If you tried to lift
this Hereford Bull
with your foot!

SANTO'S GEM, 1930 Cham-
pion Polled Hereford Bull
(After a photograph)

And yet the excess weight in ordinary boots makes you waste that much energy every day!

DURING a single day spent in ordinary boots, you lift at least 2,420 pounds of absolutely useless weight! *This weight is greater than that of Santo's Gem, 1930 Champion Polled Hereford Bull.*

You put this unnecessary drain on your energy if each boot is only two ounces heavier than it ought to be.

You can't help covering at least five and a half miles in a full working day even if you are merely doing winter chores. Five and a half miles mean 9,680 steps at the very least, and 9,680 steps, at 2 ounces on each foot, mean 2,420 unnecessary pounds.

But you *can* help wearing heavier boots than you have to!

There is *no* excess weight in a Goodrich boot. It is made of twenty-seven different rubber compounds and rubberized fabrics chosen because they make it tough without making it heavy. The B. F. Goodrich Footwear Corporation, Watertown, Mass.

Songs that Mother Used to Sing

Darling Nellie Gray

In Conclusion—By Dave Thompson

(Continued from Page 1)

FOR a season, we will lay aside the old song book filled with Songs That Mother Used to Sing, realizing as we do so that the loved old book has in it many favorites not mentioned in the series of stories which has been in AMERICAN AGRICULTURIST during 1930.

There are in it, too, several songs that father used to sing. Some of those fine old "barber shop harmony" pieces like the one most vocalized of all—Sweet Adeline.

It would have been of interest in this series of stories to have told how Harry Armstrong, who wrote the music, took it to his "Tin Pan Alley" pal, Richard Gerard, with the suggestion that it would be a hit if there were good words for it. Gerard, a New York youngster who had been badly bitten by the song-writing bug, wrote the words for the song, "You Are the Idol of My Heart, Sweet Rosalie." As another song was popular then with the name Rosalie prominent in the title, they changed the name of the maiden to Adeline. The publishing firm of which Paul Dresser was a member held the manuscript for about a year and finally returned it to the authors, glad to be rid of it.

Made Publishers a Fortune

The two authors took it to Witmark & Sons, and they brought it out with no great hopes for it. Quartettes started harmonizing it, however, and soon Armstrong sold his rights for \$1,000, and after holding on for about five years, Gerard sold his for \$3,000, making the song net him with royalties up to that time around \$4,000. It made the publishers during the life of the copyright, which is now expiring, a small fortune.

Gerard lives in a New York suburb—is in the New York post-office—and is pretty well over the song-writing fever of his early day. Although he missed garnering the fortune that Sweet Adeline made, he gave the name to one of his daughters, who I presume, like other daughters, is worth more than any amount of money.

That is about all that can be said in this last of the mother song series, about father's favorite—but there is plenty more to the story of the men who wrote it—and the words of the song. Would it interest you to have the whole story some time, say along next winter?

Getting back to mother's favorites, I had hoped to tell about "Love's Old Sweet Song." Now, there is a song!

"Once in the dear dead days beyond recall,
When on the world the mists began to fall,
Out of the dreams that rose in happy throng,
Low in our hearts love sang an old sweet song:
And in the dusk, where fell the firelight gleam,
Softly it wove itself into our dream."

There is a song! My mother sang it. My sister sang it. My children's mother sang it. So with all the mothers that you have known. And glory of glories—they have sung it when they have loved their own the most tenderly.

What a picture of home comfort in the chorus:

"Just a song at twilight, when the lights are low,
And the flickering shadows softly come and go;
Though the heart be weary, sad the day and long,
Still to us at twilight comes
Love's old song, love's old sweet song."

An Englishman wrote the words, G. Clifton Bingham, who was born the son of a Bristol bookseller in 1859, wrote this as one of his early poems. Sixteen hundred songs he wrote in all—this the most popular of them all.

J. J. Molloy, a composer of note, whose picture is among those on the cover page this week, wrote the music.

It was first published in 1880, the year before the big snow. There is a whole story about "Love's Old Sweet Song"—would you like to read the rest of it some time?

And then there is that old favorite beginning—

"There's a low green valley on the old Kentucky shore,
There I've whiled many happy hours away."

Written in 1856 by an Ohio schoolmaster, who was the son of a preacher—B. R. Hanby was his name—and according to the stories he worked long and seriously in composing the words and music of this song, and teaching them to his school during the opening exercises.

Another Old Favorite

It is a pretty good guess that from the opening lines of the first verse quoted you have not recognized the name of the song. But—"My Darling Nellie Gray"—that is something else again—you, and I, and all of us recognized that Song That Mother Used to Sing. Westerville, Ohio, and Rushville, Ohio, both lay claim to being the birthplace of the song—the preponderance of evidence being in favor of Rushville. It might be of interest to dig into that sometime with a view of getting at all the known facts, and getting the story just right. But that will have to be for some other time.

I had hoped to tell all about "When You and I Were Young, Maggie."

J. W. Bischoff, who was director of music for the School for the Blind at Delavan, Wisconsin, arranged the music for his blind musicians, and in this form it had its start there. This was some time before 1880, for at about that time Mr. Bischoff left for the East, where he became organist of the Congregational Church, Washington, D. C. Prof. Charles S. Sheldon says of him: "He was totally blind and one of the most lovable men that I ever met; he was greatly beloved by all with whom he came in contact and was considered by far the best organist and pianist in Washington, as well as one of the outstanding organists of the United States."

The words of "When You and I Were Young, Maggie" were written by George W. Johnson, who lived between 1802 and 1886. This is surely one of the great old songs that should have a whole story—

From no assignment have I had greater pleasure than this of writing the stories of the old songs. If they have given you enjoyment—touched the chords of memory to sweet, well loved harmony—I shall be happy indeed. Whether there are plans for a renewal of this series next winter I do not know—I presume, as with all other things featured in AMERICAN AGRICULTURIST, "It All Depends on You!"

"Up Anchor" is a story of D. Harold Hickey's own life as a sailor to all sorts of queer places, mostly on freight-boats. Mr. Hickey was brought up in seaport towns of Nova Scotia and this story is intended to show that the sea still provides romance and adventure. The book would furnish many a thrill for growing boys and girls, and incidentally give them a bit of geography as well. Abingdon Press, New York City. \$1.50.

"Son, did you bring a rope from the barn to pull the hired man out of the well?" "Noot yit, pop. I ain't had no errand to the barn."—LIFE.

"Spuds" Are a Puzzle This Year

Prices Seem Lower Than the Figures Warrant - Will They Go Higher?

HERE have been few instances during the past quarter century, when potato growers have been faced with so puzzling a situation as that which confronts them this fall in deciding what should be a fair price for their potatoes and when to market them. Judging from the size of the crop, the potato marketing situation this fall *should* be relatively more favorable and prices *should* be as good or better than they were last October. But such prices as 80 cents a bushel in Western New York this fall, compared with \$1.15 last October; 65 cents per bushel in Maine, compared with \$1.05 last year; and 78 cents per bushel in Idaho, compared with \$1.18 last October, leave little room for doubt that we are face to face with something unusual, and that something is "out of kilter" somewhere. No one can pierce the veil of the future and foretell what will happen during the coming months. About all that any grower can do, is to possess himself of all the available facts in the case so that he may have a sound basis for forming his own judgment, whatever the future may bring.

Size of crop has always been the dominating factor which has determined the price growers received for their potatoes. According to the October 1st crop estimate of the United States Department of Agriculture, the 1930 potato crop is forecast at 352 million bushels, compared with almost 360 million bushels during 1929, a decrease of about 2 per cent. During the past five years (1925-1929) the United States potato crop has averaged about 381 million bushels annually, so that this year's crop is 29 million bushels below the 5-year normal. The crop in the 28 leading late potato states, which is all that really counts from now until next May, is about 15 million bushels less than last season.

The 1930 potato production map shows some striking contrasts compared with 1929. Maine

and Pennsylvania have each about 6 million bushels less than last year. About 1/3 of this shortage in the eastern states is made up by the 4 million bushel increase in the New York State crop, but the eastern territory has still 7 million bushels less than last year (table 1). The North Central States suffered so severely from the drought that they will have over 11 millions of bushels less than the short crop of last year. The picture in the far West is just the reverse. All but two of the Far Western States report substantial increases over last year. Idaho, in particular, has a bumper crop, and Colorado and Ore-

gon have above normal crops. The Far Western States will have about 10½ million bushels more than last year and will just about offset the decrease in the North Central States.

The 1930 crop in the 16 "deficit" states was short about 3 million bushels last year, but that shortage has been doubled this year. In general, the Eastern States have above normal, the central states much below normal, and the Western States about average crops. Potatoes from Maine and New York will probably dominate the eastern market and be a factor on many of the middle western markets this fall. The huge shortage in the Central States must of necessity be supplied by Idaho and Colorado, with some help from Maine.

TABLE 1					
Estimated Production of Late White Potatoes in 19 "Surplus" States, October 1, 1930, Compared with Production During 1929 and the Average for the Past 5 Years.					
(Figures are in thousands of bushels)					
State	Average production 1925-1929	Estimated production 1929	Estimated production Oct. 1, 1930	Gain or loss 1930 crop compared with 1929 crop

Washington	10,192	8,680	9,300	gain	620
Total 19 "Surplus" States	264,659	245,122	237,162	loss	7,960
Total United States..	381,162	359,796	352,206	loss	7,590

Per Capita Supply Low

During the past 5 years (1925-1929) the average supply of potatoes in the United States has been 3.21 bushels (about 193 pounds) per capita. If this figure is assumed to represent the normal requirements of the population of the United States, it is at once obvious that the per capita supply available this year, 2.85 bushels (about 171 pounds) per capita, is at least 11 per cent below normal. Based on the October 1st estimate, it is clear that the 1930 crop of potatoes is one of the smallest crops in 16 years in proportion to population. The crops of 1916 and 1925 were approximately the same as that forecast for 1930, but prices were very much higher.

Other Competing Crops

Apparently the sweet potato crop has not been damaged as badly as was first reported. Present prospects call for a crop of about 67.7 millions of bushels. This is 17 millions less than was

(Continued on Page 6)

Some Dairymen Make Money

If Your Neighbor Prospers, Why Not Adopt His Methods?

DAIRYING may be a healthy occupation, but we have yet to find a man who will admit that he milks cows for his health only. Call it "filthy lucre", or quote "the love of money is the root of all evil" if you will, yet most of us are in business for the money we make from it. Granting that this is true many dairymen will swear that there is no money in dairying at present milk prices, while at the same time the fellow who depends on cash crops often feels that the dairyman, who is not troubled so much by insects, plant diseases, market gluts, and ruinous prices, has all the better of the deal.

Some dairymen have made money in the past and are still making money. Why would it not be profitable to see what practices these men follow and adopt them? What are some of these practices? Well, after visiting the herds of many successful dairymen in all sections of the East, it seems to the writer that the following are important.

In the first place, the dairymen who are making money usually have herds with better than average production. It only takes a few seconds to say it but it often takes years to do it. Weeding out the poor producers by membership in a Dairy Improvement Association helps dispose of the boarders, but generally a high-producing herd is the result of an investment in a first-class herd sire. That takes time. Of course, such cows can be bought, but owners who have the records to back up their claims have a peculiar habit of asking a good stiff price for their best cows. Even at that it is likely to be more profitable to

buy such animals than to feed poor ones.

Where can good herd sires be found? The better your herd gets, the more difficult it is to find a sire that will increase the average production of the herd. Most of us can find what we want near at home if we are willing to pay the price. If not, talk with the County Agent, a representative of your breed association or a successful dairyman. Do all good dairymen have purebred herds? Not at all. In fact, the man just starting out can well consider the advisability of investing

It takes time to breed a high-producing herd. Wilson Plankenhorn of Dutchess County, New York, the young dairyman in the center, is starting early. As a 4-H Club member he has been breeding and showing calves and heifers for several years.

more in a purebred herd sire and less in purebred cows. A grade cow that produces heavily is just as profitable as a purebred with the same production. However, most successful dairymen sooner or later gradually work into purebreds. For one thing, there is more of a call for the surplus stock at better prices than can be secured for grades.

Almost never, unless we are entirely wrong, does a man who fails to keep any kind of records, succeed in building up a herd of heavy producers by raising calves from the cows he *thinks* are his best ones. He may be right often enough to keep his herd average from slipping, but that won't help much if the average is too low. Anyway, there is too much uncertainty about the ability of a grade or scrub to transmit her good qualities to her offspring. Purebreds breed true; that's what makes them purebreds, yet there is plenty of uncertainty even when breeding purebreds.

Then again the chances of building up the herd you want by buying the cows that look good to you, aren't so rosy either. Do you think you can pick the best cow from a herd? If you do, find a man who keeps records, pick out his best cows and his poorest cows—or at least, what you think are best and poorest—and then compare your guess with the actual figures. If you're not surprised, then we'll be surprised.

The dairyman who makes money is almost always a better feeder than the fellow who just breaks even. First.

Courts Uphold TB Campaign

SOME time ago an Iowa court granted an injunction to a dairyman to prevent enforcement of the Iowa law for the eradication of bovine tuberculosis. Those opposed to the tuberculin test gave much publicity to this case. On September 22, the Iowa Supreme Court reversed the decision, maintaining that the measure was not an unreasonable use of the State's police power or a denial of due process of law to owners of stock.

On August 1, Judge Royal Hawley of the State of Michigan, dismissed legal action brought by E. S. Townsend, a dairyman, questioning the validity of the Michigan law authorizing the eradication of bovine tuberculosis by the tuberculin test.

More than one-third of all the counties in the country are now classed as modified accredited areas, meaning that all the cattle have been tested at least once and the reactors removed. Three entire states, namely, Maine, North Carolina, and Michigan have been designated as modified accredited areas. The fight against this cattle disease has been costly and it is not yet finished. The work is going ahead steadily but surely, and we believe that those dairymen who have already taken the loss incident to testing their herds will be glad to know that the courts of these two states have sustained the legality of the work.

Vote "Yes" on the Building Proposition

EVERY voter in New York State will be asked on election day to make a decision on the proposition to bond the State for a sum not to exceed \$50,000,000 to provide adequate housing for the insane, mentally defective, epileptic, and the inmates of the State prisons and reformatories. We hope every citizen will vote "yes" on this proposition.

The proposal contains no politics; the bill submitting it to the people at this coming election was passed by the legislature last year and signed by the Governor. It has the full approval of all political parties as well as of all others who know the terribly overcrowded conditions which prevail in most of the institutions of the State.

Suppose a member of your family were insane. How would you like to have him forced to live in a building overcrowded 35.4 per cent? This is the overcrowding which actually exists in the State's insane asylums. In other words, 47,000 insane are forced to live in buildings whose normal capacity is for 35,000 patients. Think what this would mean in case of fire; think what it means in the whole environment of the patient and in the lack of possibilities to get well.

The State schools for the mental defectives are overcrowded 26 per cent and whatever you may think about the criminals, we are still civil-

ized enough not to want them to be quartered in damp, unsanitary, and unhealthful buildings, such as many are forced to live in at the present time.

In general, AMERICAN AGRICULTURIST is emphatically against propositions which unnecessarily raise taxes. So far as possible, also, we believe in a "pay as you go" policy on the part of the government. But occasionally there come along situations that cannot be ignored and the present housing conditions of the State's unfortunates is one of these situations. *After all, we are our brother's keeper.* It is impossible to raise the necessary funds for new buildings or enlarging the institutions out of current taxes. The buildings will last to serve posterity. Therefore, it is just to ask posterity to pay part of the bill. Again we repeat, we hope you will give careful consideration to this proposition and then vote "yes."

Marketing Hail-Damaged Apples

AFTER considerable persuasion we are occasionally able to get Mr. Morgenthau, our publisher, to write articles directly from his experiences on his big farm at Hopewell Junction. Many letters from our readers indicate that these articles are very much liked because they are taken directly from experience.

On the opposite page, this time, Mr. Morgenthau has written describing in some detail his experience in harvesting and marketing a large apple crop after it was damaged by hail. We found the article extremely interesting because it illustrates so well the gamble that every farmer has to face, and also because the writer has made a suggestion for the better marketing of apples, which, it seems to us, might well be put into practice.

Students of Agriculture Please Note

FOR the next few months we are offering a prize of \$3.00 each month for the best news item sent us by a student in a high school department of agriculture or a state school of agriculture. This prize will be in addition to regular space rates for any news stories which are printed in AMERICAN AGRICULTURIST.

In judging these items for the prize, the question of timeliness, general interest to readers, brevity, and the skill with which the item is prepared, will be considered. In sending entries for these prizes, include a note that the item is entered for the prize and have it signed by your teacher of agriculture.

For More Farmers' Markets

THE other evening, having an extra hour or so at our disposal, we went down into the farmers' curb market in the city of Albany to look over the products there on sale and to talk with the farmers who had brought them in. The Albany market is one of the largest curb markets that we have seen. Thousands of dollars' worth of farm products are sold there every day from farmers' trucks and wagons coming from an agricultural territory many miles in extent.

If one knew all of the facts, there are probably many criticisms of this curb market. Many farmers complain to us about the low prices which prevail this year, but these are the fault of the times rather than of the market itself. The fact remains that these curb markets do furnish a market outlet for hundreds of farms in the vicinity where they are located, and it would seem that one of the biggest jobs to be done for agriculture is to establish the right kind of a farmers' terminal or curb market in every city.

The New York State Department of Agriculture and Markets is doing what it can to assemble the right information on which city markets can be established. We believe that such markets should be financed and controlled, at least in part, by the State itself, thereby taking them out of local politics and safeguarding the farmers' interests in them.

On the need for such city markets Professor

F. P. Weaver of the New York State College of Agriculture, says that there should be one in every city with from ten to twenty thousand population and upwards. He estimates that the consumption of home-grown fruits and vegetables averages about \$15.00 per person a year, and in cities of ten to twenty thousand this would amount to a market of from \$150,000 to \$300,000 worth of home-grown produce. If housewives would buy one-half of their home-grown fruits and vegetables on the market, as well as a part of their butter and eggs, a volume of business from \$75,000 to \$150,000 annually might be expected.

What a difference such a market would make in every farm community. If you live near a city which has no curb market, why not try to establish one? Arrange for a meeting of interested farmers, talk the matter over, confer with the city authorities as to the location, and write to the New York State Department of Agriculture and Markets, or the Department of Agriculture in the state in which you live for information as to how to proceed.

More Flowers and Better Lawns

IN visiting with an old lady friend of ours this summer, she made the remark that when she was a girl no one on the farms in her neighborhood ever thought of such a thing as mowing the lawn, "and now", she said, "every lawn in our whole community is mowed regularly."

One does not have to go back more than twenty-five years to find that a well-kept lawn in any neighborhood was the exception. In traveling hundreds of miles through farm communities in New York and other states this summer, we have been much impressed to find practically all of the lawns well mowed and a lot of flowers in nearly every yard or garden. Many of these flowers are the fine, old varieties that our grandmothers knew and loved.

All of us can remember, also, that just about the most cheerless, homely places in every village and city were the manufacturing plants. Today, nearly all of these have beautiful lawns and well-kept flower beds.

All of which shows that we Americans are beginning to learn something about the art of living, and to realize that "man cannot live by bread alone."

Eastman's Chestnut

I OFTEN get provoked at conductors and brakemen, and other officials who deal with the public because most of them seem to answer any polite question very grudgingly. Probably the reason is that they get so tired of answering fool questions that they are barely polite to any seeker after information.

The story is told about a conductor of a railway train who was greatly annoyed by a woman passenger who pestered him with all sorts of questions, wise and otherwise. At first, he answered her politely, but he soon got tired of being stopped with fool questions every time he went through her car.

The train stopped to take on water, and the conductor got off to see that everything was all right. When they were ready to go, the conductor waved his hand to the engineer as a signal to proceed. The woman saw him and as soon as he came along, she said: "Oh, conductor, why did you wave your hand at the engineer instead of ringing a bell?"

By that time, however, the conductor's patience was exhausted and he said, "Oh, that meant get to h— out of here!", and he walked away. One of the passengers called him aside and said: "Say, conductor, you should not have said that to that woman. Her husband is one of the directors of this road."

"Is that so?" said the conductor and rushed back to make humble apologies to the lady.

"Well, conductor", said the man after he returned, "what did the woman say when you apologized to her?"

"She didn't say nothing", answered the conductor; "she just waved her hand!"

News from the Publisher's Farm

AT the time of writing this article about two-thirds of my apple crop has been picked. This year's crop has been most difficult to pick and market.

When prices are high, apple buyers do not seem to be nearly as particular as to the grading and picking of the fruit as when prices are low. We started picking our McIntosh apples on September 8th. At least 20 per cent of the apples were on the ground—the extra heavy drop being contributed by the apples which had been hit by hail.

We had been offered \$1.75 a bushel for Number 1 McIntosh delivered at Yonkers, but no price had been fixed for the hail injured fruit up to that time.

We first instructed our pickers to pick only perfect fruit, but after a couple of hours we found that this was most wasteful and that if we continued, the cost would be prohibitive. We then decided to pick everything, put the fruit in boxes, and haul them to a shed. We quickly got together six or seven women, who live in our immediate vicinity, and organized them to grade our fruit. We found that we were getting about one bushel of Number 1 apples to about nine bushels of Number 2. We had little difficulty in making the Number 1 grade as this grade consisted of only perfect apples, but we had quite a lot of trouble in putting up the Number 2 grade as it was not always easy to decide just how badly an apple had to be injured before it was thrown aside for cider. After Mr. Steinmetz, our buyer, saw the Number 2 grade that we were putting up he decided to pay us \$1.00 a bushel for this grade delivered. We felt that this was a fair price, as many buyers would not care to bother with hail injured apples at all. It is a distinct asset to do business with the same man for a number of years and especially with one who has as high standing of business ethics as Mr. Steinmetz.

It took us from the 8th of September to the 25th to harvest 5,373 bushels of McIntosh—of which 528 were number 1 and 4,845 were Number 2. It is safe to say that we threw out at least another 1,000 bushels for cider. For the McIntosh sold I received \$5,769. If we had not been hit by hail, I believe that we would have had around 6,000 bushels of Number 1 McIntosh for which we would have received \$10,500. In other words, the hail storm damaged my McIntosh crop to the extent of more than \$5,000, and by the time we get through picking the rest of our crop I think we will find that the hail storm cost us another \$5,000. I doubt very much whether we will break even on the orchard this year. If it had not been for the hail storm, we certainly would have made a very handsome profit on our orchard, even during these difficult times, because we had a crop which was free from all insect injury and which was exceptional as to color and size.

While I was in the midst of marketing my own crop, one of my neighbors who had also been hit by the same hail storm came in to see me. This neighbor had about 600 barrels of apples to sell and could not find a buyer. This case leads me to say that I think it is most unfortunate that the apple growers in the State have no selling organization. Thousands of apple growers in the State are individually trying to market their crop as best they know how. It seems to me that if this deplorable marketing situation continues in the fruit industry in the East, we cannot continue in competition with other fruit growing sections which are well organized to sell their fruit.

The College of Agriculture in Ithaca has organized a splendid Spray Information Service which is of great use to the growers. These men are finished

with their jobs about the middle of August. Why couldn't these Spray Service men be brought into Ithaca this winter and given an intensive course in marketing so that next year they could form a nucleus of a Sales Information Service. With the present situation of complete lack of cooperation among the apple growers in this State when it comes to the selling of their crops, I suppose it is foolish to point out what some of the other growers are doing in the United States. However, I do wish to take this opportunity to show what some of the other food producers are doing to encourage the housewife to consume more of their products. The following figures give you an idea of what some

of the cooperative organizations spent during 1929 for advertising their particular commodities:

California Fruit Growers Exchange (Sunkist Oranges and California Walnut Growers Association (Diamond Brand Walnuts)	\$765,295
Lima Bean Growers Association	\$102,400
California Asparagus Growers	\$72,138
American Cranberry Exchange	\$177,775
Skookum Packers Association	\$150,000
If the California Fruit Growers Exchange can spend \$765,295 to advertise	\$3,675

oranges and lemons grown only in California, what can the apple growers in the United States afford to spend to advertise "that an apple a day, keeps the doctor away". Perhaps Western New York does grow the best Greenings in the United States! Perhaps the Hudson River Valley does grow the best Northern Spys in the United States—but who knows it! This is an age of advertising and intensive selling and if we apple growers wish to keep our place in the market, we have got to organize, we have got to advertise or else each year we will find that the consumers are eating less apples and substituting some other kind of fruit.

Henry Morgenthau Jr.

What Is a Master Farmer?

By E. R. EASTMAN

EDITOR'S NOTE:—The following address was given by Mr. Eastman over the General Electric Company's broadcasting station, WGY, at Schenectady recently. The naming of a Master Farmer both in New York State and throughout America by the Standard Farm Papers has become such an important and valuable part of the agricultural work that we feel every farmer should know about the Master Farmer movement.

THE purpose of the Master Farmer movement is to bring honor where honor is due. To the social and spiritual progress of the nation and the world the farmer has contributed his full share. His wise counsel, backed by the rugged, sterling qualities of his character, have been a mighty force in holding the nation steady in times of stress and in the onward march of civilization. Unfortunately, however, the place that farming and farmers fill in our economic and social structure is little recognized or appreciated. We take agriculture too much for granted, and a farmer, no matter how successful he is, or how great his contribution to society has been, is still, too often, just a farmer. It takes as much skill and wisdom to succeed at farming today as it does in any other business or profession. All other trades and professions have their master

craftsmen. Why not the greatest trade of all?

It is eminently fitting and high time therefore that we give recognition to those men who are leaders in modern agriculture, so the Master Farmer movement has for its purpose to honor farmers and farming. It was started in 1925 by the Prairie Farmer, a leading Standard Farm Paper of the Central West. Since then it has centered public attention on the splendid achievements of agriculture in general and on nearly 600 farmers in particular.

In New York State the Master Farmer project was started three years ago by the American Agriculturist. Since that time, 34 farmers have received the title and honor of "Master Farmer" in New York, and eight have been named in New Jersey by the American Agriculturist cooperating with the Pennsylvania Farmer.

How is a Master Farmer found? First, he must be nominated. Any friend or neighbor may send in the name of some man who, it is thought, meets the high standards of a Master Farmer. Of course, there may be others better fitted who are not nominated. They may be named in other years. Each nominee is sent a detailed questionnaire or work sheet which he fills out and returns. This work sheet covers the life history of the nominee and his family, and gives in great de-

tail information about his farm business. When the work sheets are received representatives of the Master Farmer Board of Judges select those that give the most promise, and each of these receives, a personal visit from one of the editors of American Agriculturist, representing the Master Farmer Board of Judges. This representative studies at first hand the farm, the business, the home and the life of the man nominated.

After the personal visits are completed, the Master Farmer judges hold a meeting where all the information and data which have been collected on each of the nominees are carefully reviewed and considered, and from this information the judges make their choices of men to receive the final honor. This year, for example, about one hundred men were nominated for Master Farmers in New York State. Of this number, approximately forty were chosen for a personal visit, and thousands of miles were traveled by the American Agriculturist's staff to make these visits. From this forty, ten or twelve will be chosen by the judges, and the honor will be finally conferred on these with suitable ceremony at a banquet to be held this year at Farmers' Week at the New York State College of Agriculture. During the past two years the Governor of the State, who is a member of the Board of Judges, personally conferred the degree of Master Farmer on each nominee. The other judges are:

Berne A. Pyrke, Commissioner of the New York State Department of Agriculture and Markets;

Frank M. Smith, Chairman, Committee of Agriculture in the Assembly;

Dr. A. R. Mann, Dean, New York State College of Agriculture;

Dr. C. E. Ladd, Director of Extension, New York State College of Agriculture;

L. G. Kirkland, Chairman, Agricultural Committee, New York State Senate;

Fred J. Freestone, Master, New York State Grange;

Henry Morgenthau, Jr., Publisher, American Agriculturist;

E. R. Eastman, Editor, American Agriculturist.

But, what is a Master Farmer? What are the qualifications for which the judges search? In the first place, the nominee must be an economic success as a farmer. There must be proof that he has accumulated at least some property through the business of farming, and preferably, that he has done so without much start.

But a Master Farmer is much more than a good farmer from a dollars and cents standpoint. He must be a first class citizen. There must be evidence that he has had time with all of his business enterprises, also to have been "his brother's keeper". What interest has he taken in schools, in his church, in the different organizations and various community enterprises? What kind of a neighbor is he? Is he helpful, accommodating, unassuming and modest? Particularly have I been impressed with the outstanding modesty

Feed Now For Winter Egg Profits

*Start the Winter Season
With Your Birds Laying*

THIS is an important time for your laying flock. Late and backward pullets that do not start laying before cold weather cannot be expected to make a profit for you. Do your part now. Start feeding Ful-O-Pep Egg Mash at once. It contains a large amount of oatmeal that gives pullets stamina and vigor to quickly respond with a big yield of low-cost eggs. And better still, it keeps the birds in condition for all-winter laying—the season when egg prices are at their height.

Ful-O-Pep Egg Mash, besides oatmeal and other properly blended grain products, contains cod liver meal that builds hens' resistance to withstand common, winter, poultry troubles; contains molasses (in dry form) to aid digestion and act as a mild laxative; contains just the materials hens need to make eggs. It is most economical because of the results it accomplishes. Hens like it.

Ask your local Quaker dealer to tell you more about Ful-O-Pep feeds.

A.A.'s Western New York Farm and Home Talk

The Same Old Question

By M. C. BURRITT

THE fall has been exceptionally fine. Day after day of warm sunshiny weather with very little wind and rain has made the harvest period a delightful one. The dry weather and sunshine have put marvelous color on fruit and

M. C. Burritt

foliage. It has been a pleasure just to be around in such circumstances. Only on October 18, did it become cold enough to require starting the furnace fire for the first time this fall. Now the temperature has fallen to 36° and 38°. But still there is no adequate rainfall.

It is too dry to plow and cisterns and wells remain empty.

The harvest of late cabbage has begun and we must decide whether to sell now or store—the same old question which always confronts us at about this time of the year. It is even more difficult to decide than usual because of the business depression which is apparently the controlling factor rather than supply and demand. The supply of cabbage is not large, being only about five per cent above last year's tonnage for the whole country, according to the last report. In New York the yield of Domestic cabbage is below that of last year by more than twelve per cent. On the other hand, with better rainfall Wisconsin's tonnage of Domestic is 25 per cent greater than last year. As to Danish, New York's production will probably be slightly (about 1 per cent) less than last year and Wisconsin's about 6 per cent greater. So that as far as supply is concerned, prices ought to be about the same as last year.

Cabbage Storage Heavy

This may not be realized on account of the dry warm weather. With the low prices now existing, the probabilities are that storage will be heavy. At my local shipping point all the storage facilities have already been engaged. Under normal conditions the outlook for good prices out of storage is only fair. Under present business conditions storage would appear to be even more of a gamble.

Since the opening high prices in August, Domestic cabbage has been steadily below \$10 per ton and as low as \$6., and more has been loaded out at \$6. and \$7. than at higher prices. Yields in Western New York have been low because of small heads and failure of many plants to head all due to dry weather. Danish started out at \$10. but the market is weak. Yields are better in Central New York due to more rain, and the shipping movement has been about normal. Still lower prices may force storage. Perhaps the colder weather which has now arrived may help prices.

* * *

Potato harvest is well along and yields are small with few exceptions. The tubers also average small due to dry weather. Here again, prices are not in proportion to supply, although the potato crop elsewhere is much better than in Western New York.

Apples About Harvested

Apple harvest is still in full swing although a few growers have practically finished picking. Yields appear to be rather better than anticipated and quality is generally very good. Apples are good size and quite clean. The unsatisfactory part is the price. Offers for packed fruit are ridiculously low. A car of unclassified Twenty-Quince was sold last week for 65 cents per bushel. Others have sold up to 90 cents per bushel. Kings are being sold for export at \$3.75 for 2½-inch up. U. S.

number ones, 2½-inch Ben Davis bring \$3. per barrel for export. Generally, the export demand is better than the domestic. Most canners have stopped buying for the present. Sales of apple sauce are very light. It is reported that sales of dried apples have ceased entirely and that buying is only for storage. Prices paid growers for drying stock are only 25 and 30 cents per cwt. as compared with 75 to 90 cents last season.

Of course, these conditions are not peculiar to farm products alone. Prices are falling generally in the face of reduced demand. Farmers who are able to pay their debts and who have good homes and plenty to eat, are in reality fortunately situated for the winter under present conditions.—Hilton, New York, October 19, 1930.

"Spuds" Are a Puzzle This Year

(Continued from Page 3)

produced in 1929, and almost 13 millions less than the average crop of the past 5 years.

The 1930 rice crop is about 1.6 millions bushels less than last year, but is offset by about the same increase in the 1930 crop of dry beans. Crops of rye, barley, and oats are somewhat larger than last year and the wheat crop is much larger. The corn crop, however, is only about four-fifths of a crop.

Canadian Crop Smaller

The 1930 Canadian potato crop was estimated on September 1st to be 66.6 bushels. This is 3.1 millions less than last year. Last year, 5,16 carloads or over 3 million bushels of potatoes came into the United States from Canada. With the increased tariff of 45 cents per bushel and current low prices, it does not seem likely that Canadian potatoes will offer serious competition this fall.

Depression and Unemployment

In the opinion of the writer, the current business depression with the accompanying unemployment, and the world-wide decline in all commodities, are primarily responsible for the relatively low prices offered for potatoes this fall. Carload shipments of potatoes up to October 5 this year, from the 19 "surplus" states were over 6,000 carloads or 14 per cent less than had been shipped to the same date last year. This is a reflection, to some degree both of the slackness of storage demand and of the apathy of the wholesale trade.

It is worth while noting, that whereas farm prices in general, were about 15 per cent above pre-war levels, prices received by growers for potatoes are practically down to the pre-war level. In a year of short crop, this may indicate that the price of potatoes has been unduly depressed and that a substantial recovery might be anticipated later in the year. This is substantially the point of view taken in trade circles.

Early Crop Prospects

No official data are available concerning the probable acreage which will be planted to early potatoes in the South this fall and winter. A news item from Florida, however, indicates the possibility of a substantial decrease in acreage in the Hastings area. If this situation is common in the South, the early crop of potatoes will not present any serious difficulties to the marketing of the northern late crop.

Statistically, the competitive situation which the late potato crop must face this fall and winter is more favorable than it was in 1929. Any improvement in potato prices then, seems to depend to a large extent on the possibilities for improvement in the business situation.

Make MORE PROFIT from your COWS

A ration with Dried Beet Pulp in it is as beneficial as a day on Spring Pastures. **It increases milk production and adds to your daily profits.** Dried Beet Pulp is the great vegetable milk producing feed—all the sugar beet after extraction of the sugar—then dried and packed in sacks for convenient handling—you get the nourishing, health building part that tones up the cow's system.

Feed Dried Beet Pulp

Cut down on some of the heavy heating grains in your ration and substitute Dried Beet Pulp. It is **cooling, palatable, laxative.** It prevents the bad effects of heavy feeding as it lightens the ration, aids digestion—no feed is wasted.

Widely Used

Most dairymen know the matchless value of Beet Pulp. It is widely used—now it is available at low prices. But remember the demand by dairymen who know its value is large so see your dealer and order early to avoid disappointment or delay.

How Some Dairymen Make Money

(Continued from Page 3)

he is more than likely to produce better roughage on the farm. Plenty of corn silage, alfalfa or clover hay, and good pasture cut food costs. Then he usually feeds a better ration and feeds it according to production. By a better ration we mean a ration mixed to balance the kind of roughage used and a ration, either home-mixed or ready-mixed that has proven its ability to produce milk. Money can often be saved in buying feed. Some feed stores display a sign which reads: "By special agreement, our bank does not sell feed and we do not give credit." It is a fact that credit costs less at a bank than it does at a store whether you are buying feed, hardware or fertilizer.

A third point we have noticed is that the man who makes money saves labor by good equipment. At first thought the cost may seem prohibitive yet as one man says, "We cannot afford not to have it; labor these days costs too heavily." You can hire a thousand dollars to work for you a year for \$60.00. You cannot hire much labor for that. Of course, some seem to prosper by working themselves and their families for long hours. Later they wonder why the boys do not like farming! Why not make our heads save our heels? Litter carriers, feed carriers, and water buckets, and power, either gasoline or electric, to do everything it can be made to do, will cut your costs. Gasoline or electricity will pump your water for a few cents an hour. Can you afford to do it by hand at that price?

We are not quite so positive about the next statement, but we have a strong belief that it is difficult, if not impossible, to make much money from a herd that is not healthy. At least most of the paying herds we see are accredited or on their way toward that goal and an increasing number have been blood tested and are free from contagious abortion. One man remarks that before his cows were TB tested, his herd was always having breeding troubles and udder troubles. Since TB has been cleaned out these troubles have almost disappeared.

It seems too, that the men who have the smallest disease problem are the men who buy the fewest cows. At least the danger of introducing disease is less where all cows are raised on the farm. One dairyman goes so far as to ask all visitors not to go into the feed alley ahead of the cows. One outbreak of contagious abortion has apparently been traced to infection brought in on the shoes of a visitor!

When the four practices we have mentioned are examined closely, it will be seen that they all, in a way, have to do with lowered costs, or putting it another way, with producing a hundred pounds of milk more cheaply than your neighbor does. You probably both get the same price for your milk, yet you prosper and he is always one jump ahead of the sheriff, or is it the other way around and he is the one who prospers?

Once in a while someone cashes in by finding or developing a special market for his milk. One dairyman sells his milk to a dairy company for use in making "starter". He gets a special price for it. There are not enough opportunities like that to go around. If you can find one, that is fine, but everyone has the chance to try out the other suggestions. What other way is there? Get more for milk? Sure, get all you can, but just as soon as you do, more milk will be produced and prices drop. Keep your costs below average and your income will be above average. It is not as simple as it sounds, but it can be done because it is being done.

Milking Machines Save Time

THE following conclusions relative to the use of milking machines are taken from Iowa bulletin 248 which was published following some extensive

experiments.

"The method of milking does not influence the milk yield. Such variations as are sometimes attributed to a change of method are due to other causes.

"Mechanical milking equipment needs very careful operation, otherwise udder troubles are likely to increase.

"Mechanical milkers are commonly allowed to remain on the cows too long. Observations indicated that from four to six minutes are as long as they should operate. Stripping after the milker is removed should always be practiced.

"Milk with a low bacteria count can be produced by either method of milking if sanitary precautions are taken in the care of all equipment, whereas, only temporary neglect with the milking machine will cause bacterial counts to run very high.

"Sediment tends to be less in the case of machine-drawn milk, although samples taken when the teat-cups have dropped off show a large amount of sediment.

"The use of a milking machine saves about one-half the labor required for milking a herd of 20 or 25 cows. Greater saving in labor occurs in larger and higher producing herds.

"In a herd of 20 or 25 cows the use of a milking machine saves about one-quarter of the cost of milking. Economy from the use of a milking machine is largely proportional to the size of the herd."

Reviewing the Latest Eastern Markets

Milk Prices

Dairymen's League prices are based on milk testing 3.5%. Sheffield on the basis of 3%.

	Class	Dairymen's League	Sheffield Producers
1	Fluid Milk	3.37	3.17
2	Fluid Cream		2.00
2A	Fluid Cream	2.16	
2B	Cond. Milk		
3	Soft Cheese	2.41	
3	Evap. Cond. Milk Powder		
4	Hard Cheese	2.00	1.80

The Class 1 League price for October 1929 was \$3.42 for 3.5% milk and Sheffield's \$3.22 for 3%. The above prices in each class are not the final prices the farmer receives. The final price received from the dealer is the result of weighed average.

Fancy Butter Firm: Lower Grades Weak

CREAMERY SALTED	Oct. 24, 1930	Oct. 17, 1930	Oct. 25, 1929
Higher than extra	40 1/2-41	40 1/2-41	46 -46 1/2
Extra (92 sc.)	40 -	40 -	45 1/2
84-91 score	30 1/2-38 1/2	31 -39 1/2	38 1/2-44 1/2
Lower Grades	29 1/2-30	29 1/2-30 1/2	37 1/2-38

With the exception of a quiet spell during the middle of the week ending October 25, fancy butter, including 92 score and higher, has held steady and firm. A weakness in Chicago caused a slight flutter on the 22nd and 23rd, but as the market came to a close for the week, fancy butter again assumed its former position. When we get below 92 score butter the story is entirely different. The demand is insufficient to absorb the very free supplies and accordingly there is strong pressure to sell. The heavy normal supplies of low grade butter have been aggravated by shipments from other cities where satisfactory outlets were impossible. The situation in low grades is very hard to define. When a buyer shows interest he is given every attention and the transaction becomes one of individual negotiation. Accordingly, it is quite hard to define the line of values on lower grades. There are differences in some cases of a full cent on the same grade of butter.

Consumption of butter continues satisfactory. The turn to colder weather has had a beneficial effect. During the week

from October 10 to 17, the out of storage movement in the four principal cities totaled 2,143,783 pounds which was approximately 300,000 pounds more than moved out during the same period last year. These four cities held on October 17, approximately 6,000,000 pounds less than they held the same time last year.

No Change in Cheese

STATE FLATS	Oct. 24, 1930	Oct. 17, 1930	Oct. 25, 1929
Fresh Fancy	20 -21 1/2	20 -21 1/2	
Fresh Average			
Held Fancy	21 -26	24 -26	27 1/2-29 1/2
Held Average			

There has been no change in the cheese market since our last report. Business is quiet, most of the buying being confined to small jobbing sales for current use. In spite of the slow trade the feeling on the whole is steady. Only a comparatively few fresh State flats are arriving in New York City, so that there is no burdensome supply to aggravate the situation.

On October 16, the ten cities making daily reports had about 2,300,000 pounds less cheese on hand than they had a year ago. From October 9 to October 16, the out of storage movement in the ten cities was quite unsatisfactory being just about one half what it was during the same period last year.

Fancy Nearby Eggs Hold Steady

NEARBY WHITE	Oct. 24, 1930	Oct. 17, 1930	Oct. 25, 1929
Hennery			
Fancy Jersey, incl. premium			
Selected Extras	52-55	52-55	66-71
Average Extras	45-50	45-50	60-65
Extra Firsts	30-40	30-38	52-59
Firsts	27-29	27-29	46-50
Undergrades	25-26	25-26	42-45
Pullets	27-31	26-27	38-44
Pewees	22-26	22-25	33-37
NEARBY BROWNS			
Hennery		38-50	54-60
Gathered		4-37	41-53

Fancy nearby whites have held steady since our last report, while some of the other grades have shown an actual advance. Those lines just beneath the top grades are selling a little better. Pullets and pewees also have improved. During the week, Pacific Coast whites were advanced in price but the market refused to meet the advance and prices on the Western product broke. As the week comes to a close Pacific eggs have recovered the lost ground, closing at substantially the same prices they held before they were advanced to the breaking point. Nearbys have been held steady to avoid any such disturbing breaks. As a consequence there is a very strong undertone for the nearby market with some talk of a fractional advance in prospect. Supplies have been quite limited and with the weather turning sharply colder there is some likelihood of a slight advance. However, there is very little to expect in the way of permanent improvement due to the statistical condition of the market plus the serious unemployment situation existing in our large Metropolitan centres.

Live Poultry Market in Bad Shape

	Oct. 24, 1930	Oct. 17, 1930	Oct. 25, 1929
FOWLS			
Colored	12-24	18-26	21-27
Leghorn	10-17	12-15	18-20
CHICKENS			
Colored	15-23	15-25	25-30
Leghorn	16-18	17-19	25-27
BROILERS			
Colored	22-30	25-30	29-34
Leghorn	21-23		26-30
OLD ROOSTERS	-16	24-26	-20
CAPONS		-16	
TURKEYS	30-35	25-30	40-45
DUCKS, Nearby	18-25	18-25	23-32
GESE	-18	-18	

The live poultry market closes in bad shape on October 25, the situation being due to a combination of factors. In the first place, the Metropolitan district is supplied with too much poultry. On top of that, slaughter houses have not cleared their stocks indicating a lack of buying on the part of consumers. To add to all this grief the market has been cursed with a super-abundance of inferior birds. It is to be expected therefore, that the market would wind up for the week in miserable shape. Fancy fowls are so uncommon that they have brought premiums, but such cases are exceptional. Average good to low grade poultry have been difficult to sell except at bargain prices. Most of the aggravation came from the freight market although the supplies of fowls arriving by truck and express have been quite liberal. Chickens

have been dull with the exception of Leghorns.

Those who are contemplating shipping birds into the Metropolitan market for the Thanksgiving trade should bear in mind that only fancy birds are going to receive consideration. It would be well therefore, to plan on finishing off roasting chickens before sending them to market. As yet no prices have been mentioned relative to Thanksgiving turkey trade. At the present time a range of 30c to 35c prevails for nice stock. This is approximately 5c higher than any freight arrivals.

Bean Market Easier

Practically all lines of domestic beans have shown a decided weakness of late. Marrows are bringing from \$8 to \$8.75 for Jumbos while average lines range from \$6.75 to \$7.50. Pea beans generally sell from \$5.75 to \$6.25. Red Kidneys have slipped and are now selling from \$8.50 to \$9, while White Kidneys bring from \$8.50 to \$9.25.

Hay Prices Up \$1

Receipts of hay during the week ending October 25 were quite short of trade needs, causing prices to advance \$1 per ton. The week opened with supplies at a low point which induced buyers to compete for supplies. The limited offerings were promptly absorbed at prices ranging from \$20 to \$28 for timothy and from \$22 to \$27 for grass and clover mixtures. The better grades of clover mixtures easily brought \$1 per ton over similar grades of grass mixtures. The market closes with a firm undertone. Rye straw has been selling slowly at \$14 per ton with oat at \$12.

Meats and Livestock

CATTLE—Steers slow, steady to weak. Medium grassers \$8.10-9.00; cows and bulls scarce, steady. Common to medium cows \$4.00-5.00. Medium bulls up to \$6.25.

VEALERS—Slow, steady to 50c lower, mostly steady. Good to choice \$13.00-15.00. Medium \$9.50-12.50; Cull and common \$5.00-9.00.

HOGS—Steady per pound \$9.75-10.25.

LAMBS AND SHEEP—Lambs scarce, 50c to \$1.00 lower. Good to choice \$8.00-8.75. Medium \$6.50-7.75. Ewes steady, \$4.00 down.

COUNTRY DRESSED CALVES—Fresh receipts were light to heavy during the week. The demand has continued very slow and the market closed weak. Fresh receipts per pound: Choice 14-17c; fair to good 11-13c; small to medium 6-10c.

LIVE RABBITS—Fresh receipts of live rabbits, while light at first, increased during the week. The demand was slow and the market was steady. By the coop: 14-20c per pound.

Wool

The wool market has been steady. New York better fleece wool, unwashed, fine, per pound, 21-30c 1/2 blood 23-30c; 3/8 blood 24-29c; 1/4 blood 24-30c; low quarter blood 25-27c; common and braid 23-25c.

Bananas Compete With Apples

I READ your quotation from a letter on the editorial page on the tariff issue of June 14. I agree with his statement in the first paragraph of the letter but do not with the second paragraph, in which he states that no tariff bill can really help the fruit growers.

* * *

Our analysis of the biggest single factor in competition which our fruit growers face is the rapidly growing importation of bananas, produced at extremely low cost. They unquestionably are displacing many apples. Our fruit growers have been asking for a tariff on bananas but they are bucking a strong combination. I agree that other fruits and vegetables produced in this country also are displacing some apples, but for the most part they are produced under about the same labor and other producing conditions as apples. Then because they are produced within our borders, we must accept this competition.—E. D. M., New York.

EDITOR'S NOTE—The way for eastern producers to meet competition from anywhere else is to organize, grade and pack and then put on a sales force that will out-sell the other fellow. That is the way all other business is done.

HERD INFECTION

Dr. Roberts says: "Watch out for symptoms of HERD INFECTION, such as Failure to Breed, Failure to Clean, Scours and Goiters in Calves, Garget, Cow Pox and Shortage of Milk. There may or may not be a loss of Calves. Send in a confidential report of your herd and Dr. David Roberts will tell you without charge what is wrong."

THE HOOD 4-BUCKLE ARCTIC

will keep your feet warm
and comfortable in the
coldest weather . . .

WHEN the wind whistles and the snow piles mountain high—when the thermometer hits bottom and the thought of going outdoors gives you a

cold chill, get your feet into a pair of Hood 4-buckle Arctics and you'll be warm and comfortable all over.

And Hood Arctics will give you not only real foot comfort and protection, they will give you the best kind of service under the hardest wear. Uppers are of heavy wool cashmerette with a thick fleecy lining that goes way down to the toes. Extra heavy tire tread soles of grey or red rubber with wide extension soles for extra wear.

To make sure you're getting the genuine Hood Arctic look for the name Hood stamped on the sole. This is your guarantee of quality in rubber footwear.

Hood makes a complete line of arctics, boots and rubbers for every member of the family, for all work and dress occasions.

THE HOOD 4-BUCKLE ARCTIC is a first quality cloth-top arctic made particularly for protection against the coldest weather and deepest snow.

BEFORE we discuss the actual operation of your tractor, let's take just a moment to consider winter storage—it'll soon be time for that. Place some extra time on your preparation this year and do a *real* job.

Follow carefully the directions in your instruction book about draining the crankcase oil and preparing the crankshaft and pistons for the winter with fresh oil. Make sure that all bearings and moving parts have a good protective film of grease or oil.

Go over the whole machine, greasing and oiling every part which might rust. Clean off the coating of dust and dirt that has collected during the summer.

The certainty that your tractor will start off in better condition next Spring and that extra years of life will be added to the machine, makes a good job of winter storing seem a worthwhile saving indeed.

Now for some savings next Spring

First—have you kept records of your fuel and oil costs this year? Are they accurate enough so you can check them against repair and service charges—and profits? We hope so, because that's the only way to be sure you are making the most money possible. And it helps gauge your methods for improvement next year.

We know quite a few farmers who are under the impression that they save money by purchasing oils that are just a little cheaper than the better grades.

But let's look at it in a little different way. You are draining the crankcase every 60 hours. Some manufacturers recommend from 30 to 60 hours. All right—if you are using an inferior oil and draining every 60 hours, the oil is completely worn out long before the end of that time. Beyond 30 hours then, you are using an oil that has done its work and has lost its body. The result is nothing but danger—carbon, scored piston walls, wear and tear on bearings—repair bills and eventually, a short-lived tractor.

Still, on the other hand, if you drain this inferior oil at the end of thirty hours as should be done, you will be using twice

Drain the transmission regularly. Use Mobiloil "C" in the summer and Mobiloil "CW" during cold weather.

as much oil. So, either way, you are met with increased costs, in the way of repairs and shortened tractor life or excess use of oil.

Frankly, that is exactly the reason so many farmers are using Mobiloil today.

Why? Because Mobiloil holds its rich lubricating character right up to and beyond the 60-hour draining period. And still more important, it cuts down repair and wear to a minimum. There will be less carbon and consequently, lowered carbon-removal expense—more power—and longer tractor life.

It will soon be time to store your tractor for the winter. Do a good job—it will help prolong the life of the machine.

How to operate your tractor at a lower cost

Here is just a sample of the kind of results Mobiloil is giving farmers all over the country. A Michigan farmer says: "I've been running this tractor for five years now and she has never had any repairs except valve grinding in all that time. I feel safe in saying that the reason for such remarkable service is that I have never used anything but Mobiloil."

Why Mobiloil makes possible these savings

In Mobiloil, ALL the essential properties of a full-duty oil are present and in correct proportion for your tractor engine.

These properties are: (1) **OILY CHARACTER**—provides moving parts with rich lubrication—and holds down wear; (2) **RESISTS HEAT**—lasts longer—keeps down oil consumption, and makes for economical use; (3) **CONTROLS CARBON**—keeps hard carbon deposits from piling up in your cylinders; (4) **OXIDATION CONTROL**—keeps oil systems from clogging, and valves from sticking and gumming.

Don't forget the transmission

The crankcase is not the only major point that needs careful attention. There's the transmission, too. And this is especially important to remember when you get ready for your Spring work.

If you should write today to the manufacturer of your tractor and ask about transmission lubrication, he would more than likely say something like this, "It is extremely important that the transmission get a fresh supply of high-quality oil at regular intervals. If you are using your tractor a great deal, the transmission should be drained *twice* during the season.

"Before fresh oil is put in, wash the case and gears with kerosene or a thin solution of oil and gasoline."

And when you refill, we urge you especially to make use of Mobiloil "C" in the summer and Mobiloil "CW" during cold weather. These oils hold their rich body right up to the time for the next draining. This means that gear teeth will be well protected from wear and tear. And the whole mechanism will operate smoothly and quietly—lightening the load on the engine—helping develop more power.

A new grease

One of the most important of your preparations for the Spring work has to do with pressure fittings and grease cups. Your Mobiloil dealer now has a new lubricant called Mobilgrease, for use with

pressure fittings. The main reason you'll like it is that it creeps to every friction point, sticks there and does a good job of lubricating. And unlike most greases, it does not wash out readily with rain.

For grease cups, we have a fine lubricant called "Mobilubricant." Try it.

You'll also want to use Mobilgrease and Mobilubricant on all your other implements where there are pressure fittings or grease cups. They are truly the most efficient greases we have ever seen.

Next time you are in town, have your dealer consult the complete Mobiloil Chart, just to check up on the proper grades of Mobiloil to fit your own particular needs—for tractor, truck and car.

Also, have him tell you about the economy and convenience of getting Mobiloil in 55-gallon and 30-gallon drums.

Winter driving with car and truck

Just changing to any so-called "winter" oil for your car and truck is not enough. Many light-bodied oils give easy starting, but are too thin to stick to hot moving parts and protect them when your engine warms up.

Freezing weather demands double-range protection. Mobiloil Arctic is a specially made cold-weather oil for your crankcase. It flows freely at zero temperatures, and retains its rich lubricating body at operating temperatures.

For your transmission and differential use Mobiloil "CW." You'll be surprised at how easily the gears shift.

Make this Chart your Guide

The correct grades of Gargoyle Mobiloil for engine lubrication of prominent passenger cars, motor trucks, and tractors are specified below. If your car is not listed here, see the complete Chart at your dealer's.

Follow winter recommendations when temperatures from 32°F. (Freezing) to 0°F. (Zero) prevail. Below zero use Gargoyle Mobiloil Arctic.

Mobiloil

The 8^{as} BUICK B U I L D S I T

VALUE INSTANTLY RECOGNIZED

*Valve-in-Head Straight Eight Luxury,
Performance and Reliability at \$200
Less than Any Recent Buick Six!*

Come—know the matchless superiorities of the world's lowest priced Valve-in-Head Straight Eight . . . one of the four new series of Buick Eights everywhere accorded instant leadership. Take the wheel and thrill to its lightning-like acceleration, hill-climbing and speed . . . its brilliant smoothness, stamina and roadability . . . its exceptional roominess, comfort and luxury. Here is a type of performance long sought in the eight-cylinder field . . . at *less cost* than last year's Buick Six!

Now Buick places Valve-in-Head Straight Eight luxury, dependability and performance within the

FOUR SERIES			
\$1025	STRAIGHT 8	\$1535	
\$1095		\$1565	
\$1285		\$1610	
\$1355		\$2035	
ALL VALVE-IN-HEAD			

reach of almost *every* motorist. Now—for as little as \$1025 to \$1095 at factory—you can have the many engineering advancements found only in The Eight as Buick Builds It.

These extra-value Buick Eights, like Buick's three remaining series, have the masterly new Valve-in-Head Straight Eight Engines, new Engine-Oil Temperature Regulators, and the new Ring-Type Torsional Balancers. They reveal the ample roominess and

comfort of new Bodies by Fisher, skillfully insulated against heat, cold and noise, and upholstered in either broadcloth or mohair plush. They pos-

WHEN BETTER AUTOMOBILES ARE BUILT . . . BUICK WILL BUILD THEM

Why fiddle around?

WHY waste a lot of time and matches trying to find the one smoking-tobacco you can tie to for life? I can give you a passport to pipe-joy in two words: *Prince Albert!* I ought to know. I was already a pipe-smoking veteran when some of you fellows were still on the bottle.

Just get yourself a tidy red tin of P. A. and you won't need any ballyhoo from me. Throw back the hinged lid and let that P. A. aroma

broadcast its message. Then fill-up and light-up. Cool as the shock of a bill you'd forgotten. Sweet as the stamp reading "Paid in full."

Mellow and mild and refreshing, as no other tobacco ever was. That's P. A., whether you smoke it in a pipe or the makin's papers. Why fiddle around? Skip straight across lots to the one smoking-tobacco that sets the pace for all others. There must be a reason . . . there *is!*

PRINCE ALBERT

—the national joy-smoke!

Quality and quantity BOTH
—you get TWO full ounces
in every tin.

Farm News from New York

The Outlook for Turkey Prices--County Notes

ABOUT this time of year, every reader who raises turkeys is interested in all information as to the price they are likely to receive. The information we have from the Department of Agriculture indicates that the entire United States turkey crop is about 3 per cent smaller than last year's crop, but that it is still larger than either the 1927 or 1928 crops. Taking the situation by sections, the western states decreased production considerably more than 3 per cent, which shortage is made up by increases in certain eastern states, particularly increases of 32 per cent in Massachusetts and 33 per cent in Connecticut. While we do not have figures available, there seems to be quite a revival of interest in turkey growing in several eastern states, particularly New Jersey.

The storage situation is relatively favorable. On Oct. 1, turkeys in storage totaled 3,656,000 pounds, as compared with 5,173,000 pounds on October 1 last year, and a five-year average of 4,987,000 pounds. In making a guess as to what prices will be, producers should remember that the situation last fall was far from satisfactory. Inasmuch as turkeys are essentially a luxury, the fact that conditions in cities are not too favorable, will probably have a reaction on the demand for Thanksgiving and Christmas turkeys.

One authority predicts that the price for live turkeys in Texas will be from 15c to 17c a pound, which would probably mean a retail price of around 35c a pound. Needless to say, this is not a price which offers much encouragement to raising turkeys under eastern conditions.

"On to Rochester" Is Grange Slogan

SOME time during the National Grange convention an excursion will be run to Niagara Falls, giving people from all parts of the United States a chance to see one of America's greatest wonders.

Deputy Master Wilbur L. Cleveland of Bloomville, Delaware County, organized a Grange in Coventry, Chenango County, on September 17, with twenty four charter members. The Master is Harry Lidsey; secretary, Mrs. Blanch Dalton; lecturer, Mrs. Anna Lyon, all of Coventry. This is Deputy Cleveland's second Grange to be organized this year and speaks well of his good work.

We have in the Grange what is known as the revolving scholarship fund from which boys and girls, members of the Order, may borrow money at a low rate of interest, to help them to obtain an education. Anyone wishing information in regard to this fund should address Harold M. Stanley of Skaneateles, New York, who is its secretary. Mr. Stanley informs us that he has made a large number of loans during the past three years that this fund has been working. It is one of the worthwhile projects that the Grange is sponsoring for rural young people.—F. J. RILEY.

Western New York Dairy-men Start Mail Box Testing

NINETY-ONE dairymen in Erie, Chautauqua, and Cattaraugus Counties have started a tri-county dairy record club. Under the plan they are following, each dairyman weighs the feed and the milk production per cow for one day each month, and takes samples of the two milkings to be tested. The samples and records are mailed to a central laboratory at Gowanda, where the milk is tested for butterfat and the records summarized.

Perishable Commodities Law Helps Protect Shippers

WE expect there will always be differences of opinion between shippers of farm products and the men who buy them. In many instances farmers feel that too many receivers are inclined to reject cars or to attempt to settle for a price less than originally agreed upon after produce is once in their hands. There is also, altogether too much buying by irresponsible receivers and too often

the shipper finds that the buyer is either unable to pay or that he merely comes up missing and cannot be located.

Recently, quite a number of cases have been called to our attention where New York State farmers have sold farm produce to buyers in other states only to find that it was not so easy to get all their pay. In such a situation the recent Summers-Borah Law, known as the Federal Perishable Commodities Act, passed by the last Congress, should prove helpful.

What the Law Provides

Without going into too much detail as to the provisions of this law, it provides that buyers of farm produce who deal inter-state must take out a federal license and must deal fairly with shippers. This law went into effect recently and the U. S. Department of Agriculture, which has charge of the enforcement of the law, has already settled a number of complaints from shippers. Although investigation has not always shown that the complaints have been reasonable, in the majority of cases and where the facts have been placed squarely before the receiver of the products, he has in most instances settled the complaint rather than risk legal action by the Department.

When this bill was under consideration

there was some opposition from buyers of farm produce on the ground that they were being over-regulated, but we see a change in this attitude and a feeling on the part of more responsible buyers that they have nothing to lose and much to gain through a regulation of those elements in the trade who have not always been too scrupulous about the methods they have used. It would seem that this new law is a distinct protection to the farmer who sells his produce to a buyer in another state. Violations of the law should be called to the attention of the Secretary of Agriculture, Washington, D. C. or to the Service Bureau of American Agriculturist.

Pennsylvania Horseshoe Pitchers Limber Up

IN contrast with New York State, which runs its horseshoe pitching at the State Fair in the fall, the State of Pennsylvania is holding theirs at the State Farm Products Show in January. Pitchers in nine counties have won the right to enter the state championships next January. The names and counties are as follows:

Huntingdon County, Vance Moore; Luzerne County, Elmer Hess; Indiana County, Richard Fulmer; Jefferson County, S. J. Snyder; Somerset County, Edison

New York County Notes

GENESEE COUNTY—For some unknown reason beans are still dropping in price. One buyer explained that he wasn't holding them over for they were too risky, though he was quite sure they would rise in price when the rush was over. Grain threshers say that beans are a very poor crop—in most cases below one half the average yield. Buckwheat is higher than wheat, bringing \$1.80 per 100 lbs. Genesee County 4-H Forestry members joined Cattaraugus, Wyoming, Erie and Livingston County members in a meeting at Letchworth on October 18. Prizes were given the four most successful tree planters in each county by a representative of the Buffalo Evening News.

The rabbit season opened October 16 in this county and closes December 31. Not more than six rabbits can be taken in a day. A good share of the farms are posted but farmers are issuing permits to some of the more careful hunters who respect farmers' rights. The residents of Wyoming and southern part of Genesee County were greatly surprised when the heaviest snow storm known at this time of year covered the country to a depth of 6 to 30 inches on the level. At Alabama cars were hindered very little except for the swirling of snowflakes which obstructed the view. What snow fell soon melted, while at Corfu snow fell to a depth of six inches and the farther south the deeper the snow. Snow plows were busily at work Monday morning. Cars were stalled all along the roads—some had slid in ditches, because the deep snow hid the road. At Bennington the snow fell over a foot deep sagging roofs and shutting off electricity and telephone. A good share of the residents were unprepared for the storm. Potato digging and apple picking were just started.—Mrs. R.E.G.

SARATOGA COUNTY—Two nice rains have helped the water supply but more is needed for fall plowing—clay is too hard and dry. Potatoes are a fair crop in most places and are bringing \$1 per bushel but there is not much demand. The county is very beautiful with the colored leaves. Butter brings about 50c; eggs 45c at local store in trade. Some are canning hens as there is not much market now. Snow is reported in the Adirondacks. Some are planning deer hunting. A few are planning to leave for Florida and California for winter.—Mrs. L.W.P.

CHAUTAUQUA COUNTY—The past few days we have been paying for those beautiful October days that have characterized the month up to the 17th, when we had a cold, disagreeable rain followed by a real blizzard snowstorm and freezing temperatures. But we have no cause to complain. It has been a wonderful fall to clean up the fall work and farmers have seldom been in better shape for bad weather. The seven days before the break were all bright sunny days with

summer heat, every day just like the one before, and the bright many-colored foliage of the trees was never more beautiful.

Sunday, October 12, many people from town picniced in the woods as comfortable as they did two months earlier in the season. As we look back over the season it has not been so bad for the farmers of this section after all. The spring grains were never better. Meadows that had been cared for and had not been down too long produced a fair crop. Corn turned out better than expected. A few farmers had their silos full. Most buckwheat was a poor crop but a few had a good yield. Potatoes were probably about a half crop but generally the quality is good, no rot and mostly smooth. Prices for nearly all farm products are low. That is what hurts—the short crop and the low price together. The milk check for most dairymen has not been much more than half what it was a year ago. The low price of milk discouraged the feeding of grain. Then the short feed in the pastures, shortened the milk flow still further so that the middle of October finds many dairies about dried up. Judging by this section, I can't see where the surplus milk supply comes from.

Springer cows are all in good demand. A good-sized young cow is bringing around \$100. Other stuff is cheap and little demand.

The Farm Bureau is making plans for the annual membership drive. On account of the economic conditions the officers of the association are not very optimistic regarding the results. But it looks to us as if the farmer never needed the help that the Farm Bureau can give more than they do now. The time is coming, if it has not already arrived, when we must produce more economically, or be crowded out of the business and the Farm Bureau can help us to eliminate many losses and inefficiencies.—A.J.N.

DUTCHESS COUNTY—We are having a dry spell again. It is bad for sowing wheat. Corn is a poor crop and potatoes are also light. There is no market for apples. Eggs bring 50c a dozen wholesale, hens 28c to 30c a pound, live weight. The grange had a fair and chicken pie supper on October 17. The Washington Grange gave a play. Supper served and everyone had a good time.—P.S.

SULLIVAN COUNTY—Most all grain is gathered. Potatoes are a fair crop; apples are very good. Some cider is being made. Lambs are not selling very well and what do sell, go for \$7 or \$8 each. The political pot has started to simmer and getting warmer every day. There have been a few corn busking bees. Many farmers are doing their fall plowing. We are in need of rain; pastures are very dry as well as springs. Eggs, 40c, butter 40c.—Mrs. P.E.R.

Hay: Schuylkill County, J. A. Roeder, Montgomery County, George Chalk; Berks County, James Heinly, and McKeen, G. A. Crooks.

The Whitfield Elm

AN interesting bit of historical prose is woven about this old elm tree, still standing in the town of Stonington, Conn., which bears two tablets, the lower and smaller bearing the inscription:

"PEQUOT TRAIL, OLD POST ROAD."

The upper one says:

"This tablet was placed here September 3, 1895 by the children of the American Revolution, The William Latham, Jr. Society of Stonington, Conn., and The Samuel Ward Society of Westerly, R. I. in memory of the Rev. George Whitfield, who preached, July 19, 1747 from a platform erected under this tree. The large meeting house then on the other side of the road, being able to hold only a small part of this audience."

This tree stands beside the road on the farm known as "The Centre Farm", in front of the two and one-half story colonial house, built in 1790, for many years the home of the late Fernando Wheeler, which has recently been sold to New York parties for a summer home. The old elm bears evidence of its great age in the decaying branches and it seems improbable that it can survive many years longer. It would indeed be a pleasure to provide a platform under some of our beautiful wayside trees if one were able to secure a preacher who, as then, required it.—Mrs. C.A.M., North Stonington, Conn.

Booklet About Land Banks

THE Intermediate Credit Banks have just issued a pamphlet stating that at present, outstanding loans for the aid of agriculture total \$123,000,000. The pamphlet also answers most of the common questions relative to the functions of the Intermediate Credit Banks and the Federal Farm Loan Board. Anyone who is interested in securing a copy of this pamphlet may write to the Federal Intermediate Credit Banks, 1265 National Press Building, Washington, D. C., or to American Agriculturist, 461 Fourth Avenue, New York City.

Farmers' Meetings

The Inter State Milk Producers' Association of Pennsylvania will have its annual meeting, November 18 and 19 at the Benjamin Franklin Hotel, Philadelphia, Pa.

The National Cooperative Milk Producers' Federation are holding their fourteenth annual meeting at Des Moines, Iowa, November 6 to 8.

Immediate Relief for INDIGESTION

WHAT most people call indigestion is usually excess acid in the stomach. Food has soured. The instant remedy is an alkali which neutralizes acids. But don't use crude helps. Use what your doctor would advise.

The best help is Phillips' Milk of Magnesia. For the 50 years since its invention, it has remained standard with physicians. You will find nothing else so quick in its effect, so harmless, so efficient.

One tasteless spoonful in water neutralizes many times its volume

in acid. The results are immediate, and with no harmful after-effects from its use.

Once you learn this perfect way you'll never deal in any other manner with the headaches, gas, bloating, nausea, dizziness, indigestion, biliousness, etc., due to an over-acid stomach and bowels.

Be sure to get genuine Phillips'. It is always a liquid; never made in tablet form. Look for the name Phillips' on the bottle. All drugstores —25c and 50c.

A Cooked Food Sale

Helpful Hints That Will Insure Success

THIS is one of the good old stand-by's of the Ladies' Aid, when it's a case of money-raising, which is a perennial problem with that organization. There's really nothing more satisfactory than securing space from a kindly merchant, and displaying ready-cooked good things. Of course, an empty store is sometimes available, but this rarely has the drawing power of a display where there are already customers. The cooked food sale is usually clear profit, since the articles are all donated.

In planning a sale, however, there are a few points which can be kept in mind and will prove helpful. Remember that you are catering to two classes of

her house with a critical eye and make the small changes that will bring more comfort to her family during the coming months.

One of the things to prepare for is enough heat. Weather strips may mean a more even warmth in the house and smaller coal bills. Far more air leaks in through the joints around a window than is generally realized and coal must be burned to warm it. Metal weather strips would soon be paid for by savings in fuel.

Another question of winter health and comfort is the proper amount of moisture in the air. Colds which are the result of a dry hot atmosphere in the house may be prevented by a water tank attached to the hot-air furnace by water receptacles on the back of radiators.

A closet for outdoor clothing is a blessing to the whole household if it contains a window for light and ventilation, and heat to dry wet clothes. Special low shelves, drawers, or boxes will provide places for children's hats, gloves and overshoes. Rods placed low enough for the children to reach will hold small coats on small hangers.

Since sour milk has practically the same food value as fresh milk it should not be considered a waste product. Use both the milk and whey in cooking.

* * *

Children need only the simple foods which promote growth and health and will not tire of the same dishes well prepared and attractively served.

"Play Tag" Bean Bags

Young and old will play with these inexpensive little articles and derive much fun from them. For baby they are better than a ball and when sonny cannot find his league ball these will do to play catch and no one can get hurt using them. It is the wise mother who keeps something of this sort in readiness to satisfy the children. They are stamped on fast Venetian Cloth, size 8x5. Price for all 3 in assorted colors is 25c (in stamps) postpaid, and 20c extra if fast colored six-strand floss is wanted for embroidering. Ask for Nos. C931, C932 and C933 when ordering from the Embroidery Dept. American Agriculturist, 461 Fourth Ave., New York City.

people; business folks who will joyously jump at the chance to secure something home-made, and home women who buy to "help along the cause" and are interested in novelties.

One of our members at a recent sale, had an inspiration, and brought in a basket of "Just for two" good things. There were alluring little flaky pies, cartons of salad sufficient for two people, and a couple of cute little meat loaves that no bride could resist. Did they sell? I'll say they did!

Cookies are always good sellers, while as for a good home-made pie, not a "pale face", but a brown flaky one that hardly stays on the table long enough to get unwrapped! Home-made cakes are popular, but don't make them too large and expensive. At recent sales nothing has sold more quickly than "filled cookies", which were usually spoken for in advance.

Just as a final word of "Food sailors"; do try as far as possible to get your contributors to use cartons and paper plates.

Rarely a sale gets by without someone's "good tin pie plate", or "china bowl" going astray, and the committee are, alas "in bad"! Not long ago a committee chairman showed me a collection of pie plates and cake pans, which she had been hopeful holding for the right owners.

Finally, keep the counter dainty, the food from getting messy, give your patrons a chance to get the best "home cooking at fair prices!"—A. B. S.

Winter Comfort

Late October and November the homemaker can take time to view

Charming Model

Dress pattern No. 2724 is charming and smart for the figure whose lines need lengthening. The side jabot, the snug hip line and the rippling skirt are all good style points this season. Transparent velvet, flat crepe or canton crepe is well adapted to this style, the pattern of which cuts in sizes 16, 18, years, 36, 38, 40, 42, 44 and 46 inches bust measure. Size 36 requires 4 1/2 yards of 39-inch material with 5/8 yard of 27-inch contrasting. Price 15c.

A Christmas Suggestions Meeting

LAST year our Home Bureau unit held a Christmas Suggestions Meeting and many of the ideas presented were so excellent that they will bear passing on.

Among the ideas suggested, or discussed, that were of particular interest to the housewife were: small kitchen equipment such as stainless steel knives, orange juice extractor, egg beaters of different kinds, grinders to keep the knives in first-class condition, and a flour sieve with a sifter at each end that would be especially nice for use when flour must be sifted several times. One woman told of a can opener of unusual merit and another of a grape fruit knife that had given particular satisfaction.

The agent displayed a number of articles that could be made at home at small expense. These included a laundry bag that opened at the bottom so that the last article could be emptied out without undue effort, card cases and purses of leather, felt, and raffia, playthings for the children, and other articles. One idea was a hat of two tones of blue felt with purse to match. One end of the folding purse which was made of the darker blue was decorated with a square or circle of the lighter felt on which was stitched initials or monogram of the other shade.

Another idea was to fill a pretty dish or jar of some sort with home-made jam, jelly or marmalade and decorate with a little bow stuck into the paraffin while still warm. These can be bought in the shops but can be fixed up at home at far less expense. More than one color of jelly may be used by pouring the first in and allowing it to harden, then add another color.—MRS. E. N., N. Y.

For Wee Folk

Little girl's dress pattern No. 2756 is a cute mother hubbard style with its shapely yoke and gathered skirt. The placket in the yoke front is an added decoration. Tiny checked gingham, small-flowered print, linen, or crepe Jersey would be very suitable for making up this pattern which cuts in sizes 2, 4 and 6 years. Size 4 requires 2½ yards of 39-inch material with ¼ yard of 35-inch contrasting and ¼ yard of ruffling. Price 15c.

TO ORDER: Write name, address, pattern sizes and numbers clearly and correctly and enclose with proper remittance in stamps (Do not send coin due to possibility of loss.) Add 12c for one of the new Winter Fashion Catalogs and address to Pattern Department, American Agriculturist, 461 Fourth Ave., New York City.

Let's all try
the wake-up food
for quick new
energy!

All together! Mother—father—youngsters—oldsters! Pick up spoons and dip into the crisp, golden wake-up food. Post Toasties! Quick new energy in delicious form! Easy to digest—quick to release its stored-up energy to the body. Richly flavorful—easy to serve. Heap it up—golden, oven-fresh flakes in cool, nourishing milk or cream. Mingle it with fruits or berries in season. Gloriously good—for breakfast—for lunch! A wake-up food the whole family enjoys. And serve Post Toasties often as a wholesome supper "bite." How good to have the wake-up food always in the house! Order Post Toasties now!

AMERICAN AGRICULTURIST

Just David--By Eleanor Porter

THE STORY THUS FAR

David and his father live alone in a rude shack on a mountain overlooking the "Silver Lake." For six years they have lived there alone, cooking their own food, taking long walks in the forest, playing their violins. David's father is ill. He wonders if he has been wise in bringing David here away from the world and realizing that his strength is nearly spent, he suddenly decides to leave the mountain and take David back to civilization.

"Are we coming back sometime?" asks David. "Why, of course, you're coming back," his father replies, and the boy not realizing the full meaning of the reply, is happy.

At noon they paused for luncheon, and at night they camped where the chattering brook had stopped to rest in a still, black pool. The next morning the man and the boy picked up the trail again, but without the bag. Under some leaves in a little hollow, the man had hidden the bag, and had then said, as if casually:—

"I believe, after all, I won't carry this along. There's nothing in it that we really need, you know, now that I've taken out the luncheon box, and by night we'll be down in the valley."

"Of course!" laughed David. "We don't need that." And he laughed again, for pure joy. Little use had David for bags or baggage!

They were more than halfway down the mountain now, and soon they reached a grass-grown road, little traveled, but yet a road. Still later they came to where four ways crossed, and two of them bore the marks of many wheels. By sundown the little brook at their side murmured softly of quiet fields and meadows, and David knew that the valley was reached.

David was not laughing now. He was watching his father with startled eyes. David had not known what anxiety was. He was finding out now—though he but vaguely realized that something was not right. For some time his father had said but little, and that little had been in a voice that was thick and unnatural-sounding. He was walking fast, yet David noticed that every step seemed an effort, and that every breath came in short gasps. His eyes were very bright, and were fixedly bent on the road ahead, as if even the haste he was making was not haste enough. Twice David spoke to him, but he did not answer; and the boy could only trudge along on his weary little feet and sigh for the dear home on the mountain-top which they had left behind them the morning before.

They met few fellow travelers, and those they did meet paid scant attention to the man and the boy carrying the violins. As it chanced, there was no one in sight when the man, walking in the grass at the side of the road, stumbled and fell heavily to the ground.

David sprang quickly forward.

"Father, what is it? What is it?"

There was no answer.

"Daddy, why don't you speak to me? See, it's David!"

With a painful effort the man roused himself and sat up. For a moment he gazed dully into the boy's face; then a half-forgotten something seemed to stir him into feverish action. With shaking fingers he handed David his watch and a small ivory miniature. Then he searched his pockets until on the ground before him lay a shining pile of gold-pieces—to David there seemed to be a hundred of them.

"Take them—hide them—keep them, David, until you—need them," panted the man. "Then go—go on. I can't."

"Alone? Without you?" demurred the boy, aghast. "Why, father, I couldn't! I don't know the way. Besides, I'd rather stay with you," he added soothingly, as he slipped the watch and the miniature into his pocket; "then we can both go." And he drop-

ped himself down at his father's side.

The man shook his head feebly, and pointed again to the gold-pieces.

"Take them, David,—hide them," he chattered with pale lips.

Almost impatiently the boy began picking up the money and tucking it into his pockets.

"But, father, I'm not going without you," he declared stoutly, as the last bit of gold slipped out of sight, and a horse and wagon rattled around the turn of the road above.

The driver of the horse glanced disapprovingly at the man and the boy by the roadside; but he did not stop. After he had passed, the boy turned again to his father. The man was fumbling once more in his pockets. This time from his coat he produced a pencil and a small notebook from which he tore a page, and began to write, laboriously, painfully.

David sighed and looked about him. He was tired and hungry, and he did not understand things at all. Something very wrong, very terrible, must be the matter with his father. Here it was almost dark, yet they had no place to go, no supper to eat, while far, far up on the mountain-side was their own dear home sad and lonely without them. Up there, too, the sun still shone, doubtless,—at least there were the rose-glow and the Silver Lake to look at, while down here there was nothing, nothing but gray shadows, a long dreary road, and a straggling house or two in sight. From above, the valley might look to be a fairyland of loveliness, but in reality it was nothing but a dismal waste of gloom, decided David.

David's father had torn a second page from his book and was beginning another note, when the boy suddenly jumped to his feet. One of the straggling houses was near the road where they sat, and its presence had given David an idea. With swift steps he hurried to the front door and knocked upon it. In answer a tall, unsmiling woman appeared, and said, "Well?"

David removed his cap as his father had taught him to do when one of the mountain women spoke to him.

"Good evening, lady; I'm David," he began frankly. "My father is so tired he fell down back there, and we should like very much to stay with you all night, if you don't mind."

The woman in the doorway stared. For a moment she was dumb with amazement. Her eyes swept the plain, rather rough garments of the boy, then sought the half-recumbent figure of the man by the roadside. Her chin came up angrily.

"Oh, would you, indeed! Well, upon my word!" she shouted. "Humph! We don't accommodate tramps, little boy." And she shut the door hard.

It was David's turn to stare. Just

what a tramp might be, he did not know; but never before had a request of his been so angrily refused. He knew that. A fierce something rose within him—a fierce new something that sent the swift red to his neck and brow. He raised a determined hand to the door-knob—he had something to say to that woman!—when the door suddenly opened again from the inside.

"See here, boy," began the woman, looking out at him a little less unkindly, "if you're hungry I'll give you some milk and bread. Go around to the back porch and I'll get it for you." And she shut the door again.

David's hand dropped to his side. The red still stayed on his face and neck, however, and that fierce new something within him bade him refuse to take food from this woman. . . . But there was his father—his poor father, who was so tired; and there was his own stomach clamoring to be fed. No, he could not refuse. And with slow steps and hanging head David went around the corner of the house to the rear.

As the half-loaf of bread and the pail of milk were placed in his hands. David remembered suddenly that in the village store on the mountain, his father paid money for his food. David was glad, now, that he had those gold-pieces in his pocket, for he could pay money. Instantly his head came up. Once more erect with self-respect, he shifted his burdens to one hand and thrust the other into his pocket. A moment later he presented on his outstretched palm a shining disk of gold.

"Will you take this, to pay, please, for the bread and milk?" he asked proudly.

The woman began to shake her head; but, as her eyes fell on the money, she started, and bent closer to examine it. The next instant she jerked herself upright with an angry exclamation.

"It's gold! A ten-dollar gold-piece! So you're a thief, too, are you, as well as a tramp? Humph! well, I guess you don't need this, then," she finished sharply, snatching the bread and the pail of milk from the boy's hand.

The next moment David stood alone on the doorstep, with the sound of a quickly thrown bolt in his ears.

A thief! David knew little of thieves, but he knew what they were. Only a month before a man had tried to steal the violins from the cabin; and he was a thief, the milk-boy said. David flushed now again, angrily, as he faced the closed door. But he did not tarry. He turned and ran to his father.

"Father, come away, quick! You must come away," he choked.

So urgent was the boy's voice that almost unconsciously the sick man got to his feet. With shaking hands he thrust the notes he had been writing

into his pocket. The little book, from which he had torn the leaves for this purpose, had already dropped unheeded into the grass at his feet.

"Yes, son, yes, we'll go," muttered the man. "I feel better now. I can—walk."

And he did walk, though very slowly, ten, a dozen, twenty steps. From behind came the sound of wheels that stopped close beside them.

"Hullo, there! Going to the village?" called a voice.

"Yes, sir." David's answer was unhesitating. Where "the village" was, he did not know; he knew only that it must be somewhere away from the woman who called him a thief. And that was all he cared to know.

"I'm going 'most there myself. Want a lift?" asked the man, still kindly.

"Yes, sir. Thank you!" cried the boy joyfully. And together they aided his father to climb into the roomy wagon-body.

There were few words said. The man at the reins drove rapidly, and paid little attention to anything but his horses. The sick man dozed and rested. The boy sat, wistful-eyed and silent, watching the trees and houses flit by. The sun had long ago set, but it was not dark, for the moon was round and bright, and the sky was cloudless. Where the road forked sharply the man drew his horses to a stop.

"Well, I'm sorry, but I guess I'll have to drop you here, friends. I turn off to the right; but 'taint more'n a quarter of a mile for you now," he finished cheerily, pointing with his whip to a cluster of twinkling lights.

"Thank you, sir, thank you," breathed David gratefully, steadying his father's steps. "You've helped us lots. Thank you!"

In David's heart was a wild desire to lay at this good man's feet all of his shining gold-pieces as payment for this timely aid. But caution held him back; it seemed that only in stores did money pay; outside, it branded one as a thief!

Alone with his father, David faced once more his problem. Where should they go for the night? Plainly his father could not walk far. He had begun to talk again, too,—low, half-finished sentences that David could not understand, and that vaguely troubled him. There was a house near by, and several others down the road toward the village; but David had had all the experience he wanted that night with strange houses, and strange women. There was a barn, a big one, which was nearest of all; and it was toward this barn that David finally turned his father's steps.

"We'll go there, daddy, if we can get in," he proposed softly. "And we'll stay all night and rest."

CHAPTER III

THE VALLEY

THE long twilight of the June day had changed into a night that was scarcely darker, so bright was the moonlight. Seen from the house, the barn and the low buildings beyond loomed shadowy and unreal, yet very beautiful. On the side porch of the house sat Simeon Holly and his wife, content to rest mind and body only because a full day's work lay well done behind them.

It was just as Simeon rose to his feet to go indoors that a long note from a violin reached their ears.

"Simeon!" cried the woman. "What was that?"

The man did not answer. His eyes were fixed on the barn.

"Simeon, it's a fiddle!" exclaimed Mrs. Holly, as a second tone quivered on the air. "And it's in our barn!"

Just David

(Continued from Opposite Page)

Simeon's jaw set. With a stern ejaculation he crossed the porch and entered the kitchen. In another minute he had returned, a lighted lantern in his hand.

"Simeon, d—don't go," begged the woman, tremulously. "You—you don't know what's there."

"Fiddles are not played without hands, Ellen," retorted the man severely. "Would you have me go to bed and leave a half-drunken, ungodly minstrel fellow in possession of our barn? Tonight, on my way home, I passed a pretty pair of them lying by the roadside—a man and a boy, with two violins. They're the culprits, likely,—though how they got this far, I don't see. Do you think I want to leave my barn to tramps like them?"

"N—no, I suppose not," faltered the woman, as she rose tremblingly to her feet, and followed her husband's shadow across the yard.

Once inside the barn Simeon Holly and his wife paused involuntarily. The music was all about them now, filling the air with runs and trills and rollicking bits of melody. Giving an angry exclamation, the man turned then to the narrow stairway and climbed to the hayloft above. At his heels came his wife, and so her eyes, almost as soon as his fell upon the man lying back on the hay with the moonlight full upon his face.

Poultry Farmer

Tell the Pullets You Are Coming

By L. E. WEAVER
A. A. Poultry Editor

L. E. Weaver

PUTTING the pullets into their quarters for the winter and getting them started off right is very much like breaking in a new car. They way it is done, will to quite an extent, determine their future performance and how long they will perform. The first few weeks are particularly important. They must learn that the caretaker is their friend, and not some one to be afraid of. It is far better to have the pullets crowd around so they have to be pushed out of the way before one can get through than to have them scatter like a flock of blackbirds every time the door is opened. The Reds and Rocks and other heavy breeds are naturally quiet and not easily disturbed, but any Leghorn flock can be trained to be equally tame, though they will always be more active and alert.

Henry and Morrison speaking of farm animals in their book "Feeds and Feeding," say:

"The flow of saliva and other digestive juices is checked by fright. On the other hand, kind treatment and palatability of food should favorably influence digestion. Under skillful care animals show remarkable relish for their food, and it is reasonable to conclude that better digestion ensues."

And we may reasonably conclude further that the same is true of poultry. Since better digestion means more eggs there is a real money return in having the birds tame and quiet. Tame flocks are the result of two things. First, never letting them be suddenly frightened, and second, getting them accustomed to having the caretaker

move about in their midst as a matter of course.

To avoid sudden frights, always let them know you are coming. Rap gently on the door, or rattle the latch, not too vigorously, or whistle or talk to them. Then open the door slowly. Later it need not be so slow, but never burst into the room in a rush and never without a warning of your approach. The windows should be screened with wire fine enough to keep out the sparrows. There are plenty of reasons for that aside from keeping the birds from scaring the pullets. Bushel baskets and empty feed pails should not be left on the floor unless they are turned bottom side up or on their sides. Otherwise some pullet is sure to hop up on the edge and tip it over. And that always throws a big scare into the flock.

All pullets are timid when first put in the house, but they very soon lose their fear of the attendant if he does nothing to frighten them and is frequently among them. He moves about quietly and is careful to make no quick or sudden moves, nor to corner groups in tight places. He always gives them time to run out of his way or out of the corners. And one more thing. He wears the same outfit all the time as far as possible so the pullets don't think he is a stranger. But when a visitor comes the attendant sees that he (or she) stays outside and looks through the window, or else walks through the pen slowly, and talks quietly. In starting off the pullet flock then let's remember to take it easy, and be content with about twenty miles an hour for the first five hundred miles. The same is true of getting them up to high speed in production. Let them work up to it slowly and gradually and avoid the danger of burned-out bearings.

What Is a Master Farmer?

(Continued from Page 5)

of our Master Farmers. In almost every instance when these men have talked about their work, they have given large credit to their wives for whatever success that has been obtained.

A Master Farmer is a booster and seldom a knocker. He is progressive and responds quickly to new information and knowledge about his business. Perhaps his greatest outstanding characteristic is the belief in, and love of, his own job. He talks the business of farming up and not down. His outlook is cheerful and reasonably optimistic.

Then again a man can be a success economically as a farmer and a first class citizen and yet not be a Master Farmer. On top of all the rest he must be a real homemaker, for the home is an inseparable part of the life of farming. What kind of home has he provided for the wife and the children? What about conveniences in the home? Can you conceive of a Master Farmer who still requires his wife to carry water from an outside pump? Has he been as quick to provide modern equipment in the home as he has for the farm? If electricity is available, for example, we expect that a Master Farmer will use it. What about the proper kind of books and magazines and music for the home? Perhaps most important of all, what have the Master Farmer and his wife provided in the way of educational advantages for the children? How far did the children go in school and college?

These and many more are some of the qualifications that the judges look for when they come to select a Master Farmer. Its purpose is not to set one farmer above another. It is distinctly

not a contest. It would honor all farmers by honoring a few.

In conclusion, the best example of what a Master Farmer is not, is that sad and depressing picture of the European peasant which Edwin Markham, the great poet, describes in the "Man with the Hoe."

"Bowed by the weight of ages he leans

Upon his hoe, and gazes on the ground;

The emptiness of ages in his face
And on his back the burden of the world."

The direct opposite of this sad picture is that of a real Master Farmer, an outstanding example of all American farmers whose spirit is so well described in Liberty Hyde Bailey's little poem, from "Wind and Weather."

"Blow, ye winds, and lay on ye storms,
And come ye pests in rabble swarms,
And fall ye blights in legion forms—
I am here. I surrender not

Nor yield my place one piece or jot;

For these are my lands

And these are my hands,

And I am born of the folk that

resistlessly stands.

"The blood of old plowmen runs hard

in my arm,

Of axemen and yeomen and battlemen

all,

Who fought and who flinched not by

marsh or wall

Who met the bold day and chased

every alarm;

My fatherkind sleep, but I hear the old

call

And fight the hot battle by forge and

by farm—

For these are my lands

And these are my hands,

And I am born of the folk that

resistlessly stands."

Have You a Friend in This List ?

LAST week on Page 5, we gave you the names of subscribers in several counties who had received indemnities from North American travel-accident insurance policies. As we said at that time we are proud of this service because a large majority of those who take these travel-accident policies have no other form of insurance and therefore, the indemnities which they get are especially helpful to them. This week we are again giving you the names of a few more who have benefited from this service.

If You Have Claims Against The Farmers Sales Co.

ON the Service Bureau page in the issue of September 27, we called attention to the fact that Theodore Cohen of the Farmers Sales Company of Schenectady, had been arrested and fined \$50. In an effort to do everything possible to insure receipt of the money due them by our subscribers, we wrote to Captain J. M. Keeley of Troop D of the New York State Troopers located at Troy, N. Y. Captain Keeley assigned Trooper I. P. Clark to investigate the matter. He reports that Cohen promised to settle all outstanding bills against him and that any subscribers who have claims against Cohen should communicate with Harold Furlong, City Court, Schenectady, N. Y.

No Authority to Collect Money

IT has just come to our attention that an elderly man who weighs about 200 pounds, is six feet tall, and claims to be 91 years of age, has been fraudulently representing one of our advertisers, Maloney Brothers of Dansville, N. Y. We understand that this individual, who has been operating in western New York, has in a number of instances collected money for rose bushes and other nursery stock and has given receipts on blank paper for the money collected. Naturally, subscribers did not receive their rose bushes or other nursery stock and probably never will. Any subscriber who is solicited by anyone answering this description should immediately communicate with us and with Maloney Brothers.

See Land Before You Buy

Can you tell us anything about a Mr. Charles Roberts who is selling lots located in Detroit, Michigan, very near the Henry Ford plant? These lots are \$1,500 dollars, the terms are \$150 down and monthly payments of \$15. Mr. Roberts says these lots are all improved. A number in this neighborhood have purchased lots.

AS a general proposition we advise against buying any real estate without first making a personal investigation of it. The lots may have value but there is nothing, so far as we can see, to guarantee that they are worth \$1,500. We also understand that the New York Department of State, Division of Licenses, can find no record of having issued a real estate brokers or salesman license to Charles Roberts for the current license year which began November 1, 1929. We are informed that the Roberts Realty Company is not a corporation and have been unable to get any data as to its financial responsibility.

"I have today received a check for \$15 from the.....for my claim against them, which you so kindly have taken up for me. As they simply ignored my letters I positively know they never intended to settle, so please accept my sincere thanks and good wishes for your Service Bureau and farm paper, that we enjoy every week here in Pennsylvania."—C. A. K.

Farm taxes, on the average, take thirty per cent of the farmers' net income, according to Dr. B. A. Hibbard of Wisconsin.

"RCA Radiotrons always in every socket"

says

COLIN B. KENNEDY

President

COLIN B. KENNEDY CORPORATION

"MANY unnecessary radio troubles are caused by inferior tubes. The finest receiver is handicapped by poorly designed and constructed tubes. RCA Radiotrons are the unquestioned standard of scientific achievement in this field. To insure clear Kennedy tone, and maximum Kennedy performance, we strongly advise 'RCA Radiotrons always in every socket.' We unhesitatingly recommend them to Kennedy owners."

RADIO ENGINEERS ADVISE:

Replace all the vacuum tubes in your radio set with RCA Radiotrons at least once a year. This is the only sure way to maintain good performance and minimize disagreeable noises and other troubles caused by inferior tubes. RCA Radiotrons will give you the maximum in selectivity, sensitivity and tone quality. Old tubes may impair the performance of the new.

This is the 24th in a series of endorsements of RCA Radiotrons by the leading radio set manufacturers.

POST YOUR FARM And Keep Trespassers Off Reduced Prices on TRESPASS SIGNS

Effective October 1, 1930, trespass signs are offered to subscribers of American Agriculturist at new reduced rates in quantities of fifty or more. The new rates are as follows:—

Per Dozen	\$ 1.00
Per Fifty	3.50
Per Hundred	6.50
Per Thousand	60.00

The price for smaller quantities remains at \$1. per dozen.

Specially worded signs will be made up at slight additional cost. Names and addresses will be imprinted at \$2.00 for the first one hundred and \$1.00 for each additional one hundred.

These signs are made up of extra heavy cloth material that will withstand the severities of the weather.

We unreservedly advise farmers to post their land. The signs we have prepared are worded to comply with Conservation Law.

To avoid loss of cash in mail, send check or money order with order.

American Agriculturist

INVENTS AIR-BURNING HEATER

Makes Heat for 1c Per Hour

O. G. Steese, Steese Bldg., Akron, Ohio, has invented a revolutionary, new kind of portable heater that gives a roomful of clean, healthful, penetrating heat for 1c per hour. It burns 96% air, only 4% oil, and makes its own gas without soot, smoke or odor. No piping, wiring or installation is required. It is simple, safe and easy to operate. He offers one free to the first user in each locality who will help him introduce it. Write him for particulars. Agents wanted.

KILLS RATS NOTHING ELSE

K-R-O (Kills Rats Only) killed 238 rats in 12 hours on a Kansas farm. It is the original product made by a special process of squill, an ingredient recommended by U. S. Government as sure death to rats and mice, but harmless to dogs, cats, poultry or even baby chicks. You can depend on this. K-R-O in a few years has become America's leading rat and mouse killer. Sold by all druggists on a money back guarantee.

**Brings Eggs All Winter
Lets In Ultra-Violet Rays**

Prevents Disease—Promotes Growth—brings Winter Eggs. Nothing better for laying hens; doubles and triples egg production. Prevents weak legs and disease. Matures chicks 1/3 sooner. Your money back if it doesn't.

**MORE EGGS
Under FLEXO-GLASS**

**Less Than
4% Loss
Out of
2,500
Chicks**

"Flex-O-Glass is valuable in helping our chicks grow rapidly, and one hatch of 2,500 chicks at three weeks showed deaths of less than 4 per cent. We have never heard a complaint against it."—Standard Poultry Journal, Pleasant Hill, Mo.

MAKE YOUR PORCH A HEALTH ROOM

Save Fuel and Doctor Bills

You'll be surprised what wonderful comfort you will get by simply nailing Flex-O-Glass over screens. Flex-O-Glass holds in heat and keeps out cold better than glass. Besides it admits the highest percentage of sun's Healthful Ultra Violet Rays.

Wonderful Porch Enclosure

"I ordered 20 yards of Flex-O-Glass several months ago for my back porch and believe me it is the warmest room in the house. The kids are tickled to death over it."—M. B. Abbey, Webb, Miss.

**Transforms Screen Doors into
Light Storm Doors** "We are delighted with Flex-O-Glass for screen doors. It has turned them into light storm doors. It is all you claim it to be."—Mrs. Geo. Coleman, Rochester, N. Y.

Used in Hospitals "I know how Flex-O-Glass draws heat, for I have been in the Hospital and was taken to sit in the healing glow, and found it so nice."—Mrs. G. Bollis, Aberdeen, S. D.

See Baby Thompson of Poskin, Wis., getting his daily sun bath through Flex-O-Glass.

Whole Farm Flex-O-Glassed

"We use Flex-O-Glass on windows in barn, calf stable and poultry house and we like it. I am sending for 10 yards more."—C. Richards, Oaklandon, Ind.

Better Than Glass

"I have used Flex-O-Glass for 2 years and find it the best glass substitute I can buy. I find it gives better light than glass."—R. E. Hagoe, Madison, Ky.

Repair Broken Windows

Don't spend money for expensive glass that breaks so easily. Just replace the broken panes with Flex-O-Glass. You can do it in a few minutes and have unbreakable windows at 1/10 the cost of glass.

Fine For HOTBEDS

Flex-O-Glass grows stronger plants quicker, which grow when transplanted.

"I use Flex-O-Glass and find I not only have better plants but far stronger than any other gardener here."—B. Benson, Ft. Worth, Texas.

10 sq. yds. at 29c \$2.90
(covers 3x30 ft. or 90 sq. ft.)
20 sq. yds. at 29c \$5.80

Tested and Recommended by the WORLD'S FOREMOST AUTHORITIES

The Iowa State Experiment Station Test

They found that chicks under Flex-O-Glass did not develop leg weakness and that this glass substitute kept heat in and cold out better than window glass.

The Manitoba, Can., Experiment Station Test

They found that chicks under Flex-O-Glass gained a half pound each more than chicks under ordinary glass in a 12-weeks' test. 16 chicks died under Glass out of 50 started, only 3 died under Flex-O-Glass.

The American Medical Association Test

They found that months of severest weathering did not affect Flex-O-Glass in the least in its ability to transmit Ultra-Violet Rays. The Kansas, Ohio and Wisconsin Stations have also secured superior results with the "world's greatest glass substitute."

Dr. Morse

Consulting Chemist of Connecticut for 45 years, wrote: "Congratulations are due you. Flex-O-Glass makes hens lay because the Ultra-Violet Rays which penetrate it make hens healthful, chemically active and increase the oxygenating power of the blood."

The large chick was raised under FLEX-O-GLASS. The small chick was raised under glass. Both chicks from the same hatch and fed the same at Nebraska Experiment Farm.

The British Illuminating Society

divided a flock of hens for 16 weeks and fed both groups the same. The group that received Ultra-Violet Rays laid 497 eggs. The other group laid only 124 eggs. This proved the Ultra-Violet Rays alone, which Flex-O-Glass admits from the sun, brought 373 eggs. "God moves in a mysterious way, His wonders to perform."

TRY FLEX-O-GLASS 30 DAYS—AT OUR RISK

The fairest way we have to prove Genuine Flex-O-Glass quality and benefits to you is to fill your order on a 30-Day Money-Back Test. You take no risk—use it 30 days, if not surprised with results and absolutely satisfied, return it to us and get your money back. That's fair, isn't it?

Our Supply of 10, 20 and 30 Yard Cuttings is Limited. Order Your Supply NOW...

DIRECT FROM THIS AD.

Order your supply now at 29c a square yard. Test Flex-O-Glass 30 days at our risk. Prove all our claims. Order 20 yards or more right now before you forget—before these rolls are gone, and get the free pencil shown below. Perhaps your neighbor can use 10 yards also. We pay postage on 10 yards or more.

DON'T DELAY!

Get your order in at once—today! Flex-O-Glass is the greatest bargain ever offered—at only 29c a square yard. Whether you order 10, 20, 30 yards or more, you are fully protected by our Iron-Clad, Money-Back Guarantee. Send a check or money order today. Give it a 30-Day Trial! Now! We Prepay Postage. Less than 10 yards—35c per yard. All orders filled day received—FREE BOOK "Prevention of Poultry Diseases," and automatic pencil valued at \$1.00, sent with 20 yard order.

LETS IN MORE ULTRA-VIOLET RAYS

—the life-giving rays of the sun—than any other glass substitute (30% more as proved at the Iowa State Experiment Station). And this superior quality is PERMANENT; the American Medical Association found that the severest weathering for months did not affect Flex-O-Glass.

EASY TO INSTALL

All you need is scissors to cut the Flex-O-Glass and a hammer, nails and a few wood slats. No frames to buy or make. No skill required. And you have a lasting protection against wind, rain, sleet and all kinds of weather.

Unaffected By Water

Dip a sample of Flex-O-Glass in water and lay it aside until dry. You will find that it will not turn white and will not take up water. It does not stop the light and will not rot or rust.

Withstands Snow and Sleet

Glass and over an inch of sleet fell on it, my Flex-O-Glass is still O.K. and my egg production shows an increase of 415 per cent, over last year's. (One hen laid 25 eggs in January.)"

Many People Can't Believe the Amazing Results Obtained by Using FLEX-O-GLASS Until They Have Tried It

IT WORKED WONDERS—"I am more than satisfied. Your glass does all that you claim it does and then some. Lots of eggs now and nice healthy chickens. I built a new coop and put in your glass. A difference was noticed at once, and my hens seemed more happy."—Ernest Less, Milford, Wis.

Won't Break or Shatter

Unlike ordinary glass Flex-O-Glass withstands hail, and is stone proof. Poke it—bang it—it still remains unbroken.

We Visit the Jungfrau

Mountain Climbing by Railroad in Switzerland

By L. E. WEAVER

SWITZERLAND is not made up entirely of snow-capped mountains, and its climate is not always severe and rigorous. Perhaps I should not have been surprised to find an almost tropical riot of vegetation and gorgeous flowers and even palm trees bordering the streets and surrounding the homes and hotels of Lugano, but I certainly had not expected to find them. Had not the pictures all shown the snow-crowned mountains and the Alpine-mountain-climbers crawling over the glaciers, and does that not

L. E. Weaver

sound like a cold climate?

I believe that one must read a very great deal about a country and read very carefully and see a great many pictures to get anything like a true conception of it. And even then, a visit is needed to fill in a lot of skips and give the complete picture.

As a matter of fact, Switzerland has a great range in climate. The south slope of the Alps and especially the valleys have essentially the same balmy climate as Italy, while the north part of the country does have some real winters. But in August when we saw it the country was beautifully green everywhere. There was evidence of plenty of rainfall in the bright green pastures and meadows and even high up the

mountainsides. The thrifty Swiss farmers were out mowing the second-growth hay though it was not more than six or eight inches tall as a rule. There was very little alfalfa and they were mowing by the only means they have, the scythe. In most cases that is the only way they could mow, since the small, irregularly-shaped fields are poorly adapted to mowing machines, to say nothing of their often being on steep hill-sides.

But I started to tell of our trip to the

Jungfrau. It is one of the comparatively few peaks that are snow-capped; I mean few in comparison with the total number of peaks. As we came up into the Alps from the south and the train climbed the grades of the valleys and dodged from one tunnel to another we saw towering peaks on all sides, and through the occasional breaks between the mountains we saw peaks and peaks beyond, but only once in a great while a glistening white one.

Apparently a peak must rise above the eleven or twelve thousand foot line before the snow accumulates to become perpetual.

The first thought is "why that peak is no higher than the rest." That is the effect of distance. You must be fairly close to them to realize their height.

We went to Interlaken to see, and possibly climb the Jungfrau. Long before we reached the city we could see the beautiful white mountain towering in the background and shining in the brilliant afternoon sunshine. The ascent of the mountain must be made in the morning so we filled in the afternoon by strolling out to see the town and get some walking-sticks with short spikes in the end, not that they are exactly needed, but because all the other tourists

QUILTS

*are small comfort
to a freezing
radiator...*

WHEN winter winds blow keen and cold, your car's in danger! Blankets and quilts can't keep it warm. For sure protection all day long, and every night, it needs a permanent anti-freeze. Some anti-freezes are safe for a spell, but they evaporate or boil off during a thaw . . . and again your car is defenseless against penetrating cold.

This year, use Eveready Prestone, the ONE-SHOT anti-freeze. A single filling, put in long before cold weather comes, if you wish, will safeguard your car from fall to spring. It can't evaporate or boil off. It won't overheat your engine. But it *is* time-tried and proved protection.

The Byrd Antarctic Expedition used Eveready Prestone at the South Pole, where it gave satisfaction at 70° below zero. Operators of large fleets of busses and trucks have used it for years. They have found it not only completely effective, but *economical*.

Eveready Prestone *is* economical. It comes to you undiluted, and one filling is all that's required. Compared with other anti-freezes, a considerably smaller quantity is needed. For mild climates and small cars, it is available in small-size cans. Under such conditions, a car can be protected for as little as \$2.50.

Eveready Prestone is different from all other anti-freezes. It contains no alcohol or glycerine. It was developed in the laboratories of the Union Carbide and Carbon Corporation, and is distributed by National Carbon Company, Inc., makers of Eveready Flashlights and Radio Batteries.

This year, Eveready Prestone is *green* in color, so that it can be readily identified.

Forget those freezing worries *now*. Take the simple precautions necessary to make your cooling-system water-tight, and put Eveready Prestone in today!

★ ★ ★

The Eveready Hour, radio's oldest commercial feature, is broadcast every Tuesday evening at nine (Eastern standard time) from WEAJ over a nation-wide N. B. C. network of 27 stations.

NATIONAL CARBON COMPANY, INC.

General Offices: New York, N. Y.

Unit of Union Carbide **UCC** and Carbon Corporation

9 POINTS OF SUPERIORITY

1. Gives complete protection.
2. Does not boil off.
3. Positively will not damage cooling-system.
4. Will not heat-up a motor.
5. Circulates freely at the lowest operating temperatures.
6. Will not affect paint, varnish, or lacquer finishes.
7. Non-inflammable.
8. Odorless.
9. Economical—one filling lasts all winter.

What's Wrong With the Apple Market ?

U. S. Crop Slightly Above That of Last Year But Still Below Average

AS we get into the apple harvesting period, it becomes increasingly evident that the effect of the drought has been somewhat over-emphasized in most of the important apple-producing states of the Union. On the other hand, the shortage of apples in the Shenandoah-Cumberland area seems to become greater with each report from that area.

According to the October 1st report by the United States Department of Agriculture, the 1930 commercial crop of apples is now estimated at almost 32 million barrels. This is an increase of over a million barrels more than was expected on the 1st of September, 1930. The 1930 commercial crop of apples is now estimated to be about 2,851,000 barrels greater than in 1929, an increase of about 10 per cent (see accompanying table). The average commercial crop of apples in the United States for the past 5 years has been about 32½ millions of barrels, so the 1930 crop promises to be about 2 per cent less than a normal crop.

Production Differs from 1929

A glance at the figures of apple production for 1930 shows some striking variations from last year's crop. With the exception of Maine and Vermont, all of the northeastern states, from Delaware and Pennsylvania north, have appreciably larger commercial apple crops this year than in 1929. New York leads with an increase of 1,451,000 barrels, New Jersey and Massachusetts each have an increase of over 400,000 barrels, and Pennsylvania has about 300,000 more. For this entire area, the commercial crop this year is almost 3 million barrels greater than in 1929.

The picture in the Shenandoah-Cumberland Valley, however, presents an entirely different appearance. In Maryland, Virginia, West Vir-

By DR. M. P. RASMUSSEN
New York State College of Agriculture

ginia, Kentucky, North Carolina, and Tennessee, the commercial crop is estimated to be 2½ million barrels less than last year. Roughly speaking, the shortage in these 6 states offsets five-sixths of the increased crop in the northeastern states.

Central West Situation No Better

Out of 12 states in the central west, only Ohio, Indiana, Illinois and Arkansas report increased apple crops compared with last year, and the

Estimated Commercial Production of Apples in Competing States, as of October 1, 1930, with Comparisons for 1929, and the 5-Year Period, 1925-29.

(Figures are in thousands of barrels)

State	Average production 1925-1929	Production 1929	Production Oct. 1, 1930	Gain or loss 1930 compared with 1929
BARRELED AREA				
Maine	506	692	623	loss 69
New Hampshire	225	198	275	gain 77
Massachusetts	642	567	984	gain 417
New York	4,621	3,404	4,855	gain 1,451
Pennsylvania	1,092	762	1,063	gain 301
Maryland	444	455	279	loss 176
Virginia	2,718	3,100	1,680	loss 1,420
West Virginia	1,334	1,400	608	loss 792
New Jersey	668	430	849	gain 419
Delaware	411	287	489	gain 202
Michigan	1,216	1,206	995	loss 211
Ohio	604	247	310	gain 63
Arkansas	398	220	277	gain 57
Missouri	482	380	283	loss 97
Kansas	302	288	120	loss 168
Illinois	1,067	840	936	gain 96
Tot. above barreled	16,630	14,476	14,626	gain 150
BOXED AREA				
Washington	8,611	8,300	10,464	gain 2,164
Oregon	1,294	750	1,635	gain 885
California	1,684	1,471	2,147	gain 676
Idaho	1,550	1,650	1,169	loss 481
Colorado	858	720	312	loss 408
Utah	176	80	195	gain 115
New Mexico	200	252	131	loss 121
Montana	87	125	75	loss 50
Tot. above boxed	14,460	13,348	16,128	gain 2,780
Tot. U. S. barreled and boxed	32,563	29,011	31,862	gain 2,851

increase is only 222,000 barrels. The remaining states in the north central and Mississippi Valley-Ozark Region apple belts have appreciably smaller crops than last year. Michigan leads the decline in this area, closely followed by Kansas and Missouri. This part of the country is now estimated to have about 425,000 barrels less than last year.

Total Barreled Apple Production Little Changed

From the foregoing it is apparent that while the location of volume of production of barreled apples has changed decidedly this year, compared with 1929, the actual total commercial production of barreled apples this year is only 71,000 barrels greater than last year. It follows, therefore, that any surplus production of apples this year, is not due to production in the barreled apple areas.

When one analyzes the data from the boxed apple regions, however, one gets an entirely different slant on the situation. The State of Washington is reported to have one of the largest and finest apple crops ever produced in that State, about 6.5 million boxes greater than in 1929, and about 5.5 million boxes greater than the average crop of the past 5 years. The 1930 apple crop in Oregon is more than double the short crop of last year and also about a million boxes above the normal of the past 5 years. The 1930 apple crop in California is about 1/3 larger than last year and almost 1.4 million boxes above its 5-year normal crop. There is, then, an increase in production in the Pacific Coast States of 3.7 millions of barrels (or over 11 millions of boxes) more than last year.

The states in the Inter-mountain areas, however, have not fared so well. Production in Idaho shows a decrease of almost 1.4 million boxes.

How to Start Improving Your Pasture

Suggestions From the Experiences of Other Dairymen

By J. B. ABBOTT

WE here in America admittedly are somewhat more subject than is northern Europe to periods of combined heat and drought in late summer which retard the growth of grass, but not sufficiently so to preclude successful operation of the system. Normally our droughts are not of long duration, nor is Europe by any means exempt from drought. The reputed great climatic superiority of northern Europe and the British Isles with respect to grass production is more or less of a myth—and, on the whole, more rather than less.

In broad general terms, the grass country of northern Europe and the British Isles, like that of the Hay and Pasture Belt of the northeastern part of the United States, is grass country mainly because of being more or less unfit, in one way or another, for any more profitable crop rather than because of special adaptation to grass. The unfitness may be physical, as in the case of land too steep or too stony for arable crops; climatic, as in the case of extreme northern latitudes; or economic, as in the case of small holdings which are unable to continue growing wheat, for example, in competition with extensive agriculture on newer lands; but in either case the unfitness is there and it, rather than special adaptation to grass, is what makes a country into a grass country.

The fact is, almost any country except the far South and the arid regions is pretty good grass country, if sufficient plant-food is supplied, and there simply is no sense at all in believing that the British Isles and northern

Europe have some marvelous climatic advantage in grass culture which permits them to have better pastures than we can hope to have on this side. They have better pastures mainly because they treat pasture as a crop which is worthy of some care and attention and we have poorer pastures because, for the most part, we seem content to "accept the gifts the gods provide" and let it go at that.

Virtually all of the tests of intensive pasture fertilization which have been made in recent

years in America bear out the assertion that we can get about as good results as they get in Europe. This year the average green weight yield per acre of pasture land the last of May in the case of 41 newly started pasture fertilization tests in the New England States, New York, Pennsylvania, and Maryland, was 4892 pounds with fertilizer and 1836 without it.

From the economic and animal nutrition standpoint the intensive grassland system is as well adapted to America as to Europe. As in Europe, so also in America, the dairy cow must have plenty of feed in order to produce, and in so far as the pasture falls short she must be fed in the manger; and manger feeding always costs more than pasturage, even allowing for liberal fertilization of the pasture.

Some reader may be disposed to question the assertion that manger feeding costs more than liberally fertilized pasturage. Ordinarily it figures out about as follows:

Pasture Feeding One Cow

Use of \$50 worth of land.....\$ 5.00
Fertilizer 15.00

Pasturage for season (120 days).....\$20.00
Cost per cow-day.....16 2/3c

Manger Feeding One Cow

36 pounds silage @ 1/3c.....\$0.12
12 pounds hay @ 2/3c..... 0.08
7 pounds concentrates @ 2 1/2c. 0.175

Cost per cow-day.....\$0.375
Difference per cow-day in favor
of pasture feeding.....\$0.208

Change the ration and the values to fit any ordinary set of farm conditions.
(Continued on Page 18)

Why Not Give It a Trial?

THIS is the second article by Mr. Abbott on pasture improvement. The author traveled for months during the past season through several of the intensive dairy countries of Europe to study the pasture improvement methods. The article on this page discusses the possibility of applying some of the European methods to our pastures here in the North and East.

The need of pasture improvement is an outstanding dairy problem never more apparent than during the past dry season. Of course, there is no need for better pastures during the couple of weeks when they are at their best in June. The great problem is to extend the pasture season, that is, bring on the grass earlier and make it last longer. Experiments have proven, also, that it is possible through fertilization greatly to improve the quality of pasture grasses.

Experimental work with pastures both in Europe and America have gone far enough to show that any dairyman can give attention to this problem with great profit. Mr. Abbott tells how to get started. Note particularly what he says about fencing. He does not mention the use of farm manure, which, we are sure, can be used with profit. Without question the plentiful use of lime on most of our soils is also necessary. As to commercial fertilizers, super-phosphate comes first. Some authorities disagree as to the need of nitrogen and potash. This need will vary with the type of soil, but Mr. Abbott's study of many pasture demonstrations both in this country and in Europe, indicate that best results are usually had in pasture improvement with the liberal use of complete fertilizers.

We are going to continue to discuss this problem with the hope that we can get thousands of our dairymen readers to fence off at least a small part of pasture this next season and give pasture improvement a real trial.—The Editors.

A Time When You Need This Help

DURING the past few weeks thousands of Farm Bureau committeemen representing nearly every rural community in the State of New York have been in conference planning in carefully organized detail Farm Bureau work for the coming year, and making arrangements for the annual meeting and membership campaign.

There must be something to an organization and to a program when a hundred or more leading farmers of each county as Farm Bureau committeemen will spend so much time planning the program and ways and means of putting it into effect. There are nearly 7,000 of these committeemen in New York State alone. There must be something to an organization also that has 40,000 good farmers of the State as members and back of its program. The answer is that few organizations have done more for rural life in every state than the County Farm Bureaus, and most farmers are beginning to realize this.

There are those, of course, who criticize Farm Bureau work, and always the pet criticism is the complaint that they increase production. The fundamental object of Farm Bureau work is not to increase quantity but to improve quality. When all is said and done, there are just two ways of making money on the farm. One is to sell the product at good prices, and the other is to keep the cost of producing it down. The County Farm Bureaus have done effective marketing work, but their biggest service has been to help farmers increase the quality of their products and to produce those products at low cost.

During the next year it will be increasingly hard to get even fair prices for farm products. The farmers who will come through best will be those who have used every means to improve the quality of their products and to reduce their costs of production. This is the time, therefore, when an organization like the County Farm Bureaus can be especially helpful, providing, of course, that farmers work with them and use their services.

Be Sure Your Gas or Oil Land Lease Protects You

A GREAT gas and oil boom is on chiefly in the counties of Tioga, Chemung, Tompkins, Schuyler and Yates, in New York. It is said that the city of Elmira is much excited over new discoveries of gas in a section extending sixty miles in several directions from that city. The Elmira hotels are full of geologists and representatives of oil companies who are trying to procure land leases. Several oil companies are interested including the Columbia Gas & Oil Company, the Standard Oil Company, the Dougherty Companies, and several others. High hopes are entertained for developing a new oil and especial-

ly a new gas section because gas already has been found in large quantities in this territory.

We are receiving many inquiries from farmers as to the fairness of leases which oil companies are offering for the oil and gas rights on farmers' lands. Our most emphatic advice is *go slowly in signing any leases*. Whether it is a good or poor lease from your standpoint, no possible harm can be had from delaying your signature until you are absolutely sure that it safeguards your interests. If you are asked to sign such a lease, consult a local lawyer. A few dollars spent in this way may save you hundreds later. It goes without saying that you should be sure of what you are signing and this means that you should read and study the lease carefully. Do not take anybody's word as to what it says.

We have found that many farmers have been disappointed because representatives of the oil companies have told them that they were expecting to strike oil, and the lease provides very liberally for the farmer in case oil is struck. But we are told the real object is to drill for gas with little or no expectation of finding oil. The gas lease is usually much less advantageous from the farmer's standpoint. The usual provisions of the gas land lease offered to the farmer are, first, a small rental of so many cents per acre; second, a guarantee of \$100 a year to the farmer for every well where gas is found, and third, a guarantee that in case gas is located, the farmer can have all he can use free of charge. We understand that these provisions are fairly standard and are the ones that have been offered for years in the older gas sections.

We are having a study made of several of the typical gas and oil leases now being offered to farmers by our lawyers, and will have more to say on this subject later. In the meantime, we reiterate our advice—not to be in a hurry.

Assessed Valuations Used to Figure Your School Tax

OUR letters indicate some misunderstanding about school tax rates and assessments.

School taxes in one-room districts are levied and collected in the same way that they have always been—that is, the levy is made on *assessed* valuations.

Some of our friends are confused because of the true or actual valuation clause in the new State Aid Law for one-room school districts. You will remember that this new law provides that the one-room school districts of the State may spend for school expenses a maximum of \$1300 for 1929, \$1400 for 1930, and \$1500 for 1931 and for each year thereafter. Of this sum the district must raise by local taxation a four mill tax on its *true* or *actual* valuation, the State to pay all of the remainder of the total necessary for running the school. The true or actual valuation clause is used simply to equalize taxes and valuations, as between districts in the same county, and to determine the amount of State aid your district shall receive. The assessed values which are almost always lower than true values, are used as in former years by the local authorities to determine your tax.

For Better Dirt Roads

OUR friend, O. H. Benson, Director of the Department of Rural Scouting of the Boy Scouts of America, writes so emphatically about the need of better dirt roads that we are passing his statements herewith on to you. It is high time that farmers living on dirt roads had their share of road service. New York State, recognizing this problem, re-distributed its road moneys so that the majority of the poor towns of the State are receiving greatly increased aid for their dirt roads. The State also is conducting experiments trying to determine the best and cheapest way of improving the dirt road, but these efforts are only a start. We must all get back of this job of improving the town roads. Here is Mr. Benson's letter:

"It seems to me that one of the great needs of America, which is of immense value not only to the

farm, but to the general public as well, is the extension of road-building through the rural areas. Up to the present time the great difficulty has been that most of our road-building has been done to accommodate the people who wish to travel from city to city, and from large town to large town, with very little thought of building roads to help the farmers. At this particular time when we need to give employment in a constructive and productive way to the three and one half million unemployed in America, it seems to me that those interested in agriculture should work hard for this particular issue of road-building, otherwise, much of the money will be spent where it is not so badly needed.

"It is estimated that the Federal Government will spend \$1,750,000,000 in the building of roads on a national basis for 1930. Here is hoping that the powers that be will give their leadership to the program of helping farm families who are off the main auto pikes in the country to get a little bit of road building for marketing their food products. There are 6,250,000 farmers, and over 5,000,000 of these are cut off entirely from the use of good roads. Most of the year their roads are muddy and full of ruts and snowdrifts.

"Greater equity in road building must be more courageously championed by people who have an intelligent interest in and understanding and sympathy with farm people and their problems. In addition to better marketing facilities, there are the other questions of farmer road needs such as for the education of their children, the social recreation and church life of rural people, and the building up of American agriculture on the basis of its value to the whole nation. Here is a program and challenge for farmers and their friends to cooperate with in securing greater equity in road building."

Building Power Lines Across Farms

"What are a farmer's rights when a power company wishes to build a line across his farm?"

—A. E. F.

THIS is typical of many letters that our Service Bureau receives during the year on this question. Let us say first, that we have found that many of the power companies want to do the right and fair thing when putting up new lines across farm property. We have found, also, that there is occasionally a farmer who is unreasonable in his demands. It is a question of fair play on both sides. There are, however, some companies who try to ride over the farmer's rights in building their new lines. In some cases, it is not the officers of the company itself who are to blame, but the trouble is due to their untactful and often-times bullying representatives in charge of construction gangs.

Every farmer should know his rights in cases of this kind. For example, no electric company can build a transmission line in New York State until it obtains a franchise from the town board of the town through which it passes. Further than this, it cannot exercise that franchise until it has secured the approval of the public service commission after a public hearing. Then the power company still has no right on your property until it has paid you for the privilege.

If the representatives of the power company are courteous and apparently fair, we know that farmers will meet them halfway. Rights for passage across farms should not be held at too high a price, yet farm owners are entitled to a fair price for damage done. Always it should be borne in mind that the extension of a power line means progress, and that every community is the better on the whole because of the coming of light and power.

Eastman's Chestnut

IF you have a friend who operates a soda fountain, try this on him some time.

Two men went into a drug store where they were well known, and said to the manager:

"We've made a bet of the sodas for us two, the loser to pay for them. Can we have the sodas, and pay when the bet is decided?"

"Sure", said the manager.

After the two had had their sodas, the manager asked:

"What is that bet of yours?"

"Well, Jim, here, bets that when the Woolworth Building falls it will fall toward the North River, and I'm betting that it falls the other way."

Honoring a Fundamental Occupation

THE name "Master Farmer" brings responsibilities as well as honors. Neighbors, as well as casual visitors, have a habit of looking with critical eye at the home, the flocks, and the fields of the Master Farmer, and observers find fault, mentally if not verbally, with conditions that would cause no comment on other farms.

Perhaps this thought was in the mind of a Master Farmer when he said, "We have had more than the usual number of callers since American Agriculturist honored us and I cannot help wondering whether or not they found what they expected to see. We do not feel that we have anything unusual here. We do try to run the farm on a profitable basis and in addition to find time to enjoy life, to give our

mers, men are more important than farms. If Mr. Salisbury were to be characterized in a single sentence, we would say that there is a man who is never so busily engaged in making money that he cannot find time to work for the betterment of his community. In fact, on a day that a representative of the board of judges called on him, he had spent the entire forenoon of a beautiful fall day in working at the local Grange hall. In addition

Morris took the responsibility of running it. The size of the farm has gradually increased, modern conveniences and comforts were added to the home, and when Mr. Morris' two sons were married, two adjoining farms were purchased and the three are now operated on a partnership basis.

This farm, which no one would claim lies in the most fertile section of the State, has been built up until it grows excellent crops. The principal sources

their Schuyler County home. There is no question as to their sincerity as they could live comfortably in the city if they wished to do so.

In common with other Master Farmers, Mr. Morris has found time to serve his community well. He has, at various times, acted as master, overseer, and trustee of his local Grange. He has been director of the Schuyler County Farm Bureau and supervisor of his township, and has taken an active interest in his local school.

* * *

WESLEY J. YOUNG,
Cherry Creek, Chautauqua County.

TO the farmer who has always lived in flat Genesee County, the prospect for farming in hilly Chautauqua County might look unfavorable. Yet there are good farms there and one of them is owned by Master Farmer Wesley J. Young of Cherry Creek.

We doubt if we are revealing any secrets when we pass along the story told us by a firm friend of Mr. Young. Mr. Young, it seems, purchased his present farm about twenty years ago on very limited capital. Financial backing for the venture was secured on a strictly business basis because of Mr. Young's excellent record of industry, ability, and integrity. The faith of the man who advanced the money has been amply justified by the profitable dairy business which has been built up.

In fact, Mr. Young did more than build up the business. Without in any

Mr. J. L. Salisbury

children the opportunity to get an education, and to interest ourselves in our community." And, may we add, that just about covers those things by which Master Farmers are chosen.

There may be farms that make more money than this farm does—there certainly are many that make much less—but after all we are naming not Master Farms, but Master Farmers.

At the same time, we would like to emphasize that the entire Master Farmer movement is not designed to single out and honor an individual, but rather to center attention upon the dignity and importance of agriculture. Farming is a fundamental occupation and one which requires real skill.

A few weeks ago on this page, we told you a little about some men who received the Master Farmer award in 1929. Here are the pictures and records of four others. They are human and, therefore, by no means perfect, yet their accomplishments should be a source of inspiration to every man who tills the soil.

* * *

J. L. SALISBURY,
Phelps, Ontario County.

THERE are many successful farms in fertile Ontario County, yet no one could travel over Mr. Salisbury's farm without identifying it as one of that number. Apples are an important source of income and the orchards give evidence of careful and intelligent attention. Cash crops are also important, including potatoes and cabbage. In addition, there is a fine flock of eight hundred hens.

However, in naming Master Far-

Mr. and Mrs. W. H. Morris and two of their children

to his interest in the Grange, an active interest is taken in Farm Bureau work, Boy Scouts, church, and school.

While it is, in no sense a requirement that a Master Farmer have a son working with him, the fact that the farm business and home life have been made attractive enough to interest the next generation in farming is, we feel, important. Mr. and Mrs. Salisbury have given each of their four boys every educational opportunity, and one of their sons is at present working with them on the home farm.

Neither is it essential that a candidate for the honor of Master Farmer receive more than one nomination, but it is interesting in this connection to know that four people who know Mr. Salisbury well, nominated him for the honor. Along with his nomination one man says, "He has a productive, well-managed farm, a very fine capable wife, and four boys. He is active in the Phelps Presbyterian Church, has been supervisor of the town, and is always interested in farmers' organizations."

* * *

W. H. MORRIS,
Alpine, Schuyler County.

THE success which has come to Mr. Morris tends to prove that the necessity of assuming responsibilities at an early age is not always an insurmountable handicap. His father died when Mr. Morris was ten years old. The farm was share-rented for five years and at the age of fifteen Mr.

of income are sheep, hogs, beans, and poultry.

Too often, in our opinion, people are engaged in farming for the purpose of accumulating money enough to move

Mr. and Mrs. John Child and family

to the village or city. In refreshing contrast to this Mr. and Mrs. Morris are emphatic in stating that no place on earth is so attractive to them as

way seeking the job, he was practically drafted to act as town supervisor. In addition, he has acted as director of the County Farm Bureau, clerk of the local school district, steward in his Grange, and has taken an active interest in 4-H Club work.

Mr. Young, we are told, is an ardent baseball fan and goes to games with his boys, one of whom already shows considerable ability as a player. It is difficult to conceive of a better basis for a fine future partnership between father and son.

* * *

JOHN CHILD,
Malone, Franklin County.

TO many of us northern New York speaks of short growing seasons, heavy snows, and extreme cold. The seasons there are a little more rigorous than they are in the southern part of the State, yet to the north of the Adirondacks is a fine dairy section where the soil and climate are also fitted for the growth of first-class potatoes.

John Child of Malone lives on such a farm. Bought on limited capital which Mr. Child had earned and saved, the farm business has been improved, conveniences and comforts added to the fine old stone house, and educational advantages given to a family of four fine youngsters.

The Holstein herd is partly grade

Mr. and Mrs. Wesley J. Young and family

Crack Cows in U. S. Gov't herd jumped in milk yield after

Conditioning..

says Dr. Woodward

Dr. B. T. Woodward, formerly veterinary practitioner of the U. S. Bureau of Animal Industry; and for the dairy herd at the U. S. Experimental Farm, Beltsville, Md.

**Even the Best Bred Cows
Need more than Good Food**

**Medicine and minerals prevent
Feed-waste, improve resistance**

In every herd potentially great milkers are grafting their keep from the few real producers that are robust enough to carry on against the terrific strain of modern forcing for greater yields.

Kow-Kare wards off dairy losses . . . increases dairy profits . . . by providing the cow owner with an inexpensive and safe drug-and-mineral conditioner to stimulate the digestion and assimilation. With these key functions performing naturally, the maximum normal yield is made possible; disease and disorders are reduced by increasing the bodily health and resistance.

Kow-Kare is a scientific preparation of Iron, the great blood tonic, combined with potent drugs, roots, herbs and pharmaceutical minerals. Dosages for regular conditioning use are small and very inexpensive because Kow-Kare is concentrated and without "filler" to make bulk. Your milk check can be increased surprisingly by regular Kow-Kare conditioning to elevate sub-normal cows to full normal yield.

At Calving time the milk-producing process and the urgent call for the nourishment of the growing unborn calf divert so much vitality from the mother that her own bodily functions are reduced in efficiency. Outside aid is especially required at this critical period. Kow-Kare supplies this acutely-needed support in stimulating the appetite and aids most if fed regularly with the ration for a few weeks before and after calf-birth.

Sold by feed, drug, hardware and general stores. \$1.25 and 65¢ sizes. Mailed post-paid if your dealer is not supplied.

Dairy Association Co. Inc.
Dept. 19, Lyndonville, Vermont

KOW-KARE

The concentrated . . .

open-formula conditioner

[Warning—Do not make the mistake of choosing a conditioner or "tonic" for bulk or low price. This concentrated product of established reputation will provide greater medicinal action at lower cost and save time and disappointment.]

At the Government Dairy Experimental Farm at Beltsville, Md., where supervision is exceptionally close and each cow's rations are mixed according to a special formula, it was found that some individuals were unable to maintain their natural level of production, particularly in winter and early spring. Something besides feed was needed and this seemed to be supplied when they were treated with a prescription giving them special appetizers, tonics, laxatives and minerals that may have been deficient in their feed.

The effects of this treatment were the stimulating of the cow to eat a larger amount of feed, increase the flow of digestive juices and the drinking of more water. This could only mean one thing . . . increase of milk yield to the normal maximum, with the off-condition cows returned into the profitable class where they belonged.

With the A. A. Fruit Grower

The Mouse and the Rabbit Problem

What is the most satisfactory method of stopping damage to fruit trees by mice and rabbits?

THE surest way seems to be to protect the young trees with wire netting. The most satisfactory material, we understand, is wire hardware cloth with from two to four meshes per inch. This comes in rolls 36 inches wide. The roll can be cut in two down the center and then these 18-inch strips can be cut into pieces 14 inches wide. These can be rolled around the trunk so that the long way is up and down the tree. The lower edges can be pushed into the soil and the wire cylinders can be kept in place by twisting a wire around the middle.

Just as good results can be secured by the use of wood veneer strips or even building paper, but of course, they have to be renewed every year. You will have less trouble from mice and rabbits if grass, litter and trash are all hoed away from the base of the tree before winter sets in.

Reports come to us of good results from poisoning mice and other rodents. Care, of course, must be taken in using this material. The following formula is sometimes recommended:

- 1/8 oz. powdered strychnine
- 1/8 oz. baking soda
- 1 qt. rolled oats or oat flakes
- 6 tablespoonfuls tallow
- 2 tablespoonfuls paraffin

Sift and mix the strychnine and soda and then mix well with the oats. Heat the mixture, and stir into it 6 tablespoonfuls of melted tallow and 2 tablespoonfuls of melted paraffin, until each flake is coated with grease. When cool, the flakes will be both waterproofed and inviting to the mice.

By putting a teaspoonful of this bait in tin cans with the top partly cut away, the mice can get them but larger animals are protected. A little time given to the problem now may save you a lot of bridge grafting next spring.

Fall or Spring Setting?

Do you advise setting currants and gooseberries in the fall or in the spring?

ONE authority, at least, recommends setting these fruits out in the fall. They state that growth of currants and gooseberries starts very early in the spring and that it is an advantage to have them established in the fall so that they are ready to grow at first warm weather.

If they are not planted in the fall they should be set out very early in the spring, in which case it helps to have the ground plowed and fitted in the fall. The same authority recommends one-year-old plants secured from a reliable nursery.

What's Wrong With the Apple Market?

(Continued from Page 3)

Colorado has 1.2 million boxes less than last year. Montana and New Mexico together are short about 1/2 million boxes. Utah has an increase of about 345,000 boxes, so the net supply in the Inter-mountain states will be about 2.8 million boxes below last year. The net increase in the entire boxed apple area is estimated to be 2,780 barrels or about 8.3 million boxes, and practically all of the increase is in the Pacific Coast states.

Canadian Crop Smaller

According to the September 1st estimate of the Canadian Department of Agriculture, the 1930 Canadian apple crop will be almost 25 per cent smaller than last year. The situation in Canada is very similar to that in the United States, viz., the eastern provinces have from 1/2 to 3/4 as many apples as last year, whereas British Columbia has al-

most 24 per cent more. The Canadian-Pacific Steamship Line has just announced a new freight rate schedule on Canadian apples going to the United Kingdom. The new rate on Canadian apples is 80 cents per barrel, which is 10 cents cheaper than the rate for American barreled apples. A recent report in a leading trade paper indicates that the already short crop of apples in Nova Scotia had been materially damaged by heavy storms last week. The bulk of Canadian barreled apple exports comes from Nova Scotia. Competition from this area during 1930-31 is not likely to be as serious as it was last year, despite the lower ocean rate.

Foreign Crops of Apples and Pears Smaller

According to reports issued during September by the Foreign Division of the United States Department of Agriculture, prospects are for a considerably smaller apple crop both in England and in continental Europe, and the pear crop is also below normal. If economic conditions were anything like normal in England and in continental Europe, a fairly good export season might reasonably be expected. Despite the fact that the economic depression is even more severe in Europe than in the United States, export shipments of apples thus far this year have held up very well compared with last fall. Up to the 3rd of October, exports this year totalled 405,706 barrels and 1,166,389 boxes compared with 474,771 barrels and 605,766 boxes to the same date last year.

It is probable that the increased apple crop, as reported on the 1st of October by the United States Department of Agriculture, had already been anticipated by members of the produce trade before the figures were published. The larger crop this year is, undoubtedly, responsible for some share of the considerable reduction in apple prices which apple growers find facing them this year. But how account for the other share? There can be little doubt that the economic depression through which we have been going during the past 13 months, is primarily responsible for the situation. Even crops like potatoes, which are in much smaller supply than last year, are bringing much lower prices. It is probable that many people are out of employment and do not have the money with which to buy. It is equally as probable that many people who are fully employed and who have the money, are saving their funds because they fear what the immediate future may hold for them in the way of possible unemployment.

It does not seem likely that market supplies of apples this year are responsible for the lower prices, since the volume of apples handled thus far has been less than that of a year ago. Up to October 5 of this year, carload shipments of eastern barreled apples were 6,733 carloads behind those of last year. Boxed apple shipments are about 4,800 carloads ahead of last year, but for all apples, the shipments are about 2,000 carloads less than those shipped to the same date last year.

Future Prospects

The 1930 commercial apple crop in the United States, while it is larger than that of last year, is still somewhat less than the average or normal crop of the past five years. At present prices, apples certainly constitute one of the cheapest forms of wholesome fruit. If business conditions improve to any appreciable extent during the next 5 or 6 months, it seems likely that apple prices may benefit therefrom. Apple growers will probably find it desirable to study economic conditions very carefully during the next six months.

WE GUARANTEE THE FOUR VITAMINS EVERY LAYING HEN NEEDS

In this feed, Vitamins A, B, D and E are **KNOWN** to be **Present and Potent**

Four vitamins are essential to everything a poultryman prizes. Flock health, eggs, vigor, fertility! What a price to pay if there's any question about the vitamin value of feed!

Pratts have settled the vitamin question. They purposely *make sure* of enough Vitamins A, B, D and E to keep up health, laying ability, vigor and fertility.

We don't say that all other mashes lack vitamins. We do say that Pratts are the first to *make sure* that an effective amount of these four essential vitamins are in every bag of laying mash.

The nutritive value of Pratts is well known and undisputed. By scientific processes and special ingredients it is now guaranteed complete in vitamins. Think what that means. It means enough sun Vitamin D to keep birds vigorous, strong and laying during the cold dark days of winter. You need not buy cod liver oil or any other extra vitamin mixture for Pratts.

And of very great importance is Vitamin E. Where feed is deficient in

Vitamin E, unhatchable eggs result. Now at no extra cost, simply by feeding Pratts laying mash instead of some other, you can be sure that breeders won't give you unfertile eggs because of any vitamin lack in feed.

Vitamin E can be stored in the body long in advance of the hatching season. When fertile eggs are at stake, why not be sure hens are getting a surplus from now on? Every mouthful of this mash is more insurance that you'll get fertile eggs next January and February.

Pratts now provide the choicest cereals, the best of animal proteins with a great big

plus sign — **COMPLETE IN VITAMINS.** Yet it costs not one penny more than any good feed.

We will be glad to mail you the nearest Pratt dealer's name. They all carry other feeds well worth knowing. A splendid broiler mash that grows fat broilers quick, either in crates or semi-confinement. And a buttermilk fattening mash wonderful for preparing holiday poultry.

**THE POULTRYMAN'S VITAMIN GUIDE—
FREE**

A Good Herd Is Worthy of a Good Cream Separator

WITH butter-fat prices on the upgrade you want to make up for the period when prices were low. You want to get the most cash in your pocket for the cream your herd produces. A McCormick-Deering Cream Separator gives any dairyman a big advantage. In test after test it has proved itself to be the *closest-skimming cream separator*. It skims cream with the highest possible butter-fat content—and that's what counts when you are after profits.

Every part of the McCormick-Deering is designed for the utmost operating efficiency. It skims milk at variable temperatures, whether hot, cold, or in-between, and it gets all the cream every time. The bowl is perfectly designed and sanitary. Minimum power runs the McCormick-Deering. Perfect balance and ball bearings at all high-speed points make it the *world's easiest-running cream separator*.

The McCormick-Deering pays for itself by the cream it saves. See the McCormick-Deering dealer now or have him bring a machine out to your farm and demonstrate it.

With the A. A. DAIRYMAN

Blood Will Tell

By JAMES STARK,
Dutchess County Dairyman

IN response to a letter from the American Agriculturist, I will endeavor to give a very brief outline of the fundamental factors which have enabled me to secure the results mentioned in the recent Dairy Improvement Association reports.

The winning combination is a dairy farmer on a good dairy farm, employing good farm methods in the production of the various farm crops which are to be fed to a well-bred and managed herd.

The writer through heritage, observation, and training has an attachment to the farm and farm life and a fair knowledge of dairy farming. A high school course, with a little more than a year at Wesleyan University and a winter course at Cornell Univer-

Results Speak for Themselves

THE best possible proof of the soundness of any recommendation is the actual results secured by those who have tried it. We have frequently mentioned the Dairy Improvement Association as a means of increasing profit, so we are more than glad on this page to give you Mr. Stark's own story of what he has accomplished through membership in such an association.

sity, formed a basis to which I have added through cooperation with the Farm Bureau and practical experience. What I have lacked in intelligence I have endeavored to make up with diligence and determination. A few years ago I produced 103,000 pounds of milk in 120 days from a herd of 21 cows, doing all the work myself.

In the Family for Generations

Starkdale Farm has been the home of the Stark family since before the Revolutionary War. The farm consists of some 400 acres, with a complete set of farm buildings, equipped to handle the registered herd of Holstein cattle with efficiency and comfort. Dairy farming has been carried on here ever since the New York Milk Shed reached up these sixty miles to Pawling, New York, for its milk supply, back in the 80's. A good crop rotation consisting of corn for silage, oats and barley and hay has been carried on. The farm fertilizer has been returned to the land with the addition of some commercial fertilizer, chiefly acid phosphate and ground limestone.

The foundation for my present good herd was made several years ago when my entire grade herd was taken as a result of the TB test. At that time I purchased twelve young cows from the Anthony Pulver estate of Pine Plains, New York, and thirteen yearling heifers from Adrian Langdon, Copake, New York. Anthony Pulver has used a well bred 31-pound son of King Korndyke Sadie Vail, for which he paid \$1200, in building up his good herd. Then he paid \$1400 for Brookside Waldorf Supreme, whose three nearest dams averaged 36 pounds of butter and 718 pounds of milk in seven days. His dam was a 1,000 pound cow by a 40 pound cow. His sire, Sir Pontiac Waldorf Pietje, a Canadian bred bull out of a 36 pound four-year-old, had a 36 pound four-year-old full sister. The twelve cows purchased from the Anthony Pulver estate consisted mostly of daughters of Brookside Waldorf Supreme, and they have proved to be real producers. One of his daughters run on a semi-official test as a junior three-year-old in class B, made four

New York State records and one world's record.

Among the yearlings purchased from Adrian Langdon were ten daughters of Kookee Royal Boon, a 34 pound son of Kookee Combination. Eight of these heifers averaged 12,000 pounds as two-year-olds and are developing into real producers.

Good Roughage Important

There is no secret or sleight-of-hand business back of a world's record or a high herd average. There is, however, plenty of room for the exercise of good judgment in the handling of a herd. There was a time when I felt that if I only knew the grain ration which was being fed to some of the large record cows, I would then have the secret to the high record. But I found that there are many other factors that help the well-bred cow or herd to make good records, such as clean, comfortable quarters with plenty of bedding, regularity in management, milking and feeding, and gentle and courteous treatment. (Most cows have considerable intelligence and many are worthy of respect.) Keep her well groomed. Do not expose her too long to cold or wet. Give her plenty of water.

The quality of the roughage is mighty important and here is where your good farm and farming practices play a big part. Early cut, bright legume hay is best and good, clean corn silage, free from mold. I have an ordinary 12 per cent and a regular 20 per cent grain ration which I feed, varying the amounts of each depending on the condition of the cow and her inherent ability as a producer. I plan to feed about one pound of grain to four pounds of milk. I am careful not to over-feed and watch the cow to see that her bowels are always open.

Herd Is Blood Tested

I endeavor to keep a close watch over the health of my herd. I have been very careful in my purchases and have only brought in clean, tested cows. I have had an accredited herd for several years. Recently I had my herd blood-tested for contagious abortion and found the entire herd negative to the blood-test. Nothing will cut down a herd average faster than contagious abortion.

In the building of the herd it has been necessary to weed out the cows which, when tried, have been found wanting. I have a 10,000 pound minimum and dispose of any cow who will not exceed this figure. I keep an accurate record of milk weights and butterfat tests on each cow. This gives me a complete record for each cow and also serves as a basis for determining the amount of her grain ration, which is also weighed out accurately. We know—we don't guess. I am not attempting to build up a large herd, but a small herd of real producers of good type.

When Does a Cow Do Most of Her Drinking?

AN observer for the Department of Agriculture, sitting up nights in a barn for three weeks, expresses an opinion that the cows drink more between five o'clock at night and five in the morning than they do during the other twelve hours.

Possibly that is why the use of water bowls or drinking cups increases the milk flow—because of these extra night-drinks—that the cows take when they have water before them all the time.

Most folks don't care so much when a cow drinks as how much she drinks because, milk being 87% water, the water ration is a big factor in milk production. Reports indicate that the use of water bowls increases milk production anywhere from 10 to 30% depending on how much water the cows were able to get before the bowls were installed.

This extra milk that follows the use of water bowls comes at a time when prices are usually at their best. It's a simple matter to measure or weigh the extra milk and figure its value in dollars and cents.

Water bowl pipes that have to be laid in the ground should be laid now, before the ground freezes enough so that it's hard to dig.

"No. 10

*wasn't a moneymaker
so I sent her to the butcher"*

*By selling the losers and feeding
the rest better, he makes more money
with fewer cows and less feed*

seed Meal also keeps your cows in condition for high milk production month after month.

That's exactly what Dairy Herd Improvement Associations advise you to do to increase your dairy profits.

And this fall, when there is not an over-abundance of feed and in the face of present feed prices, is the ideal time to adopt this modern method of feeding. It has increased the profits of hundreds of dairymen. It will do the same for you.

No matter whether you have grade cows or a registered herd, if you sell the losers and feed the rest a balanced ration according to production you are sure to make more money.

Feed a Balanced Ration

If you are feeding mixed clover and Timothy hay with corn silage, use this grain ration:

Ground Corn, Hominy or Barley 200 lbs.
Ground Oats.....200 lbs.
Wheat Bran.....200 lbs.
Linseed Meal.....200 lbs.

(If you use ready-mixed feed replace the Wheat Bran and Linseed Meal in this ration with 250 lbs. of good 32% feed. Look on the label for Linseed Meal.)

This ration contains enough protein-rich Linseed Meal to balance your home-grown feeds which are always low in protein. The Lin-

The Linseed Meal Chart of Balanced Rations gives you the right mixtures to use with other roughages.

About Ready-Mixed Dairy Feeds

If you are short of feed this year, it may pay you to buy ready-mixed dairy feeds. Be sure they are made by a reliable manufacturer who uses high quality ingredients. Read the label on every bag to make sure it contains Linseed Meal, the old reliable protein supplement.

The advice of leading feeding authorities, as contained in the Linseed Meal Book on Feeding Management, will keep you on the best road to dairy profits. And the Linseed Meal Chart of Balanced Rations gives you the right rations to use under every condition. Rations for using either home-mixed or ready-mixed feeds. You should have this chart tacked up in your barn.

Free Ration Chart and Feeding Book

Chart is printed on durable, heavy paper for tacking up in your barn. Book has string in corner for hanging up. Both sent postpaid. Mail coupon.

Milk Prices

November Prices

Dairymen's League prices are based on milk testing 3.5%. Sheffield on the basis of 3%.

	Class	Dairymen's League	Sheffield Producers
1	Fluid Milk	3.37	3.17
2	Fluid Cream		2.00
2A	Fluid Cream	2.16	
2B	Cond. Milk		
3	Soft Cheese	2.41	
4	Evap. Cond. Milk Powder		
	Hard Cheese	2.00	1.80

The Class 1 League price for October 1929 was \$3.42 for 3.5% milk and Sheffield's \$3.22 for 3%.

The above prices in each class are not the final prices the farmer receives. The final price received from the dealer is the result of weighed average.

Butter Loses a Fraction

CREAMERY SALTED	Nov. 1, 1930	Oct. 24, 1930	Nov. 2, 1929
Higher than extra	40 1/2-41	40 1/2-41	45 -45 1/2
Extra (92 sc.)	39 1/2-40	40 -	44 1/2-
84-91 score	30 -38 1/2	30 1/2-38 1/2	37 -43 1/2
Lower Grades	28 1/2-29 1/2	29 1/2-30	35 -36 1/2

The butter market slipped a little during the last week in October, due chiefly to heavy shipments of both fresh and held goods from other markets, chiefly Chicago. There has been of late an unusual differential between New York and Chicago, which was bound to send butter eastward. This heavy influx from other markets made all elements in the trade ultra-conservative so that a slight downward revision in prices was more or less expected, in order to keep stock moving. Statistically, the situation in butter continues very strong. On the last day of October, the four principal cities had in cold storage 48,806,714 pounds as compared with 56,422,924 pounds on the same day a year ago. From October 24 to October 31, the four cities reported withdrawals from cold storage totaling 2,534,246 pounds compared with withdrawals during the same period last year totaling 2,113,360 pounds. The fact that the four largest cities hold approximately seven million pounds less butter than they held last year is most encouraging. However, the industrial situation kills this encouragement for conditions are not showing any improvement. That is why the market prefers to maintain a steady selling situation, rather than force prices upward and thereby cause a break and disturb the trade.

Steadier Feeling in Cheese Market

in the New York cheese market as the market comes to a close on November 1. There are indications that production of fresh cheese in New York and Wisconsin is lighter. This has given the market a slightly steadier tone on finer makes. Up to the present writing there has been no material change in prices. Trading has not been of very heavy character and outside quotations prevail only on small lots. Large round lots usually can be bought for a middle or inside figure. Nevertheless the undertone is good enough to lead us to expect some improvement.

Cold storage holdings in the ten cities on October 30 (A. M.) were reported at 18,021,000 pounds whereas on the same week day a year ago the same cities reported 20,681,000 pounds. During the last week in October the out of storage movement totaled slightly over one half million pounds which was approximately 60 per cent heavier than the out of storage movement during the same period last year.

Hennery	48-55		56-62
Gathered	27-46		47-55

The week ending November 1, found the egg market a shade over the close of the week previous. During the week the egg market was irregular, temporary shortages and recoveries in supplies sending prices up and down. On Oct. 31, the tone became steadier and on November 1 the situation looks firm. Fresh eggs have been running into a lot of opposition caused by the pressure to sell refrigerator eggs.

Advices from Ohio and the Mississippi Valley indicate that the production of fresh eggs is on a smaller scale. The middle West is sending up a lot of refrigerator eggs. It evidently cannot find an outlet in the interior markets. These Western refrigerators have been responsible for a lot of the difficulties in the Metropolitan storage market.

Fancy nearby whites have found a ready market. Many choice lines have brought as much as 58c plus a 2c premium. Of course, these are very choice, closely selected extras. A great many shipments of nearbys are showing mixtures with medium sizes, while others show the effects of holding, which makes it necessary that these shipments be sold at a discount. It is a mistake to make these mixtures because the medium sized eggs are in themselves bringing a good price but where they are mixed with large sizes they prove to be a heavy anchor on the first line quotations.

According to the Price Current, the last day of October found the ten cities with 3,886,000 cases on hand, approximately 885,000 cases more than they held at the same time last year. During the last week in October 294,000 cases came out of storage in the ten cities, whereas during the same period last year they removed 278,000 cases.

DUCKS, Nearby	16-25	18-25	21-28
GESE	18-19	-18	

The last week of October opened with the New York live poultry market in a most conservative frame of mind. The week previous was a bad one and it wound up most disastrously on October 25 with prices crashing on all sides. The week ending November 1 opened in the doldrums, slaughter houses having effected no clearances the previous week-end. This threw the market into a very conservative state and placed trade on a quality basis. It was estimated that something like thirty carloads of poultry were held in the slaughter houses on

Monday, October 27. On Tuesday, 186 cars were listed for the week. The buying and selling elements stood motionless on Tuesday until the situation could be analyzed more clearly. The extremely low retail prices of the previous week undoubtedly stimulated consumption, for by Wednesday we had a buyers market and prices started upward. In the express market fancy colored fowls have sold well with anything showing class bringing a premium. Fancy Leghorns sold well but medium and poor stock was slow. Early in the week chickens and broilers were in the buyers' favor whereas toward the end the market turned toward the favor of the sellers. Turkeys have not been selling well. This is to be expected when fowls and chickens can be bought for 10c a pound less. The consuming public is watching where every 25c piece goes to, and they are not buying turkeys when they can buy nice roasting chickens for considerably less money. There seem to be plenty of turkeys available throughout the East and just as soon as the price goes over 30c more stock becomes available than can be disposed of without cutting prices. Therefore, we do not look for a high turkey market this fall. The industrial situation is the controlling factor.

One of the outstanding features of the live poultry market has been the extremely poor quality of freight arrivals. Indiana, usually a shipper of choice stock, has been sending very mediocre birds. Many conclusions may be drawn from this and there are many who expect that it will later react in the form of higher prices.

Potato Market Quiet

The potato market was quite a dull affair at the end of the last week in October. Maines and Long Islands were both meeting slow sale. There have been quite a few importations from Canada but most of them have been going directly to a special trade. Maines in 150 pound sacks have been bringing from \$2.50 to \$2.75, while Long Islands in the same package have been bringing from \$2.50 to \$3. Bulk goods per 180 pounds from Maine have been bringing from \$3.10 to \$3.35 while Long Islands generally bring 15c more. There have been no sales of New York potatoes reported in New York City to warrant quotations. Most New York State shipments are moving westward.

Feeds and Grains

FUTURES	Nov. 1, 1930	Oct. 17, 1930	Nov. 2, 1929

41% C. S. Meal			44.50
43% C. S. Meal	37.50		47.00
34% O. P. Linseed Meal			54.00

The above quotations taken from the weekly feed letter of the N. Y. S. Dept. of Agr. and Markets are for straight carlots, f.o.b. Buffalo. Prices on mixed cars and less than carlots are higher. Consult your local freight agent for freight rates to your station.

Hay Receipts Light

Hay receipts were light during the last week in October being barely sufficient to meet the needs of the trade. As a result, receivers were able to shove the price up \$1 per ton. Buyers balked at this and swung to lower grades, preferring to take inferior hay rather than exceed \$27 per ton. No. 1 timothy went as high as \$29. Prices of timothy and mixtures closed in a range of \$22 to \$29 with sample hay at \$20 to \$22. The market closed steady to firm on November 1.

Meats and Livestocks

CATTLE—One load of medium 1250 pound Kentucky grass steers steady at \$8.00. Cows and bulls steady. Low Cutter and Cutter cows \$1.75 3.50. Cutter to medium bulls \$4.00-6.00.

VEALERS—Slow, weak to 50c lower.

Good to choice \$11.00-13.50. Medium \$7.50-10.75. Cull and common \$5.50-7.00.

LAMBS—Lambs scarce, steady to strong. Good to choice West Virginias \$9.00. Medium New York State lambs \$7.50. Few common throwouts \$5.50.

COUNTRY DRESSED CALVES—Receipts though only normal were more than required by the trade, demand being very slow all through with daily carryovers. Prices were very irregular, ranging from 7 to 15c per pound. Market closed weak and irregular with a big supply still unsold. Fresh receipts per pound: Choice 13-15c; fair to good 11-13c; small to medium 7-11c.

COUNTRY DRESSED PIGS—A few now arriving on the market. Sales in small quantities only. Per pond: Roasting, 12-15 lbs. 22-28c; 15-20 lbs., 20-25c; 25-30 lbs., 8-15c.

LIVE RABBITS—Fresh receipts moderate to liberal during the week. Demand slow in early part, improving at end. Market steady. By the coop, 10-18c per pound.

Wool

The wool market has been steady. New York better fleece wool, unwashed, fine per pound, 21-30c; 1/2 blood 22-29c; 3/8 blood 24-29c; 1/4 blood 24-29c; low quarter blood 25-27c; commond and braid 23-25c.

Honoring a Fundamental Occupation

(Continued from Page 5)

and partly purebred, with an average milk production well over eight thousand pounds a year. Aside from the dairy, the main source of income is from potatoes. Approximately eight acres, part of which are certified seed, gave promise of excellent yield when a representative of the Board of Judges visited the farm. Their home life is especially fine. The two older boys are students in Franklin Academy, Malone, and fortunately the farm is near enough to the village so that they can board at home. Mrs. Child, who by the way serves her community as lecturer of the local Grange, and the two older boys have a first-class family orchestra. Mrs. Child plays the piano; Stuart, the saxophone, and Robert the violin. The two older boys have both been Scouts and both have been members of 4-H Clubs.

Mr. Child is master of the Franklin County Pomona Grange, master of his local Grange, director and committee-man of his Farm Bureau, collector of his local school district and a member of the town board.

Farm News from New York

Farmers and Business Men of Hudson Valley Addressed by R. W. Dunlap of Washington

"**B**USINESS men have been ignoring farmers" was the keynote of an address by R. W. Dunlap, assistant secretary of agriculture, at an Exchange Club banquet held in Poughkeepsie, October 30, and attended by 175 business men and farmers of the Hudson Valley. Mr. Dunlap stated that business men in general have little or no appreciation of the magnitude and importance of farming, or its relation to the welfare of the nation, and of the buying power of the farmer. He enumerated various farm industries and their valuations in the nation, New York, State and Dutchess County.

Speaking of New York, Mr. Dunlap pointed to the Empire State as one of the leaders in the nation in the production of hay, potatoes, vegetables, dairy and poultry products, fruit, etc. Going further, he cited the farm income of Dutchess County farmers from dairying, poultry, and fruit, and called upon the merchants of Poughkeepsie to appreciate what that income meant to local business.

Again referring to the farm business of the nation, Mr. Dunlap pointed out the value of farm buildings in the United States and how much the farmers of the country spend each year in repairs and replacements. From buildings he turned to the annual farm machinery bill of the nation's farmers, as well as to the amount of freight they pay,—and taxes. In short, the nation's business is the farmers' business and vice versa, and unless the farmer prospers the country cannot hope to prosper. Referring to the potential business the merchant and business man may anticipate, Mr. Dunlap enumerated the percentage of farmers whose homes are not equipped as yet with running water systems, gas or electric lights, and other home conveniences; who have as yet no automobiles or trucks, tractors, or stationary engines. The forceful manner in which Mr. Dunlap presented his argument, backed up by actual figures in dollars and cents, greatly impressed the business men at the meeting and many were heard to remark later that they had never looked upon the farm business in the Hudson Valley in the light of Mr. Dunlap's statements.

Following his remarks on the relation of the farmer to the business man, Mr. Dunlap discussed at some length the farm relief measures that have been instituted in the national legislature. He spoke on the tariff, pointing out that the present tariff is protecting the Eastern farmer's market from a flood of cheap foreign produce, made possible by cheap labor existing in European countries. Mr. Dunlap stated that in spite of the criticism of the tariff, balance of trade shows that the farmers are gaining under the present rates.

Hamilton Fish, Jr., representative in Washington of the mid-Hudson Valley district, followed Mr. Dunlap on the program and gave a most interesting talk on the farmers' battle that is being conducted in Washington. He referred to the fight for a higher tariff on onions which meant so much to onion growers in Orange County. Mr. Fish also referred to the Debuture Bill, as well as the McNary-Haugen Bill, both of which he opposed. He stated that in spite of the fact that he is a Granger and that the Grange endorsed the Debuture Bill, nevertheless he opposed it for it would have taken money out of eastern farmers' pockets, inasmuch as the eastern dairymen and poultrymen buy western grains, growers of which would have benefited under the bill. Mr. Fish also touched upon the present unemployment situation expressing the great need at the present time for confidence on the part of business men. He endorsed a strong program of public building to furnish labor a means of maintaining a high standard of living.

Another speaker on the program who directly represented the farming interests was Fred I. Brower, secretary and treasurer of the Dutchess County Farm Bureau, who spoke on the great changes that have taken place in the farming industry. He referred to early experiences in his life and how the

farming methods of those bygone days have lost out in favor of increased production. He stated that the present trend is away from the physical prowess of the older days to the increased efficiency of modern husbandry which to some degree is eliminating the old-fashioned pleasures that were a high spot in farm life.

The banquet was arranged by the Exchange Club of Poughkeepsie, a service organization of business and professional men, as a service to Dutchess County agriculture by bringing a nationally prominent agricultural authority, in the person of Mr. Dunlap.

State Department Opens Office at Hudson

ANOUNCEMENT is made by Commissioner Berne A. Pyrke, of the Department of Agriculture and Markets, that in order to facilitate the typing and transmission of inspection reports to New York City, covering export shipments of apples and pears, a temporary office was opened October 21, at Hudson, N. Y.

All requests for shipping-point inspection of apples or pears either for domestic or foreign shipments from Hudson Valley points, should be made to the following address: Bureau of Markets, New York State Department of Agriculture and Markets, 26 Green Street, Hudson, N. Y., Post Office Box 763. Telephone No. 664.

Fifth, Sixth and Seventh Degrees at Rochester

THOSE of our readers who are planning to attend the National Grange meeting at Rochester, November 12 to 21, will be able to get a special rate of a fare and a half for round trip tickets. Before you can buy these tickets you will need an identification card which you should be able to secure from the master of your local Grange. In order that your local ticket agent may secure all necessary information, it will be advisable to let him know that you are going a few days before you will need your ticket.

Arrangements have been made at

Rochester to confer the fifth and sixth degrees prior to conferring the seventh or national degree. The Pomona degree will be given in full form at 2 p. m. Thursday, November 13, in the Chamber of Commerce Building. That evening at 8 p. m. at the Convention Hall, the officers of the New York State Grange will confer the sixth degree.

The next day, Friday, November 14, plans have been laid to accommodate twelve thousand people for the seventh degree. This ceremony will take place at Masonic Temple, with classes beginning at 9 a. m., 12, 2:30 p. m., 5 p. m., 7:30 p. m., and if necessary at 10 p. m.

Those who are planning to take the seventh degree should go to the armory on arrival in Rochester and obtain class tickets which will tell them just when to appear for degree work.

Accredited Herds Now Being Retested

AT the present time practically all official veterinarians are engaged in the retesting of herds already operating under the accredited herd plan. Retesting at regular intervals is one of the principal factors in the building up and maintaining of a tuberculosis-free herd. Cattle owners operating herds under the accredited herd plan and whose herds are due or overdue for retest should keep in touch with either the State, Federal, County or Assistant County Veterinarian stationed in their county and arrange to have their herds retested when testing is in progress in their neighborhood. Owners of accredited herds may have their herds retested when due by getting in touch with the Accredited Veterinarian authorized to test in the zone where the herd is located.

Four-H Members Tell of Achievements

NEW YORK state 4-H clubs will broadcast an achievement program in co-operation with the United States department of agriculture in a nation-wide achievement program from forty-five stations covering the whole United States

on November 8, according to the announcement of Professor W. J. Wright, state leader of junior extension at Cornell University.

At 12:45 a summary of the 4-H achievements, addresses, and music is broadcast from Washington, D. C. From 1:00 to 1:30 a similar program comes from New York clubs. This will be followed by a fifteen minute address by Arthur M. Hyde, secretary of the United States department of agriculture.

New York members of 4-H clubs may hear the program in full from station WHAM in Rochester. The Washington portion may be heard from station WJZ in New York City. While WHAM broadcasts the New York contribution, WJZ will broadcast a similar program for New Jersey.

Tune In On WGY

WEXCELLENT farm programs that are broadcast each Wednesday noon by Station WGY. Each week some outstanding speaker is on the air and in addition to this talk, farm news prepared by AMERICAN AGRICULTURIST is broadcast, and a farm question box conducted by E. W. Mitchell.

Just to show you some of the outstanding speakers that have been secured we mention the names of a few: On November 17, Mr. George Putnam, president of the New Hampshire Farm Bureau Federation, will speak on "The Farm Bureau's Contribution to Rural Life." Mr. Edward Thompson, president of the Federal Land Bank at Springfield, will speak on "Financing Farmers Through The Federal Land Bank," on December 15. On January 5, Dean Mann of the New York State College of Agriculture will talk on "The New Year of Agriculture." On January 15, Henry Morgenthau, Jr., publisher of AMERICAN AGRICULTURIST and chairman of Governor Roosevelt's Agricultural Advisory Commission, will be the speaker, while on January 26, Honorable Arthur M. Hyde, secretary of the U. S. Department of Agriculture will talk.

Farm Wages Low

FARM wages on October 1, this year were at the lowest point in seven years according to the Department of Agriculture.

The low level of wages was attributed to poor crop prospects, farm products price declines and the fact that the supply of farm hands exceed the demand by more than 40 per cent. The supply is in excess of demand in all geographical sections, ranging from an excess of 24 per cent in the North Atlantic states to 49 per cent in the South Central states.

The combined index of farm wages on October 1 is placed at 150 per cent of the 1910-14 pre-war level. This is a drop of 10 points since July 1, this year, and a drop of 24 points since October 1 a year ago. Wages declined from July 1 to October 1 this year, whereas in the past five years there has been an average seasonal advance of 2.6 points during this period.

Day wages of farm workers not provided with board now range from about \$3.50 in the northeastern industrial states, and \$3.40 on the Pacific Coast, down to \$1.05 to \$1.15 from South Carolina to Mississippi. The North Central States show an average of \$2.60 a day, and the average for the country is \$2.12. Farm workers provided with board are receiving an average of \$1.61 a day, and \$31.31 when hired by the month.—Wall Street Journal.

Keystone Boy Wins Oratorical Contest

REPRESENTING Pennsylvania in the regional oratorical contest at Springfield, Mass., David Warfield, an agricultural student in the Fawn Township high school, York County, won the right to enter the national contest at the American Royal Livestock Exposition at Kansas City, Mo., next month.

Warfield won the state contest at State College in August. His subject in both the state and regional contests was "Rural Electrification." At Kansas City he will meet the champions from four other regions.

New York County Notes

ERIE COUNTY—The Genesee-Orleans Vegetable Growers' Association, Inc. held their 10th annual banquet on October 23. Among the guests were Albert Schillroth, Orchard Park, manager of the Erie County Vegetable Growers' and Shippers' Association and president of the New York State Vegetable Growers' Association, and commission men from New York, Philadelphia, and Boston.

Emil Gutekunst of Colden, president of the Western New York Honey Producers' Association and the largest beekeeper in Erie County, has a hive that this year produced 200 pounds of honey. Four years ago a single colony produced 560 pounds. The production of honey is more or less a side line to his extensive mail order business in queen bees. He has developed his own particular strain and breeds around 1500 queens annually, supplying both foreign and domestic demand.

On October 21, State Master Fred J. Freestone dedicated the Grange building at East Otto, Cattaraugus County.

First honors have been awarded Hamburg High School for its 1930 magazine—Cargoes—in a nationwide contest for school publications, by the National Scholastic Press Association.

Western New York from October 12 to 16, was a veritable enchanted land. With fields springing green after the drought, woods glowing with a thousand tints of red and gold, a still hush in the air, and a blazing sun pouring summer heat over all, it seemed like some strange tropic scene—a scene that over night changed to one of blinding snow, howling wind, and mounting drifts that for two days broke down and ruined trees and shrubbery, crippled electric and telephone lines, and the number of stalled and abandoned cars mounted into the thousands.

Erie and Chautauqua Counties suffered most. At Hamburg and North Collins snow lay three feet deep on the level, with drifts from seven to eight feet high in places. All in all, it was a record-breaking storm for October. At this writing, one week later, the drifts are fast disappearing and farmers have hopes of fine weather that will enable them to dig

the many acres of potatoes that have lain unharmed under the snow.

TIOGA COUNTY—This county is fully alive, for when any county will make so many necessary improvements on their county farm and prepare hospital rooms and beds there for the afflicted, one may know that the people, the taxpayers, know what is the right thing to do and to see that it is being done. For a long time the ways of the county farm have been a source of annoyance to many of the right-minded citizens. But the climax was reached a while ago and Leon J. Baird of the Welfare Commission, was appointed to attend to matters there. He has done so and the result is pleasing to the supervisors who met there recently and examined the work being done. They immediately set to work to have all completed and ordered the borrowing of \$10,000 to finish the improvements and pay up the deficits in the appropriated finances.

Farm work has not been handicapped by rainy weather. Crops have yielded far superior to that anyone thought could be possible, owing to so much dry weather. The Susquehanna River is very low and creeks are too. A few short rains did a world of good even to the pastures. The late crops responded heavily to the short and welcome rains. It is hopeful that soaking rains will come before winter sets in. Potatoes are a fair yield. Fruits have been plentiful; not so many apples as some years, but winter apples have grown amazingly since the showers came.

This county has been afflicted with several devastating fires. The barns, sheds, and other out buildings and a filled silo of Jesse Keith, midway between Flemingville and Newark Valley, were burned this month, containing all the farm tools and tractor, a \$250. bull, and 105 pullets. The origin of the fire is unknown.

Farm and Home Bureaus hold meetings regularly and the annual drive for membership began November 1. This organization as well as the several county Granges, have done and are doing, much to aid the farmers.—Mrs. C.A.A.B.

It's raining EGGS out our way

BY "OUT OUR WAY" we mean the farm of Dr. Hess & Clark, Inc., Ashland, Ohio, where Dr. Hess Poultry Pan-a-min is put on trial for egg production. And by "raining eggs" we mean egg production like we show here.

The two pens of 100 hens each shown below have just finished a production test of a year. One pen laid a total of 13,148 eggs—the other 14,940! Both pens laid a lot of eggs, as you can see. But the one pen laid 1792 more eggs than the other—and *that's some difference!* What made this big difference in production?

The hens in both pens were selected from the

same brood and divided as evenly as possible. No variation there. Both pens were given exactly the same feed and care*, so this had nothing to do with the difference in production. There was one difference between the two pens—one and only one. The pen that laid the most eggs by a wide margin received Dr. Hess Poultry Pan-a-min *in addition* to good feed and care. That and that alone accounts for the 1792 more eggs they laid.

What Pan-a-min did for these hens to give them the edge was keep them in top condition day after day. It kept their bodies in order and their egg-machinery working. It gave them minerals for substance and energy.

Put your hens in "laying trim" with Dr. Hess Poultry Pan-a-min—and keep them that way this winter while egg prices are up. *Pan-a-min pays in eggs the year 'round.* See your Dr. Hess dealer or write us. Dr. Hess & Clark, Inc., Ashland, Ohio.

**The ration we gave these two pens of hens was composed of a good mash and a good scratch feed balanced, mixed, and blended for egg production. They received the best care that hens could get. But no matter what the feed or the care, Dr. Hess Poultry Pan-a-min will keep the egg baskets higher every time.*

The Problem of Fall Colds

AS in the case of colds in man, there is no specific treatment or preventive for colds and kindred ills in poultry. Dry quarters, fresh air, sunlight, and protection from drafts and sudden low temperatures will help, but in our climate during fall and early winter it often seems impossible to maintain these favorable conditions. Once an epidemic of colds is under way little can be done other than to keep the flock well fed and comfortable and let the trouble run its course.

When trouble first appears, however, its spread may be limited by promptly removing ailing birds. Disease organisms usually gain in virulence with each new victim, and sick birds left in the pen are continual centers of infection, not only for the cold or similar trouble, but also any other wandering organisms which may be looking for a foothold in the flock.

Disinfect the Drinking Water

Another safeguard is to use a suitable disinfectant in the drinking water, which often is a common means of spreading disease. Sick birds frequently do not eat, and so do not contaminate the food supply nor is the dry mash a very favorable place for the multiplication of infection. In most cases sick birds do drink—often they will spend all day standing in or on the water pan, and proper disinfection of the water reduces the chance of spreading infections.

One of the following antiseptics may be used: One of the sodium hypochlorite solutions, in dilution recommended by the makers; potassium permanganate, enough to color water deep pink; bichloride of mercury, one part to 6,000 of water. Non-metallic water dishes should be used.

Disinfecting the water is in no sense a "cure"; it is simply a protection. Drugs strong enough to penetrate tissues and destroy the "bugs" would also harm the bird. But antiseptics used in the recommended dilutions will help in preventing the spread of disease in a flock.—Locke James.

Candling Eggs

Can you tell me the best way to candle eggs and with what means? Can more than one egg be candled at one time?

EGGS are best candled one at a time before a strong light in a darkened room. To construct a candler cut a round hole 1½ inches in diameter in a box made of wood or stiff cardboard and hang a 40 watt bulb inside close to the hole. Or ready-made candlers may be purchased from any poultry supply house.

Each egg is given a quick rotating motion with the wrist as it is brought toward the light, large end up. This causes the contents to rotate past the light while the egg is momentarily held stationary against the opening with the light shining through it. Any blood-spots, meat-spots, or cloudiness in the white may be seen. Experienced candlers usually pick up four eggs at a time, two in each hand. They are then nimbly juggled by the fingers so that the four eggs are rapidly candled one at a time, alternately from each hand.—L. E. Weaver.

These Ducks Lay Eggs

"I HAD five Pekin ducks. They commenced to lay January 28th and on the 25th of May I lost one, that left me four and up to September 10th they have laid 775 eggs as you will see from the record I am inclosing."

Pekin ducks do not have the highest reputation as egg layers and it seems to us that this is an excellent record. We are wondering if any subscriber to American Agriculturist has ducks which lay heavier than those of this subscriber.

Makeshift Lighting Plant Not Satisfactory

"There is no electric line on our road and I am thinking of installing a small electric light plant. We only want lights on an average of four hours per night throughout the year. Would it be practical to use a small generator and gasoline engine and will it give a steady light?"—J. H. B., New York.

It would be possible to fix up such an outfit and it would give fairly satisfactory service so long as the engine were in operation. However, some arrangement would have to be made so that the voltage would not rise too high when only one or two lamps were burning. Any generator manufacturer could furnish you with a compound wound generator which would take care of this requirement. Also it would be necessary to provide a relay to cut off the engine ignition when the last lamp is turned off, but this also could be arranged.

While such a small plant would probably cost a little less than a regular battery plant or automatic plant, I believe the extra convenience of the latter plant would be of more importance than the slight additional cost. Your proposed plant would not function until some one went down to the basement and started it. This would be a nuisance in case you wanted light at night, or in case of a burglary of the poultry house or a horse getting into trouble at the barn. If you happened to be late getting home at night or the wife wanted to press a garment, she would have to go down and start up and adjust the outfit. As you would still have to depend on lamps and matches and could make no use of automatic electric pumps, and so on, it really seems that it would hardly be worth the cost. I would prefer to get good gasoline or kerosene lamps and make them do until I was able to put in a real electric plant or else hook up to high line service.—I. W. D.

Old Varnish Has No Value

"I have a can of floor varnish. I used some of it about three months ago and now I want to use the rest. By heating the can I got it out into a bowl, but it is pretty hard. How should I have put it away? Can I thin it now so that I can use it? There is about 1½ pints in the bowl.—P. T. S., N. Y.

I DO not believe that you can do anything with this so it will be of any value. Varnish is a peculiar mixture of hard resins or gums boiled in oil and with certain hardening ingredients cooked in with it, and once this mixture hardens in the can it might just as well be thrown away. One would have to go through a dangerous process of cooking and stirring in more oil, and then it probably would not dry and work right. If a can of varnish is sealed air tight, it can be kept without spoiling; but if it stands very long, even an airtight can will hardly keep it after the air strikes it.—I. W. D.

Prepare For Cold Weather

THE season is at hand for the farm mechanic's attention to cars, trucks and stationary engines, to prepare them for the rigors of cold weather. Non-freezing solutions should replace plain water in the radiating chambers. There are a number of well advertised products on the market that will insure against frozen radiators and cracked water jackets. Oil should be drained from crank case and the winter grade put in its place. Transmissions and differentials should be cleaned out and winter compound applied. Proper lubrication is the life of the car.

To insure ease of starting check over the spark plugs and replace those badly worn. Give the battery a thorough overhauling and have it recharged. Perhaps a new one would be cheaper in the end if frequent recharging is necessary.

THE LONGEST FORWARD STEP IN MOTOR OIL

the new SOCONY MOTOR OIL

Perfected...proved... in every way

THIS is an announcement so important to every owner of farm equipment that we put aside all technical language and tell it to you in the simplest words.

We have produced the New Socony Motor Oil which gives you—to a greater degree than any other—what you want and should have in a motor oil . . . full lubricating value.

In the new Socony Motor Oil "full lubricating value" means something more than it ever has meant before. For we have perfected and proved for you not just one or two but every characteristic a motor oil should have.

Here are five reasons for changing today to the New Socony Motor Oil:

1. **Perfected Lubrication. Less wear on your motor.** The new Socony Motor Oil is made from a Paraffin Base crude, selected because of its greater inherent oiliness (adsorption). Exclusive New Socony Process gives additional lubricating value.

2. **Minimum Oil Consumption. Will not break down.** No engine heat or pressure severe enough to decompose this oil or destroy its lubricating value. Only through contamination by foreign matter which finds its way into the crankcase can the life of this oil be limited.

3. **Easy Starting in Coldest Weather.** Selected Paraffin Base oil . . . completely de-waxed. More fluid at low temperatures than any other oil. Instant lubrication. Less drain on your battery.

4. **Fuel Economy and Increased Power.** Maintains proper "body" at all engine temperatures. Result: perfect piston seal, maximum power, and minimum fuel consumption.

5. **A Clean Motor.** New refining process reduces to a minimum all harmful elements which cause carbon, gum and sludge. The new Socony Motor Oil insures a clean motor.

Best Remedy for Cough Is Easily Mixed at Home

You'll never know how quickly a stubborn cough or chest cold can be conquered, until you try this famous recipe. It is used in millions of homes, because it gives more prompt, positive relief than anything else. It's no trouble at all to mix and costs but a trifle.

Into a pint bottle, pour 2½ ounces of Pinex; then add plain granulated sugar syrup or strained honey to make a full pint. This saves two-thirds of the money usually spent for cough medicine, and gives you a purer, better remedy. It never spoils, and tastes good—children like it.

You can actually feel its penetrating, soothing action on the inflamed throat membranes. It is also absorbed into the blood, where it acts directly on the bronchial tubes. At the same time, it promptly loosens the germ-laden phlegm. This three-fold action explains why it brings such quick relief even in severe bronchial coughs which follow cold epidemics.

Pinex is a highly concentrated compound of genuine Norway Pine, containing the active agent of creosote, in a refined, palatable form, and known as one of the greatest healing agents for severe coughs, chest colds and bronchial troubles.

Do not accept a substitute for Pinex. It is guaranteed to give prompt relief or money refunded.

First Aid in the Home

What Every Homemaker Should Know in Case of Emergency

BROKEN bones are all too common casualties; a competent surgeon is always necessary; do nothing but make patient comfortable until he arrives; handle injured parts as little as possible. Temporary splints may be applied as a relief from muscular twitching which causes considerable pain; these splints may be made of paste board or shingles. It is not necessary to set broken bones at once; a patient might much better be left a day or two than to have a fracture reduced improperly. A broken leg may be laid on a pillow or bandaged to a padded stick until bones are set. For fractured ribs, keep patient in bed, apply a tight bandage, a roller towel is splendid, pin darts around the bottom to make it fit tightly.

Sprains usually occur in ankles and should be cared for or permanent injury will result. Rest is essential. Soak injured part in hot water, gradually increasing heat; keep foot elevated between baths; a supporting bandage is helpful and massage is useful when swelling is gone.

Bruises respond to rest and hot applications. Cloths wrung from very

hot. Can it under ten pounds of steam pressure for sixty minutes.

Pumpkin preserves may be made from five pounds of pumpkin, four pounds of sugar, four lemons, and salt. Cut the pumpkin in slices one-fourth inch thick and from one to two inches long. Put it in a crock, add the sugar and let it stand overnight. Drain it off and boil the syrup until it threads, add the pumpkin, the lemons sliced thin, and a small amount of salt. Cook the mixture until it is thick and clear and seal it in clean, hot jars.

Candied pumpkin, prepared like candied citron, has a rich color and a delicious flavor. Cut a pound of pumpkin in medium-thin slices and boil it in clear water until it is tender. Drain it and, using one and one-quarter cups of the water in which it was cooked, make a syrup with one-fourth cup of sugar. Bring the syrup to the boiling point, add the pumpkin and one lemon sliced thin. Cook until the pumpkin slices are clear, drain them on a plate to save the syrup and place them on a cloth over a rack in a warm place. Dry the pieces about twenty-four hours or until they are not sticky. They should be clear and perfectly tender.

In an article such as this space is too limited for more than a few suggestions. Talk to your physician and he will advise you as to household

Bassinette or Carriage set No. B5422 and B5423 comes of soft pink or blue bunny cloth with the most adorable "rabbits", tinted patches of white bunny cloth, all ready to applique on. Be sure to state color desired. The cover, B5422 is \$2.00 each while the pillow, B5423 is 90 cents each. Order from the Embroidery Department, American Agriculturist, 461 Fourth Avenue, N. Y.

hot water and covered with dry cloth are soothing.

The most painful injuries are probably burns. People are more liable to lose all presence of mind in case of fire. Simple rules which prevent pain and injury are; keep flames from head and face, and try not to inhale flames. If your own clothes are on fire lie down and roll, keep your mouth shut; if you see another person on fire, throw her to the floor and wrap in a rug, shawl or any heavy woolen thing; begin at head and keep fires from her face.

To treat burns, exclude air; if a superficial burn, a paste of bicarbonate of soda and a wet bandage will allay pains, cover with flour and cotton—do not use this remedy, however, if skin is broken. Vaseline or olive oil is sufficient; in the hospital we used caron oil which is made by combining equal parts of linseed oil and lime water.

Burns caused by strong acids are treated as burns from fire; a weak solution of some alkali such as soda or ammonia prevents further action from acid. Lime or caustic potash produces severe burns; neutralize the alkali with some acid, a teaspoonful of vinegar to a cup of water, then treat as any burn. In any case of severe burning the victim is likely to suffer from shock and should be treated for it.

A person suffering from severe cold or frost bite, should be taken to a cold room and rubbed with snow. When circulation is restored, give hot stimulating drinks and gradually bring him to warmer rooms. Chilblains are painted with iodine; have feet warmly dressed but loosely. Never wear tight shoes, bathe with cold water and ammonia. Heat prostration is treated as follows; reduce body temperature, this may be done by cold baths, keep patient in cool room, do not give stimulants. Ice applied to head is useful.

In drowning cases, artificial respira-

tion must be used. Space does not permit description of this treatment, but it is well to learn this method.

remedies. Your local Red Cross or Home Bureau could arrange a series of lectures and demonstrations which would be of tremendous assistance to any farm woman.—Trained Nurse.

Preserve Pumpkins

PUMPKINS may be saved for meals later in the year by canning, candying, or making into preserves, according to the New York State College of Home Economics at Cornell University.

Pumpkin to be used later for pies, or to be served as a vegetable, should be washed, cut into slices, and steamed until tender. Then put the pulp through a colander, stir it until it is smooth, and pack it into jars while it is still

Prevent Cancer

THE American Society for the Control of Cancer is trying to accomplish three certain things:

1. To make the public consult physicians regularly.
2. To acquaint the public as far as possible with the symptoms which may indicate cancer.
3. To bring the message of cheer that cancer in its early stages certainly is curable.

The committee has to depend upon the donations of the public to carry on its program of education and free information. To get funds for this purpose, they are offering Christmas Reminder booklets at one dollar each. The Reminders are convenient for shopping and Christmas lists while the dollar you send goes into the funds for the work of the committee. The bulletins, lectures, motion pictures and lantern slides which they make available free to groups of thirty are carrying their influence where it is most needed. Send the dollar for your booklet called "Christmas Reminder" to the New York City Cancer Committee of the American Society for the Control of Cancer at 34 East 75th St., New York City.

To protect the top of blankets and quilts from being soiled, bind the edge with a piece of cheesecloth or other inexpensive material about sixteen inches wide which matches the blanket in color. When this is soiled it is easily removed and laundered.

Godey's Pattern for Pillowcases and Sheets

This pattern, number M551, was adapted from a Godey's Ladies Book of 1858. While this rich, all white embroidery for pillow case and sheet is hardly "new" it does have a charm that's enduring.

Simple stitches are used, eyelets, satin stitch for the flowers and buttonhole for all the rest. Embroidery of this sort demands more careful workmanship than "lazy-daisies," but is certainly more valuable when done. This pattern would be lovely, white on the new tinted bed linens as well as on standard white.

Number M551 is a wax transfer pattern which includes designs and scallops for two pillow cases and a sheet.

Number M551C supplies 36-inch tubing for two pillow cases torn 42 inches long of excellent quality material stamped with the design ready to embroider.

Stamped sheet of heavy quality material 84 inches wide and torn ninety inches long will be seen as number 551S.

M551 Wax Transfer Pattern 25c; M551C Pair of Stamped Pillow Cases \$1.00; M551S Stamped Sheet, each \$2.00; Order from Embroidery Dept., American Agriculturist, 461 Fourth Avenue, New York City.

The Fall Fashion Show

Here's a Hint for Entertainment Committees

THE new senior class was planning a joyous "get-together" and the girls who composed the "party" committee, issued invitations to a Fashion Show. The boys of the class, anticipating a parade of pretty girls, attractively dressed, eagerly accepted the invitation. When all had arrived, numbered slips were distributed to the boys, these being in sets of four, numbered alike. The young men, according to instructions, formed into groups, and awaited orders.

Four tables were then brought in, and on each was heaped articles of apparel, on the first a variety of obsolete hats, on the second bungalow aprons and dresses, on the third wraps, and on the fourth miscellaneous accessories, as scarfs, flowers, belts, etc.

The boys were instructed to choose a "model" for each group, the other three being "dressers." They were told that the necessary material for the costuming would be found on the tables, but only one article must be taken at a time, and then returned if not needed. Ten minutes was allotted for the costuming, for which screened

spaces had been arranged. When a bell indicated "Time Up", the models came out attended by their dressers. One at a time, the "mannequins" came to the platform, the costume being eloquently described by one of the "modistes". After this, a parade came, and judges awarded a prize to the one whose costume was the most unique.—E. D. Y.

Pillow Triplets

ELLEN was much pleased with the little pillows I made her. I had small pieces of silk, none sufficiently large for a good-sized pillow. But I made three, a foot square, pink, light green, and lavender, placed one on top of the other, and tied the pile with

Smart Junior

Junior dress pattern No. 2807 is as jaunty and debonair as youth itself with its flaring skirt and trim bodice with smart detachable collar and cuffs. A grosgrain ribbon tie and patent leather belt complete this very useful and becoming frock which can be made of plaid woolens, tweeds, challis, velveteen or the tweed-like cottons. The pattern cuts in sizes 6, 8, 10 and 12 years. Size 8 requires 1 1/4 yards of 39-inch material with 3/8 yard of 32-inch contrasting and 1 yard of ribbon. Price 15c.

"rainbow" ribbon. The following verse was written on an accompanying card.

*Sometimes pillows come in threes,
So I hope my gift will please.*

They were just the right size to be slipped behind the neck, or under the elbow, or shoulder, and my inexpensive gift proved welcome.—A. B. S.

Avoid Sending Cash Through the Mail

There is always some danger that money will be lost when it is sent through the mail. This is particularly true of coins. May we, therefore suggest that when you have occasion to send money to American Agriculturist, either for subscriptions, patterns, embroidery, trespassing notices, or insurance policies that you send either a check or postal money order. Where amounts are very small, stamps will be acceptable.

The Tunic "Style"

Tunic dress pattern No. 2814 decidedly bears the high marks of this season's style with its Russian tunic skirt and graciously becoming cowl neck line. The pretty dark red silk or woolen materials of solid color trimmed with black buttons or hunter's green trimmed with a simulated fur strip from shoulder to hem of tunic would be stunning. The pattern cuts in sizes 16, 18 years, 36, 38, 40 and 42 inches bust measure. Size 36 requires 3 1/2 yards of 39-inch material with 1 1/4 yards of 27-inch lining. Price 15c.

To ORDER: Write name, address, pattern sizes and numbers clearly and correctly and inclose with correct remittance in stamps (do not send coin). Add 12c in stamps for one of the new Fall and Winter Catalogs and address to Pattern Department, American Agriculturist, 461 Fourth Ave., New York City.

TWO HELPERS INSTEAD OF ONE IN EVERY BAR

That's why

NOTHING EQUALS

FELS-NAPTHA

FOR WASHING WORK CLOTHES

WORK CLOTHES are particularly hard to wash because they get so dirty.

But in Fels-Naptha, you get an added dirt-loosener—two washing helpers instead of one. You get soap, of course—good golden soap. And in addition, you get naptha, which is a marvelous dissolver of grease. So with soap and naptha working together, grime hasn't a chance. Even stubborn ground-in dirt lets go. Clothes come out bright and clean without hard rubbing.

Fels-Naptha gives this extra help for work clothes and the whole family wash. Try it! In tub or machine; for soaking or boiling; in hot, lukewarm or even cool water, it works splendidly. Try it for your household cleaning, too. See how quickly it cleans woodwork, milk cans, separators, incubator trays. See how gentle it is to hands. That's

because Fels-Naptha loosens dirt quickly and you have them in water less time.

Ask your grocer for Fels-Naptha—it's the best kind of washday thrift. It brings you not more bars, but more help. Extra help that saves YOU!

SPECIAL OFFER—We'll be glad to send every user of laundry soap a Fels-Naptha Chipper. Many women who chip Fels-Naptha into their washing machines, tubs or basins find this chipper handier than a knife. Use it and Fels-Naptha to make fresh, golden soap chips (that contain plenty of naptha!) just as you need them. Send only a two-cent stamp to help cover postage, and we'll mail you this chipper without further cost. Write today. Dept. 1-11-8 Fels & Company, Philadelphia, Pa.

Just David--By Eleanor Porter

THE STORY THUS FAR

David and his father live alone in a rude shack on a mountain overlooking the "Silver Lake." For six years they have lived there alone, cooking their own food, taking long walks in the forest, playing their violins. David's father is ill. He wonders if he has been wise in bringing David here away from the world and realizing that his strength is nearly spent, he suddenly decides to leave the mountain and take David back to civilization.

"Are we coming back sometime?" asks David. "Why, of course, you're coming back," his father replies, and the boy not realizing the full meaning of the reply, is happy.

They start down the mountain on foot. As his strength lessens, David's father leaves his grip by the road. Finally he can go no farther but luckily they get a lift for a way in a wagon. They decide to spend the night in a nearby barn. In the evening Simeon Holly and his wife hear the strains of a violin and start to investigate.

Instantly the music dropped to a whisper, and a low voice came out of the gloom beyond the square of moonlight which came from the window in the roof.

"If you'll please be as still as you can, sir. You see he's asleep and he's so tired," said the voice.

For a moment the man and the woman on the stairway paused in amazement, then the man lifted his lantern and strode toward the voice.

"Who are you? What are you doing here?" he demanded sharply.

A boy's face, round, tanned, and just now a bit anxious, flashed out of the dark.

"Oh, please, sir, if you would speak lower," pleaded the boy. "He's so tired! I'm David, sir, and that's father. We came in here to rest and sleep."

Simeon Holly's unrelenting gaze left the boy's face and swept that of the man lying back on the hay. The next instant he lowered the lantern and leaned nearer, putting forth a cautious hand. At once he straightened himself, muttering a brusque word under his breath. Then he turned with the angry question:—

"Boy, what do you mean by playing a jig on your fiddle at such a time as this?"

"Why, father asked me to play," returned the boy cheerily. "He said he could walk through green forests then, with the ripple of brooks in his ears, and that the birds and the squirrels—"

"See here, boy, who are you?" cut in Simeon Holly sternly. "Where did you come from?"

"From home, sir."

"Where is that?"

"Why, home, sir, where I live. In the mountains, 'way up, up, up—oh, so far up! And there's such a big, big sky, so much nicer than down here." The boy's voice quivered, and almost broke, and his eyes constantly sought the white face on the hay.

It was then that Simeon Holly awoke to the sudden realization that it was time for action. He turned to his wife.

"Take the boy to the house," he directed incisively. "We'll have to keep him to-night, I suppose. I'll go for Higgins. Of course the whole thing will have to be put in his hands at once. You can't do anything here," he added, as he caught her questioning glance. "Leave everything just as it is. The man is dead."

"Dead?" It was a sharp cry from the boy, yet there was more of wonder than of terror in it. "Do you mean that he has gone—like the water in the brook—to the far country?" he faltered.

Simeon Holly stared. Then he said more distinctly:—

"Your father is dead, boy."

"And he won't come back any more?" David's voice broke now.

There was no answer. Mrs. Holly caught her breath convulsively and looked away. Even Simeon Holly refused to meet the boy's pleading eyes.

With a quick cry David sprang to his father's side.

"But he's here—right here," he challenged shrilly. "Daddy, daddy, speak to me! It's David!" Reaching out his hand, he gently touched his father's face. He drew back then, at once, his eyes distended with terror. "He isn't! He is—gone," he chattered frenziedly. "This isn't the father-part that *knows*. It's the other—that they leave. He's left it behind him—like the squirrel, and the water in the brook."

Suddenly the boy's face changed. It grew rapt and luminous as he leaped to his feet, crying joyously: "But he asked me to play, so he went singing—singing just as he said that they did. And I made him walk through green forests with the ripple of the brooks in his ears! Listen—like this!" And once more the boy raised the violin to his chin, and once more the music trilled and rippled about the shocked, amazed ears of Simeon Holly and his wife.

For a time neither the man nor the woman could speak. There was nothing in their humdrum, habit-smoothed tilling of the soil and washing of pots and pans to prepare them for a scene like this—a moonlit barn, a strange dead man, and that dead man's son babbling of brooks and squirrels, and playing jigs on a fiddle for a dirge. At last, however, Simeon found his voice.

"Boy, boy, stop that!" he thundered. "Are you mad—clean mad? Go into the house, I say!" And the boy, dazed but obedient, put up his violin, and followed the woman, who, with tear-blinded eyes, was leading the way down the stairs.

Mrs. Holly was frightened, but she was also strangely moved. From the long ago the sound of another violin had come to her—a violin, too, played by a boy's hands. But of this, all this, Mrs. Holly did not like to think.

In the kitchen now she turned and faced her young guest.

"Are you hungry, little boy?"

David hesitated; he had not forgotten the woman, the milk, and the gold-piece.

"Are you hungry—dear?" stammered Mrs. Holly again; and this time David's clamorous stomach forced a "yes" from his unwilling lips; which sent Mrs. Holly at once into the pantry for bread and milk and a heaped-up plate of doughnuts such as David had never seen before.

Like any hungry boy David ate his supper; and Mrs. Holly, in the face of this very ordinary sight of hunger being appeased at her table, breathed more freely, and ventured to think

that perhaps this strange little boy was not so very strange, after all.

"What is your name?" She found courage to ask then.

"David."

"David what?"

"Just David."

"But your father's name?" Mrs. Holly had almost asked, but stopped in time. She did not want to speak of him. "Where do you live?" she asked instead.

"On the mountain, 'way up, up on the mountain where I can see my Silver Lake every day, you know."

"But you didn't live there alone?"

"Oh, no; with father—before he—went away," faltered the boy.

The woman flushed red and bit her lip.

"No, no, I mean—were there no other houses but yours?" she stammered.

"No, ma'am."

"But wasn't your mother—anywhere?"

"Oh, yes, in father's pocket."

"Your mother—in your father's pocket!"

So plainly aghast was the questioner that David looked not a little surprised as he explained.

"You don't understand. She is an angel-mother, and angel-mothers don't have anything only their pictures down here with us. And that's what we have, and father always carried it in his pocket."

"Oh—h," murmured Mrs. Holly, a quick mist in her eyes. Then, gently: "And did you always live there—on the mountain?"

"Six years, father said."

"But what did you do all day? Weren't you ever—lonesome?"

"Lonesome?" The boy's eyes were puzzled.

"Yes. Didn't you miss things—people, other houses, boys of your own age, and—and such things?"

David's eyes widened.

"Why, how could I?" he cried. "When I had daddy, and my violin, and my Silver Lake, and the whole of the great big woods with everything in them to talk to, and to talk to me?"

"Woods, and things in them to—to talk to you!"

"Why, yes. It was the little brook, you know, after the squirrel, that told me about being dead, and—"

"Yes, yes; but never mind, dear, now," stammered the woman, rising hurriedly to her feet—the boy was a little wild, after all, she thought. "You should go to bed. Haven't you a—bag, or—or anything?"

"No, ma'am; we left it," smiled David apologetically. "You see, we had so much in it that it got too heavy to carry. So we didn't bring it."

"So much in it you didn't bring it,

indeed!" repeated Mrs. Holly, under her breath, throwing up her hands with a gesture of despair. "Boy, what are you, anyway?"

It was not meant for a question, but, to the woman's surprise, the boy answered, frankly, simply:—

"Father says that I'm one little instrument in the great Orchestra of Life, and that I must see to it that I'm always in tune, and don't drag or hit false notes."

"My land!" breathed the woman, dropping back in her chair, her eyes fixed on the boy. Then, with an effort, she got to her feet.

"Come, you must go to bed," she stammered. "I'm sure bed is—the best place for you. I think I can find what—what you will need," she finished feebly.

In a snug little room over the kitchen some minutes later, David found himself at last alone. The room, though it had once belonged to a boy of his own age, looked very strange to David. On the floor was a rag-carpet rug, the first he had ever seen. On the walls were a fishing-rod, a toy shotgun, and a case full of bugs and moths, each little body impaled on a pin, to David's shuddering horror. The bed had four tall posts at the corners, and a very puffy top that filled David with wonder as to how he was to reach it, or stay there if he did gain it. Across a chair lay a boy's long yellow-white night-shirt that the kind lady had left, after hurriedly wiping her eyes with the edge of its hem. In all the circle of the candlelight there was just one familiar object to David's homesick eyes—the long black violin case which he had brought in himself, and which held his beloved violin.

With his back carefully turned toward the impaled bugs and moths on the wall, David undressed himself and slipped into the yellow-white night-shirt, which he sniffed at gratefully, so like pine woods was the perfume that hung about its folds. Then he blew out the candle and groped his way to the one window the little room contained.

The moon still shone, but little could be seen through the thick green branches of the tree outside. From the yard below came the sound of wheels, and of men's excited voices. There came also the twinkle of lanterns borne by hurrying hands, and the tramp of shuffling feet. In the window David shivered. There were no wide sweep of mountain, hill, and valley, no Silver Lake, no restful hush, no daddy—no beautiful Things that Were. There was only the dreary, hollow mockery of the Things they had Become.

Long minutes later, David, with the violin in his arms, lay down upon the rug, and, for the first time since babyhood, sobbed himself to sleep—but it was a sleep that brought no rest; for in it he dreamed that he was a big, white-winged moth pinned with a star to an ink-black sky.

CHAPTER IV

TWO LETTERS

In the early gray dawn David awoke. His first sensation was the physical numbness and stiffness that came from his hard bed on the floor.

"Why, daddy," he began, pulling himself half-erect, "I slept 'all night on—" He stopped suddenly, brushing his eyes with the back of his hands. "Why, daddy, where—" Then full consciousness came to him.

With a low cry he sprang to his feet and ran to the window. Through the trees he could see the sunrise glow of the eastern sky. Down in the yard no one was in sight; but the barn door was open, and, with a quick indrawing

Just David

(Continued from Opposite Page)

of his breath, David turned back into the room and began to thrust himself into his clothing.

The gold in his sagging pockets clinked and jingled musically; and once half a dozen pieces rolled out upon the floor. For a moment the boy looked as if he were going to let them remain where they were. But the next minute, with an impatient gesture, he had picked them up and thrust them deep into one of his pockets, silencing their jingling with his handkerchief.

Once dressed, David picked up his violin and stepped softly into the hall. At first no sound reached his ears; then from the kitchen below came the clatter of brisk feet and the rattle of tins and crockery. Tightening his clasp on the violin, David slipped quietly down the back stairs and out to the yard. It was only a few seconds then before he was hurrying through the open doorway of the barn and up the narrow stairway to the loft above.

At the top, however, he came to a sharp pause, with a low cry. The next moment he turned to see a kindly-faced man looking up at him from the foot of the stairs.

"Oh, sir, please—please, where is he? What have you done with him?" appealed the boy, almost plunging headlong down the stairs in his haste to reach the bottom.

We Visit the Jungfrau

(Continued from Page 1)

had them. I neglected to get a far more important piece of alpine equipment, dark-colored glasses. Fortunately they were on sale next day at the railway hotel, or I would not have seen much on the glacier. In the shops of Interlaken we saw great quantities of the most beautiful wood carving of all sorts from tiny wooden mice and kittens to the most elaborate furniture and clocks, and at astonishingly low prices. Wood-carving has been brought to a very high state of artistic and useful excellence by the Swiss artisans and seemed even more in evidence than their famous watches and hand-worked linens. But what is one to do in such a place with a strictly limited travel budget and too much baggage already, but just heave a sigh of regret and pass on hoping that next time it will be different?

Next morning we took the train for the climb to the Jungfrau along with perhaps 200 other tourists. For about seven or eight miles we were on an ordinary railway and traveled at good speed as we followed the course of a large stream of exceptionally clear water. It is fed by the melting ice and snow and is the source of power for the electrically-driven locomotives that hauled us up the mountain. We were still quite a number of miles from the Jungfrau when the grade became too steep for an ordinary locomotive and we changed to what they called a "rack and pinion" drive. A large cog wheel on the underside of the locomotive meshes into a cog rail laid midway between the other rails. Our speed was cut down to about 5 miles an hour but we did not mind that. We were going up a 25% grade and the scenery was constantly shifting below and on all sides. We had to have time to take it all in; glens that reminded me of our own Finger Lake region each with its series of water falls, the sleek Swiss cattle every where feeding in those very green pastures, the huts without any chimneys that I decided must be temporary shelters for the herdsmen, the occasional uncleared woodlots with many familiar evergreens and hardwoods and others that were new to me, and the gorgeous red and purple and white and blue wild flowers everywhere, the Jungfrau itself almost

never in sight because hidden by the nearby peaks that towered above us to no mean height. We went 6½ miles in about an hour and a quarter then stopped at a little station to change locomotives. Then on again for 5 miles more. This time through less pasture land, more forests and many tunnels. We could see one very good reason for using the electric locomotives. There was no smoke in the tunnels. At the end of this lap of the journey we were a little more than 6000 feet in the air and at the lower edge of the glacier which pushes down from its place of origin more than 5000 ft. above this midway point. And we were at last on the Jungfrau, but a long, long way from the top.

The rest of the trip was over the justly famous Jungfrau Railway, a remarkable engineering achievement. It lies for nearly its entire five and ¾ miles inside the mountain. It is one long upward winding tunnel through the rock and underneath the ice of the glaciers.

Occasionally the train would stop at a station where a side channel had been cut to the open, we would all pile out and look from the observation platform at the marvelous panorama below. Beautiful Lake Brienz and Lake Thun and the city of Interlaken "between the lakes," and beyond the valley a veritable forest of mountain peaks stretching away for miles, and beyond them the famous Black Forest of Germany. We were glad for the clear bright day. But we were cold up there, we could see our breath in the tunnel and hurried back to the comfort of the electrically heated cars.

The railway ends at a point 11,342 ft. above sea-level and 2,300 ft. short of the top. From there one must go on foot and with a guide. It is a six hour hike over the snow trails to the top and back to the station. Our time was too closely scheduled to attempt that so we contented ourselves with walking as far as an hour would take us and then returning in time to get back to Interlaken that night. I am sure we didn't need the extra thrill of reaching the summit to make a full day for us.

The sun was shining down hot and dazzling and as we emerged from the dimly-lighted tunnel I was absolutely blinded. I couldn't keep my eyes open. The dark glasses were life-savers indeed. A beautiful and marvelous sight lay before us. We were at the upper end of the glacier. Here it had its beginning.

The Jungfrau with its 13,667 ft. is the highest peak in a series. There are only 3 higher peaks in Europe. Across a wide valley is Monch, 13,467 ft. high. At these heights the clouds deposit their moisture nearly always, even in summer, as snow. Eventually the accumulations of snow slide down from the mountainsides into the wide saucer-like valley between and by melting and freezing turns to solid ice. But it cannot go on forever piling up for there is a big niche in the edge of the saucer. So when sufficient millions of tons of

ice have accumulated the very weight of it pushes it down the valley. Thus we see the seemingly impossible happen. A river of solid ice flowing down the valley, following its winding course as smoothly and truly as a liquid river would flow, only infinitely more slowly, perhaps 8 or 10 feet a year.

The phenomenon of glaciers should be of interest to A. A. readers since scientists assure us that it was glaciers pushing down from an enormous ice-cap in the north in some pre-historic ice-age that gave us of northern United States our scramble of soils and filled it with otherwise unexplainable puzzles such as sand and gravel banks on hillsides far from any stream, and the rounded and smoothed granite "hardheads" that are found everywhere and that must have come from the granite mountains to the north, being polished and rounded on the long journey by the action of the glaciers and the glacial streams.

The weather changes very suddenly on the mountain top. Now all is beautiful, our eyes are getting accustomed to the glare of the reflected light on the snow. The sun is hot and we are comfortable if we keep in a protected spot where the wind does not strike.

Then from nowhere a cloud appears, wrapped around one of the nearby peaks, or perhaps it is down below and creeping up the valley toward us. Then we are enveloped in its penetrating dampness, the sun has disappeared, the fog is so dense we can scarcely see each other only a few steps apart. A real winter blast is blowing, our ears are tingling, our hands are turning blue and we start retracing our path to the sheltering hotel. But just as suddenly the cloud has passed and all is again springlike. The air is thin at such heights and even a light-weight is soon panting if he attempts to hurry up the path. And as for the others, one plump matron from the southland confided to us that she almost passed out. She reckoned she gave the others in her party a right good scare.

From this picture of Alpine mountain-climbing one might get an idea that it is a regular picnic, and the hardships and difficulties we read about were all myths. I want to point out, therefore, that on this particular mountain the hardships have been nearly all eliminated by the railway. For the most part, however, Alpine climbing holds all the thrills and dangers and hard work that it ever did.

How to Start Improving Your Pasture

(Continued from Page 3)

ditions and it always boils down to the same conclusion, namely, *it is cheaper to grow feed in a fertilized pasture and send the cows after it than to grow it on arable land and send a man and team after it or to buy it in bags.*

American Farmers Should Profit from European Experience

Most American farmers probably will feel that the full intensive system of grassland management, involving as it does fertilization of five or more separate pasture fields and grazing them in turn, is quite too much to attempt at one move—at least that was my own reaction when the system was first brought to my attention—but there is no reason why they should not start with one fertilized field and give that field the benefit of all that has been learned with respect to the best methods of management. Comparison of results produced from that field and from the untreated pasture will speedily show whether it is worth while to go farther or not.

It is really very simple. Pick out a piece of fairly good soil and sod in the pasture, fence it cheaply—two or three strings of barbed wire will do—and apply, *at least five or six weeks before earliest grazing is expected*, fertilizer enough to supply at least 50 pounds per acre each of nitrogen, phosphoric acid and potash. (That looks like a lot of fertilizer—but take my word for it and try it, once anyhow. It is likely to pay better than a lighter applica-

tion.) As soon as the grass is four to eight inches tall, turn a good heavy stock (four or five cows to the acre) into the field and let them graze it down to a height of about two inches—not closer. Then fence them out and keep them out until the grass is big enough to graze again—usually a matter of three to five weeks. (Recovery is very materially helped by applying, immediately after the first grazing, 100 lbs. to the acre of some nitrogen carrier such as, for example, sulphate of ammonia or calcium or sodium nitrate, and if good use can be made of extra grazing it is profitable.) Graze the fertilized field as often as it is fit to graze but *never graze it as closely as most American dairy pastures usually are grazed*. It injures the sod to do it. And graze periodically rather than continuously. Even grazing is good grazing, from the standpoint of improving the sod but excessively close grazing is not. Neither is under-grazing.

In connection with the use of nitrogen on pasture, the principal "high crime and misdemeanor" is failure to graze at the right time. Grazing before the grass is big enough cuts the yield down and injures the sod. Not grazing soon enough results in grass of lower protein content and inferior palatability and also injures the sod.

A single fertilized plot amounting to probably one-fourth acre per cow and fenced so that the grazing can be managed as outlined above is of the maximum possible value in terms of manager feeding saved and increased production in that the first grazing comes before unfertilized pasture is fit to graze at all and therefore saves a manager feeding expense of at least 35 cents per cow-day and the second grazing comes just as pastures are getting short and prolongs the "June flush" by a week or more at the latter end.

But to achieve these results grazing must be controlled and intelligently managed. Fencing is imperative. Without it the fertilized area is absolutely certain to be over-grazed and is likely to come so near to maintaining the herd as to result in under-grazing of the remainder of the pasture during late May and early June with resultant lowering of the quality of the pasturage and injury to the sod. Nor can the second growth, after the early grazing, be preserved until it is most needed and hence of greatest value unless the fertilized area is fenced.

It doesn't require a very expensive fence as it is not hard to fence a cow into good grazing. The trouble comes when you try to fence her out of it.

GIBBS TRAPS ARE BEST

They HOLD what they CATCH—and add to your Pelt Profit. They Pay You to Use Them—You Pay to Use Others. Send for our NEW Catalog—FREE—BEFORE buying this Fall's Trapping Equipment. GIBBS "TWO TRIGGER" Traps prevent "Wring-offs"—60c ea.; \$6.50 doz. No. 1 "Single Grip" Trap, 15c ea.; \$1.65 doz. Postpaid. If your dealer does not have them, order direct, W.A. Gibbs & Son, Dept. Troopers Settle Farm Theft Case

Yesterday my neighbor, who can see my walnut trees which are not visible from my house, called me by telephone and said some people were gathering our nuts and had been at it for some time. I immediately went over, took the number of their car, but they told me I could do nothing as I did not have my land posted. They were over the fence on my property and had a large sack nearly full which they took with them. I am not anxious to make anyone trouble but think they should be convinced they have no right to go on anyone's property and gather their products whether land is posted or not. So I am writing to you and if they were in the wrong would like to have you convince them for it is

Insurance Pays the Doctor

I RECEIVED check for \$70.00 today in payment for the accident I had in August with a mowing machine and am well pleased with it. It was a good thing for me when I subscribed for the American Agriculturist and got that accident policy. The paper is well worth the price I paid without the policy. I think every one ought to have protection. It will pay my doctor's bill and help replace some of the labor I couldn't do.

I think the insurance is one of the finest things you have ever done for your readers outside of the benefit the paper is to us each week.

Another big thing you are doing for your patrons is protecting them from a lot of crooks, while I have never needed help of that kind it has been a wonderful thing for a lot of people who have needed it.

Accept my respect and highest regards for the management and you will always find me ready to TALK and DO anything I can for American Agriculturist or its representatives.

(Signed) W. H. WHARTON,
Federalburg, Md.

P. S.—I would never have had the policy if your agent had not sold it with a subscription at low cost.

people like them with their ideas who make life hard for a farmer for one cannot even take a ride or go to church on Sunday without coming home to find their fruits and nuts have been taken in their absence.

WE referred this letter to Captain J. M. Keeley of Troop "G" of the New York State Troopers at Troy, N. Y. By the way, we wish to mention the excellent cooperation we received from all of the troops of the New York State Troopers in running down any complaints which we forward to them. Captain Keeley turned the case over to Sergeant W. A. Purcell who made the following report:

1. We interviewed Mrs. who stated that on September 30 she received a phone call from one of her neighbors stating that some people were gathering her walnuts. She went down the field and found a woman and young man gathering her nuts. She ordered them off and they refused to go, stating the property was not posted and they had a right to gather the nuts.

2. Trooper informed Mrs. that if she would go before a Justice of the Peace and lay an information against the man and woman for Petit Larceny, Trooper would serve warrant on same and see that they were penalized for stealing her walnuts. She stated she did not care to do this as she did not want to cause them any trouble, but she would like very much to warn them not to gather nuts on other people's property without permission.

3. Trooper called at and interviewed who stated he was the owner of the car and that he was operating same on the date in question and that he and his mother went for a ride and

as they were passing the walnut tree on the property of complainant they stopped and gathered about a peck. Trooper informed him the best thing he could do was to go and see Mrs. and pay her for the walnuts they had taken and in the future not take anyone's property without permission.

4. Trooper again called on Mrs. who stated that the trespasser and his mother had been to see her and offered to pay for the nuts and apologized for going on her property without permission and she did not want any criminal action.

Some of our readers will no doubt feel that our subscriber was too easy and that these persons who stole the walnuts—for there is no other term which can really describe the situation—should have been arrested and fined. However, there is at least one family that should be thoroughly convinced that they do not have the right to go on property and pick walnuts or other farm produce just because the property does not happen to be posted.

Incidentally this story will tell you what to do in case you suffer similar thefts. Your telephone operator is always able to put you in touch with the nearest State Trooper.

Rupert & Son Adjust Complaints

IN a recent issue we called attention to the failure of W. P. Rupert & Son of Geneva, N. Y. to answer our letters or to settle complaints which our subscribers called to our attention. Since that time this firm has made settlement to the two cases called to their attention and we are glad at this time to acknowledge this fact.

Look at the Hook—Not the Bait!

About the first of June, Mr. Frank Warner of Wilson, Connecticut asked us to send him eggs saying that he had a selected private trade for strictly fresh eggs. He said he would pay us 2c above the market quotation on the day of shipment. To date he has not sent us pay for these eggs.

WE wrote to Mr. Frank Warner and received no reply from him. Following this we started a little investigation and find that he is still doing business in Wilson. We have repeatedly emphasized to subscribers the folly of shipping to a man without a definite

credit rating just because he offers a cent or two more than the market price. It appears that this is just another case of the shipper who is stung by jumping at this bait.

Little Employment at Boulder Dam

THE National Better Business Bureau is warning the unemployed that there is little or no chance for employment at Boulder Dam, Nevada. Attempts have been made by certain individuals through advertising and use of the mails to take advantage of the employment situation to persuade people to go to Boulder Dam in the hopes that they will be able to get

Full Payment

I WISH to thank you for all you have done for me. I have received a check in settlement from the Company. This is in full payment.

I again wish to thank you for your splendid cooperation and of all the farm papers and books I receive I can fully say that yours is the best with its Service Bureau which, every farmer should join.

In closing I am hoping that you will always be of service. I am,

A WELL SATISFIED
SUBSCRIBER.

work there. The Department of the Interior says:

"Of one thing the public should be warned and that is the unwisdom of going to the vicinity of the dam site in the expectation of getting work without ample provision to meet the emergency should this expectation fail. The dam site is located in the midst of a great desert with few inhabitants and slight opportunity for other employment than that which it may afford. Employment will develop only as contracts are let and ample notice will be given when opportunities for work present themselves."

Avoid Sending Cash Through the Mail

There is always some danger that money will be lost when it is sent through the mail. This is particularly true of coins. May we, therefore suggest that when you have occasion to send money to American Agriculturist, either for subscriptions, patterns, embroidery, trespassing notices, or insurance policies that you send either a check or postal money order. Where amounts are very small, stamps will be acceptable.

Have You a Friend in This List ?

FOR the past two weeks, first on page 5 and then on the Service Bureau page, we have been giving lists by counties of subscribers who have received indemnities on limited travel-accident policies secured with subscriptions to American Agriculturist.

As we said before, we are proud of this service to our subscribers. The company is absolutely reliable, the terms of the policy are clearly stated, and in our opinion, it is the best travel-accident policy that can be secured at such a nominal cost.

Here's how to make extra Christmas Money

If you keep chickens, there's an easy way to make extra money. By starting now, you can have some of it to spend for Christmas. And you'll have still more to spend later on.

The easiest way to get more income on a farm at this time of year is by getting more eggs from your flock. You will get more eggs by feeding Pearl Grit. Very often egg production is doubled within a few weeks. Try it and see for yourself. Just buy Pearl Grit, either in the 10-lb. box or 100-lb. sack, from your hatcheryman or feed dealer.

Lime and Grit in Natural Form
Pearl Grit is made from the whitest, purest limestone. The pearly pebbles are attractive to fowls, but have no odor or flavor to cause overeating. Pearl Grit is the NATURAL form of lime AND grit.

Eggs simply cannot develop unless the pullet or hen has enough lime in her system to make complete eggs. That's why a flock's output may easily be doubled or trebled by supplying Pearl Grit. It is especially necessary in the fall and winter, and that's when eggs bring the highest prices.

This Instructive Book Free

The facts are all explained in our book, "The Poultry Raiser's Pay Envelope." It may be worth many, many dollars to you. Write us today for your free copy.

POST YOUR FARM And Keep Trespassers Off

Reduced Prices on TRESPASS SIGNS

Effective October 1, 1930, trespass signs are offered to subscribers of American Agriculturist at new reduced rates in quantities of fifty or more. The new rates are as follows:—

Per Dozen \$ 1.00
Per Fifty 3.50
Per Hundred 6.50
Per Thousand 60.00

The price for smaller quantities remains at \$1. per dozen.

Specially worded signs will be made up at slight additional cost. Names and addresses will be imprinted at \$2.00 for the first one hundred and \$1.00 for each additional one hundred.

These signs are made up of extra heavy cloth material that will withstand the severities of the weather.

We unreservedly advise farmers to post their land. The signs we have prepared are worded to comply with Conservation Law.

To avoid loss of cash in mail, send check or money order with order.

250 PRIZES for "WAY-BACK" MEMORIES

Here's your chance to win two pairs of Ball-Band rubber footwear—your own selection. 200 pairs will be given for the best letters of early experiences with Ball-Band. 50 additional pairs will be given for the best photographs taken on the farm twenty or more years ago. Search your memory—and the family album—for a prize-winning letter and picture. This offer expires March 31, 1931. Tear off the Red Ball trade-mark below and send with your letter.

Were YOU one of the first of our ten million friends?

LOOK far back in your memories—twenty years, thirty years, perhaps even more. Can you remember your first pair of boots with the little Red Ball trade-mark—your first trial of *more days wear* and *built-to-the-foot comfort* in rubber footwear!

More than thirty years have passed since the first Ball-Band rubber footwear was made. Today ten million of you buy Ball-Band from over 70,000 dealers in this country. Have you been one of our friends since the early days? Then let us hear from you!

Write us a prize-winning letter about your

first meeting with Ball-Band. Tell us when you first saw the Red Ball trade-mark on footwear. To refresh your memories—and maybe win an extra prize—look through the family album for snapshots of those days of twenty or more years ago. All pictures—including the prize winners—will be returned if requested.

Year after year our skilled craftsmen have met your footwear needs with better quality at always reasonable prices. Today, the Red Ball trade-mark brings you that *natural*, *light-on-the-foot* feeling you want in modern footwear.

Yet the live, tough rubber in Ball-Band footwear will wear longer than it's reasonable to expect.

We prepare rubber for but one purpose—the making of quality footwear. And we've developed many special compounds—for the heel, for the toe, for the sole, and so on. The stout linings and fabrics you see in Ball-Band are knit in our own factory. Each part, rubber or fabric, is perfected for the particular job it must do; each adds to that *plus wear* you have learned to expect of Ball-Band.

Your entire family's needs are cared for by our full line of over 800 items, including Mishko-

sole leather work shoes.

There's a Ball-Band dealer near you. If you do not know his name, write us. And remember to look for the Red Ball trade-mark.

MISHAWAKA RUBBER & WOOLEN MFG. CO.

482 Water St., Mishawaka, Ind.

New-Day Styles— Old-Time Quality

Choose the boots that fit your needs—short boots, hip boots, red boots, white boots, sport boots. At the extreme left is the 3-Buckle Walton giving "boot protection with shoe comfort." Growing fast in public favor.

Get a pair of these 4-Buckle all-rubber Arctics—and forget the weather. Reinforced at every point with live, tough rubber, these Arctics will give you the long wear you have a right to expect of Ball-Band.

This 2-Buckle Sanslip is especially popular—cannot pull off in the mud. (Also made without buckles.)

Style Leaders for Women

Made to Ball-Band standards, our galoshes and light rubbers will hold their neat, erect shape throughout the season. All "styled-to-the-shoe" for dainty, snug fit and smart appearance by our Style Committee. At the left, the "light-as-a-feather," all-rubber Savoy.

Look for the Red Ball

See Yellowstone With Us

Take a Vacation With American Agriculturist

By E. R. EASTMAN

IT is with great pleasure that we are now able to announce another service to our readers. Starting from various points in New York State on August 1, 1931, the AMERICAN AGRICULTURIST cooperating with the great Northern Pacific Railroad will conduct a big ten day excursion of farm people to the Yellowstone National Park, the world's greatest park.

The first few days of August have been chosen for this excursion because on most Eastern farms there comes a lull at that time between haying and harvesting, making it easier for farm people to get away. We are inaugurating this excursion service because of the growing desire of farm people to travel, and because so many are not familiar with the details necessary to make a trip easily and to get the best results from it. There are many, for example, who never have been on a sleeping car, who would not know how to arrange for the transportation of baggage, who dread going into a dining car among strangers, who do not know when and how to give tips, and who, because of all these details, would become so worried and tired that the trip would soon cease to be a pleasure.

Under AMERICAN AGRICULTURIST's plan every detail and travel worry will be removed, even the annoyance of how much and when to tip for service will be assumed by the tour manager. You will be assured of seeing everything worth seeing, having meals which you will long remember, enjoying comfortable beds, and in fact having every possible accommodation, so that all

you have to do is just have the time of your life.

Why not? Who has a better right to a real vacation than a farmer and his wife who, perhaps, have worked a lifetime for others, and who have had an opportunity for little play or recreation. How tragic it is that so many fathers and mothers keep planning a trip together but put it off from year to year because they hate to get started, until it is too late.

Not only will we be able on this tour to

make it possible for you to see everything worth seeing and to have every possible accommodation, but best of all, you will be able to make the trip for nearly fifty dollars less than you could possibly do it traveling alone. This will be made possible through the organization of a large party of farm folk so that we can charter a special train and obtain wholesale rates on all services along the trip. There follows a brief day-by-day outline showing just where you will go and some of the things you will do on this trip. We expect to print more from time to time during the winter, but if you are interested, write to us for literature giving detailed descriptions of the Yellowstone Park and of other interesting things to see on the trip. You will not be obligated, of course, by asking for this information, but it is none too early to begin to think and plan and dream over the possibilities.

You may know, of course, that Yellowstone, of all the national parks, is the wildest and most universal in its appeal. There is more to see there than in any half dozen other parks combined. Emerson Hough, the great American author, in writing of the Yellowstone said: "Here, indeed, you may

WHO'D GO BACK TO CLEANING OIL LAMPS?

ELECTRICITY

*lights a whole house for
less than a dime a day*

THE daily task of cleaning, trimming and filling dirty oil lamps has disappeared from 57,000 of New York State's farms. Clean, safe electricity is providing abundant light for less than a dime a day.

Electric lighting has made farm homes brighter, pleasanter places to live. Portable electric lamps have added new beauty to farm living rooms.

And electric lights in the barn, controlled by handy switches, have made it an easier place to work . . . have eliminated fire hazard.

*We help you finance the purchase
of electrical equipment*

Each year, reliable Niagara Hudson electricity is made available to more thousands of New York State farmers.

And to help farm customers utilize this cheap dependable power, the operating companies of the Niagara Hudson System offer to finance on easy terms the purchase of wiring and equipment.

NIAGARA HUDSON

Unemployed Sell Apples

Idea Helped Producer, Seller, and Consumer

AT present in New York City over five hundred men out of work have been given an opportunity to earn some money. It is impossible to walk far through any part of New York City, south of 59th Street, without seeing a man standing on a street corner beside a box of western apples. By the box is a sign which reads, "Unemployed. Buy an apple—5c each." Up to the time this is written, over five thousand boxes of apples have been sold in this way and still there is a steady stream of boxes going out from the Independent Fruit Auction Company of 66 Harrison Street, New York City.

The man who thought of the idea is Joseph Sicker of Joseph Sicker & Company, dealers in apples, so I took time, one morning, to go down to 66 Harrison Street and talk with him in order to get the story first-hand. The idea came to him as he was attending a meeting of the Labor Commission which is considering the question of relief for the city's unemployed. Mr. Sicker, by the way, is chairman of a committee to give some publicity to National Apple Week. The plan as outlined by Mr. Sicker was essentially that he would agree to furnish a box of apples to all unemployed men sent him whether or not these men had money to pay for them. It was made clear to the men that the apples were not given to them, but that they were to come back and pay \$1.75 for them after they had been sold. A box of apples contains about ninety apples, leaving a profit of approximately \$2.25 per box.

Ex-Convicts Prove Honest

Among the men selling apples are one hundred ex-convicts sent to Mr. Sicker by the Prison Association of New York. Each one of these one hundred men were trusted with a box of apples and one hundred per cent of them came back and paid for them. In fact, out of all the men who did not have money to pay for the first box an almost negligible per cent have neglected to return and pay for the apples.

Mr. Sicker was exceedingly busy when I called on him at the Independent Fruit Auction Corporation. This firm donated the use of the fruit auction room as headquarters for the distribution of apples. Each man as he comes in pays his \$1.75, or in case he does not have the money is okayed by Mr. Sicker and given a box without paying for it. The man then takes his card to get his box of apples. It was interesting to notice that the men still had their business sense. The number of apples in a box varies some and several of the men were inquiring as to the size of the apples in their boxes. They naturally wanted the box with the most apples in as they were selling them for five cents apiece regardless of size. Each man was informed that he must take them just as they came.

One woman approached Mr. Sicker

with a dollar bill and asked that he trust her for the balance on a box of apples. "We would rather not have women sell them," said Mr. Sicker. "We are interested in giving the chance to the men who are married and who have families."

"But," the woman said, "I have a husband and he cannot work. What am I going to do?"

"I am sorry," said Mr. Sicker. "I cannot do it."

However, the woman continued to present her case so strongly that suddenly Mr. Sicker called to the man taking in the money and said in a resigned tone of voice, "Say, trust this woman a box of apples."

Taxi Drivers Help

I asked Mr. Sicker how the men were able to reach that part of the city which they had chosen as their selling grounds.

"The taxi drivers," Mr. Sicker said, "are taking any of these men anywhere in the city below 59th Street for fifteen cents apiece. They usually take two or three at one trip. Some of the truck drivers in this section are doing the same thing."

It later developed that Mr. Sicker himself, has been paying the taxi fare of a few men who are in a crippled condition and unable to take care of themselves adequately. I asked Mr. Sicker how long the plan was to continue and he stated that no time had been set, although he expected that apples would be furnished for some time to any unemployed who wished to sell them.

Men Helped to Help Themselves

There is always a let down when a man is the subject of charity so the plan worked out by Mr. Sicker whereby men are simply given the opportunity of making some money is the best kind of relief. These men are allowed to retain their self-respect. Mr. Sicker said that it was interesting to watch the men who came in. The first time they came many of them looked pretty blue and apparently believed that the news was too good to be true. However, when the same men sold out and came back for another box, they looked decidedly more hopeful and appeared to believe that life might hold something for them after all.

I talked with one or two of the men who were selling the apples. One man said that at first he sold between two and three boxes a day, but that at present there were so many in the business that it was more difficult to dispose of this number. However, if each man only sells one box a day it is far ahead of walking the streets looking for the job that no one seems to be able to supply. City officials, including Mayor Walker and Police Commissioner Mulrooney, as well as Senator Royal S. Copeland, have backed Mr. Sicker in his plan.—H. L. COSLINE.

Bringing in apples by the truck load and handing them out to unemployed who are selling them on New York City streets. At the extreme right is Mr. Joseph Sicker who thought of the idea.

A Good Job for the Dairy Industry

A Brief Glance at the Splendid Work to Increase Milk Consumption

IT is doubtful if many dairymen realize how fortunate they are in the matter of free advertising of milk and its by-products. For years the per capita consumption of dairy products has been going steadily higher and higher owing chiefly to the fact that so many different agencies have been helping the consumer to appreciate the great food value of milk. Without this help the dairy industry would have been swamped with over-production long ago, and because of this help dairying is today on a better footing than any other kind of farming. Therefore, those of us who depend upon the dairy cow for a living, as well as those who believe in good health, owe a great debt to the health authorities, the hospitals, doctors, welfare and social workers, publications, and school authorities who have done so much to teach the public the true value of dairy products. In the above class we must include also workers in the dairy industry itself who have done and are doing a great work in increasing milk consumption.

Producers Also Need Milk

At this particular time, with production piling up and consumption going down because of hard times, the dairy industry should be especially interested in every effort to increase consumption. Let us, therefore, glance briefly at some of the excellent results that are being accomplished by our friends in teaching the consumer the value of milk, and while we do this, let us not forget that farmers themselves are a large consuming class, and that there is scarcely a farm family that could not use with profit more dairy products than they are now doing.

We take our hats off, first, to Dr. Shirley W. Wynne, Commissioner of the New York City Department of Health, and his associates who never miss an opportunity to emphasize the health value of dairy products. Such support

as this counts because it comes from one having authority. Dr. Wynne has always lent a sympathetic ear to the suggestion that New York Milk Shed should not be enlarged. He, his associates, and his predecessors in office have constantly advertised the fact that New York has the best and purest milk in the world and that consumers should use more of it. As a case in point, we call attention to the effective milk consumption posters issued recently by the City Health Department and carried on nearly every milk wagon in the Metropolitan district. No one can estimate the results, as measured by increased consumption of milk and better health to the consumer, when backed by such a great authority. To a lesser extent both consumers and producers are indebted to the whole medical profession and to the hospitals, schools, and many publications for their constant urging of consumers, particularly children and sick people, to drink more milk.

What Sheffield Farms Is Doing

Then turn to the milk industry itself. What is it doing? How many of you dairymen who produce milk for Sheffield Farms know that this organization maintains an efficient and effective nutrition department under the direction of Miss Catherine Litchfield. Miss Litchfield and her associates work constantly in the entire Metropolitan district, in Westchester County, and in New Jersey, carrying the gospel of more milk and other dairy products for health's sake literally to hundreds of thousands of consumers each year. During the past year, Sheffield's have been showing a milk consumption motion picture entitled "The Great White Way to Health". With the use of this film and in other ways, Miss Litchfield and her helpers came in contact with nearly 350,000 people. Thousands of these were children in public schools. Other thousands were

members of women's clubs, and such organizations as the Lions, Kiwanis, and Rotary Clubs.

Let us now consider for a moment the milk nutritional work of that other big milk dealer, the Borden's Farm Products Company. Miss Sylvia L. Bayard has charge of this work for Borden's, and she is doing a good job. Miss Bayard and her helpers work with the school children, mothers' clubs, and other women's clubs. Borden's spend much money yearly under Miss Bayard's direction for various milk educational material. This includes a movie in constant use called "Along the Wilky Way", and stereoptican lantern slides, thirty sets of which are in circulation all the time in the public schools. Attractive posters emphasizing the value of milk to health are a part of the Borden's material as are also many attractive booklets on milk and its uses. Thousands of children with their parents and teachers are conducted regularly through the Borden Company plants, on the Borden policy that if the public knows all of the care that is taken to safeguard milk as a food, it will be more likely to consume more milk.

Works through Public Health Agencies

Another feature of Miss Bayard's work is answering letters from mothers about milk and telling them where to write for disinterested information. Milk drivers encourage mothers to write to the nutritional department for this information, and hundreds of them do so. A feature of this Borden milk work which Miss Bayard particularly emphasizes is the information she furnishes to a large number of physicians, dentists, nurses, school, and welfare workers who in turn pass on this detailed knowledge to the consuming public. Miss Bayard is

Analyzing the Cabbage Situation

Prospects Depend on Weather, Business, and the Early Crop

By DR. M. P. RASMUSSEN

New York State College of Agriculture

CABBAGE, in common with many crops, has had a "tough break" this fall. Not only were cabbage producers faced with a somewhat larger tonnage than last year, but to make matters worse, the weather this fall has been unusually mild. Warm weather is not good "soup or boiled dinner" weather. Every mild and warm day during the fall and winter probably reduces cabbage consumption just that much.

Crop Estimate More Favorable

The crop estimate issued on October 1st by the United States Department of Agriculture, shows the cabbage situation to be slightly more favorable than it was on September 1st. The late domestic cabbage crop is now only 13,800 tons greater than last year, but is about 4,000 tons below the average production of the past five years. The late Danish cabbage crop is now estimated to be 12,700 tons greater than last year, but almost 27,000 tons less than the average crop of the past five years.

Drought Changes Cabbage Map

The prolonged drought and high temperatures of the past summer caused "freak" production in many crops, and cabbage was no exception to the rule. The domestic cabbage crop in New York, Ohio, and Pennsylvania, was particularly hard hit, and is almost 20,000 tons short of last year's crop and 31,000 tons below the average crop of the past five years. (Table 1). The Mid-western States of Indiana, Michigan, Wisconsin, and Minnesota, have been much more fortunate. The 1930 domestic crop in that area is about 20,000 tons greater than last year and almost 18,000 tons more than the average crop of the past five years. In other words, the increased crop in the Midwest just about offsets the smaller crop in the East. The Far-western States of Ore-

gon, Colorado, and Utah, have also had better luck than the East. Colorado has a domestic crop 67 per cent greater than last year, and the three states have about 13,000 tons more.

The Danish cabbage crop has had almost the same experiences as the domestic crop. The Eastern crop is about 700 tons smaller than last year, but almost 33,000 tons below the five year average. (Table 2). The Middle-western crop, however, is almost 8,000 tons greater than last

year, and the crop in Colorado is one of the largest ever produced, about 6,000 greater than last year and the same volume above its five year average.

More Competition from Middle West

With relatively short crops of both Danish and Domestic cabbage in the Eastern areas and with the bulk of the excess crops in the Middle West and Far West sections, marketing conditions for cabbage would not be unfavorable under normal circumstances. The heavy production in Colorado will probably crowd Wisconsin and Minnesota cabbage out of some of the Mississippi Valley markets and bring it into more direct competition with Eastern cabbage. With the deficit in Eastern areas, however, and the relatively high freight rates on cabbage to Eastern destinations, it is doubtful if the competition on Eastern markets will be very pronounced. Competition on Mid-western markets will probably be severe.

Early Cabbage Prospects

A matter for really serious consideration by all late cabbage growers and shippers, however, is the prospect for the 1931 early cabbage crop. Reports issued from Washington recently indicate the likelihood of a substantial increase in early cabbage acreage in both Florida and Texas. Last year, Texas harvested 18,000 acres of early cabbage; the intended acreage this fall and winter is forecast at 23,900, an increase of 33 per cent over last year and of 37 per cent over the average acreage of the past five years. The entire estimated acreage intended to be planted for the 1931 crop in the early cabbage states is 20 per cent greater than last year.

It is doubtful whether growers of late cabbage in the Northern States realize the extent

(Continued on Page 6)

Vol. 126 November 15, 1930 No. 20

The Morning After Election

AS we write this on the morning after Election, the papers announce the biggest plurality for Governor Roosevelt that any governor has ever received. Of particular interest to farm people is the fact that the Governor not only carried the big cities, but also many of the rural sections, most of which have never voted in such numbers for a Democratic governor before.

AMERICAN AGRICULTURIST is non-partisan in its editorial policy. We refrained from saying anything in these columns of a partisan nature about either candidate or party previous to election. We are not interested so much in parties as in good government, and in particular, in measures which will mean better and happier conditions in rural life.

Now that the election is over, we can perhaps say without danger of being misunderstood that farmers realized that the present Governor has given proof of more sympathy with and active interest in measures for the benefit of agriculture and rural conditions than any other governor in our time. Farmers know that during the past two years more good farm and rural legislation have been passed than ever before in either this or any other state. Not all, but at least a majority of these laws originated either with the Governor or with his Agricultural Advisory Commission appointed by him for the distinct purpose of helping agriculture, and every good bill for agriculture was supported by the Governor and had his final signature.

One of the nice things about this fine program is that it had the support of the Legislature, especially by those members from the rural districts. Some of the bills originated with the Legislature. Much credit is due, also, to the united support of farm organizations of the State. Everybody had his shoulder to the wheel, but we think it fair to say the Governor most of all.

This active interest by Governor Roosevelt in rural affairs is, in our opinion, one of the chief reasons why he carried such a tremendous vote in the upstate counties. It was not a question with farmers of political party but of a man sympathetic to rural problems.

As a matter of fact, we are beginning to wonder if our present political parties have not outlived much of their usefulness. How much real difference is there, anyway, between the platforms of the two leading parties? Of course, the easiest way to vote is to vote a straight ticket, but it is a good sign that more and more people are putting the emphasis on men rather than on party. The increased number of split tickets and

the increasing number of candidates who rise above their parties in the voters' minds, show more independent thinking and less blind following and speak well for our American institutions.

The Better We Are, the Worse We Are

THE world is face to face with one of the strangest economic problems in its history.

Most of the leading countries are suffering a severe depression because they have too much of everything rather than too little. In nearly every line of business we moderns have become so efficient that we can and do produce far more than we can consume.

Every farmer knows what happens to prices when there is an over-production in any commodity. But what farmers may not realize is that the same principle works for the manufacturer also. To be sure, the manufacturer can shut down, but then he throws thousands of employees out of work and interest, taxes and other overhead go on piling up just the same. Many factories are closed now because of under demand and thousands are unemployed and therefore unable to buy with the result that over-production becomes greater than ever.

Stuart Chase, writing in Harper's, shows how modern machinery and scientific methods have piled up over-production in nearly every line. For example, take automobiles. In April, 1929, according to Mr. Chase, the automobile plants in United States alone were able to produce eight million cars a year. Yet the entire world could buy only about six and a quarter million new cars. Take shoes. Mr. Chase says that American shoe factories can turn out nine hundred million pairs of shoes a year but we buy only about three hundred million—about two and one half pairs per capita.

And yet, in spite of these facts, more and more capital continues to go into great, new manufacturing plants to add to the already overwhelming surplus. Summing these troubles all up in a sentence, it seems that the better we are in efficiency, the worse off we are. Some say that the trouble is not over-production but rather, under-consumption. There is some truth in this. For example, there has been no increase in milk production during the past year. But there is a big surplus on hand because consumers have stopped buying to some extent.

The answer to the problem seems to be in cutting down production and increasing consumption. This is more easily said than done. Henry Ford believes that wages should be maintained and hours should be made shorter. Mr. Chase, the author above referred to, says that more capital should be spent in keeping wages up and not so much invested in manufacturing plants that have to stand idle at least part of the time.

We believe also that a partial remedy lies in decentralizing. Everything is becoming too big—too many large cities, too much merging, too many great manufacturing plants. Why not spread out? Build smaller plants in smaller places. Production may not be quite so large but it would be steady and if shut-downs come, workers would be better able to take care of themselves in the country than in the great cities.

To Reduce the Milk Surplus

ALL well-informed dairymen know that the next year is going to be a difficult one. It is not so much a matter of over-production as of under-consumption. The way that consumption of dairy products, and particularly of fluid milk, is falling off is a serious matter. Usually, even when there is plenty of milk during most of the year, there are some periods when it is difficult to get enough to take care of the market demand, but it is significant that there is even a surplus for these short periods this year.

Fortunately, dairymen are better organized than any other class of farmers. Even those who are not in any organization are willing to support a program when it is good, with the result that when necessary, they can act *en masse*.

Now is the time for such action. It can be said

with no exaggeration that producers would be money ahead if they were actually to throw away their surplus instead of putting it on the market. It is not necessary, however, to throw it away. Much of it can be diverted. The Dairy-men's League is advising its producers how to plan to take care of their surplus during the next several months and this advice is sound because it has been used successfully at other times. We pass this program on to you, not because it is the League's plan but because we think it is to the advantage of every dairyman, no matter what his affiliations are, to help carry it out. Here it is briefly:

Cull injured, diseased and low-producing cows.

Use the Dairy Herd Improvement Association and Dairy Record Club Service offered by the Farm Bureaus, and State Colleges to determine what cows to cull.

Give the good cows at least a 6 to 8 weeks dry period.

Raise the best heifer calves and start them for at least the first six weeks on whole milk.

Feed a 16 per cent dairy ration with clover and alfalfa hay, a 20 per cent ration with mixed hay and 24 per cent with timothy.

After first determining whether or not your farm is better adapted to fall or spring dairying, plan to have more of your cows and heifers freshen in August and September for fall dairying and April and May for spring dairying. For fall dairying this means breeding the cows in December and January and for spring dairying breeding them in July and August.

Consume more milk in the farm home.

Veal more than the usual number of calves.

Western Apples on "The Sidewalks of New York?"

AS one feature of Apple Week in New York City, an apple dealer conceived the novel idea of getting unemployed men to sell apples on hundreds of street corners in the big city. The interesting plan and the way it is worked are described on another page of this issue, but the point we want to make here is that of all the apples that were sold in this way, not a single one was grown in Eastern orchards. The total sales may not have affected the market much, but it was splendid advertising—for the other fellow.

Even with the danger of making some of our apple growing friends angry, we are going to talk plainly. Eastern growers are falling down grievously on this whole business of marketing. Through our own carelessness or indifference growers living thousands of miles away get the jump on this market every time. The Western growers themselves are better organized, their apples are better packed and graded, and they are better advertised and sold. They are the ones also, who are the first to give support to such advertising as apple week.

In the particular sales stunt described above, the only varieties were Jonathan and Spitzenberg, neither of which is grown to any extent in the East. After eating these nice western apples what varieties do you think the consumer will look for next time?

Eastman's Chestnut

THERE was much to be said in favor of the Vigilantes, those citizens of Western pioneer days who were a law unto themselves. I wonder how long it would be before city gangsters would be taking to the tall timber if cities like New York and Chicago had an old time Vigilantes' committee or two.

The story is told about two men who, in the old days in the West, formed a partnership for the purpose of cattle "rustling", and operated together until they were caught by the Vigilantes' committee. The next step, of course, was a lynching bee, and the two thieves were taken to a bridge for hanging.

As the first one, with the rope around his neck, was cast off, the rope broke, and he fell into the river. Being a good swimmer, he swam downstream and escaped.

When the lynchers adjusted the rope around the other fellow's neck, he said:

"Boys, I wish you'd be careful with that rope. I can't swim a stroke!"

A. A. Boys and Girls Go to Dairy Show

TWENTY-EIGHT boys and girls from twelve different New York State Counties exhibited cattle and attended the recent National Dairy Exposition at St. Louis, Missouri, last month.

A total of 318 head of cattle owned by boys and girls were shown. The Jersey show was strongest but the Holstein, Guernsey, Ayrshire and Brown Swiss 4-H exhibits followed very close. In this exceptionally strong competition, New York boys and girls acquitted themselves remarkably well with the calves they showed. New York's exhibit of 29 head included five Holsteins, seven Ayrshires, five Jerseys, six Guernseys and six Brown Swiss heifers. The following club members from New York attended the Exposition to show their calves:

Ayrshires—Wendell Wicks of Oxbow, Clinton Stimson of Spencer, Ralph Gould of Hobart, Kenneth Squires of Clifton Springs, Herbert Putnam and Byron Sullivan of Gouverneur.

Guernseys—Olin Phillips of Rockdale, Reginald Drake of Potsdam, William Green of Memphis, Russell Marion of Ithaca, Howard Lull, Jr. of Garretttsville and Gordon and Cecil Cairns of South Kortright.

Holsteins—Charles O. Bump of Cam-

bridge also showed the eighth prize yearling heifer, and both of his heifers were used in making up New York State's fifth prize group of five Holstein females.

The 4-H Jersey show at the National was considerably stronger than in former years, there being approximately 100 head of Jerseys shown by boys and girls from fourteen different states. However, James Fisher of the North country in New York State won first on Jersey heifers one year and under two where there were 28 entries. His animal, Noble Dictator's Sedate, was also awarded reserve grand championship of a junior Jersey show. Janet Armstrong also of St. Lawrence County with a remarkable little senior Jersey calf won sixth place in a class of approximately 20 entries.

Olin Phillips of Rockdale won second place on his Guernsey two year old heifer, Lois of Phillips Farm. Reginald Drake showed the ninth best two-year old heifer and William Green and Russell Marion showed eighth and ninth prize heifers respectively in the yearling class. In the calf class New York State took a sixth on a senior Guernsey calf owned and exhibited by Gordon Cairns of South Kortright. Gordon made the trip to the National Dairy

The New York State calf club was also represented by a 4-H dairy demonstration team and a 4-H dairy cattle judging team. Walter and Robert Marsland of Otego in Otsego County represented the Empire State in the National Dairy Demonstration Contest at St. Louis. Their demonstration subject was, "How to Select the Right Kind of a Dairy Cow." These boys were given this free trip to St. Louis and

made the trip exceptionally worth while to all club members. A most interesting and educational program was arranged by the Agricultural Committee of the St. Louis Chamber of Commerce. The numerous free trips, banquets and tours for the 4-H visitors were provided by nearly 100 merchants and firms in St. Louis. Trips were made to the Forest Park Zoo, to the Jefferson Memorial where Lindbergh's trophies

Holstein 4-H Club calves from New York State which won fifth as a group at the Dairy Show. From left to right, the calves are owned by: Frederick Petzold, Owego; Richard McGeoch, Cambridge; Bernard Kasper, Pine City; Charles Bump, Cambridge (held by Russel Marion, Ithaca); Charles Bump, Cambridge.

The 4-H Club dairy demonstration team, composed of Walter Marsland, at the left, and Robert Marsman, brothers from Otsego County, whose subject was "How to Select the Right Kind of a Dairy Cow."

bridge, Bernard Kasper of Pine City, Richard McGeoch of Cambridge and Frederick Petzold of Owego.

J Jerseys—John Luchsinger of Syracuse, James Fisher of Madrid, George Manley of Hartwick and Janet Armstrong of Ogdensburg.

Brown Swiss—James Harkness of South Kortright.

Our boys and girls returned with their share of prize money having won one championship, two reserve championships, five firsts; four seconds, one third; one fourth; two fifths; two sixths; two sevenths; three eighths and one ninth.

Wendell Wicks of Oxbow in Jefferson County won first on Ayrshire heifers two years old or over with Dolly's Bess and third on Gertrude's Nancy of Oxbow. Dolly's Bess also won grand championship over all 4-H club Ayrshires and took fifth in the aged cow class in the big show. Clinton Stimson of Spencer won first on heifers one year and under two with Toreador's Snowball of Craigy Burn and the same heifer was reserve champion among Ayrshire club exhibits. Kenneth Squires of Clifton Springs was awarded second on his yearling heifer. This is Kenneth's first year in dairy calf club work and his first trip to the National Dairy Show. This is an example of a hard working boy who selected the right kind of a dairy heifer. Herbert Putnam and Byron Sullivan of Gouverneur won second and fifth respectively in the Ayrshire calf class. New York State also showed the champion group of Ayrshire heifers in the group contest for all states.

On Holstein heifers two years old and over, Charles O. Bump of Cambridge in Washington County won first with his heifer, Lauderdale Susie's Marathon. This heifer has a long list of winnings in Eastern Holstein clubs and open class shows and we were not at all surprised that she was judged the best in her class at the junior show.

Show last year having been judged the most outstanding dairy calf club member in New York State. Because of this he won the New York Central Railroad Company's free trip to the National Dairy Show.

The New York group of five Brown Swiss females made up of heifers owned by James Harkness of South Kortright, Roscoe Owens of Guilford and Glade Baldwin of West Edmeston won fourth. In the individual classes, James Harkness showed the first prize two-year old and the second and seventh best yearlings and won seventh in the junior calf class. This marks the largest Brown Swiss 4-H calf club exhibit ever to have been sent to the National from New York State. However, it would not have been possible this year had it not been for the substantial help and cooperation that was given the New York State calf club by Mr. D. N. Boice of the Hill Top Farm, Churchville, N. Y. Mr. Boice is one of our good Brown Swiss cattle breeders and is very much interested in 4-H dairy calf club work.

The group of Ayrshires shown by New York State 4-H Club members which took first at the National Dairy Show. From left to right they are owned by: Wendell Wicks, Oxbow; Clinton Stimson, Spencer; Herbert Putnam, Gouverneur (showing for Ralph Gould of Delaware County); Kenneth Squires, Clifton Springs; Byron Sullivan, Gouverneur (showing for Herbert Putnam).

the privilege of representing this state after having proved themselves to be the champion dairy cattle demonstrators in the State of New York. The demonstration elimination contest held at the Syracuse Fair and the expenses of these two boys were paid by the De Laval Separator Company and the National Dairy Exposition. The 4-H dairy cattle judging team was also selected from the winners in the New York State Fair 4-H dairy cattle judging contest. They were: Walter Brockway of Hobart, Delaware County; Walter Miller of Slingerland, Albany County; Fred Legg of Penn Yan, Yates County; and Francis Oley of Manlius in Onondaga County.

The New York State calf club members won many prizes but the trip was valuable in many other respects. The National Dairy Show 4-H program

are kept, to Shaw's Garden, to the Purina Mills Experimental Farm.

The expenses of this trip were paid by the prize money won and from contributions from the New York Jersey Cattle Club, The New York Guernsey Cattle Club, The American Holstein-Friesian Association, The New York Holstein-Friesian Association, Meridale Farms, The St. Lawrence Valley Ayrshire Club, The Otsego-Delaware Ayrshire Club, The Saratoga Essex Ayrshire Club, the Finger Lakes Ayrshire Association, D. N. Boice of Churchville, the New York State Brown Swiss Cattle Breeders Association from four banks in Madison County and some feed and hay donations received from P. Drescher & Son of Syracuse and the G. L. F. Exchange.—By H. A. WILLMAN, New York State College of Agriculture.

High School Boys Win Dairy Show Prize

By RAYMOND R. JANSEN,
Marcellus, N. Y.

AT the State Fair in September, Roy Murphy of Marcellus, William Patterson of Newark Valley, and Milton Hislop of Chazy, were selected as the vocational agriculture dairy cattle judging team to represent New York State at the National Dairy Exposition to be held at St. Louis, October 11 to 19. Raymond Jansen, agricultural teacher at Marcellus, was designated as coach of the highest scoring boy to accompany the team.

The party started for St. Louis by auto early Tuesday morning, October 7. The route led through the grape belt along Lake Erie, where the boys took some pictures. Cleveland was reached in the late afternoon, where the party stopped over night. The route followed Wednesday forenoon southward through Ohio, was anything but straight. The increasing size of the corn fields was noted. The corn was

cut and bound into large shocks, standing in rows a considerable distance apart. In some fields the ground was green with sprouted wheat which had been sown between the shocks.

West of Columbus, the National Highway, route 40, provides a straight-away so level that speed can be made with ease. Along this route were occasional herds of beef cattle eating at open sheds. At Plain City the first large drove of hogs was seen grazing in a large pasture. Peach orchards were frequent, and tobacco seemed to be grown to a considerable extent west of Springfield, Ohio. Sweet clover was also extensively grown. Weeds were everywhere, growing tall, heavy, and luxurious. At Richmond, Indiana, one of the boys remarked that the clock was slow, which reminded everyone that the time was an hour slower than Central New York time. The boys were struck by the frequency of school buses in Ohio and Indiana. In Ohio, each district appeared to have its school bus; in Indiana township buses were noted. (EDITOR'S NOTE: Centralized or Consolidated schools prevail in these states).

Proceeding westward, the road was level and straight, the trees and fields parched and dry in appearance, and the farms extended over an unbroken plain for endless miles. Barns were small, as they appeared to shelter only the work animals, a few cows, and a little feed. Corn appeared dry and weatherbeaten, as it stood uncut in the fields. Fields of soy beans were quite frequent, the beans standing in shocks resembling buckwheat and evidently intended for threshing. Westward toward St. Louis the land is rolling, the

FOX POULTRY FARM

Gentlemen:

Metuchen, N. J.
August 20, 1930

Having fed Larro four years, thought you and other poultrymen might be interested to know my experience with Larro Mash.

When I first fed Larro Chick Starter I was feeding two other mashes—at the end of four weeks I noticed a gain in weight and appearance of the Larro chicks.

Each year I increased the number of birds fed on Larro until this year my 3,500 pullets were raised completely on Larro.

In like manner I tried Larro Egg Mash against other mashes and my home mix but soon found out the advantages of Larro Egg Mash.

Birds fed Larro continued to lay longer, had better health, greater increase in body weight and laid larger eggs.

Very truly yours,

Lewis I. Fox

Mr. Fox has a flock of 4,000 layers which this year averaged 180 eggs per bird. Think of it! That's the kind of production that brings greater year 'round profits.

Whether you have 100 or 10,000 in your flock, Larro Egg Mash and Scratch Grains will increase your profits too. See your Larro dealer at once and get started on Larro—the extra profit ration.

THE LARROWE MILLING COMPANY

A.A.'s Western New York Farm and Home Talk

Fruit Trees Escape Serious Damage

PARTS of this great farming region were prematurely visited with a strong touch of winter in mid-October. Then the area just to the east of this end of Lake Erie received a wet snow blanket from one to three feet in depth which blocked traffic on the highways for two or three days. A week later I drove through a part of the area and the scene was still a wintry one with banks of snow along the highway where snow plows had pushed them.

Many trees, both fruit and shade as well as bushes, were badly broken and split from the heavy load of snow. There had been no severe killing frost previously and the full green foliage was still on the trees in most instances. This seemed very odd and, of course, contributed to holding the snow and increasing the damage.

M. C. Burritt

Fruit Belt Escapes

The last week in October all of Central Western New York about ten miles inland from Lake Ontario had a similar snowfall, though not nearly so heavy. Though generally temperatures have been above freezing, it has been cold enough to retain much of this snow, giving this area all the appearance of winter in October. Fortunately, its nearness to the summer heated and slowly cooling Lake Ontario turned this snow to rain in almost the entire fruit belt below the "Ridge" and damage to fruit trees here was averted. This storm illustrates one of the reasons why our fruit belt is located just where it is along Lake Ontario.

Market conditions continue very bad with already low prices barely holding their own and in some cases not. There is not much change in apple prices. The export demand continues fairly good but domestic demand such as there is, will pay only low prices. Just here the total amount in storage is not large, and if business conditions do recover later in the winter storage holdings should show a good profit. Cabbage loadings have continued heavy and the market has fallen to six and eight dollars per ton. This is the lowest price in years. The dried apple market is flat and some dry houses are refusing to buy more stock. The price of 25 cents per cwt. recently paid is the lowest late season price I can remember in ten to fifteen years.

Apple Pollination

It will be remembered that interest in apple pollination has been greatly increased during the past two years. Last spring many hives of bees were brought into this section during blossom time, generally with very good results. The season was quite favorable for the pollination of early varieties. But just as the later varieties were coming into full bloom it turned colder again, and the thermometer remained mostly between 50 degrees and 65 degrees for three or four days. Only on the very last day or two of the possible pollination period did it warm up to 70 degrees and 75 degrees again.

Having had much trouble in getting a good set in a block of Northern Spy we have been grafting Romes into some of the trees for pollinators. But as it will take several years for these grafts to become effective pollinators, this year we put about 75 pails of Rome branches of bloom into and around the Spy trees. In the case of this variety the three or four days of cold weather came at the height of the bloom period and greatly interfered with pollination as bees could not work. And the bouquets of Rome were getting old and faded by the time the warm day at the end of the bloom period arrived. There were four trees where for one

reason or another the pollinator bloom was fairly good on this warm day. The average yield of these four trees was eleven bushels. The average yield of thirty-one other trees in which the Rome bloom in the pails was more or less dead was only three and a half bushels. On such slightly variable conditions does a crop often turn.

On the whole, I am well satisfied with the results from bees and the use of pollinators. Wherever we had bloom we had apples this year. And the better the pollinating conditions, bees, temperatures, and pollinators, the better the yield. We have had the best crop of Spys in five years.—Hilton, N. Y., November 2, 1930.

Analyzing the Cabbage Situation

(Continued from Page 3)

to which the early cabbage crop is year by year encroaching more and more on the market for northern cabbage. During the years 1922 to 1926, carlot shipments of early cabbage did not attain any appreciable volume until the middle or latter part of February. During recent years, however, early cabbage has been appearing on Northern markets in considerable volume, early in December and January. It is obvious that if this tendency persists, the possibilities for profits in the holding of late cabbage for winter markets will be greatly diminished. There has been a steady upward trend in the acreage planted to cabbage in Texas during the past 10 years, and it is likely that Texas growers will make every effort to place their cabbage on northern markets even earlier than heretofore. The public seems willing to pay more for a bright, green, though soft head, than for a solid, white head, and are lending the early growers considerable encouragement in the way of price.

Why Prices are Low

Since all fruits and vegetables are bringing lower prices this fall than last year, it is probably reasonable enough to expect lower cabbage prices this fall, especially in view of the somewhat larger potential supply. The relatively low prices for cabbage are not, however, due to excessive shipments, since cabbage shipments up to October 12 of this year are approximately 7,000 carloads less than had been shipped to the same date last year. The warm, languid days of the past month have had much to do with the slack demand for cabbage. Whatever edge there may have been on the demand side seems to have been dulled by the current business depression which has made dealer and consumer alike reluctant to buy more than day-to-day needs.

Future Prospects

If the business situation improves rapidly during the next two or three months, and if the weather remains cool, prospects for cabbage may improve. If, in addition, the early crop in the South should experience another disastrous freeze like that of last year, prospects might improve most decidedly. These are three big "ifs", however. No one can forecast the near future with any degree of accuracy, but it will certainly pay cabbage growers to scrutinize economic developments very carefully during the next three or four months.

Avoid Sending Cash

There is always some danger that money will be lost when it is sent through the mail. This is particularly true of coins. May we, therefore suggest that when you have occasion to send money to American Agriculturist, either for subscriptions, patterns, embroidery, trespassing notices, or insurance policies that you send either a check or postal money order. Where amounts are very small, stamps will be acceptable.

A Good Job for the Dairy Industry

(Continued from Page 3)

quite enthusiastic about this and says that it stimulates leaders to more knowledge and interest in milk from a health standpoint, so that she is able to reach indirectly thousands of people who most need to use milk and its by-products. Such work is especially valuable because when a doctor insists that his patients should use milk or butter, they are very likely to follow his advice.

The Borden Nutritional Department conducts many surveys among different classes of people to find just how much milk they are using. Then, by knowing the ideal of how much they should use, a goal is established. The writer is impressed with the large number of contacts or people whom the Dairymen's League, Borden's and Sheffield's milk nutritionists are able to reach with milk information. Miss Bayard's Department reached in one way or another 25,000 clubwomen during the past year, more than 50,000 members of mothers' clubs, and 25,000 children and teachers in public schools.

We thought that many dairymen would be particularly interested also in what the Dairymen's League Cooperative Association is doing to increase consumption and the market for milk and its products, so the other day the writer went over and spent an afternoon with Miss Vera McCrea, charged by the League with the responsibility of taking the gospel of milk to consumers.

League Members Should Encourage Miss McCrea

We think the League members would be especially proud of what the League is trying to do along this line if you had had the privilege, as we did, of visiting Miss McCrea's offices, talking with her, and studying reports of the results accomplished so far. Associated with Miss McCrea and working every day for the cause of milk and ever more milk is a whole staff of trained workers. These include Mr. Eppes, known to nearly every dairyman and to hundreds of thousands of boys and girls as Healthy, the League clown; Miss Rowe, and Miss Halsey, story tellers who work with children; Miss Edwards, Milk Maid and Dramatics; and Mrs. Borgeson, Miss Sekada, and Mrs. Gerhart, nutritionists.

A whole article might be written about the splendid work of Mr. Eppes, (Healthy). Most of you know him. We know of no better way to obtain the lasting interest of children in milk than by the splendid dramatic work of Mr. Eppes in his personification as Healthy, the League clown.

There is the little story, for example, that Healthy told us, about a little girl whose teeth and general health were bad because she never would drink milk. Then she saw and heard Healthy at school one day, and a few weeks later he received a grateful letter from the little girl's parents telling how she was drinking milk three times a day, how she had learned to like it, and best of all, how she was improving in health.

Incidentally, milk consumption work with children is the best kind of advertising because the child never forgets his lessons, and also, because he takes what he learns at school home and often succeeds in increasing the milk consumption of the entire family. As an example of this, read the following letter written by one of the principals of a large school in New York City to Miss McCrea after Healthy had been to that school:

"A little nonsense now and then is good for boys and girls as well as for the 'wisest men'. Your man, Healthy, certainly knows how to put over the value of Milk. We had a group of about 600 pupils—they were simply enthralled by Healthy. I know they repeated all his 'stunts' at home and included his message on Milk.

"I would be gratified if we could have Healthy with us again next April. I understand he will visit other cities shortly, but I hope you will make a note of my request."

Miss McCrea's files as well as those of Miss Bayard of Borden's and Miss Litchfield of Sheffield are filled with

Where the STORY of FEED is TOLD!

TWO STREAM OF MILK...flowing from udder to pail...there's the story of feed...there's the milk-making story of Purina Cow Chows. This is so, because milk is made of feed and Purina Cow Chows are built to make milk. You find the proof of Purina Cow Chow goodness in the recent national farm-to-farm feed survey of 18 months...a survey of 505,536 cows...a survey covering the 48 states and Canada...a survey conducted by 870 men...a survey still going on.

It reveals that in the average 100 pounds of Purina Cow Chows there are 16 more quarts of milk than in the average bag of more than 130 other feeds. This bag of Purina Cow Chows costs an average of 23 cents more than the average bag of these other feeds. 16 quarts for 23 cents...this is the extra you get from a bag of Purina Cow Chows.

When you buy feed for your cows you are buying milk in a bag. Consider, then what a bargain you get in a 100-pound bag of Purina Cow Chows...113 quarts of milk...all in 100 pounds of feed and the roughage that goes with it. 16 of these quarts are extra...16 quarts that show up in the pail at milking time...16 quarts which are made for 1.4 cents per quart. What a bargain! A bargain that comes in every Checkerboard Bag...a bargain that becomes *your* bargain when Purina Cow Chows become *your* feed. Purina Mills, 898 Gratiot Street, St. Louis, Mo.

other interesting letters as a result of the work of their Departments.

Nor is the League milk consumption work confined to New York City. In one year, representatives of this department of the League reached more than 100,000 people in Rochester, 52,000 in Buffalo, and over 4,000 in Auburn. Similar work is being done also to increase interest in milk and its products in dozens of smaller places. The records show that the League personnel alone have contacted in one year more than 600,000 children and grown people. What a splendid contribution to the health of our people and to the prosperity of the dairy industry!

After studying these various efforts of the League and the milk dealers to increase milk consumption, we have only one criticism, which we hope is constructive, and that is that there might well be more cooperation among those doing this work. This would lead to the development of one well-or-

ganized program, to better cooperation with the schools and other public agencies, to the avoidance of unnecessary duplication, and best of all, to the concentration of all those who are now doing such splendid work on one single program of milk education.

"Something to Think About

Let us not close this little summary of the good job that is being done for both dairymen and consumers without emphasizing a bit the responsibility of the producers themselves in this matter of using more dairy products. It is an old saying but a true one that religion begins at home. So does milk consumption. Is it not a bit inconsistent, to say the least, to spend so much effort getting city people to use more dairy products when as farm people we fail to use all that we could, ourselves? The amount of milk surplus never is large from a comparative standpoint. It does not take a large

amount to bear down the price on all the rest. If during the next few months when city people are eating less dairy products, all farmers would eat more the problem would be greatly helped if not entirely solved. Your family can have milk for less than five cents a quart. It costs the city consumer three times this. If Miss McCrea, Miss Bayard, Miss Litchfield and their helpers are justified in doing such splendid work in telling city people that they should use at least a quart of milk per day, what about your own case? Are you or your children getting less than this?

It is not the habit of the editors of this publication to do any "preaching", but we do feel most emphatically that now is the time for every farmer and especially every dairy farmer to back up the work of those who are trying to increase the use of milk products in the city by using all that you possibly can yourselves.

FEED DRIED MOLASSES BEET PULP

AND MAKE MONEY

No other supplemental feed can add to your profits like Dried Molasses Beet Pulp. It blends perfectly with other feeds—it makes the whole ration work harder for you. As a milk producer it has no equal.

Dried Molasses Beet Pulp is all of the sugar beet after extraction of sugar. As a pure succulent, vegetable food it makes a highly palatable ration. Dairy cows, beef cattle and sheep relish it. In the stomach it swells to 5 or 6 times its own bulk, loosens up the mass of feed and insures perfect digestion of the entire ration. No feed is wasted.

Fits Any Ration

Dried Molasses Beet Pulp may be used in a variety of ways. It supplements pasture, replaces silage, corn and other carbohydrate feeds. Where hay is short or high priced, 6 pounds of Dried Molasses Beet Pulp will do the work of 10 pounds of hay and do it better.

Order Now

The demand for Dried Molasses Beet Pulp has always exceeded the supply—thousands of dairymen, cattle and sheepmen are feeding it. Prices are low. See your dealer and place your order now.

Shipments made direct from factory located nearest to buyer.

Milk Prices

November Prices

Dairymen's League prices are based on
milk testing 3.5%. Sheffield on the basis
of 3%.

Class	Dairymen's League	Sheffield Producers
1 Fluid Milk	3.37	3.17
2 Fluid Cream		2.00
2A Fluid Cream	2.16	
2B Cond. Milk		
Soft Cheese	2.41	
Evap. Cond.		
Milk Powder		
Hard Cheese	2.00	1.80
4 Butter and American Cheese. Based on New York City Market quotations on butter and American Cheese.		

The Class 1 League price for October 1929 was \$3.42 for 3.5% milk and Sheffield's \$3.22 for 3%.

The above prices in each class are not the final prices the farmer receives. The final price received from the dealer is the result of weighed average.

Butter Loses Some Ground

CREAMERY SALTED	Nov. 7, 1930	Nov. 1, 1930	Nov. 8, 1929
Higher than extra	39 -39 1/2	40 1/2 -41	44 -44 1/2
Extra (92 sc.)	38 1/2	39 1/2 -40	43 1/4 -43 1/2
84-91 score	29 -37 1/2	30 -38 1/2	35 -42 1/2
Lower Grades	28 -28 1/2	28 1/2 -29 1/2	33 1/2 -34 1/2

The butter market lost some ground during the week ending November 8, the break coming at the very opening of the market on Monday, November 3. The wide differential between Chicago and New York City was held to be the primary factor back of the bear drive. A difference of 4c per pound between New York and Chicago has existed for some time and buyers have been very dissatisfied. Additional pressure to sell has developed from the fact that a great deal of butter (fresh make) has been diverted from other cities. It was to be expected therefore, that the bears would eventually have the situation in their favor.

At the existing levels the butter market is steady to firm and growing a little stronger. However, trade demands are being met promptly and reasonable business is the result. Consumption is reported to be satisfactory with the chain stores featuring butter specials. The bulk of the demand is for the better grades of butter. The lower grades are quite neglected, the light demand being of a picky nature. There is no bulk to the movement of undergrades and they are causing a little stagnation which quite naturally worries some elements in the trade.

Cheese Market Quiet

STATE FLATS	Nov. 7, 1930	Nov. 1, 1930	Nov. 8, 1929
Fresh Fancy	20 -21 1/2	20 -21 1/2	26 -26 1/2
Fresh Average			
Held Fancy			27 1/2 -29 1/2
Held Average			24 -26

The cheese market has been quiet during the past week. Asking prices have been well supported. In view of the firm situation that prevails in Western markets. Wisconsin prices are a shade higher than they were and naturally this holds the market quite steady. State cheese holds steady. The demand could be better but at the present time comparatively little cheese is coming forward, so that the situation balances itself. New York State whole milk flats that show evidences of curing and that can be classed as short held are bringing from 21 1/2 to 22 1/2c.

Eggs Take Turn Upward

NEARBY WHITE	Nov. 7, 1930	Nov. 1, 1930	Nov. 8, 1929

Undergrades	26-28	25-26	42-46
Pullets	30-33	28-32	38-43
Pewees	27-28	23-27	35-38
NEARBY BROWNS			
Hennery	46-56	48-55	63-68
Gathered	31-45	27-46	48-62

Fancy eggs advanced once more in the face of lighter receipts. The egg market is a quandry. Fresh eggs of extra fancy quality, typical of the finest that New Jersey ships, have been in very limited supply. Accordingly, most of the eggs in this class have gone directly to retailers at premiums bringing prices as high as 61c. Practically none of those eggs are appearing on the wholesale market. Medium grade eggs are bringing a little better money than last week but they are running into a lot of opposition from Pacific Coast egg producers who have a plentiful supply of fancy eggs at very attractive prices. The scarcity of fresh eggs and the advancing price is going to cut into the storage holdings which is looked upon as a benefit to the egg trade. Although prices of fresh goods may not advance materially, nevertheless the one big factor that is an anchor around the

neck of the egg business is the burdensome surplus that lies in our storage houses. The quicker that surplus is eliminated the sooner we are going to see improved egg business all around.

Live Poultry Market Mixed

	Nov. 7, 1930	Nov. 1, 1930	Nov. 8, 1929

The live poultry market was a mixed affair during the week ending November 8. Colored fowls had a hard time of it. Prices were shaded in order to stimulate trade but the demand was not there. It was practically impossible to get a premium except where quality was extra fine. Leghorn fowls, on the other hand, were in strong demand and were snapped up wherever they were obtainable. Large chickens were moving slowly and the market on them closed barely steady. Pullets and broilers favored the sellers. Old roosters have been scarce. Quite a few turkeys have been arriving and the best lots have been working out fairly well. We interviewed a couple of jobbers in the market during the past week and they expressed the opinion that high turkey prices would be impossible due to the unemployment situation. The average consumer has not got the money and it is going to squeeze every last nickel before letting it go, that is why we believe that some of the smaller local upstate markets are going to be just as good or possibly better than the Metropolitan district.

Fruits and Vegetables

Fancy large fruit in baskets and barrels has been holding firm. Western boxed goods have been barely sustained. Basket stock generally brings from 50c to \$1.50 per basket although McIntosh bring from 75c to \$2.50. Northern Spys and Baldwins bring from 75c to \$1.75 and \$1.65 respectively, depending on quality. In barrels McIntosh are bringing from \$2.50 to \$8.50; Kings bring from \$2.50 to \$5; Northern Spy from \$2.50 to \$6.50; Baldwins, \$2 to \$4.50; Greenings \$2 to \$5.50.

Cabbage is moving a little better although prices have not been affected as yet. State cabbage in bulk is bringing from \$17 to \$20 per ton with jobbing sales at \$18 to \$22. The cold weather is making corned beef and cabbage a popular dish these days.

New York State carrots are moving slowly at 65c to 75c per bag at the dock. Nearby carrots are bringing from \$1.50 to \$2.50 per 100 bunches.

Nearby pumpkins generally sell at \$1 to \$1.50 per barrel. Individual pumpkins for display purposes are bringing anywhere from 25c to as much as \$3 depending on the size of the pumpkin and how badly the buyer wants one.

Parsnips are bringing anywhere from 75c to \$1 per basket.

Nearby Marrow squash are quoted at \$1 to \$1.50 per barrel while nearby Hubbards are generally worth 25c more.

Nearby white turnips are bringing from 50c to 65c per basket. Rutabagas range from 75c to \$1.25 per hundred pound bag.

Meats and Livestock

CATTLE—Three loads of steers about steady. Load good grassers \$9.25. Few medium \$7.60. Cows steady. Common to medium \$3.75-4.75. Low cutters \$1.50-3.50.

VEALERS AND CALVES—Vealers generally steady. Good to choice \$11.50-14.00; mediums \$8.00-11.00. Cull and common \$5.00-7.00. Few Kentucky calves 50c to \$1.00 higher. Few good grades \$7.75. Common to medium \$5.00-6.75.

HOGS—Steady good to choice 160-220 pound \$9.00-9.65.

LAMBS—Lambs in light supply, fully steady, few sales 25c higher. Good New York lambs \$8.25. Few medium Ohio's \$7.00.

COUNTRY DRESSED CALVES—Receipts though only moderate were more than required by the trade during the week, demand being very slow all through with daily carryovers till Friday, when trade was slightly more active.

Prices were irregular, ranging from 8 to 15c per pound, grades not counting. Market closed irregular with some still unsold. Fresh receipts per pound: Choice 13-15c; fair to good 11-13c; small to medium 7-11c.

COUNTRY DRESSED PIGS—A few now arriving on the market. Sales in small quantities only. Per pound: Roasting, 12-15 lbs., 24-30c; 15-20 lbs., 22-27c; 25-30 lbs., 18-22c.

LIVE RABBITS—Fresh receipt moderate to liberal during the week. Demand slow in early part, improving at end. Market steady. By the coop, 12-18c per pound.

Wool

The wool market has been steady. New York better fleece wool, unwashed, fine per pound, 21-30c; 1/2 blood 22-29c; 3/4 blood 24-29c; 1/4 blood 24-29c; low quarter blood 25-27c; common and braid 23-25c.

The above quotations taken from the weekly feed letter of the N. Y. S. Dept. of Agr. and Markets are for straight carlots, f.o.b. Buffalo. Prices on mixed cars and less than carlots are higher. Consult your local freight agent for freight rates to your station.

Hay More Plentiful

Receipts of hay at Manhattan and Brooklyn terminals were more plentiful during the week ending November 8, giving the buyers a chance to slow up. As a result, values weakened as the days rolled by and finally came to rest about \$1 under last week's price range. Tuesday, being a closed holiday in New York, caused supplies to pile up, accumulations consisting of everything but No. 1 timothy. The Bushwick terminal in Brooklyn was approximately \$1 a ton higher than the Manhattan terminals. Prices on straight timothy range from an inside figure of \$24 on No. 3 to an outside figure of \$29 for No. 1. Sample hay brought from \$19 to \$22. Timothy containing mixtures of grass or clover range anywhere from \$22 to \$27 depending on grade. Rye straw has been slow at \$14. Oat straw has been bringing \$12.

Making Sauerkraut

What are the essential points in making good sauerkraut?

WE believe that you will get good results if you will follow these suggestions:

First, use either earthenware jars or paraffined barrels.

Second, remove the outer leaves and any discolored ones from the heads, quarter, and remove the core.

Third, cut the cabbage with a kraut-cutting board and pack it into the jars sprinkling with salt as packed. Use salt at the rate of one pound of salt to forty pounds of cabbage. Pack cabbage into the jar or barrel, taking care to press it tightly rather than to bruise it.

Fourth, cover kraut with clean cabbage leaves and then with a paraffined circular wooden cover.

Place enough weight on the cover so that the brine will cover the kraut, but not completely submerge the cover. The formation of a white scum is a sign that the kraut has not been properly covered. This scum is a yeast which destroys the acid and softens the kraut. Put the barrel or crock where the temperature is from 70 to 75 degrees. At this temperature it will take from three to four weeks to complete fermentation.

Blue Ribbon stock? Be your own judge

Here are the rules for judging

1. Fit comes first. Make sure of a snug, comfortable feeling, leaving room for proper foot action. This means the boot should be shaped to the foot.
2. Make sure that the boot promotes foot health and comfort. Look for flexibility. Make sure there'll be no pressure on those large veins over the arch.
3. Examine carefully the workmanship and construction. A boot should be made of many parts, carefully fitted together for fit and comfort.
4. Get the boot in your hands. Twist it. Bend it. See that it snaps back into shape quickly—with life. Just another test for flexibility and comfort.
5. Look for reinforcements at the wear points. The prize-winning boot must wear well.

Rubber footwear for the entire family. For work, dress and play.

"U. S." Blue Ribbon Boots. Made on costly aluminum lasts, which duplicate the shape of your foot precisely. They fit! Red uppers with white soles, or Ebony black with white soles. Three lengths—knee, medium, hip.

"U. S." Blue Ribbon Walrus. (All-rubber Arctic). If you've never used the "U. S." Blue Ribbon Walrus, try a pair. Slips right over your leather shoe. Kicks off in a jiffy. Built to stand the hardest usage. Four, five or six buckles.

Stylish Gaytees for the modern farm wife. Match your new coat with stylish Gaytees. Gaytees with their many beautiful colors and fabrics, are widely acclaimed by Paris style authorities.

The new Gaytees are utterly different from the heavy, clumsy overshoes of other years. Smart in colors; in fabrics; in style. Gaytees come in cloth or all-rubber uppers—in high or low upper, with snap fastener, Kwik-glide fastener, or 4 buckles. Look for the name "Gaytees" in the shoe.

The Popular Keds. Star athletes everywhere choose Keds because they are so comfortable for the feet. And they encourage young feet to healthy growth—yet afford the foot-protection every child needs.

NOW that you've read the rules we'd like to take time out right here and make a sporting wager that you'll pick the "U. S." Blue Ribbon Boot to win, every time. Just like prize cattle—"Blooded stock, bred to wear the Blue Ribbon."

Since this isn't a livestock pen, we had to leave out the rules for examining the teeth and hoofs. But seriously speaking, you'll notice that the rules

call mainly for foot comfort and foot health in a boot.

Foot comfort and foot health are important. After all, your feet are your most valuable pieces of farm equipment. That's why, to the makers of "U. S." Blue Ribbon Boots, fit is a prime consideration—so you can always be on the job with healthy, comfortable feet.

The boot that's comfortable is the boot that fits!

"U.S." BLUE RIBBON

foot-saving footwear

Something else about foot comfort and health

We'd like to send you a little book entitled, "The Care of Farmers' Feet." It was written especially for the United States Rubber Company by Dr. Lelyveld, noted foot-specialist and Executive Director of the National Association for Foot Health. You'll find it mighty handy to have around the house.

All through the book you'll find interesting discussions on corns, bunions, ingrown nails, chilblains, itching feet, etc. Not only are the symptoms of various ailments explained—you'll find simple common-sense treatments suggested. Mail the coupon for your copy today. It's free!

United States Rubber Company,

Cook Electrically and save time for other things

The Hotpoint electric range is one of the greatest time savers that electrical service brings to the farm home. It turns itself on and off, automatically, at exactly the time you have set. You needn't spend a minute in watching it—a wonderful saving of time for other things.

Its automatic temperature control does away with all the old uncertainty of baking and roasting. Canning work is greatly simplified and a real pleasure—with a Hotpoint. For large families and for farm use, Hotpoint ranges are made with extra-large ovens.

And there are a hundred other applications of electricity that save time, work, and money. Feed grinders,

for instance, and ensilage cutters, electric milkers and churns, all driven by General Electric motors, save hours of labor.

General Electric appliances heat and pump water; preserve food as well as cook it; wash, iron, and clean; light the house and barns brilliantly and economically. Even to the hidden wires and wall switches, you can depend on G-E quality and service.

Think about General Electric appliances and wiring in terms of economy—economy of labor and time and cost. Your power company will tell you all the details.

Send for the new booklet "Electric Helpers for the Farm." Address Room 315, Building 6, General Electric Company, Schenectady, N. Y.

THE FORD TRUCK

THROUGHOUT the year, at every season, the Ford 1 1/2-ton truck can serve you . . . with its steady and capable performance, with its capacity for long, hard work, and with a marked degree of economy that helps to lower expense.

The Ford is a sturdy truck, always ready and able to hurry a load to its destination, and to do it at low cost.

The Ford truck has a good engine. It develops its full 40 horse-power at 2200 revolutions per minute, which is but a medium engine-speed. Wear on moving parts is thus reduced.

In its construction, bearings and reciprocating-parts are held to close limits of accuracy, by means of precision-gages in the hands of expert workmen. For

example, crankshaft main bearings and connecting-rod bearings of the engine are held to true-round within one-quarter of one-thousandth of an inch.

This and equal accuracy at other important points result in decreased wear, longer life, and greater value.

Features of the truck are the spiral bevel gear rear axle with straddle mounted pinion; the option of two gear-ratios; 4-speed transmission; power take-off opening; large brakes and heavy front axle and spring. Dual rear wheels are available at small additional cost.

Go to your Ford dealer, and let him show you at what low cost you can operate and maintain this truck on a farm.

DODGE DEPENDABILITY

TRUE ECONOMY IS MORE THAN PRICE-DEEP

Dodge Brothers oft-repeated statement, "The first cost is practically the last," today means more than ever before. For every fine feature of Dodge cars is even finer in the Dodge Six and Dodge Eight of today. » » And modern engineering advancements, such as safe, silent Mono-Piece Steel Bodies and weatherproof internal hydraulic brakes, add still more to their long life, low upkeep costs, lasting dependability and high resale value. » » Luxury, beauty and smooth, brilliant performance are yours in a Dodge Six or Dodge Eight . . . the greatest satisfaction at the lowest cost per mile.

MARATHON SHOWS OTHERS WHAT DODGE OWNERS ALREADY KNEW

Since July first, the Dodge Marathon Eight has crossed and recrossed the country many times. Under every condition of road and weather, this car is recording officially the stamina, dependability and economy with which all Dodge owners are familiar.

DODGE SIX, \$835 TO \$935 — DODGE EIGHT-IN-LINE, \$1095 TO \$1145, F.O.B. FACTORY

Dodge Eight closed cars are factory-wired for immediate installation of Transitone, the pioneer automobile radio. Other models will be equipped on order. Ask for a demonstration.

Farm News from New York

State Home and Farm Bureau Federations Meet at Albany

FARMERS and farm leaders from all over New York State gathered at Albany on November 5, 6, and 7, for the annual meeting of the State Home Bureau Federation and the State Farm Bureau Federation.

In his annual report, Secretary E. S. Foster reported a healthy growth during the past year. On September 1, this year membership in the County Farm Bureaus was 4,124 above the same date in 1929. During the last two years the gain has been over 8,500.

President C. R. White of the State Farm Bureau Federation, in addressing the meeting, commented on the recent election and said: "The Governor has done splendid work for the farmers. He has been one hundred per cent with us. Both Democratic and Republican legislation in the capital have been above politics in the case of the farmer."

Mr. White commended the better road legislation which has reduced road taxes for the farmer, efforts to bring better educational facilities to farm people, as well as all efforts to equalize the tax burden for the farmer.

Other speakers at the meeting were Dr. W. I. Myers of Cornell, who talked about the Federal Farm Board; Commissioner Berne A. Pyrk of the Department of Agriculture and Markets, who spoke of the service given by the Department; and L. R. Simons, who spoke on membership canvassing. At the annual banquet, Honorable Peter G. Ten Eyck former State President was toastmaster. Other talks were given by E. V. Mullenbaux, president of the Chamber of Commerce; Mrs. Edward Young; and Commissioner Mark Graves.

Speakers at Thursday sessions included Dr. G. F. Warren of the New York State College of Agriculture, who spoke on "Agricultural Planning for New York State"; Chester Gray, legislature representative of the Federation

at Washington; and Dr. C. E. Ladd of Cornell University.

Gasoline Tax Builds Roads

THE U. S. Bureau of Public Roads has just given out figures showing the amount of money collected by various states through a tax on gasoline. During the first six months of 1930, 6,809,863,076 gallons of gasoline were used on roads in this country. Forty-eight states and the District of Columbia, collected an average of 3.39c a gallon on this amount, the net tax amounting to \$230,600,455. Estimates place the entire tax for the year 1930 at \$515,000,000. The highest tax per gallon paid was 6c, the lowest 2c, and the major portion of the sum collected was used for the construction or maintenance of roads.

Practical Relief for Needy

EARLY this week farmers and commission men doing business at the Wallabout and Gansevoort Markets, donated supplies to be distributed to the families of needy and unemployed. This food, consisting of fifty tons of potatoes, two tons of carrots, and five hundred bags of apples, has been taken to the Bronx Terminal Market to be stored until it is needed.

Farm Meetings

TWO important dairy meetings are on the calendar for the near future. The National Dairy Council will have its regular annual meeting at the Palmer House, Chicago, Wednesday, December 3. The annual meeting of the National Dairy Union will be held at the same place on December 2.

New York County Notes

Genesee County—It is snowing again today and we had a sleet storm yesterday. We need a few more days of

good weather. The apple crop isn't all harvested yet. Apples are cheap and so are Kieffer pears. Buyers are picking up some potatoes at as low as 80c a bushel. Pastures look greener now than they did in August and because of shortage of feed, cattle are still out. A great number of farmers will have to buy hay before spring. Arthur P. Pangborn, self-styled doctor from a medicine show, who has lived in Byron since August 1, was sentenced to thirty days in jail and a fine of \$200, imposed for practicing without a license.—Mrs. R. E. G.

Rensselaer County—We are having very fine, mild weather after that intensely cold snap. The rain that fell did much good, but more is needed to fill the ponds and swell the streams. Silos are all filled and potatoes dug. The potato crop is about two-thirds of the average yield and the market for them is weak. The apple crop is fairly good. Oscar Borden's apples are of exceptional quality this year and he has a heavy yield of them. The price of milk has advanced. Butter is bringing 50 cents per pound and eggs 50 cents per dozen. Dr. George R. Little of Schaghticoke was reelected president of the New England Milk Association at the last meeting of the Association at Boston recently.—E.S.R.

Washington County—Potatoes are selling slowly. Truckmen offering 65 cents per bushel. Maine potatoes are selling in A. & P. stores for \$2.25 per 100 pounds. Eggs are in good demand at 55 cents and 60 cents for large and 40 cents and 45 cents for pullets eggs. No demand for sheep or lambs. J. S. Petteys of Greenwich has been delivering fine McIntosh apples to markets and stores in Cambridge at \$2.00 and \$2.50 a bushel.—H.C.C.

Steuben County—Potatoes all harvested; more small ones than usual. The yield is from 50 to 100 bushels per acre on nearly all fields. Farm help is quite scarce for good men. The weather is colder.—D.C.F.

Oswego County—The harvest is ended and 1930 will go down in history as a very dry year and one of the poorest business years. Onions, 40 cents to 50 cents a bushel; carrots, 10 cents to 15 cents; potatoes, 50 cents to \$1.00; apples, 25 cents to 60 cents. many plants have had to shut down. is the lowest it has been for years and many plants have had to shut down. A good many men are idle but every business is quite optimistic. It certainly has been a nice fall to harvest crops and most all are harvested. The Farm Bureau is having a drive for members.—J.S.M.

Western New York News

THE annual banquet of the Lamb Feeders of Western New York took place in Batavia, Friday evening October 24. About 45,500 lambs were fattened in 1929-30. It is expected that 8500 less than that number will be fattened in 1930-1931. Genesee was shown to be the biggest of the lamb feeding counties.

In Niagara County a dairy record club is soon to be founded for the benefit of smaller dairymen. The purpose is to furnish to the man who keeps only a few cows the facilities for keeping an accurate record in milk and butter production and feed costs similar to the systems used by the larger farms. Under the auspices of the Dairy Improvement Association, Professor W. T. Crandall of the State College of Agriculture will introduce the proposed system of sample tests and supervision of feeding in a series of meetings to begin about the middle of November.

The western district of the New York State Teachers' Association held its annual meeting in Buffalo, November 7 and 8. Dr. S. Parkes Cadman, noted author, preacher, educator, and radio minister, gave an address in the Broadway Auditorium.

Five members of the Lockport high school musical clubs have been accepted to membership in the third national high school chorus which will sing in Detroit, February 20 to 24. The program will be broadcast over a coast-to-coast network.

High School Boys Win Dairy Show Prize

(Continued from Page 5)

soil richer, and the farms more prosperous in appearance. Wheat was just being sown in an effort to avoid the Hessian fly then present in the maggot stage in much volunteer wheat growing in the adjacent fields.

Friday we visited the modern plant, opposite beautiful Forest Park, where the Dairy Show was to be held. The arena building, occupying the center, is a huge structure, built entirely without columns, 476 feet long by 276 feet wide. It will seat 21,000 persons. On either side were two fine exhibit buildings, housing the cattle. In them were being housed, fed and groomed, 1200 of the finest dairy cattle of all breeds that ever competed for honors in the show ring, not to mention the 250 4-H Club animals which, due to lack of room, were being sheltered in a separate tent. Among these were the animals sent from New York State, which had arrived the night before under the care of Peter Luchsinger of Syracuse.

Exhibits showing the breeding of dairy cattle, the feeding of cattle, and dairy products were just being completed in readiness for the Show to start the next day. One very interesting exhibit was a cow being suckled by a calf which was held by a young boy, all molded out of butter.

Saturday at 8 a. m. the judging began. Teams were present from thirty-five states. Both young and mature stock in each breed was judged before going on to the next breed. The coaches sat in one end of the arena and graded papers as fast as they came in. After luncheon, milk was judged in the Peveley dairy plant. This was followed by a trip to the Ralston-Purina experimental farm forty miles west of St. Louis. In the evening the crowd attended the Future Farmers' sectional speaking contest at the Soldan high school. Early Monday, October 13, a visit was made to the auction rooms in Union Market, where three carloads of produce were disposed of in a few

minutes to the tune of an unintelligible (to us) jargon on the part of the auctioneer. Following this, the Swift and Morris plants in East St. Louis took the several hundred boys through their packing plants.

Four Hundred Dollar Prize Won by New York Boy

At the banquet given that evening by the St. Louis Post Despatch at the Coronado Hotel, it was announced that Milton Hislop of Chazy, New York, had won the \$400 scholarship given by the Holstein-Friesian Association of America, for excellence in judging Holsteins. As a team, the boys placed seventh in Holsteins. They placed sixth in judging milk, just escaping mention.

The return trip was started Tuesday. The first lap to Chicago was extremely interesting as it passed through the corn belt of Illinois. Fields of corn nearly a mile long were passed. Many grain elevators were seen along the Chicago and Alton Railroad, paralleling the road. In Chicago a visit was made to the tractor works of the International Harvester Company, where the new I. H. C. caterpillar tractor was observed. The group also saw the buying and selling of wheat, corn, etc., going in the wheat and corn pits of the new Chicago Board of Trade Building, which they later climbed for a view over the city.

The trip across Michigan was over excellent roads. Corn was still prominent, but the soil was more sandy than in the other states. Many fields green with alfalfa were noticed. Most of the barns were painted. At Dearborn, huge pieces of armor cut from junked battleships were observed piled neatly outside the Ford plant. In Ontario, much first-class Virginia tobacco is grown. A new million dollar warehouse has just been completed. Due to the threatening blizzard which buried Western New York the following day, no time was lost in getting through Western New York to Syracuse and home.

It Rained; but they Had their Party anyway

A Bell System Advertisement

A FARMER'S WIFE living near Adairsville, Kentucky, telephoned the friends of her twelve-year-old girl and invited them to a birthday party which she was giving for her. But when the day of the party arrived, it was raining heavily. A number of the guests telephoned to inquire if the party was postponed. The mother of the young hostess then called all of the other guests and told them that everything was prepared for their arrival. Thus reassured, the children all turned out, in spite of the rain, and every one enjoyed a happy afternoon.

The telephone is invaluable in keeping up friendly contacts and adding to the pleasures of life in the country. It is a profitable aid in selling livestock, grain, fruit and vegetables, either through local markets or co-operative marketing associations. And it is also a convenient means for ordering farm and household supplies when they are needed quickly.

The modern farm home has a telephone that serves well, day in and day out, rain or shine.

City Conveniences in the Country

And now with our new, perfected carbide gas cooking range you can have a cool, comfortable kitchen—even in the hot summer days, which will soon be at hand.

Carbide Gas, as a cooking fuel, gives you a fire that will enable you to enjoy the luxury of cooking an average breakfast of coffee, bacon and eggs and fried potatoes in less than ten minutes from the time you light the gas.

The Abner Pit Generator installed outside the house in the ground requires attention only a few times a year. It is simple and fully guaranteed. It is used for lighting and ironing also.

Step In Time Saves Nine

Make Holiday More Thankful by Early Plans

"A STEP in time saves nine"—this applies to the Thanksgiving dinner if the lady in charge wishes things to go smoothly on the day itself. As in all family affairs, it helps to have each member of the family know beforehand his duty in connection with the event and make plans to take care of it.

If there are to be children visitors, there is less confusion if someone, possibly one of the older children, takes it upon herself to keep them entertained and out of the way of the meal

stuffs such as celery, lettuce, and the turkey belong on a separate list to be secured and prepared the day before Thanksgiving. The turkey can be stuffed and kept cold, ready for the oven, giblets cooked and minced for gravy, lettuce and celery washed and kept in damp cheesecloth, the pies and cranberry jelly made, nuts salted and any other food prepared which will keep fresh for a day. In this way the event can be some pleasure instead of being merely hard work for the lady of the house.

If guests offer to help, the hostess can either assign them some task or explain graciously that their presence in the living room is needed more than in the kitchen. For it is sometimes well to remember that friendly communion of spirit among friends and family is of greater importance than food to be eaten.

Decidedly Slimming

2820

FROCK PATTERN NO. 2820 is fascinating with its one-sided rever collar and cuffed sleeves. Its diagonal lines are decidedly slimming, while the moderately full skirt is given extra flare by insets at each side of the front. Black canton crepe with smart turquoise blue for contrast was used in the original model. Crepey woolen with white silk pique would be equally smart. The pattern cuts in sizes 16, 18 years, 36, 38, 40, and 42 inches bust measure. Size 36 requires 4 yards of 39-inch material with $\frac{1}{4}$ yard of 35-inch contrasting. PRICE 15c.

preparation. The idea of recreation should not be confined altogether to the children. After the dinner, which is apt to be more or less heavy, some games do not come amiss for the grown-ups. These may be outdoor games if weather permits, guessing games, blind man's buff or similar games, which all can enjoy together indoors if the day is stormy. It adds to the fun and certainly is more healthful than it is to give up to the lassitude which follows a full meal.

High school daughter could easily look after the table-setting and the decorations. But if she is in school the previous days, it will fall upon mother to see that no spots are in the best tablecloth, the silver is shined, the company china reached down from the top shelf and such other preparations made that tend to upset things if left until the meal is being made ready.

As for the food itself, that is usually the chief concern. A menu could be made out the week beforehand, then the supply cupboard checked over to see if all seasonings and staple groceries are on hand. Perishable food-

Mock Cherry Pie

1 cup cranberries, $\frac{1}{2}$ cup chopped raisins, 1 tablespoon flour, 1 cup sugar, 1 cup boiling water, 1 teaspoonful vanilla.

Cook and cool before putting in crust. Bake with two crusts or with lattice top.—C.D.S.

Delightful Fashion

2794

FROCK PATTERN NO. 2794 has a dignity and slight formality of its own, much to be desired for the full figure, yet it is simple in construction. The draped effect at neckline and at the sides gives a becoming ease to the wearer. Black Canton with white bows or green crepey woolen in self-trim would accord with the season's color demands. The pattern cuts in sizes 14, 16, 18, 20 years, 36, 38, 40, 42, 44 and 46 inches bust measure. The medium size takes $4\frac{1}{8}$ yards of 39-inch material with $\frac{1}{4}$ yard of 39-inch contrasting for bows. PRICE 15c.

TO ORDER: Write name, address, pattern sizes, and numbers clearly and correctly and inclose with correct remittance in stamps (do not send coin). Add 12c for one of the new fall and winter catalogs and address to Pattern Department, American Agriculturist, 10 N. Cherry St., Poughkeepsie, N. Y.

See Yellowstone With Us

(Continued from Page 1)

see the Rockies, and as you look there arises in your soul the phrase, 'as it was in the beginning'.

"The bears of Yellowstone have made it famous, as has its gorgeous canyon. Its vast elk herds have no like anywhere in our country now. The big game sheep, rarest and wildest of big game animals, still lives its old life there. The wise and busy beaver builds the dams as it always did. The antelope still may be seen, shadowy, fleet. The two species of American deer still thrive, and lastly, there are still to be seen some hundreds of the noblest of all our wild animals, the bison."

Think what it will mean to take such a wonderful trip in company with friends like the ones you have known all your life. We are told by the editors of farm papers in the Central West who have conducted similar tours, that lasting friendships are made in the party. At least one of the editors of AMERICAN AGRICULTURIST will go with you in order to make certain that every effort is made for everyone's comfort and happiness. Such a trip should appeal especially to old folks because of the care that will be given to see that they are comfortable.

Now here is the outline of the trip. Read it over, think it over, and then write us for more information which it is impossible to give here.

Log of the American Agriculturist Yellowstone Park Tour**Saturday, August 1st**

Leave New York 9 a. m. (E.S.T.) via N.Y.C.

Leave Albany 12:30 noon via N.Y.C.

Leave Utica 2:49 p. m. via N.Y.C.

Leave Syracuse 4:03 p. m. via N.Y.C.

Leave Buffalo 9:00 p. m. via N.Y.C.

Luncheon and Dinner in diner.

Sunday, August 2nd

Arrive Chicago 8:00 a. m. (C.T.) via N.Y.C. Auto tour—North Shore and residential district.

Leave Chicago 12:40 noon via C.B.&Q. Along Mississippi River in afternoon and evening.

Leave St. Paul, Minnesota 11:45 p. m. via Nor. Pac.

Breakfast, Luncheon and Dinner in diner.

Monday, August 3rd

Breakfast on diner.

Arrive Jamestown, North Dakota 9:30 a. m. via Nor. Pac. Party will be guests of the Jamestown Chamber of Commerce, and make a motor trip to the various well developed farms in the vicinity.

Leave Jamestown 11:00 a. m. via Nor. Pac. Luncheon on diner.

Arrive Bismarck, North Dakota 2:00 p. m. via Nor. Pac. The capital of North Dakota. Party will be welcomed by state officials, motored around the Capital and over the Missouri River to Mandan where a visit will be made to the United States Government Experimental Farm. A feature of the visit to Mandan will be the ceremonial dance and initiation by members of the famous Sioux Indian tribe.

Leave Mandan, North Dakota 4:00 p. m. via Nor. Pac. Passing through the colorful Bad Lands of North Dakota, and Medora, where former President Roosevelt ranched when a young man. Later, along the historical Yellowstone River in Montana, redolent of Indian warfare of the past, and the route of Lewis and Clark. Dinner on diner.

Tuesday, August 4th

Breakfast on diner.

Arrive Bozeman, Montana 8:30 a. m. via Nor. Pac. Party will be met by members of the Bozeman Chamber of Commerce and escorted for motor tour of the famous Gallatin Valley, the richest in Montana, and a visit to the Flying D. Ranch, the largest ranch in Montana (250 thousand acres) showing prize live stock and range cattle. Luncheon will be taken at Karst's Dude Ranch.

Leave Karst's Ranch 1:30 p. m. via auto. Motoring down the beautiful Gallatin to the western entrance to Yellowstone National Park, passing the Madison and Firehole rivers, and the Cascades, Mammoth paint pots and Fountain Geyser.

Arrive Old Faithful 5:00 p. m. via auto. Overnight at the Lodges. Here you will find five miles of the greatest geyser region in the world, including the famous

"Old Faithful". A National Park service guide will be assigned to take your party around the formations explaining the action of the geysers and hot pools. You may, if you desire, take a plunge in the swimming pool fed by a geyser.

Wednesday, August 5th

Leave Old Faithful 1:50 p. m. via auto. Motoring past the Kepler Cascades and crossing the Continental Divide twice. The Grand Tetons are seen to exceptional advantage.

Arrive Yellowstone Lake 4:58 p. m. via auto. Overnight at the Lodges. Yellowstone Lake has an altitude of 7,800 feet, the second highest lake in the world with wonderful boating and fishing. The Absaroka Range rises from the edge of the lake to a height of 11,000 feet.

Thursday, August 6th

Leave Yellowstone Lake 10:00 a. m. via auto. Motoring along the Yellowstone River, passing Mud and Green Gable geysers and through the beautiful Hayden Valley to the Yellowstone rapids and falls, which are viewed from Inspiration Point.

Arrive Grand Canyon 11:46 a. m. via auto. Overnight at the Lodges. The painted canyon of the Yellowstone is a dramatic climax to the Park tour. Here the upper falls make a drop of 112 feet and the lower falls 309 feet over twice the height of Niagara.

Friday, August 7th

Leave Grand Canyon 1:35 p. m. via auto. Motoring up Seven-Mile Hill and entering Dunraven Pass. Mount Washburn is seen on the right towering over 10,000 feet high. Tower falls is the next stop. The Palisades across the canyon and the Needles are a wonderful sight.

Arrive Mammoth Hot Springs 4:47 p. m. via auto. Here are located the Yark museums and government buildings, also Old Fort Yellowstone. A short walk from the Lodges are the beautiful terraces and highly colored hot pools.

Leave Mammoth Hot Springs 6:15 p. m. via auto. After dinner, motor through the beautiful Gardiner canyon to Gardiner station, the northern and original entrance to the Park, and again entraining on our special.

Leave Gardiner, Montana 6:45 p. m. via Nor. Pac. Through enchanting Paradise Valley and the towering walls of

WHEN PAIN COMES...**Two hours after eating**

WHAT many call "indigestion" is very often nothing but excess acid in the stomach. The stomach nerves have been over-stimulated, and food sours. The corrective is an alkali, which neutralizes acids instantly. The best alkali known to medical science is Phillips' Milk of Magnesia. It has remained the standard anti-acid with physicians in the 50 years since its invention.

One spoonful of this harmless, tasteless alkali will neutralize instantly many times as much acid, and the symptoms disappear at once. You will never use crude methods when once you learn the efficiency of this more pleasant way. A small bottle is sufficient to show its merit.

Be sure to get genuine Phillips' Milk of Magnesia prescribed by physicians and used by druggists in prescriptions. 25c and 50c a bottle; any drugstore. Complete directions for its many uses are enclosed with every bottle.

The Genuine Milk of Magnesia is always a liquid—never a tablet. Look for the Phillips' name on the bottle.

PHILLIPS' MILK OF MAGNESIA

Just David--By Eleanor Porter

THE STORY THUS FAR

David and his father live alone in a rude shack on a mountain overlooking the "Silver Lake." For six years they have lived there alone, cooking their own food, taking long walks in the forest, playing their violins. David's father is ill. He wonders if he has been wise in bringing David here away from the world and realizing that his strength is nearly spent, he suddenly decides to leave the mountain and take David back to civilization.

They start down the mountain on foot. As his strength lessens, David's father leaves his grip by the road. Finally he can go no farther but luckily they get a lift for a way in a wagon. They decide to spend the night in a nearby barn. In the evening Simeon Holly and his wife hear the strains of a violin and start to investigate.

David's father is dead and Mrs. Holly feeds David and puts him to bed. In the morning the sudden realization comes to him that he will never see his father again.

* * *

Into the man's weather-beaten face came a look of sincere but awkward sympathy.

"Oh, hullo, sonny! So you're the boy, are ye?" he began diffidently.

"Yes, yes, I'm David. But where is he—my father, you know? I mean the—the part he—he left behind him?" choked the boy. "The part like—the ice-coat?"

The man stared. Then, involuntarily, he began to back away.

"Well, ye see, I—I—"

"But, maybe you don't know," interrupted David feverishly. "You aren't the man I saw last night. Who are you? Where is he—the other one, please?"

"No, I—I wa'n't here—that is, not at the first," spoke up the man quickly, still unconsciously backing away. "Me—I'm only Larson, Perry Larson, ye know. 'T was Mr. Holly you see last night—him that I works for."

"Then, where is Mr. Holly, please?" faltered the boy, hurrying toward the barn door. "Maybe he would know—about father. Oh, there he is!" And David ran out of the barn and across the yard to the kitchen porch.

It was an unhappy ten minutes that David spent then. Besides Mr. Holly, there were Mrs. Holly, and the man, Perry Larson. And they all talked. But little of what they said could David understand. To none of his questions could he obtain an answer that satisfied. Neither, on his part, could he seem to reply to their questions in a way that pleased them.

They went in to breakfast then, Mr. and Mrs. Holly, and the man, Perry Larson. They asked David to go—at least, Mrs. Holly asked him. But David shook his head and said: "No, no, thank you very much; I'd rather not, if you please—not now." Then he dropped himself down on the steps to think. As if he could eat—with that great choking lump in his throat that refused to be swallowed!

David was thoroughly dazed, frightened, and dismayed. He knew now that never again in this world would he see his dear father, or hear him speak. This much had been made very clear to him during the last ten minutes. Why this should be so, or what his father would want him to do, he could not seem to find out. Not until now had he realized at all what this going away of his father was to mean to him. And he told himself frantically that he could not have it so. *He could not have it so!* But even as he said the words, he knew that it was so—irrevocably so.

David began then to long for his mountain home. There at least he would have his dear forest all about him, with the birds and the squirrels and the friendly little brooks. There he would have his Silver Lake to look

at, too, and all of them would speak to him of his father. He believed, indeed, that up there it would almost seem as if his father were really with him. And, anyway, if his father ever should come back, it would be there that he would be sure to seek him—up there in the little mountain home so dear to them both. Back to the cabin he would go now, then. Yes; indeed he would!

With a low word and a passionately intent expression, David got to his feet, picked up his violin, and hurried, firm-footed, down the driveway and out upon the main highway, turning in the direction from whence he had come with his father the night before.

The Hollys had just finished breakfast when Higgins, the coroner, drove into the yard accompanied by William Streeter, the town's most prominent farmer—and the most miserly one, if report was to be credited.

"Well, could you get anything out of the boy?" demanded Higgins, without ceremony, as Simeon Holly and Larson appeared on the kitchen porch.

"Very little. Really nothing of importance," answered Simeon Holly.

"Where is he now?"

"Why, he was here on the steps a few minutes ago." Simeon Holly looked about him a bit impatiently.

"Well, I want to see him. I've got a letter for him."

"A letter!" exclaimed Simeon Holly and Larson in amazed unison.

"Yes. Found it in his father's pocket," nodded the coroner, with all the tantalizing brevity of a man who knows he has a choice morsel of information that is eagerly awaited. "It's addressed to 'My boy David,' so I calculated we'd better give it to him first without reading it, seeing it's his. After he reads it, though, I want to see it. I want to see if what it says is any nearer being horse-sense than the, other one is."

"The other one!" exclaimed the amazed chorus again.

"Oh, yes, there's another one," spoke up William Streeter tersely. "And I've read it—all but the scrawl at the end. There couldn't anybody read that!"

Higgins laughed.

"Well, I'm free to confess 't is a sticker—that name," he admitted. "And it's the name we want, of course, to tell us who they are—since it seems the boy don't know, from what you said last night. I was in hopes, by this morning, you'd have found out more from him."

Simeon Holly shook his head.

"'T was impossible."

"Gosh! I should say 't was," cut in Perry Larson, with emphasis. "An' queer ain't no name for it. One minute he'd be talkin' good common sense like anybody: an' the next he'd be chatterin' of coats made o' ice, an' birds an' squirrels an' babbling brooks. He sure is dippy! Listen. He actually don't seem ter know the diff'rence between hisself an' his fiddle. We was tryin' ter find out this mornin' what he could do, an' what he wanted ter do, when if he didn't up an' say that his father told him it didn't make so much diff'rence *what* he did so long as he kept hisself in tune an' didn't strike false notes. Now, what do yer think o' that?"

"Yes, I know," nodded Higgins musingly. "There *was* something queer about them, and they weren't just ordinary tramps. Did I tell you? I overtook them last night away up on the Fairbanks road by the Taylor place, and I gave 'em a lift. I particularly noticed what a decent sort they were. They were clean and quiet-spoken, and their clothes were good, even if they were rough. Yet they didn't

have any baggage but them fiddles."

"But what was that second letter you mentioned?" asked Simeon Holly.

Higgins smiled oddly, and reached into his pocket.

"The letter? Oh, you're welcome to read the letter," he said, as he handed over a bit of folded paper.

Simeon took it gingerly and examined it.

It was a leaf torn apparently from a notebook. It was folded three times, and bore on the outside the superscription "To whom it may concern." The handwriting was peculiar, irregular, and not very legible. But as near as it could be deciphered, the note ran thus:—

Now that the time has come when I must give David back to the world, I have set out for that purpose. But I am ill—very ill, and should Death have swifter feet than I, I must leave my task for others to complete. Deal gently with him. He knows only that which is good and beautiful. He knows nothing of sin nor evil.

Then followed the signature—a thing of scrawls and flourishes that conveyed no sort of meaning to Simeon Holly's puzzled eyes.

"Well?" prompted Higgins expectantly.

Simeon Holly shook his head.

"I can make little of it. It certainly is a most remarkable note."

"Could you read the name?"

"No."

"Well, I couldn't. Neither could half a dozen others that's seen it. But where's the boy? Maybe his note'll talk sense."

"I'll go find him," volunteered Larson. "He must be somewhere 'round."

But David was very evidently not "somewheres 'round." At least he was not in the barn, the shed, the kitchen bedroom nor anywhere else that Larson looked; and the man was just coming back with a crestfallen, perplexed frown, when Mrs. Holly hurried out on to the porch.

"Mr. Higgins," she cried, in obvious excitement, "your wife has just telephoned that her sister Mollie has just telephoned *her* that that little tramp boy with the violin is at her house."

"At Mollie's!" exclaimed Higgins. "Why, that's a mile or more from here."

"So that's where he is!" interposed Larson, hurrying forward. "Doggone the little rascal! He must 'a' slipped away while we was eatin' breakfast."

"Yes. But, Simeon,—Mr. Higgins,—we hadn't ought to let him go like that," appealed Mrs. Holly tremulously. "Your wife said Mollie said she found him crying at the crossroads, because he didn't know which way to take. He said he was going back home. He means to that wretched cabin on the mountain, you know; and we can't let him do that alone—a child like that!"

"Where is he now?" demanded Higgins.

"In Mollie's kitchen eating bread and milk; but she said she had an awful time getting him to eat. And she wants to know what to do with him. That's why she telephoned your wife. She thought you ought to know he was there."

"Yes, of course. Well, tell her to tell him to come back."

"Mollie said she tried to have him come back, but that he said, no, thank you, he'd rather not. He was going home where his father could find him if he should ever want him. Mr. Higgins, we—we *can't* let him go off like that. Why, the child would die up there alone in those dreadful woods, even if he could get there in the first place—which I very much doubt."

"Yes, of course, of course," muttered

ed Higgins, with a thoughtful frown. "There's his letter, too, Say!" he added, brightening, "what'll you bet that letter won't fetch him? He seems to think the world and all of his daddy. Here," he directed turning to Mrs. Holly, "you tell my wife to tell—better yet, you telephone Mollie yourself, please, and tell her to tell the boy we've got a letter here for him from his father, and he can have it if he'll come back."

"I will, I will," called Mrs. Holly, over her shoulder, as she hurried into the house. In an unbelievably short time she was back, her face beaming.

"He's started, so soon," she nodded. "He's crazy with joy, Mollie said. He even left part of his breakfast, he was in such a hurry. So I guess we'll see him all right."

"Oh, yes, we'll see him all right," echoed Simeon Holly grimly. "But that isn't telling what we'll do with him when we do see him."

"Oh, well, maybe this letter of his will help us out on that," suggested Higgins soothingly. "Anyhow, even if it doesn't, I'm not worrying any. I guess some one will want him—a good healthy boy like that."

"Did you find any money on the body?" asked Streeter.

"A little change—a few cents. Nothing to count. If the boy's letter doesn't tell us where any of their folks are, it'll be up to the town to bury him all right."

"He had a fiddle, didn't he? And the boy had one, too. Wouldn't they bring anything?" Streeter's round blue eyes gleamed shrewdly.

Higgins gave a slow shake of his head.

"Maybe—if there was a market for 'em. But who'd buy 'em? There ain't a soul in town plays but Jack Gurnsey; and he's got one. Besides, he's sick, and got all he can do to buy bread and butter for him and his sister without taking in more fiddles, I guess. *He* wouldn't buy 'em."

"Hm—m; maybe not, maybe not," grunted Streeter. "An', as you say, he's the only one that's got any use for 'em here; an' like enough they ain't worth much, anyway. So I guess 'tis up to the town all right."

"Yes; but—if yer'll take it from me," interrupted Larson,—"you'll be wise if ye keep still before the boy: It's no use *askin'* him anythin'. We've proved that fast enough. An' if he once turns 'round an' begins ter ask *you* questions, yer done for!"

"I guess you're right," nodded Higgins, with a quizzical smile. "And as long as questioning *can't* do any good, why, we'll just keep whist before the boy. Meanwhile I wish the little rascal would hurry up and get here. I want to see the inside of that letter to *him*. I'm relying on that being some help to unsnarl this tangle of telling who they are."

"Well, he's started," reiterated Mrs. Holly, as she turned back into the house; "so I guess he'll get here if you wait long enough."

"Oh, yes, he'll get here if we wait long enough," echoed Simeon Holly again, crustily.

The two men in the wagon settled themselves more comfortably in their seats, and Perry Larson, after a half-uneasy, half-apologetic glance at his employer, dropped himself onto the bottom step. Simeon Holly had already sat down stiffly in one of the porch chairs. Simeon Holly never "dropped himself" anywhere. Indeed, according to Perry Larson, if there were a hard way to do a thing, Simeon Holly found it—and did it. The fact that, this morning, he had allowed, and was still allowing, the sacred routine of the

Just David

(Continued from Opposite Page)

day's work to be thus interrupted, for nothing more important than the expected arrival of a strolling urchin, was something Larson would not have believed had he not seen it. Even now he was conscious once or twice of an involuntary desire to rub his eyes to make sure they were not deceiving him.

Impatient as the waiting men were for the arrival of David, they were yet almost surprised, so soon did he appear, running up the driveway.

"Oh, where is it, please?" he panted.

"They said you had a letter for me from daddy!"

"You're right, sonny; we have. And here it is," answered Higgins promptly, holding out the folded paper.

Plainly eager as he was, David did not open the note till he had first carefully set down the case holding his violin; then he devoured it with eager eyes.

As he read, the four men watched his face. They saw first the quick tears that had to be blinked away. Then they saw the radiant glow that grew and deepened until the whole boyish face was aflame with the splendor of it. They saw the shining wonder of his eyes, too, as he looked up from the letter.

"And daddy wrote this to me from the far country?" he breathed.

HANDY ANDY Says "Here's How"

To Protect Your Fence

By Ray Inman

Have you a horse which does this to fences?

do this: wire up a 6 volt dry cell, a FORD ignition coil and a pole switch. Attach to top fence wire.

when Dobbin is in the field, wait for him to touch fence wire, then - THROW THE SWITCH!

it will shock but will not harm him and 3 or 4 experiences will cure him.

THE SAME IDEA WILL WORK ON THESE CRITTERS, TOO

ONLY, WE SUGGEST A HIGH POWER LINE INSTEAD OF A SIX VOLT BATTERY.

WHOOEEE - THAT'S THE FIRST TIME I EVER RUN INTO COCKLE BURS GROWIN' ON A FENCE WIRE

HOW COME I NEVER SEB YOU TRYIN' TO TUNE IN ON THEM CORN SHAWKS OVER THERE NO MORE, GEORGE?

THEY'S TOO MUCH SHOCK, AN' NOT ENOUGH CORN.

Poultry Farmer

A Novel Poultry Alarm

A Woodbury, New Jersey poultry-
man has installed a novel burglar
alarm system in his poultry house,
that has proven extremely satisfac-
tory in keeping thieves away from his
plant. He has attached to the electric
light system a set of wires that oper-
ates a buzzer in the house and a large
automobile horn placed high in a near-
by tree.

The automobile horn was taken
from a discarded car and hooked up on
the same circuit with the warning bell
in the house. The effectiveness of the
system is shown that whenever the
door is opened this loud horn in the tree
lets out its clarion call to all of the
neighborhood.

Since its installation, this poultry-
man has never lost a chicken that he
can recall, although there have been
times at night when the buzzer in the
house and the horn in the tree have
given their loud warnings for an in-
stant and then stopped.

In the opinion of this poultry raiser,
the thief has quickly shut the door and
escaped in the darkness rather than
take a chance and enter the house or
even leave the door open.—A. K.

Figures Tell the Story

THE following letter has just been
received from a subscriber. It will
be interesting if other readers have
kept accounts on their flocks, to see
how the figures compare with the re-
turns on this flock.

Putting the matter in another light,
this reader has made about \$2.25 per
hen above fed costs, assuming that his
hens are now worth \$1.00 apiece. They
probably will not be worth quite that
if they are sold for meat. It seems to
us that this is a fair return. Is there
any reader who has the figures to beat
it? Following is our reader's letter:

"Having bred Barred Plymouth Rocks
over thirty-five years I thought to experi-

ment with White Leghorns with the fol-
lowing results: July 1, 1929, I bought 100
White Leghorn pullets, ten weeks old
for \$75. September 1, 1929 the first egg
was laid. The pullets were fully matured
and very few small eggs were laid. From
September 18, 1929 to September 17, 1930,
16,447 eggs were gathered. Cash received
at market prices for Grade A eggs was
\$469.08. We also used all eggs wanted for
our family of eight. Pullets cost \$75.00,
mash \$144.65, corn \$91.60, Cabbage \$14.79,
Straw \$2.00, Grit \$1.00, Shell \$1.10—Total
\$330.14.

"No males were kept and we lost twelve
pullets since July 7, 1929, mostly early
before they began laying. We have now
eighty-eight hens easily worth.....\$ 88.00
Egg Sales 469.08

Total Receipts\$557.08
Cash Expenses 330.14

Returns\$226.94
Not counting labor
or investment or
eggs used in home."

Are the Hens Paying?

PROFESSOR L. E. Card gives a very
simple rule for finding whether
hens are making a profit or just pay-
ing for their feed. He says: "Divide
the price of feed per 100 lbs. by the
price of eggs per dozen and multiply
the quotient by three. The result will
be the number of eggs 100 hens must
lay to pay for their feed." For exam-
ple, suppose that the price of feed is
\$3.60 per 100 lbs. and eggs are 36c.
doz. Dividing as the rule directs, the
quotient will be 10. Multiplying by
three, the result is 30, the number of
eggs each 100 hens must lay each day
to cover the cost of their feed.

Where the Extra Cent Goes

A SUBSCRIBER recently wrote us for information about a receiver of eggs who is given a fair rating in our Market Credit Guide. Our subscriber said:

There are 15 or 20 farmers around here shipping eggs to this dealer. He pays good prices and is quite prompt in returns. But quite often we get a bill back telling us that so many were smashed and that so many were cracked and sold at reduced prices. Such letters always say, "File claim at express company. We have reported damage to them." We expect to lose some this way but when it happens so often we wonder whether they really are broken or if he is just using this way of avoiding making full payment. The express agents here say that they get more complaints from this dealer than from any other. We have been unable to collect from the express company."

It is, of course, difficult to prove that the eggs were not broken as reported by this dealer. However, in discussing this situation with a man who is very familiar with the market, he said, "Farmers who ship less than carload lots to concerns that consistently overquote the market can understand that the receiver has got to get his money back some way. There are a good many small firms in the city that will gladly pay the shipper two cents above the market price but they even it up in the long run on breakage which has not occurred, and, as the farmer says, the amount is so small that it is hardly worth bothering with. However, in the

long run it just about brings the farmers' returns down to what he would have received on a real market basis. This is an old trick. We suggest to shippers of less than carload lots that they ship by parcel post. Then if there is too much damage deducted from his returns, he can take the matter up with the Post Office Department. In the past, several small New York egg dealers have spent terms in jail because of alleged breakage in parcel post shipments in which case the Post Office Department has prosecuted."

Why Be in a Hurry?

IN the issue of October 11 under the heading "For Yates County Readers" we called attention to the activities of the Fiber and Pulp Wood Producers' Association, in Yates County. Since that time we have learned that the promoters of this corporation and its subsidiaries are Clay Oliver who has been in the cattle business and also in the oil business in Wichita Falls, Texas; Fred A. White from Westport, Mass.; and William H. Williams who was born in Summerset, Mass. and at present lives in Belleville, N. J.

We know nothing about the machine which this company is sponsoring. It is possible that it is a very valuable machine and that it will revolutionize the hemp industry. We would, however, like to point out that at present there is no factory for handling hemp in Yates County or, so far as we can de-

termine, is there any factory of a similar nature anywhere in the country. We understand that patents for the machine have been secured dated 1926 to 1929. The Fiber and Pulp Wood Producers' Association is incorporated under the laws of the State of Delaware with a capital consisting of 1,000,000 shares valued at \$10 per share.

It would seem reasonable to state that any farmer in Yates County can well afford to wait until the factory is actually built before he plans to plant any hemp. We also feel that investing in any company which is not actually producing cannot be classed other than as entirely speculative.

The Law on Using Ferrets

Is it against the New York State law to use ferrets for hunting rabbits?

AT the last session of the legislature a bill was passed and signed allowing the use of ferrets for hunting cottontail rabbits in certain counties, namely, Wayne, Ontario, Orleans, Livingston, Monroe, Niagara, Cayuga, Schuyler, Tompkins and Onondaga. This, of course, makes it legal to use ferrets only during the open season for rabbits. Before you can legally possess a ferret, however, you must get a license from the Conservation Department at Albany, New York which, we understand, costs \$1.00 a year and is dated from January 1st to December 31st.

I have been successful in getting the policy about which I wrote you.

Thank you for your kindness in trying to secure the policy. We appreciate greatly the kindness that we have received through the American Agriculturist.

We will always be glad to speak a good word for it.

Ten Years of Progress

THIS CHART pictures the progress made by the Cooperative Grange League Federation Exchange, Inc. since its organization in June 1920. At the close of ten years' operation, farmers in the New York Milk Shed were purchasing annually \$29,239,098.05 worth of open formula feeds, known origin seeds, approved formula fertilizers, and other farm supplies through this organization. The G. L. F. traces its origin directly to the New York State Grange.

THE GRANGE—

Backbone of the Cooperative Purchasing Movement in New York State

1874—At the first annual session of the New York State Grange, plans for cooperative purchasing were discussed and a definite start made for patrons to purchase supplies.

1883—Patrons were dealing with "Trade Houses", and local cooperatives had been set up. One report showed \$1,000,000 worth of business going through a single county agency.

1912—A Committee on Cooperation was appointed and a contract made with the New York State Grange Purchasing Agency for purchasing service.

1918—The New York State Grange Exchange was organized with headquarters at Syracuse, N. Y. Farm supplies were purchased in car load lots. The growth of this business soon demanded additional working capital.

1920—The New York State Grange, the Dairymen's League Cooperative Association, and the New York State Farm Bureau Federation sponsored a cooperative purchasing organization called the Grange League Federation Exchange, Inc.

1930—In the tenth year of its operation, 90,000 farmers were using this farmer-owned, farmer-operated, non-profit cooperative, the G. L. F.

Some Occasions for Thanksgiving

Frankenstein, the Monster, Has Not Got Us Yet

EDITOR'S NOTE—The article on this page was given as an extemporaneous address at the annual meeting of the New York State Federation of Farm Bureaus at Albany on November 6th. It so impressed us when we heard it that we asked Commissioner Pyrke to write it so that we could pass it on to you.

By BERNE A. PYRKE

Commissioner of New York State Department of Agriculture and Markets

I PLAN to sound this afternoon a note which, because of its novelty, may seem out of place in an agricultural gathering.

Funeral dirges have, in recent years, grown to be the conventional music in farm meetings. I favor the substitution of, if not a paean of joy, at least a spirit of gratitude and thanksgiving. I have the feeling that our agricultural programs have, in recent years, been too much tinged with the spirit of pessimism. This may be due to the fact that economics have assumed a prominent place on every agricultural program and economists, from the very nature of their profession, are inclined to be breeders of pessimism. Economists must be realistic and realities frequently are unpleasant. A dyed in the wool optimist will, of course, blink realities and will be able to see plainly even the invisible lining back of the murky cloud.

I am prompted to extend a thanksgiving message this afternoon primarily not because there is anything in the New York agricultural situation wildly to jubilate over, but because the calendar is emphatic upon the point that Thanksgiving Day will soon be at hand, and I have no desire to quarrel with the calendar. In addition, the calendar reminder will shortly be reinforced by proclamations from the President and the Governor. These proclamations will, if they follow the conventional form, command us to be thankful whether we are or not.

Wholly aside from

the calendar reminder and the national and state proclamations, I have no difficulty in perceiving a number of things for which New York State farmers may be genuinely thankful. In the first place, the world is not menaced by an inadequate food supply. It is difficult for the men and women of this generation to realize that there was a period of time not remote when the world was haunted by the spectre of an impending and inevitable famine. Now the bogey man creeps upon us in the form of a superabundance of food.

In presenting my subject I must bring together three names—Malthus, Crookes and Frankenstein. Two of these were flesh and blood individuals, historic characters; the third is an imaginative figure developed by a fiction writer. Malthus, an English curate and political economist who died a century ago, advanced the doctrine that population tends to multiply faster than its means of subsistence can be made to do, and that unless that undue increase of population be checked by prudential restraint,

poverty is inevitable. In the age in which it was written this doctrine proved to be highly unpopular; it brought down upon its author most vehement criticisms. As the doctrine, if accepted, tended to impair the rate of population increase, it was disapproved both by the State and Church. The State was interested in developing the largest possible number of male citizens to furnish cannon fodder in the wars, which were the common phenomena of the time; and the Church was anxious to swell its numbers by the bringing in of new adherents.

So unpopular was the Malthusian doctrine that the world was not disturbed by its implications. After the passage of well toward a hundred years a distinguished English scientist examined the question which had been raised by Malthus and came to a conclusion which did not differ widely from that of the gentle curate. In 1898 Sir William Crookes published the results of his studies. His conclusions were that with the agricultural science at that period, and with the methods in vogue in those days, food production could not keep pace with the growth of population, and that by 1931 the world would begin to feel the shortage of food, prices would rise and world famine would be just around the corner. Sir William Crookes was no dreamer and his message produced quite a different effect from that of Malthus. The agricultural scientist and the farmer recognized the conclusions of Crookes as a challenge and bent their energies to ward off the results which Crookes regarded as inevitable. How well the scientist and the farmer have succeeded in meeting the challenge is testified to on all sides. We are now within two months of the period when Crookes calculated that world

(Continued on Page 6)

The breadline established by "The Little Church Around The Corner" in New York City. Meal tickets are being given out each morning and are paid for by funds obtained through voluntary contribution. Our farming country has no breadlines.

It Helps Starting Any Life Work

It Helps Starting A Home

The Policy creates a substantial estate AT ONCE for a small sum. One is thus enabled to get his affairs on a basis of successful production with adequate insurance protection and without strain.

Premium Rate for Age 30

FIRST FIVE YEARS

\$10.76 per thousand if paid annually;

\$0.99 per thousand if paid monthly.

These rates reduce by dividends, 9½% being guaranteed each year.

During the years you need protection most, you get the most for your money. Accumulation begins after five years under a contract without medical re-examination.

Are you the young married man who has been saying, "I certainly need more life insurance"? This Policy is especially constructed for you.

Not a few facing the exigencies of life, the chances one has to run, feel the need of adequate life insurance,—**more than they are now carrying.** This policy is provided for such. It is most appropriate—at the start of a career one has more to think of than himself. He needs the protecting arm of life insurance for his dependents—who is without them? When he "harvests his crop," when his "years of increase" have come, he can then take on the accumulative and the investment kind for himself as well as his family.

The Postal Life is always concerned to do what is appropriate in thinking out insurance problems for its patrons. That's why it announces the Start-Off Policy for those who need it.

Based on its experience of twenty-three years, advantages of the Postal Life's way of doing business and its economies are now being strikingly shown. Conditions in the Company that have contributed to low cost of insurance will continue to improve. Policyholders tell a very satisfying story and are increasing the Company's prestige everywhere.

What Sustains and Commends the Company

Standard, Old Line, Legal Reserve Insurance, \$56,000,000, issued.

Income from Insurance and Investments, Over \$2,000,000 Annually.

Standard Policy Provisions Approved by New York Insurance Department.

Standard Policy Reserves, \$20,102,439, as per New York State Certificate of Valuation.

Operated Under Strict Requirements of New York State, and Subject to the United States Postal Authorities everywhere.

The life-prolonging Service of the Company's Health Bureau.

Record of Payments to Policy Beneficiaries During Twenty-three Years:

Endowments, Death Claims, Maturing Values, Dividends, Policy Loans, \$36,680,941.

High Medical Standards in the Selection of Risks.

Payment of Premiums Monthly, Quarterly, Semi-Annually, or Annually, optional with the Policyholder at any time.

Dealing directly at headquarters for one's insurance.

Selecting one's Policy *voluntarily* from official data.

9½% Dividends **GUARANTEED** in Policy.

Postal Life Building
Owned by the Company

Call at the Company's office, or simply use the Coupon, or write and say, "Mail me information as to Start-Off Policy mentioned in The American Agriculturist of November 22nd", and in your letter be sure to give

1. Your full name;
2. Your occupation;
3. Exact date of your birth.

Every standard form of Life and Endowment insurance is issued by this company and information as to any of them will be gladly furnished. When your inquiry reaches us it will receive prompt attention. We desire to co-operate with you *directly*, and have you think out your problems, from documentary matter submitted.

Tractors or Horses—Which?

Letters from Subscribers Give Personal Experiences

SOME time ago we asked for the experiences of subscribers with tractors and horses. As we expected, some are strong for horses, while others believe that the tractor adds greatly to their profits. Apparently it is a case where every man must decide for himself as to which will pay the best under his particular conditions.

At any rate, we know you will be interested in the replies which we are giving on this page. Unfortunately, we are unable to print all of the many interesting letters which we received.

—The Editors

* * *

Why We Use Both

WE bought our first tractor in war time. The experience cost us time, patience, and a lot of hard-earned cash. We said, "No more tractors for us."

After that we worked one hundred and fifty acres with five horses. My husband drove a three-horse hitch and the hired man the other team. The arrangement was efficient, and we prospered as long as we could hire a good man for forty dollars a month and board.

But times changed. Road work and city jobs attracted our competent men, and we had to compete for riff-raff laborers at forty cents per hour. Horse-labor plus high-priced man-labor became too expensive. My husband had to find some way to increase his labor output per man. The only answer seemed a larger power unit.

We sold all but two favorite horses and bought a 10-20 tractor which does the heavy work of plowing, fitting, cutting grain, and belt power. This tractor has proven satisfactory, does the heavy work better than a team in less time, and produces crops more cheaply by reducing labor costs. The tractor easily doubles a man's labor

output and reduces the expense of hired help to a minimum.

We keep the team for supplementary power—cultivating, drilling, hauling—all lighter jobs for which the tractor is too clumsy. So at present we need both team and tractor. But we expect the general purpose tractor will be perfected in a few years and our next machine may do everything a team can do except whinny! Then goodbye faithful Dobbin! For we must keep up with the times if we hope to keep up with our competitors.—MRS. H. R. B., *New York*.

A Horseless Farm

HERE is what I have to say after two years of farming without horses. We live in Nassau County in the potato section. At present we are farming one hundred thirty acres of which one hundred are planted to potatoes, twenty-five to sweet corn, and the balance to peas and a little cabbage. Four years ago, when we started cultivating potatoes with a tractor with patented wheels which would fit to take two rows at a time, we soon realized what was going to happen to horses. The following year we planted our potatoes with it. Some farmers said all kinds of things about that way of farming; some even said it would make the ground lumpy. Today in this section there is hardly a real potato grower who doesn't plant and cultivate with a tractor. Of course, they have improved these machines a lot since then.

Today, on my farm, two men can handle one hundred thirty acres except in the spring when one hundred ten tons of fertilizer and six hundred barrels of seed have to be handled in about four weeks. We have a general purpose tractor and one man can cultivate twenty acres

of potatoes a day without hurrying. We have weeders attached to the general purpose tractor when the potatoes are coming up. With this one man is doing the work of eight horses and four men. Then spraying comes and we have a duster hooked to the tractor. With it a man can dust fifty acres a day easily and mix his own dust.

Then digging time comes. Turn the tractor over in the morning and you're off with no time lost and what that means when harvest time is here! Getting potatoes from the farm to the yard is next. For that we use two old trucks and can load on one of these as much as six horses and three wagons will take. Here in Nassau County there are no more pastures to feed animals and it also costs a farmer about five hundred dollars a year to keep a team of horses here. Well, figure out how much gas you can buy for that amount. This is a machine age and horses cannot keep up with them.—R. W., *New York*.

* * *

Finds Both Are Needed

IN 1918 I purchased the first tractor to be used for farm work in this neighborhood. Since that time I have tried my best to find some way that I could do my farm work without the aid of horses but so far I have not been able to do so.

My farm contains ninety acres of which about forty acres have been orchard and pasture, the balance crop land. Until last year twenty or twenty-five acres were plowed each year. My experience with the tractor has been that I had to keep the same number of horses as before, but by doing the heavy work with the tractor I have saved enough on horse feed to pay for gas and oil and I believe that the average team will last much longer than where they have all

A Profitable Woodlot in Herkimer County

How Mr. Laucks Manages to Make an Annual Profit

By J. A. COPE, Extension Forester
New York State College of Agriculture

THE Laucks woodlot is in no sense a special woodlot; it is typical as far as composition goes of thousands of acres of farm woods in Central New York, consisting of a mixed stand of the three northern hardwoods, beech, yellow birch and hard maple, with a mixture of white ash, basswood, elm, and ironwood. The only thing that makes it worthy of note is the fact that it has been given careful attention during the past seventeen years and that records have been kept for this period on the material removed.

Thirty-one years ago, this eleven acre block of woods was cut over by a portable mill operator, which following the usual practice, cut everything that would make a 2x4. A few scattered beech too limby and knotty to be worth felling were left; otherwise it was cut clear. In 1912, Mr. Laucks bought the eleven acres of cut over land for \$9.00 an acre, or a total investment of \$100.00.

In the thirteen years that had elapsed since the original cutting a vigorous stand of sprout growth had sprung up; in fact, it was this young growth that interested Mr. Laucks in making his \$100.00 investment. As soon as title to the woodlot passed into Mr. Laucks' hands he began careful cuttings in the tract to improve growing conditions and to yield him annually the fuel wood required for home use.

For the past seventeen years Mr. Laucks has taken out each year from this eleven acre block, forty cords of fourteen inch fuel wood which is the equivalent of about twelve standard cords, or a little better than one cord per acre per year. His annual cutting

during this seventeen year period has removed most of the older defective beech and a quantity of the poorly shaped inferior second growth.

A sample area in this woodlot measured in 1929 showed a mixed hardwood stand made up largely of fine ash, basswood and hard maple, running around twenty-five standard cords to the acre. No figures are available on the volume of the stand at the time Mr. Laucks made his purchase seventeen years ago, but it is fair to assume that the volume at that time was probably about fifteen standard cords per acre, including the large beech trees.

On this basis Mr. Laucks' woodlot has yielded in fuel wood better than a standard cord of wood

per acre per year and at the same time his forest capital in growing trees has been built up from fifteen to twenty-five cords per acre. It should also be pointed out that this careful cutting has improved the quality as well as the quantity of his forest capital.

On the basis of the above figures it can be seen that New York State woodlots on good soil can produce with intelligent use of the axe, a standard cord and a half of wood per acre per year.

The financial aspect of Mr. Laucks' woodlot is equally worthwhile. On the basis of actual work done in the woodlot and the sale value of fuel wood in that community, the owner figures that every fourteen inch cord of fuel wood is worth \$1.75 as it stands in the woods. The woodlot has thus yielded: \$70 of fuel wood per year for seventeen years or a grand total of \$1190.00.

It should be remembered this is a net figure; liberal wages for cutting, hauling and buzzing this wood have already been deducted.

If Mr. Laucks had put this \$100 in a savings bank paying four per cent compound interest it would have amounted to \$194.79 in the seventeen years. In addition Mr. Laucks has had to pay out taxes of \$6.82 per year on the woodlot. His total expense on account of this woodlot is thus: original cost plus interest, \$194.79; annual taxes for seventeen years with interest \$162.82; a total of \$357.61.

The fuel wood produced has net value of \$1190.00. Deducting the costs totaling \$357.61, we find a balance in (Continued on Page 11)

Vol. 126 November 22, 1930 No. 21

Thought for the Week

GAIUS FURIUS CRESIMUS, a freedman, being able to raise from a bit of land far more abundant harvests than his neighbors could from the largest farms, was greatly envied, and accused of enticing away the crops of others by the practice of sorcery. . . . A day was appointed for his trial. Apprehensive of being condemned, when the question was to be put to vote among the tribes, he had all his implements of husbandry brought into the Forum, together with his farm servants, robust, and, as Piso says, well-conditioned and well-clad, iron tools splendidly made, stout mattocks, ponderous ploughshares, and sleek oxen. When all this had been done, he said, "These, Roman Citizens, are my instruments of magic; nor can I exhibit to your view, or bring into the Forum, those midnight toils of mine, those early watchings, those sweats and fatigues." Upon this he was unanimously acquitted.—PLINY.

Why Not Register Good Grades?

FOR a long time some farmers have felt that the dairy breed registry associations should set up a system of registry which will permit the entering of unregistered high producing grade animals. The cow testing associations and dairy record clubs give some recognition to good grade cattle but not enough. All registered cattle came, of course, at one time from common stock.

We believe in the pure-bred and want to see her numbers increase in the land when she is a credit to her breed. But every dairyman knows that there are pure-breds and pure-breds, and there are many grades that are better cows than some pure-breds. Why not, therefore, recognize these good grades and make it easier to perpetuate their line? Let us hear from both grade and pure-bred owners on this subject. For the best letter received within four weeks, we will pay five dollars.

Buy Seed Only from Reliable Sources

WE have reports indicating that farm seed salesmen are traveling through the country selling seeds direct to farmers at too high prices and telling farmers that seed is very scarce and high because of the drought. Worse still, not only is much of this seed offered at much more than it is worth, but it is of poor quality.

It ought to be clear by this time that it does not pay to go to all the expense and labor of sowing, caring for, and harvesting a crop when poor seed is used. Most farmers, for example, know by this time that it is merely a waste of time to sow common alfalfa of unknown origin which means that the seed was probably grown in some southern country so that it will not stand

our northern conditions. It should be unnecessary also to warn our farmers to buy only from houses which you know to be absolutely reliable and to get quotations from more than one source to avoid paying more than the seed is worth.

A Suggestion for Dirt Road Farmers

WE are in receipt of letters every day from farmers asking for help to secure better care of the dirt roads. Some of these letters are rather pathetic. As most of our readers know, an adjustment was made last year by the state government of New York whereby state aid for the town roads was equalized so that most of the towns of the state get from one to three times as much help for their roads as they had before.

This money has not long been available. Possibly it is too early to look for very much improvement. Heretofore your local road officers have had some excuse in not keeping up certain roads in the town because of lack of money. But soon now, in most towns, all of the farmers have a right to expect better service. If you are not getting it, our suggestion is that you have a good friendly talk with your town superintendent or with your local town supervisor. If there are several farmers on the road, appoint a committee for a conference with the town authorities. Be fair. In the very great majority of cases, local officers are trying to do the best they can. If they are unable to help there may be some good reason for it which will come out in the conference. In the few instances where it is evident that the local officers do not want to cooperate with you, then about the only remedy is to replace them at election time.

Record Yourself Against This

AT the coming sessions of the legislatures in the different states, the reformers will be busy again trying to pass laws against trapping animals. These anti-trap bills are ingenious. They call for the exclusive use of traps that will either catch animals alive or kill them instantly. The only trouble is there are no such traps, so the passage of such a bill means simply legislating all trapping out of existence.

Every decent person believes, of course, in being humane, but there is no more reason for lawing against traps than there is against hunting, and for that matter, against the killing of any meat animal. On the other hand, there are thousands of young men and boys who, at this time of the year and during the winter, pick up a little money by trapping, and this money is often all the cash these boys see during the entire winter.

An Unnecessary Expense

DO you know that because of the inefficient and out-of-date method of collecting taxes, it costs taxpayers of New York \$300,000 a year? If you pay your taxes on time, the collector gets one percent, if late, five percent, and if not at all, he gets two percent. What sense is there to such a system?

City taxes are now collected entirely by mail at a fraction of the cost of our obsolete country system. There are no collectors. Why not stand for a correction of this problem possibly by some optional legislation giving the local authorities the right either to use the old system, or adopt the better one.

The Way to Stop Chicken Thieving

THE season of chicken thieving is with us again. We are receiving letters every week from farmers who have suffered losses, some of them heavy ones. The solving of this problem depends primarily upon the efficiency of local officers in running the thieves down, and on drastic sentences by judges when they are caught. Chicken thieving is no longer a minor crime. Often it is a regular organized racket backed by city gangsters. Be careful to lock your buildings thoroughly. Have the telephone number of the

sheriff and of the nearest State Police headquarters handy so that you can call them quickly. Report the loss the night it happens, and if and when the thieves are caught, cooperate with the officers with testimony that will back up the judge in imposing sentences that will make this crime unpopular.

Pay to Keep Well

IN a recent speech at the annual meeting of the New York Farm Bureau Federation, Dr. George Warren said that some time most of us would learn to have a doctor look over our bodies at least once a year in the same way that any good automobile driver has his car regularly inspected by a trained mechanic. "In the colleges now," said Dr. Warren, "the students pay a small fee and for this they are guaranteed a physical examination and two weeks of free hospital service if they need it. Why not extend this to the community?"

It is said that the doctors of China are paid to keep people well instead of to cure them and that they get their pay so long as there is no sickness in the family but none after the illness starts. Naturally the doctor is anxious for the patient to get well.

We are making some progress in disease prevention but we have a long way to go along this line, particularly in the rural districts.

Hold on to Your Money

"There was a man through here asking the farmers to give \$10 apiece to make the milk dealers pay twice a month and to double the price the farmers receive for milk. They had a long list of names of men who had signed."—F. G.

FOR several years representatives of the so-called New York State Farmers and Livestock Dealers Association have been canvassing dairy farmers in certain counties for a \$10 membership fee on the promise that the Association would make the State of New York pay larger indemnities for cattle condemned for TB. Having worn out the old scheme, these representatives have now turned to this new plan for collecting the farmers' \$10.

As we have pointed out time and again in this paper, the leaders of this Association had no standing in Albany and no influence whatever in helping to secure larger indemnities for condemned cattle. There is even less chance that these men can have any influence in increasing the price of milk to farmers. In fact many believe that their only purpose is to get your \$10.

Will You Go to the Rockies with Us?

IT is none too early to begin to think and plan about the trip with the AMERICAN AGRICULTURIST party to the Yellowstone. Our big excursion will start from various points in New York State on August 1st and will be gone ten days. Our guarantee is that we will pack into that ten days enjoyment and recreation that will give you something to think about for the remainder of your life. Write us for complete information. This will be cheerfully furnished with no obligation, of course, on your part. This trip is another one of the services which AMERICAN AGRICULTURIST is trying to render its readers.

Eastman's Chestnut

AMAN from Indiana moved out and home—stepped a quarter-section in the West.

"Friend," said a man who had a ranch hard by, "where'd you come from?"

"From Indiana."

"How was it you left that well-settled and fertile State to come 'way out here on these prairies?"

"Why," said the newcomer, "they got to slandering me back there somethin' frightful, sayin' all sorts of mean things about me, and I just concluded to move."

"But why didn't you make them prove them slanders?"

"They did."

Oil and Gas Boom Comes to New York

Good for Farmers if They Signed a Good Lease

By E. R. EASTMAN

ALL of my life I have always read with a thrill the romantic stories of the big booms which followed the discovery of gold or silver or oil, but they were always located a long way off in California, Alaska, or Texas, and I never expected to see a boom in my own home country. Such a boom is on now in many of the old farm counties of Southern New York and Northern Pennsylvania.

Some of the great oil companies have discovered that there is gas, and perhaps oil, in large quantities in those foothills of the Appalachians in the counties of Chemung, Tioga, Broome, Tompkins, Cortland, Cayuga, Yates, and some other adjoining counties in New York State, and extending over the boundary into northern Pennsylvania. The result is considerable excitement. Thousands of leases have been made with farmers covering gas and oil rights. Wells are being drilled, and in a few instances gas in paying quantities has been found.

When representatives of the companies started to ride the country and talk to farmers about signing leases, American Agriculturist's Service Bureau began to receive large numbers of letters from farmers asking what they should do, whether to sign the lease or not. We made as much of an investigation as we could by mail, and I am just back from a trip on which I traveled into several of the counties, saw some of the new drilling operations at work, and talked with a large number of farmers, Farm Bureau men, and others about the leases. We made this investigation in order to do what we could to safeguard farmers' rights. What the right thing to do is hard to answer, for, like all other questions, there are two sides.

A real gas and oil development would be good for the country for it would bring back capital, employment, some prosperity, and new life to a section that needs these. There is no doubt about there being at least some gas, and maybe oil, in this section, otherwise the great oil corporations would not spend a large amount of money to lease land and to start operations. The question is, of course, whether the gas is there in paying quantities. If so, and if the fond hope can be realized that under the worn-out soils of these old hills there is a new treasure, then hundreds of thousands of dollars will be brought into the territory, land values will increase, and those who are lucky enough to own the gas and oil land, may become prosperous, if, and this "if" is the crux of the whole matter, the lease you hold with the company is a good one.

Some of the leases are much better than others, and that is the reason we have already advised our readers to go slowly in signing a lease until they are sure that it is the very best that can be obtained. This advice does not mean, however, that you should hold up the entire development of your section by being too obstinate in not signing.

What is a good oil and gas lease from the farmer's standpoint? In order to answer that question I have read dozens of leases offered farmers by oil companies, and I find great variations. One cannot escape the impression that an effort was made to sign up farmers before they could find out what their rights were. A farmer in the old oil country of Allegany County who had also had some connection with an oil company told me that many of the contracts now being offered to farmers in this new development were very unfair to farmers, and he stated that no oil company would think of offering such a lease to farmers who live in the older oil and gas country where they had had an opportunity to know what their rights were.

A letter before me as I write explains what happened when the oil and gas companies started out to lease this new territory. The letter is from

a farmer's wife, and reads in part as follows:

"The representative of this company explained the lease and gave the impression that they wanted to drill for oil, but was careful not really to say so. He was a good talker and we liked his appearance and manner very much. He was the first agent to come into this vicinity. None of the farmers knew

as well as the oil, or the equivalent of one-eighth, is considered a fair share."

The terms of the first contracts which were offered farmers and which so many signed, vary somewhat but in general contain the following provisions for the farmer: One-eighth of any oil discovered, twenty-five cents an acre rental for the land, and one hundred dollars annually to the farmer

Drilling for gas in the Finger Lakes section of New York. This well is 1,700 ft. deep. Sometimes it is necessary to go as deep as 4,000 ft. The first 350 feet is cased with eight inch pipe, the rest of the distance with six and one-quarter inch pipe. It costs many thousands of dollars to put down one well. —Photo by Ewing Galloway.

about gas and oil then. A block was mapped out for him and he covered it getting most of the farmers to sign. I feel that these first signers were taken at a disadvantage as the whole thing was new to them and they supposed there was only one form of lease. Farmers had heard no rumors yet and did not know they should get more for gas. Now it is generally understood that one-eighth of the gas

for each producing gas well, with enough gas for the farmer's own consumption up to one hundred or one hundred fifty thousand cubic feet per year. There is no question that this is a poor contract for the farmer.

On the matter of the land rental, leases vary but many of them contain the provision that no rental shall be due until after the first year of the lease. I feel that this rate is too low, and this is proven by the fact that

some companies are offering more. The offer of one-eighth of the oil to farmers is a fair one and a customary offer in an old oil country. This offer is rather played up in some of the contracts and by some of the oil corporations' representatives. The trouble is, however, that there does not seem to be much hope of finding oil. What is expected is gas, and on this point, the offer of one hundred dollars a year for a producing gas well is absurdly low. Many of the companies are now offering farmers from two hundred to three hundred dollars a year rental for a producing well, but the only fair basis for such a contract is exactly the same for gas as is offered for oil that is, one-eighth of the gas produced or its equivalent in a royalty per thousand cubic feet.

It is unfortunate, of course, that so many farmers were induced to sign these poor leases. The arguments were used that companies would not begin developments unless they were able to lease a whole block of territory, and it was put up to farmers that if they failed to sign, they would be responsible for holding up the whole movement. It was also argued that even though there is gas and oil in paying quantities on a farmer's land, he does not have experience or capital to develop it himself and must depend upon the big corporations to make such developments. These arguments, of course, are true. On the other hand, if it develops that there is really gas and oil in your neighborhood, you can rest assured that no good oil company will be scared away even though they are obliged to offer you a good contract. Moreover, what good will this boom do you even if gas wells are developed if your lease is such that you do not have any fair share in the boom? What good to you would be a hundred dollar a year rental for a great gas well producing thousands of dollars' worth of gas per year?

A small point also to remember is the fact that lawyers say that these leases might hamper somewhat your credit at a bank, in particular if you want to secure a mortgage. We do not think this is much of a point, but it is a reason for not signing a gas and oil lease which may not mean much to you.

Another point that should be clearly understood: Do not under any circumstances lease your land for this purpose to an irresponsible or unknown party. Make sure that the agent represents one of the reliable oil companies. There are brokers trying to obtain leases with farmers, and these are always poor from the farmers' standpoint. Then the broker in turn sells the lease to an oil company and makes the profit that should be yours. Every corporation representative should carry with him credentials by which you can surely identify him. If there is any doubt, do not sign until you know.

This whole situation is another example of people doing something in a hurry and repenting at leisure. Please do not misunderstand the purpose of this article. We believe and hope that this gas boom will mean a lot to the whole territory where it is developed. We do not want to hold it up unnecessarily, and we hope that every farmer eventually will sign a lease. Our sole and only purpose is to help you protect your rights.

If you have already signed, of course there is not much you can do. At the worst you have not lost any money and will profit, at least to a small extent. If a development starts in your neighborhood, then it may be that all of the farmers of that section can unite if they have one of the poor form of leases, and appeal to the company for a better contract. A corporation is not legally bound to give you a better one, but we are informed that one corporation actually did make an adjustment when farmers became aroused over the matter. But as I see it, there is no use of making a protest unless there

(Continued on Page 6)

The Song of the Lazy Farmer

MIRANDY says to me. "There ain't no place I'd rather be, than here upon the farm in fall, a feller surely has his gall to brag about this city life, I'd rather be a farmer's wife. Of course there's things that you could do to keep your wife -from gittin' blue and keep me happy, I should think you might git me a kitchen sink and put a gas plant in so I won't have to burn my cake and pie, or have it raw because the fire won't draw because the wind ain't higher. A gas stove would be mighty fine, and we might tap the 'lectric line, or have a light plant, it is mean to have the smell of kerosene about the place, a coal oil light is awful smelly here at night and it is hard on our old eyes, electric light is sure the prize."

Says I, "Mirandy, all that's so, but you must think I'm made of dough, the biggest idee in my life is doin' things to please my wife, the best is none too good for you, there ain't a thing I'd rather do than fix this place of ourn up fine, and buy things for this wife of mine. The trouble is it all cost mon, and as for me, I ain't got none, I'd like to buy you lots of things but all my cash has taken wings." Mirandy says, "I realize this man of mine is sure a prize, I know you ain't got cash to buy a new gas stove, but you might try a choppin' up some wood for me." Say I, "My back is lame, by gee, I'd fix the house up if I could, but I ain't strong for choppin' wood, I think a lot of you, dear Jane, but choppin' wood gives me a pain!"

this place of ourn up fine, and buy things for this wife of mine. The trouble is it all cost mon, and as for me, I ain't got none, I'd like to buy you lots of things but all my cash has taken wings." Mirandy says, "I realize this man of mine is sure a prize, I know you ain't got cash to buy a new gas stove, but you might try a choppin' up some wood for me." Say I, "My back is lame, by gee, I'd fix the house up if I could, but I ain't strong for choppin' wood, I think a lot of you, dear Jane, but choppin' wood gives me a pain!"

Your Independent
Shoe Merchant
uses **HEAD**
his
to protect your
FEET
and pocketbook

Your town's independent shoe store is a place where dollars buy a little more in downright worth. Its owner has built his own business by dealing in the sort of footwear people need. He searches for the best, because he knows his customers are his only bosses.

He's your kind, and he's our kind. Top Notch Rubber Footwear comes from a factory run by men who still believe that long wear should go hand in hand with style. That is why your independent merchant chooses Top Notch. He knows that you can get more wear from them for every nickel paid. He carries Top Notch because he wants to keep your trade.

Visit your independent shoe store next time you want rubber footwear. Say Top Notch, and get the best money's worth in town. Boots, arctics and rubbers (heavy and light) for men, women and children. Beacon Falls Rubber Shoe Company, Beacon Falls, Connecticut.

● Put your foot into a Top Notch Buddy Boot. Feel those "muscles" of tough live rubber. Get a lot of wear without a lot of weight.

● The Top Notch Topeka is a real Man's rubber with a Man's strength, built to travel through the roughest kind of punishment.

● Real protection for a woman's feet. Slush, rain and cold cannot penetrate them. Top Notch Women's All-Rubber Smarties are designed to make feet look smaller.

Some Occasions for Thanksgiving

(Continued from Page 1)

famine would be in sight; and instead of facing famine conditions we observe a surplus of food products of ominous and depressing proportions.

One of the interesting things about the studies of Sir William Crookes is that his calculations were remarkably accurate, though his conclusions, owing to developments which he did not anticipate, have proved to be groundless. Sir E. John Russell, Director of the Rothamsted Experimental Station of England, said last month in an address delivered in New Jersey, that Sir William Crookes' "calculations were remarkably accurate, his predictions for the world requirements for wheat for 1911, 1921, and 1930 are astonishingly near and there is little doubt that if science had stood still since 1898, we should now be on the verge of a world famine, with all of its dreadful terrors." We may well be thankful to agricultural science and to the farmers of the world who have made such an intelligent application of the principles worked out by scientists for a more bountiful food production. So well have the scientists and the farmers cooperated that Sir E. John Russell, in his recent address, was moved to say, "all fear of a scarcity of food has been abolished; one cannot foresee the time when the human population will have inadequate food supplies."

Overproduction a Menace

The remarkable success of the farmers of the world, guided by agricultural scientists in confounding the disquieting forecasts of Malthus and Crookes brings me to the third name mentioned in the beginning of this address. Frankenstein, according to the novelist's fancy, was a medical student who constructed a monster mainly out of materials of human bodies obtained from the church yard and the dissecting room and endowed it with a sort of life. This monster grew into a being of hideous mien and of extraordinary strength. It was ever a problem to its creator and eventually, because of its unsatisfied desires, slew its author. It has grown to be a symbol of uncontrollable forces misguidedly brought into existence. Agriculture at the present time finds itself in a situation quite similar to that of Frankenstein. To meet the threat of world famine it has brought into existence a monster of over-production—less menacing to be sure in appearance than Frankenstein's monster, but hardly more controllable. I have no thought of pressing the analogy too far. It is far from my purpose to suggest that the monster of over-production will destroy its creators, but it does present a new type of challenge, and it does emphasize the need which agriculture has for a different type of scientific aid—the assistance of the agricultural economists who, despite their joylessness, we must heavily lean on to avoid the unhappy fate of Frankenstein.

I can see other occasions for thanksgiving. The past season has witnessed in far-flung areas of the United States a drought of unexampled severity and of unprecedented proportions. I happened to be in Washington a few weeks ago in attendance at a national convention where I had the opportunity to learn in an official and authoritative manner of the extent of the drought and of its catastrophic implications. We, of New York, have been conscious during the past season that there was a deficiency of rainfall, but few of us have any real understanding of conditions in the drought stricken area. That area extends over twenty-four states and embraces more than a thousand counties. I will not attempt a recital of the harrowing conditions which prevail in those areas, but will leave the subject with the statement that there are hundreds, nay thousands, of farm families capable and self-respecting who, through no fault of their own, have been reduced by drought conditions to destitution. Surely, when we take note of the fact that the drought was stayed before it laid its devastating hand on the State of

New York, we have reason to express a mood of thankfulness.

There is also another basis for developing and expressing a spirit of thankfulness. It is true, of course, that during the past decade the economic status of agriculture has been unsatisfactory; it has been distinctly inferior to that of urban industries, but there had been remarkable economic changes in the past twelve months; urban industries, practically without exception, are depressed; and while agricultural conditions even in New York State have not improved, they are, in relation to urban industry, in very much better condition. Whether an individual or an industry is depressed depends to a considerable extent upon the measuring stick which we employ. Measured by the economic level of other types of industries, prior to twelve months ago, New York State agriculture for more than ten years had been in an unsatisfactory condition; measured, however, by the conditions which prevail at the present time in city industries, the condition of the average New York farmer is by no means an unenviable one. Authorities differ as to the extent of unemployment, but even at a conservative estimate there are in the world at the present time upwards of fourteen millions of unemployed able-bodied men. I know of no greater economic tragedy than the tragedy of unemployment.

If the New York farmer will compare his lot with the condition of these millions of unemployed, he will find ample cause for rejoicing. Of all men, he does not suffer from unemployment; in addition, he has a roof over his head, an ample supply of provisions in the larder, usually an automobile in the garage, and not infrequently a radio in the living room. In conclusion, I repeat that the New York State farmer might easily be a lot worse off and that there is ample reason for joining festively and enthusiastically in the spirit of Thanksgiving Day.

Oil and Gas Boom Comes to New York

(Continued from Page 5)

is some likelihood of actual development. If, on the other hand, you have not signed one of these leases yet, our advice would be not to be obstinate about it, nor definitely to refuse to sign, but instead tell the representative that you will be very glad to sign, in fact you want to sign a lease, but that it must be as good as is offered in any other section and by any other company. Read this article carefully and then if you have any doubt about the contract, send it to American Agriculturist and we will give you an opinion or you may consult a lawyer.

The other day, Curry Weatherby, his father and I were riding for several hours across some of the old worn-out hills in Southern New York to study this gas proposition. Around us about as far as we could see were thousands of acres of land that never was much good, and now is good for nothing at all except possibly to produce trees. There had once been some farming here, but it was mostly gone and the buildings fallen to ruin. It was typical deserted farm land. Suddenly we came over the crest of a knoll, and there in a barren old meadow was a great tower rearing into the air where a gas and oil well was being drilled. The lonesome hills resounded to the echo of the cough of a big gasoline engine and to the steady pound on the drill as it was being driven downward. We stopped for a moment to look at it, and then Curry said, "How strange are the changes that time brings about. Here was once all of the activities of a farming country. Then the soil played out and the folks were starved off. Now along comes this oil and gas boom, and the barren old hills echo to activity again."

Here is hoping that this activity really amounts to something and brings back prosperity to our farmer friends.

Allegany-Steuben Breeders Hold 11th Annual Sale

SEVERAL hundred Ayrshire enthusiasts attended the eleventh annual sale of the Allegany-Steuben Ayrshire Breeders' Club held recently in the sales pavilion on the Hornell (N. Y.) Fair Grounds. In all, 66 head were sold by Harry Scott of Canaseraga, as auctioneer and C. T. Conklin, Secretary of the Ayrshire Breeders' Association, as pedigree man. Most of the animals consigned were young cows just fresh or near by and there were also a few heifers and young bulls. The general average of the animals consigned was better than in past years and there was a decided improvement in the condition of the stock.

Great Gift's Princess of Lind-ayr a six-year old cow consigned by H. B. Toby of Lindley, topped the sale at \$275. A cow consigned by E. K. Hanks of Almond, brought \$265 and cows consigned by Ben Burger of Greenwood, and Harlo Atherton of Adrian, sold for \$250 each. The average price for the entire sixty-six head which includes several calves, was \$150.

Cows go to Oklahoma

The largest single purchaser was the Standard Paving Company of Tulsa, Oklahoma. They paid \$3715 for nineteen cows and heifers. E. A. Weeks & Company of Locke, N. Y. purchased seven head; Ross R. Finch of Palmyra, bought five; Soper Brothers of Geneva, took four; and F. A. Buell of Holcomb, R. H. Bardeen of Hornell, and Lena C. Dorman of Geneva, each purchased three animals. Other prominent buyers were George Doty of Churchville, Robert Eno of Honesdale, Pa., H. F. Towner of Moira, N. Y., F. W. Corney of Nunda, O. A. Kibbe of North Bingham, Pa., W. A. Zellars of Myerstown, Pa., and L. F. Adams of Holcomb.

This sale is held at Hornell each year on the first of November and is growing to be one of the greatest Ayrshire sales in the country. Animals are carefully selected in advance of the sale and an effort is made to secure animals of high quality from the best herds of this region.

C. T. Conklin, Secretary of the National Ayrshire Breeders' Association announces that three carload of Ayrshire cattle have been shipped from Hornell during the past week and Ray Mead, secretary of the Allegany-Steuben Club reports the sale of six head to Porto Rico and a recent shipment of several carload of cows to Vermont, \$400 a head having been paid by the New England purchaser.—WM. STEMPLE.

Avoid Scrub Bulls

Why is it that a fine looking grade bull whose dam is a fine producer so often proves disappointing when used as a herd sire?

A GRADE or scrub bull may have a good individuality but may be capable of transmitting to his offspring all kinds of characteristics, both good and bad. You are just as likely to get the bad as you are the good. The purebred breeds true, the only sure thing about a scrub or grade is that he will not breed true.

Sweet Clover Pasture for Sheep

Is sweet clover good for sheep pasture?

TRIALS in Ohio indicated that a second year growth of biennial sweet clover has a high carrying capacity for sheep from early May to about August 1. A group of ewes pastured on sweet clover were healthy and thrifty and the lambs made excellent gains. There was not much tendency to bloat, although there was some trouble as well as with some sheep which were pastured on mixed clovers.

"My job is to get
**Best Results at
Least Possible
Feed Cost**"
says well-known herdsman

*So he tests all
leading feeds - then finds
B-B gives best results*

WHEN Maynard Hack, Herdsman of the Cold Springs Guernsey Farms, St. Johns, Penna., tells you that Bull Brand Dairy Ration produces the most milk at the lowest feed cost he certainly knows what he is talking about. For he has tested all of them and here is what he says:

"My job is to get best possible results at lowest feed costs. I have tried every one of the leading dairy feeds sold in this community regardless of cost and have found Bull Brand gives better results than any other feed we have used.

What the Test Proved

"Our herd consists of nearly all imported Guernseys costing up to \$2500.00 each, so it would be impractical to feed anything but the best. Before feeding B-B to our entire herd, we ran a six months' test against another highly advertised feed and found that Bull Brand produced more milk, kept the cows in much better body weight and we never lost even a teat. Our cows came through the lactation period in wonderful shape which means much to us as our young stock from this herd are valuable."

Interesting as Mr. Hack's experience has been, it is not an unusual one. Thou-

sands of dairymen have tried Bull Brand against other feeds—both commercial and home mix—and have found the answer the same: *Bull Brand produced the most milk at the lowest feed cost.* And that's what most feeders are looking for.

The Guarantee That Protects You

Whether you own pure bloods or grade cows, you can try B-B feed with the positive assurance that if you don't have the same satisfactory results as these other dairymen, the trial costs you nothing. Here is our offer:

Order enough Bull Brand to last one or two cows for 30 days. Feed according to the directions in the sack. *Then watch the milk flow increase.* But if B-B doesn't prove most productive per dollar of feed cost, hand the empty sacks back to your dealer and he'll refund every cent you paid for it.

The sooner you start this test, the sooner you'll find the way to make dairying pay bigger profits. If you can't get B-B from your dealer, write us direct.

October 1926	2.41	2.51	
The Sheffield Producers announce the cash price to producers for 3% milk in the 201-210 mile zone, as \$2.53 per hundred, (2.73 for 3.5% milk).			
	3%	3.5%	
October 1929	2.83½	3.03½	
October 1928	2.82½	3.02½	
October 1927	2.81	3.01	
October 1926	2.60	2.80	

Butter Market Suffers Severe Setback			
CREAMERY SALTED	Nov. 15, 1930	Nov. 7, 1930	Nov. 16, 1929
Higher than extra	35½-36	39 -39½	42 -42½
Extra (92 sc.)	35 -	38½ -	41½ -
84-91 score	27½-34	29 -37½	33 -40½
Lower Grades	26½-27	28 -28½	32 -32½
The butter market suffered a severe blow during the week ending November 15. On November 13 prices weakened and on the 14th they were carried down 2c on creamery extras. In some lines it has been most difficult to keep track of price levels. The Chicago market, a weak sister for a long time, appears to be the biggest factor in the situation. When prices broke they went down for the count. The New York operators have been watching Chicago very closely and have been operating most cautiously. For the past several weeks we have mentioned the fact in these columns that a lot of butter has been arriving in New York, having been diverted from other markets. This has kept New York well supplied with both fresh and short held goods. Receivers have been very apprehensive and at times shaded prices in order to avoid even slight accumulations. When Chicago broke it was to be expected that New York would follow suit. The trade has been bound to keep floors clear. If the differential between New York and Chicago were allowed to remain, it would have meant that more butter would have been diverted from the West to the New York market.			
It is very apparent that the industrial situation in New York with its serious unemployment problem and diminished consumer buying are the dominating factors in determining the volume of business. Buyers are following a hand to mouth policy with the exception of the chain stores which have taken long lines of butter at these reduced prices and are using the butter bargains as "specials". The statistical condition of the market appears to have little or no influence on the trade. Statistically, the market is in very good shape. On November 14 (A.M.) the four cities reported to the Price Current that they held 44,402,151 pounds whereas at the same time a year ago they held 52,168,379 pounds. From November 7 to November 14 the four cities took out of storage 2,195,763 pounds of butter while during the same period last year they took out 2,052,989 pounds.			
When the price of butter dropped to 35c a large volume of business followed and there was a better clearance than had been experienced in several days. The weakness in the market that was very apparent on Thursday and Friday, disappeared on Saturday, the 15th, and the market closed steady and strong. This was made more secure when advices			

from Chicago stated that the market in Chicago had recovered 1½c. This improved condition in the market, however, prevails only on 92 score butter or better. The lower grades which constitute a large proportion of the holdings are still in very bad shape. There is no regularity to the price schedules, for transactions are principally a matter of negotiation. There is no telling what will happen next week. We know that butter below 92 score is going to continue in a bad way. We look for a rather steady market on 92 score or better inasmuch as we are now approaching the holiday season. However, we do not look for any advance worthy of serious consideration due to the existing economic conditions.

Cheese Market Draggy			
STATE FLATS	Nov. 15, 1930	Nov. 7, 1930	Nov. 16, 1929
Fresh Fancy	20-21½	20-21½	26-
Fresh Average			
Held Fancy			26-27
Held Average			24-25
The cheese market is slow and draggy and although prices as yet are the same as they were a week ago, we would not be surprised to see schedules suffer a shading. Statistically, the market isn't as strong as it has been of late. There is a very slow movement of fresh goods. Cured stock has been holding steady but no big sales have been made, most of the transactions being in small lots. Here and there pressure to sell is developing in Wisconsin.			
The storage situation continues unchanged. On November 13 slightly less than 17½ million pounds were held by the ten cities, while a year ago the same markets held over 20 million pounds.			

Fancy White Eggs Cheaper; Browns Hold Firm			
NEARBY WHITE	Nov. 15, 1930	Nov. 7, 1930	Nov. 16, 1929
Henery			
Selected Extras	52-55	52-57	64-67
Average Extras	48-50	48-50	61-63
Extra Firsts	35-45	35-45	53-60
Firsts	29-34	29-34	47-51
Undergrades	26-28	26-28	42-46
Pullets	30-34½	30-33	38-43
Pewees	27-28	27-28	35-38
NEARBY BROWNS			
Henery	52-57	46-56	63-66
Gathered	33-50	31-45	49-63
The egg market closed on November 15 with an up and down movement. Brown eggs held up to previous levels and if conditions continue they may show some advance. Production of brown eggs and Mixed colors in the middle West has fallen to unusually low levels. The resulting scarcity of colored eggs has been felt in the New York market and values have held firm.			
White eggs, on the other hand, have not shown any decreased production. In fact, supplies from the Pacific Coast have been quite full. Consumer demand has been falling behind on these lines and prices on the best marks have been modified downward. It appears now that Mrs. John H. Housewife is looking with more favor on medium priced whites and is reluctant to pay that extra 2c for the top grades. New Jersey producers of extra quality eggs are still enjoying a 2c premium, receiving up to 57c for their best marks. However, they are 2c below a week ago.			

Fancy Live Poultry Selling Well			
FOWLS	Nov. 15, 1930	Nov. 7, 1930	Nov. 16, 1929
Colored	19-25	19-25	26-31
Leghorn	17-21	17-22	22-25
CHICKENS			
Colored	18-24	20-25	20-29

DUCKS, Nearby	18-25	18-25	21-28
GEESE	-17	18-19	23-25
The express market on live poultry has experienced a fairly satisfactory week from November 10 to 15 inclusive. Colored fowls sold well and Leghorns also moved freely. Chickens improved as the week advanced and pullets and broilers have sold satisfactorily. The freight market did not do so well, due principally to the fact that the cars contained large proportions of inferior birds. It is quite evident that the Western producing sections are culling very heavily, and sending the culls to market. This may help the egg market.			
Turkeys are a problem. It is almost impossible to get a line on the probable market for Thanksgiving. At this writing, supplies have been excessive, a great			

many birds coming through in the freight shipments, far beyond market needs. We would not be surprised to see plenty of turkeys for the Thanksgiving market in spite of the predictions of a shortage compared with a year ago. We still believe that there is infinitely greater possibilities in local markets than in the New York trade. A man who can fit his birds and dress them in a fine attractive style should be able to get a fair price and a premium over the New York level. On November 15 the finest nearby turkeys, dry packed, were bringing from 27c to 37c for young toms. Young hens brought 26c to 35c. Medium birds were from 22c to 25c and old birds from 25c to 29c.

34% O. P. Linseed Meal	36.50	37.00	52.50
The above quotations taken from the weekly feed letter of the N. Y. S. Dept. of Agr. and Markets are for straight carlots, f.o.b. Buffalo. Prices on mixed cars and less than carlots are higher. Consult your local freight agent for freight rates to your station.			

Hay Supplies Liberal

Receipts of hay were quite free during the week ending November 15, slightly in excess of demand which was fairly good for choice stock. Most of the unloadings consisted of poor quality hay in small bales, which are least in demand. Prices declined \$1 per ton and the market closed in a weak condition. Straight timothy grading No. 1 to No. 3 sold at a range of \$23 to \$28 while mixtures brought from \$20 to \$25. Sample hay sold at \$17 to \$20. These prices were for large bale goods, similar grades in small bales sold for \$1 less than quotations.

Wool

The wool market has been steady. New York better fleece wool, unwashed, fine, per pound 21-30c; ½ blood 22-29c; ¾ blood 24-29c; ¼ blood 24-29c; low quarter blood 24-26c; common and braid 22-24c.

Follow the daily radio reports on potatoes, vegetables, fruits, etc.

KILLS 103 RATS ON NEBRASKA FARM

A Nebraska farmer killed 103 rats in 12 hours with K-R-O (Kills Rats Only), the product made by a special process of squill, an ingredient highly recommended by the U. S. Government. It is sure death to rats and mice but harmless to dogs, cats, poultry or even baby chicks. K-R-O is today America's most widely used rat and mouse exterminator. Sold by druggists on money back guarantee.

Farm News from New York

Crop Conditions as Given by the November Report

THAT unusually favorable fall weather has helped the growth of late harvested crops is indicated in the state-federal crop report for November, issued from the New York State Department of Agriculture and Markets.

Potatoes improved somewhat, the crop now being estimated for the state at 31,270,000 bushels, compared with the abnormally small production of 24,840,000 bushels last year and 31,046,000 bushels, the five-year average, the heaviest yields occurring on Long Island and in Central New York. Last year, Long Island yields were very small. The United States crop is estimated at 368,444,000 bushels, compared with 359,796,000 bushels last season and 392,605,000 bushels, the five-year average.

Field beans in New York, with harvest facilitated by dry weather and with practically no damage from weather, are estimated at 1,160,000 bushels, compared with 1,250,000 last year and the five-year average of 1,358,000. The sharpest decreases from last year were in Red Kidneys and Yellow Eyes. The United States bean crop is placed at 20,975,000 bushels, compared with 19,693,000 bushels last season and 17,323,000, the five-year average.

Buckwheat, with a state crop of 3,413,000 bushels, compared with 3,168,000 last year and the five-year average of 4,098,000 bushels, has a United States crop of 9,409,000 bushels. Last year, it was 11,520,000 bushels, and the five-year average was 13,786,000 bushels.

Apples have taken on better size than expected, the Baldwins and Greenings generally overrunning earlier expectations. The Baldwin crop is, however, substantially below last year, while Greenings and Ben Davis are much better. The estimate here given relates to the total crop, but it is probable that low grade apples and apples in the non-commercial sections will be gathered less completely than in several years, possibly reducing the quantity actually harvested. This year, in New York, 27,683,000 bushels; last year 16,520,000 bushels; five-year average 26,075,000 bushels. The Hudson Valley has an especially good crop. United States production is placed at 162,016,000 bushels, compared with 142,078,000 bushels last season and 180,262,000, the five-year average.—R. L. GILLET, *Agricultural Statistician*.

Unemployed Men Still Sell Apples

IN last week's issue we told of the unemployed men who are selling apples on the street corners of New York City. These men are continuing the work; in fact, the numbers of them are increasing daily. The latest information we can get states that five thousand men have sold approximately three million apples, and,

if our arithmetic is correct, they have taken in \$150,000.

There have been several interesting results. For one thing, competition has become pretty keen. Perhaps the Broadway theatre section is the most popular and on a little walk through that section a day or two ago, we found an approximate average of two men for every street corner. Even at that, they seem to be making fair money, the returns, of course, depending upon the individual's ability

Martin O'Connor, Jr.

ON August 14, 1930, Martin O'Connor, Jr., a bright, well-appearing boy, nineteen years old, left his home in Rummerfield, Pa., and has not been heard of since.

His mother is failing in health and heartsick over the loss of her boy. If Martin has a good position and is well and happy, his mother has no wish to annoy him or make him change; she wishes only to have word of him or from him to dispel her great worry and heartache. If Martin is not happy or has not succeeded in getting work, he knows that of all the people in the world there are only two who really care about him no matter what he has done, or on whom he can always depend for sympathy and help. His home is always there for him to go to, and his mother and father are always ready to back him to the utmost when he needs them.

If you have any knowledge of this lad or have run across any boy whom you think might be he, or if Martin himself should read this, please write the mother, Mrs. Martin O'Connor, R.F.D. No. 1, Rummerfield, Pa., or the editor of American Agriculturist giving what information you can.

as a salesman. Some of them make as high as six dollars a day and perhaps an occasional one even more than that. A *New York World* reporter, in order to get first-hand information, tried the stunt for himself and made \$1.25 in four hours.

Another result has been that the old law of supply and demand has been at work and the prices for Western boxed apples have come up. Now the men have to pay \$2.00 or \$2.25 instead of \$1.75 which they paid first. There was doubtless a tendency for some to believe that those back of the scheme are profiteering, but

here again a check-up indicates that the wholesale price has actually increased.

As might be expected, Mr. Joseph Sicker, who is sponsor of the idea, has run into a few problems. For example, it was suspected that some men were in the rush getting their box of apples without surrendering their tickets and the next day were getting another box on the same ticket. As a result, he decided to change the color every day. Sure enough the next day several presented tickets with the wrong color and were refused boxes of apples. One of the men had the nerve to go to court and get a warrant charging "John Doe, a fruit exchange clerk", with unlawful holding of property!

Whatever way you look at it the scheme has certainly enabled thousands of men to make an honest living and at the same time has resulted in a remarkable increase in the market for apples. We cannot help regretting, however, that New York State apples are not being sold instead of boxed apples from the West.

New York County Notes

FRANKLIN COUNTY—Mrs. J. F. Fallon of Westville, represented Franklin County this week at the New York State Federation of Home Bureaus' meeting in Albany. Miss Eloise Irish, manager of Home Bureaus for this County also attended the meeting. The prolonged drought has brought real inconvenience, even hardship, to many farmers of the county. Water is very scarce on some farms, in many cases water has to be drawn in cans some distance for household purposes and even to water stock. Those dependent on "driven" wells seem to have been luckier than those with "dug" wells as a source of supply, since the former haven't lacked water.

Plowing has been difficult and unsatisfactory. Clay land baked so hard that only a tractor could plow it, sandy soils were powder dry. Most farmers used heavily-weighted plows. The weather has been fine to do fall work and most crops went into storage in good condition. A number of tractors have been purchased, throughout the county. Frosts held off until late in most sections.

Local market prices this week were: Best print butter in cases, 40c; tub butter 39c; eggs, strictly fresh, 45c to 50c; some stores paid a bit more in trade; pea beans, \$3.50; dressed pork, 16c to 18c; western beef dressed, 12c to 17c; native beef, dressed, 9c to 11c; live fowls, 23c to 26c; veal, 17c to 20c; dressed fowls, 32c to 36c; potatoes, 60c; baled hay, \$14 to \$17; oats, 45c.

MADISON COUNTY—Real winter broke upon us on November 6, and our first snow to stay on and cover the fields. Today, the 8th, it is just beginning to thaw. The cabbage crop has turned out to be a fairly good one and most of the farmers have disposed of their crop at a moderate price. Farmers in this vicinity are rejoicing over the advent of electric light and power for their houses and barns. Many who have had individual electric plants are being rewired to use the Niagara Power. What with the telephone, radio, automobile, electric light and power, etc., we need not complain of a hard lot, but may be as ultra modern as the town dwellers.—MRS. C.A.P.

STEBEN COUNTY—It still continues very dry. The ground is so hard that it is almost impossible to plow. Fall work is well along and crops of all kinds are far below normal this year. There is scarcely any winter grain sown on account of the drought and what is sown does not grow. The potato market is very dull. Avoca Grange number 176 with a membership of around 350, is just completing its new hall.—C.H.E.

SARATOGA COUNTY—A nice rain Wednesday helped out the cisterns and so forth and gave farmers an opportunity to plow. Crops and gardens all gathered. Very cold nights and much hard wind. Potatoes \$1. a bushel and not much demand; eggs, 50c and scarce; dressed poultry, cheap; milk and cream a little better price but still very cheap. Epidemic of colds during the last couple of weeks. Election was very quiet in this section.—MRS. L. W. P.

YATES COUNTY—Farmers are closing up their work for the season having fine weather. Red kidney beans are down to 5c. Most of the lambs in the Middlesex Valley have been shipped out at 6c to 8c per pound. Kaufman of Rochester has had the most of them. A large number of Grangers are getting ready to attend the session of the National Grange to be held in Rochester this week. Cabbage is down to \$5. a ton. The apple market is dull; dealers offering about 50c per bushel for stock 2½ inch up.—L. C. W.

Farmers and Dealers Contribute for Needy

THIS picture shows crowds assembled at the New York City Hall recently when a thousand bushels of potatoes, which had been donated for relief of needy families whose bread-winners were out of work, were being transported for storage in the Bronx market.

This relief work, we understand, is under the direction of Commissioner Dwyer of the New York City Department of Markets. Donations have been made by dealers in the Wallabout and Gansevoort Farmers' Markets, as well as by large numbers of Long Island farmers who bring produce to be sold on these markets.

FEED DRIED MOLASSES BEET PULP

AND MAKE MONEY

No other supplemental feed can add to your profits like Dried Molasses Beet Pulp. It blends perfectly with other feeds—it makes the whole ration work harder for you. As a milk producer it has no equal.

Dried Molasses Beet Pulp is all of the sugar beet after extraction of sugar. As a pure succulent, vegetable food it makes a highly palatable ration. Dairy cows, beef cattle and sheep relish it. In the stomach it swells to 5 or 6 times its own bulk, loosens up the mass of feed and insures perfect digestion of the entire ration. No feed is wasted.

Fits Any Ration

Dried Molasses Beet Pulp may be used in a variety of ways. It supplements pasture, replaces silage, corn and other carbohydrate feeds. Where hay is short or high priced, 6 pounds of Dried Molasses Beet Pulp will do the work of 10 pounds of hay and do it better.

Order Now

The demand for Dried Molasses Beet Pulp has always exceeded the supply—thousands of dairymen, cattle and sheepmen are feeding it. Prices are low. See your dealer and place your order now.

Shipments made direct from factory located nearest to buyer.

"Increase Your Profits by Lowering Your Production Costs"

Do you know the Full Meaning of "FARMALL" and "Farmall EQUIPMENT"?

THE FARMALL Tractor, by itself, is a general-utility power plant for any farm. *Farmall Equipment* is designed to make *additional* use of the power of the FARMALL Tractor—that's why it *increases the value* of the FARMALL.

The FARMALL Tractor

The FARMALL, by itself, is a practical, economical tractor that applies its power at drawbar, belt, and power take-off. It plows two furrows; pulls all seed-bed implements; pulls and powers grain and corn harvesting machines; operates threshers, ensilage cutters, huskers and shredders, feed grinders, corn shellers, saws, pumps, etc. It is the original all-purpose tractor.

The FARMALL Equipment

Of all the special pieces of Farmall Equipment, *you will need only machines designed for the crops you raise*. If you grow corn you will probably want a planter, cultivator, and maybe a corn picker. For cotton, you will be interested in

a planter, cultivator, and perhaps a duster. You will want a power mower if you have hay, and you may have use for a sweep rake. Potato growers can use a cultivator and the new power-drive digger. Farmall hitches make it easy to use much of the machinery already on the farm.

FARMALL System of Farming

The Farmall System of Farming is the perfect combination of Power and Equipment for a great amount of work at high speed and low cost. It greatly increases the range of power farming. It makes horseless farming a reality. More than 100,000 FARMALL Tractors are now on farms in all sections and on all crops (more than 1,000 FARMALL owners are farming entirely without horses). See the FARMALL Tractor and Equipment for your own crops at the McCormick-Deering dealer's store. Write us for information.

Body Heated Eggs

I have about 700 White Leghorns. The pullets I raised this year had a touch of enteritis sometime during the growing season. I used the enteritis powder. It helped some but there are still some among the flock that are not well. I have been receiving complaints from customers that occasionally they find an egg that is not right. I am positive that we let no egg go to the trade that there is any doubt about. Is it then possible that some of these affected pullets are laying such eggs?

It is not very unusual to find defects in freshly laid eggs such as you describe. The usual cause is the holding of the egg in the hen's body at incubation temperature after it should have been laid. Sudden fright is said to cause hens to retain eggs in this way. I do not believe the touch of enteritis is the cause. All eggs going to a private trade should be candled as a matter of good business.—L. E. Weaver.

How One Poultryman Controls Cannibalism

I HAVE often seen inquiries in your paper for a remedy or cure for cannibalism among chickens or hens rather. Now I have had that trouble sometimes and always give my hens a piece of raw salt pork, the fat meat not the lean, and let them eat all they want of it and that stops all the picking for that time. If they start again why I hang up some more fat salt pork. It has always worked fine with our hens and pullets and so much easier than cutting off the end of the bill or such things. Wish you would publish this in your paper as so many have asked for a remedy.

—MRS. J. O., Pa.

A Novel Drinking Fountain

WHILE visiting some friends I saw a novel drinking vessel for chickens. It was made from a discarded auto tire. The tire was split in half along the tread. Each tire made two drinking fountains.

The advantages are several. It is unbreakable, can not upset, is easily cleaned, holds a good quantity of water, but is not deep enough to drown small chicks. If the water freezes no damage is done as old tires have no value right now. I thought possibly you might like to pass this idea on to your many readers.—W.M.A., Conn.

Tractors or Horses—Which?

(Continued from Page 3)

the heavy work to do. And then, of course, there is the matter of time saved by using the tractor.

But to my mind there is another great advantage from the tractor and that we do not hear so very much about and that is the fact, in my experience at least, that one will get from 10 per cent to 15 per cent or more increased crop from tractor worked land than from horse worked and this alone will go a long way toward making a tractor worth while on any farm.

With a good tractor now costing less than \$1000 and a life of at least ten years on the average one hundred acre farm, the interest and depreciation would only be \$150 per year. I believe that a farmer who is plowing twenty to twenty-five acres a year can well afford to have one to do the heavy field work and what belt work one has to do.

It seems to me that the cheapest power for the eastern farm is to use both horses and tractor.—J. D. C., N. Y.

Artificial lights for poultry merely make a normal condition during an abnormal time and is not a forcing process, if used with reasonable judgment.

Shavings are superior to all other materials for hen's nests.

HERD INFECTION

Dr. Roberts says: "Watch out for symptoms of HERD INFECTION, such as Failure to Breed, Failure to Clean, Scours and Goiters in Calves, Garget, Cow Pox and Shortage of Milk. There may or may not be a loss of Calves. Send in a confidential report of your herd and Dr. David Roberts will tell you without charge what is wrong."

Ask for a free copy of "The Cattle Specialist" and how to get the "Practical Home Veterinarian" a live stock doctor book.

For Carefree Winter Driving

WITH winter "just around the corner" the motorist can take advantage of the pleasant fall weather to check over his car or have his service station do so in order that it will be in proper condition to withstand the rigors of winter driving.

The first step in the procedure is to clean the chassis, engine and body as dirt can hide many defects.

Tighten all bolts and nuts.

Check front wheels for proper alignment; remove hub caps and re-grease; adjust wheel bearings and replace hub caps.

Drain the oil from the transmission and differential and pour into both about a quart of kerosene. At the same time put in the radiator a few handfuls of sal soda and then drive the car two or three miles. The kerosene should then be drained from the transmission and differential and water drained from the radiator. A winter grade lubricant recommended by the car manufacturer should then be put in the transmission and differential.

Inspect the rubber hose connections, replacing if necessary, after which the radiator should be filled with clean water; and at the first appearance of cold weather an antifreeze solution should be added.

Next, drain oil from the engine; flush crankcase and put in a winter grade of oil. If the oil filter has been in use for 10,000 miles install a new cartridge.

Inspect wiring and clean contacts; oil generator and starting motor and clean the armatures and brushes; set generator charging rate ahead for winter driving; check breaker points for proper spacing; replace spark plugs if used more than 10,000 miles; if used less than this, clean them and adjust the gaps; clean battery with ammonia water solution; tighten terminals and grease with vaseline; inspect water level and if gravity reading is low, recharge.

Adjust brakes and reline if necessary.

The motorist should also examine the top of his car. Going over the top with a good grade of top dressing will do much to preserve it.

Many car manufacturers are now equipping cars with a summer and winter driving adjustment on the carburetors and the proper adjustment to the carburetor should be made at this time. The fuel and carburetor strainers should also be taken out and cleaned.

With these simple but highly essential adjustments, a winter of care-free driving should be enjoyed.

A Profitable Woodlot in Herkimer County

(Continued from Page 3)

favor of Mr. Laucks amounting to \$832.39. This profit is on what has been cut. In addition Mr. Laucks has a woodlot which on the present yield of 25 cords per acre at \$1.75 per 14 inch cord is worth \$1,212.25.

This is figuring on the basis of fuel wood only. In the next 20 years some of the 8 inch white ash and the 10 inch basswood will be ready to cut, and will bring a higher value than for fuel wood.

While it is obvious to the reader that these amazing returns came about because the original owner sold his "bush lot" for a song, the fact nevertheless remains that well planned cutting will make any woodlot an income producing unit of the farm.

The New York State College of Agriculture through its Forestry Department is anxious to cooperate with woodlot owners in all parts of the State in establishing similar demonstrations of woodlot management. The writer will be glad to hear direct from readers of the American Agriculturist who are interested in such a project.

THE LONGEST FORWARD STEP IN MOTOR OIL

the new SOCONY MOTOR OIL

Perfected...proved... in every way

THIS is an announcement so important to every owner of farm equipment that we put aside all technical language and tell it to you in the simplest words.

We have produced the New Socony Motor Oil which gives you—to a greater degree than any other—what you want and should have in a motor oil... *full lubricating value.*

In the new Socony Motor Oil "full lubricating value" means something more than it ever has meant before. For we have perfected and proved for you not just one or two but every characteristic a motor oil should have.

Here are five reasons for changing today to the New Socony Motor Oil:

1. *Perfected Lubrication. Less wear on your motor.* The new Socony Motor Oil is made from a Paraffin Base crude, selected because of its greater inherent oiliness (adsorption). Exclusive New Socony Process gives additional lubricating value.

2. *Minimum Oil Consumption. Will not break down.* No engine heat or pressure severe enough to decompose this oil or destroy its lubricating value. Only through contamination by foreign matter which finds its way into the crankcase can the life of this oil be limited.

3. *Easy Starting in Coldest Weather.* Selected Paraffin Base oil... completely de-waxed. More fluid at low temperatures than any other oil. Instant lubrication. Less drain on your battery.

4. *Fuel Economy and Increased Power.* Maintains proper "body" at all engine temperatures. Result: perfect piston seal, maximum power, and minimum fuel consumption.

5. *A Clean Motor.* New refining process reduces to a minimum all harmful elements which cause carbon, gum and sludge. The new Socony Motor Oil insures a clean motor.

AMERICAN AGRICULTURIST

Just David--By Eleanor Porter

THE STORY THUS FAR

Because of failing health David's father, a violinist, decides to leave the mountain home where they had lived alone for six years. They start down the mountain on foot, but strength fails the man before they go far. A farmer gives them a lift for a way and they decide to spend the night in a nearby barn where Simeon Holly and his wife find them. David's father is dead.

The next morning David decides to go back to his mountain home and leaves without saying goodbye. He returns hurriedly when Mrs. Holly telephones to a neighbor to tell David that his father left a letter for him.

* * *

Simeon Holly scowled. Larson choked over a stifled chuckle. William Streeter stared and shrugged his shoulders; but Higgins flushed a dull red.

"No, sonny," he stammered. "We found it on the—er—I mean, it—er—your father left it in his pocket for you," finished the man, a little explosively.

A swift shadow crossed the boy's face.

"Oh, I hoped I'd heard—" he began. Then suddenly he stopped, his face once more alight. "But it's 'most the same as if he wrote it from there, isn't it? He left it for me, and he told me what to do."

"What's that, what's that?" cried Higgins, instantly alert. "Did he tell you what to do? Then, let's have it, so we'll know. You will let us read it, won't you boy?"

"Why, y—yes," stammered David, holding it out politely, but with evident reluctance.

"Thank you," nodded Higgins, as he reached for the note.

David's letter was very different from the other one. It was longer, but it did not help much, though it was easily read. In his letter, in spite of the wavering lines, each word was formed with a care that told of a father's thought for the young eyes that would read it. It was written on two of the notebook's leaves, and at the end came the single word "Daddy."

David, my boy (read Higgins aloud), in the far country I am waiting for you. Do not grieve, for that will grieve me. I shall not return, but some day you will come to me, your violin at your chin, and the bow drawn across the strings to greet me. See that it tells me of the beautiful world you have left—for it is a beautiful world, David; never forget that. And if sometime you are tempted to think it is not a beautiful world, just remember that you yourself can make it beautiful if you will.

You are among new faces, surrounded by things and people that are strange to you. Some of them you will not understand; some of them you may not like. But do not fear, David, and do not plead to go back to the hills. Remember this, my boy,—in your violin lie all the things you long for. You have only to play, and the broad skies of your mountain home will be over you, and the dear friends and comrades of your mountain forests will be about you.

DADDY.

"Gorry! that's worse than the other," groaned Higgins, when he had finished the note. "There's actually nothing in it! Wouldn't you think—if a man wrote anything at such a time—that he'd 'a' wrote something that had some sense to it—something that one could get hold of, and find out who the boy is?"

There was no answering this. The assembled men could only grunt and

nod in agreement, which, after all, was no real help.

CHAPTER V

DISCORDS

THE dead man found in Farmer Holly's barn created a decided stir in the village of Hinsdale. The case was a peculiar one for many reasons. First, because of the boy—Hinsdale supposed it knew boys, but it felt inclined to change its mind after seeing this one. Second, because of the circumstances. The boy and his father had entered the town like tramps, yet Higgins, who talked freely of his having given the pair a "lift" on that very evening, did not hesitate to declare that he did not believe them to be ordinary tramps at all.

As there had been little found in the dead man's pockets, save the two notes, and as nobody could be found who wanted the violins, there seemed to be nothing to do but to turn the body over to the town for burial. Nothing was said of this to David; indeed, as little as possible was said to David about anything after that morning when Higgins had given him his father's letter. At that time the men had made one more effort to "get track of something," as Higgins had despairingly put it. But the boy's answers to their questions were anything but satisfying, anything but helpful, and were often most disconcerting. The boy was, in fact, regarded by most of the men, after that morning, as "being 'a little off';" and was hence let severely alone.

Who the man was the town authorities certainly did not know, neither could they apparently find out. His name, as written by himself, was unreadable. His notes told nothing; his son could tell little more—of consequence. A report, to be sure, did come from the village, far up the mountain, that such a man and boy had lived in a hut that was almost inaccessible; but even this did not help solve the mystery.

David was left at the Holly farmhouse, though Simeon Holly mentally declared that he should lose no time in looking about for some one to take the boy away.

On that first day Higgins picking up the reins preparatory to driving from the yard, had said, with a nod of his head toward David:—

"Well, how about it, Holly? Shall we leave him here till we find somebody that wants him?"

"Why, y—yes, I suppose so," hesitated Simeon Holly, with uncordial accent.

But his wife, hovering in the background, hastened forward at once.

"Oh, yes; yes, indeed," she urged. "I'm sure he—he won't be a mite of trouble, Simeon."

"Perhaps not," conceded Simeon Holly darkly. "Neither, it is safe to say, will he be anything else—worth anything."

"That's it exactly," spoke up Streeter, from his seat in the wagon. "If I thought he'd be worth his salt, now, I'd take him myself; but—well, look at him this minute," he finished, with a disdainful shrug.

David, on the lowest step, was very evidently not hearing a word of what was being said. With his sensitive face illumined, he was again poring over his father's letter.

Something in the sudden quiet cut through his absorption as the noisy hum of voices had not been able to do, and he raised his head. His eyes were starlike.

"I'm so glad father told me what to do," he breathed. "It'll be easier now."

Receiving no answer from the some-

what awkwardly silent men, he went on, as if in explanation:—

"You know he's waiting for me—in the far country, I mean. He said he was. And when you've got somebody waiting, you don't mind staying behind yourself for a little while. Besides, I've got to stay to find out about the beautiful world, you know, so I can tell him, when I go. That's the way I used to do back home on the mountain, you see,—tell him about things. Lots of days we'd go to walk; then, when we got home, he'd have me tell him, with my violin, what I'd seen. And now he says I'm to stay here."

"Here!" It was the quick, stern voice of Simeon Holly.

"Yes," nodded David earnestly; "to learn about the beautiful world. Don't you remember? And he said I was not to want to go back to my mountains; that I would not need to, anyway, because the mountains, and the sky, and the birds and squirrels and brooks are really in my violin, you know. And—" But with an angry frown Simeon Holly stalked away, motioning Larson to follow him; and with a merry glance and a low chuckle Higgins turned his horse about and drove from the yard. A moment after David found himself alone with Mrs. Holly, who was looking at him with wistful, though slightly fearful eyes.

"Did you have all the breakfast you wanted?" she asked timidly, resorting, as she had resorted the night before, to the everyday things of her world in the hope that they might make this strange little boy seem less wild, and more nearly human.

"Oh, yes, thank you." David's eyes had strayed back to the note in his hand. Suddenly he looked up, a new something in his eyes. "What is it to be a—a tramp?" he asked. "Those men said daddy and I were tramps."

"A tramp? Oh—er—why, just a—a tramp," stammered Mrs. Holly. "But never mind that, David. I—I wouldn't think any more about it."

"But what is a tramp?" persisted David, a smouldering fire beginning to show in his eyes. "Because if they meant thieves—"

"No, no, David," interrupted Mrs. Holly soothingly. "They never meant thieves at all."

"Then, what is it to be a tramp?"

"Why, it's just to—to tramp," explained Mrs. Holly desperately;—"walk along the road from one town to another, and—and not live in a house at all."

"Oh!" David's face cleared. "That's all right, then. I'd love to be a tramp, and so'd father. And we were tramps, sometimes, too, 'cause lots of times, in the summer, we didn't stay in the cabin hardly any—just lived out of doors all day and all night. Why, I never knew really what the pine trees were saying till I heard them at night, lying under them. You know what I mean. You've heard them, haven't you?"

"At night? Pine trees?" stammered Mrs. Holly helplessly.

"Yes. Oh, haven't you ever heard them at night?" cried the boy, in his voice a very genuine sympathy as for a grievous loss. "Why, then, if you've only heard them daytimes, you don't know a bit what pine trees really are. But I can tell you. Listen! This is what they say," finished the boy, whipping his violin from its case, and, after a swift testing of the strings, plunging into a weird, haunting little melody.

In the doorway, Mrs. Holly, bewildered, yet bewitched, stood motionless, her eyes half-fearfully, half-longingly fixed on David's glorified face. She was still in the same position when Simeon

Holly came around the corner of the house.

"Well, Ellen," he began, with quiet scorn after a moment's stern watching of the scene before him, "have you nothing better to do this morning than to listen to this minstrel fellow?"

"Oh, Simeon! Why, yes, of course. I—I forgot—what I was doing," faltered Mrs. Holly, flushing guiltily from neck to brow as she turned and hurried into the house.

David, on the porch steps, seemed to have heard nothing. He was still playing, his rapt gaze on the distant sky-line, when Simeon Holly turned upon him with disapproving eyes.

"See here, boy, can't you do anything but fiddle?" he demanded. Then, as David still continued to play, he added sharply: "Didn't you hear me, boy?"

The music stopped abruptly. David looked up with the slightly dazed air of one who has been summoned as from another world.

"Did you speak to me, sir?" he asked.

"I did—twice. I asked if you never did anything but play that fiddle."

"You mean at home?" David's face expressed mild wonder without a trace of anger or resentment. "Why, yes, of course. I could not play *all* the time, you know. I had to eat and sleep and study my books; and every day we went to walk—like tramps, as you call them," he elucidated, his face brightening with obvious delight at being able, for once, to explain matters in terms that he felt sure would be understood.

"Tramps, indeed!" muttered Simeon Holly, under his breath. Then, sharply: "Did you never perform any useful labor, boy? Were your days always spent in this ungodly idleness?"

Again David frowned in mild wonder.

"Oh, I wasn't idle, sir. Father said I must never be that. He said every instrument was needed in the great Orchestra of life; and that I was one, you know, even if I was only a little boy. And he said if I kept still and didn't do my part, the harmony wouldn't be complete, and—"

"Yes, yes, but never mind that now, boy," interrupted Simeon Holly, with harsh impatience. "I mean, did he never set you to work—real work?"

"Work?" David meditated again. Then suddenly his face cleared. "Oh, yes, sir, he said I had a beautiful work to do, and that it was waiting for me out in the world. That's why we came down from the mountain, you know, to find it. Is that what you mean?"

"Well, no," retorted the man, "I can't say that it was. I was referring to work—real work about the house. Did you never do any of that?"

David gave a relieved laugh.

"Oh, you mean getting the meals and tidying up the house," he replied. "Oh, yes, I did that with father, only—his face grew wistful—"I'm afraid I didn't do it very well. My bacon was never as nice and crisp as father's, and the fire was always spoiling my potatoes."

"Humph! bacon and potatoes, indeed!" scorned Simeon Holly. "Well, boy, we call that women's work down here. We set men to something else. Do you see that woodpile by the shed door?"

"Yes, sir."

"Very good. In the kitchen you'll find an empty woodbox. Do you think you could fill it with wood from that woodpile? You'll find plenty of short, small sticks already chopped."

"Oh, yes, sir, I'd like to," nodded David, hastily but carefully tucking his violin into its case. A minute later he had attacked the woodpile with a

(Continued on Page 14)

Farm Women Meet

Federation Holds Annual Meeting in Albany

THIS year's annual meeting of the New York State Home Bureau Federation had many extra thrills because of its being held in the state's capital. There was the ride provided by the Chamber of Commerce to show state buildings, schools, hospitals, parks, and attractive residential sections of Albany; there was the visit to the State Departments of Health and Education, State Museum, and State Library; and, most exciting of all, there was tea at the Executive Mansion at the invitation of the Governor's gracious wife, Mrs. Franklin D. Roosevelt.

These very pleasant features of the meeting were in addition, however, to sessions packed very full of business. County and district reports, committee meetings and reports, discussion of projects in progress or to be undertaken, speeches by prominent people—these were the stuff of which the conference was made.

Speakers were H. E. Babcock, General Manager of the G. L. F. on marketing; Dr. Thomas Parran, Jr., Commissioner of Health, on rural health; Mrs. Charles W. Sewell, Director of the Home and Community Department of the American Farm Bureau Federation, on dreams for farm women; Miss Martha Van Rensselaer, Director of New York State College of Home Economics, on the health program of the extension service; Dr. Marjorie Murray, Pediatrician of the Mary Imogene Bassett Hospital at Cooperstown, on child health; Mrs. Eleanor Slagle, of the State Department of Health, on mental

hygiene; Mrs. Edward Young, Ex-President of the Home Bureau Federation, on her trip to the International Council of Rural Women at Vienna; Dr. C. E. Ladd, Director of Extension in New York State, on the important things yet to be done in the rural program.

Miss Frances Searles, Home Bureau Manager of Monroe County, acted as song leader; Miss Edith Beecher as pianist, a feature which did much to enliven the program. Miss Millicent Robinson of Delhi, rendered some beautiful solos at the special meeting on Wednesday evening.

Prizes of ten dollars each for the

For Chic Little Girls

2811

GIRLS' DRESS PATTERN NO. 2811 is very popular with its Peter Pan collar and turn-back cuffs, its side-front pleats and yoke which gives the fashionable jumper effect. Cotton broadcloth, wool jersey or challis would be both attractive and practicable in this design which cuts in sizes 2, 4, and 6 years. Size 4 requires 1½ yards of 39-inch material with ½ yard of 32-inch contrasting. PRICE, 15c.

TO ORDER: Write name, address, pattern sizes and numbers clearly and correctly and inclose with correct remittance in stamps (do not send coins). Add 12c in stamps for one of the Winter Catalogs and address to Pattern Department, American Agriculturist, 10 N. Cherry St., Poughkeepsie, N. Y.

highest gain in county membership were awarded by the Home Bureau Federation to Rensselaer, Ontario, Delaware and Niagara County Home Bureaus. Mrs. Clark Stoodley, Chairman of the membership contest committee, awarded the prizes.

Prizes for the Rural School Beautification Contest were awarded as follows: Schuyler County, 1st prize of \$50.00; Orleans County, 2nd prize of \$25.00; Cayuga County, 3rd prize of \$15.00; Cattaraugus County, 4th prize of \$10.00. These prizes were awarded by American Agriculturist and were presented by Mrs. Grace W. Hockett, Household Editor.

Officers elected for the coming year were Miss Elizabeth MacDonald, Delhi, President; Mrs. Edward Eddy, Saratoga Springs, 1st Vice-President; Mrs. Clark Stoodley, Adams Center, 2nd Vice-President; Mrs. Nettie M. Roods, Wilton, Treasurer; Mrs. Evelyn Gotchell, Alton, Director.

Apples may be candied or made into such confections as apple rings, apple balls, ginger apples, or mint chips.

Attractive New Model

2830

FROCK PATTERN NO. 2830 is a Russian tunic model with a scarf neckline which is very smart and becoming. This wrapped closing makes the mature figure look tall and slender and accentuates slimness for the youthful type. Bordeaux red canton crepe, dark green velveteen, black canton crepe or lightweight tweed in a brown mixture would be good for this pattern which cuts in sizes 16, 18 years, 36, 38, 40 and 42 inches bust measure. Size 36 requires 4½ yards of 39-inch material with ½ yard of 39-inch contrasting and 1½ yards of 35-inch lining. PRICE 15c.

TWO HELPERS INSTEAD OF ONE IN EVERY BAR

That's why

FELS-NAPTHA GETS YOUR CLOTHES SO BRIGHTLY CLEAN

THERE'S a very good reason for that bright sparkling look that Fels-Naptha washes always have.

For Fels-Naptha brings you *extra* help that gets clothes cleaner. It brings you the *extra* help of good golden soap and plenty of naptha, the dirt-loosener. Working hand-in-hand, these two helpers search every fibre and thread of your clothes. They dissolve grease. They loosen clinging dirt and wash it away—*thoroughly*. And when clothes come off the line, they're bound to be fresh and sweet and bright—because they're clean through and through.

Remember, too—it's this *extra* help that makes Fels-Naptha the real soap bargain. It saves YOU! Use it in tub or machine; for soaking or boiling, in piping hot, lukewarm or even cool

water. Fels-Naptha works so quickly that your hands stay in water less time. Which, of course, helps keep them nice. Get a few bars or the convenient ten-bar carton at your grocer's today!

• • •

SPECIAL OFFER—We'll be glad to send every user of laundry soap a Fels-Naptha Chipper. Many women who chip Fels-Naptha into their washing machines, tubs or basins find this chipper handier than a knife. Use it and Fels-Naptha to make fresh, golden soap chips (that contain plenty of naptha!) just as you need them. Send only a two-cent stamp to help cover postage, and we'll mail you this chipper without further cost. Write today. Dept. 1-11-23 Fels & Company, Philadelphia, Pa.

THE GOLDEN BAR WITH THE CLEAN NAPTHA ODOR

FELS-NAPTHA

When Your Cough Hangs On, Mix This at Home

The best cough remedy that money could buy, can easily be mixed at home. It saves money and gives you the most reliable, quick-acting medicine you ever used. The way it takes hold of stubborn coughs and chest colds, giving immediate relief, is astonishing.

Any druggist can supply you with 2½ ounces of Pinex. Pour this into a pint bottle, and fill up with plain granulated sugar syrup or strained honey. It's no trouble at all to mix, and when you once use it, you will never be without it. Keeps perfectly and tastes good—children really like it.

It is surprising how quickly this loosens the germ-laden phlegm, and soothes and heals the inflamed membranes. At the same time, part of the medicine is absorbed into the blood, where it acts directly on the bronchial tubes, and helps the system throw off the whole trouble. Even those severe coughs which follow cold epidemics, are promptly ended.

Pinex is a highly concentrated compound of genuine Norway Pine, containing the active agent of creosote, in a refined, palatable form. Nothing known in medicine is more helpful in cases of severe coughs, chest colds and bronchial troubles.

Do not accept a substitute for Pinex. It is guaranteed to give prompt relief or money refunded.

Rub antiseptic Japanese Oil on painful spot. Bind up with flannel. The penetrating heat drives out the pain. QUICK. Japanese Oil won't blister like old type liniments. 46 Years Success. At Druggists.

Just David

(Continued from Page 12)

will; and Simeon Holly, after a sharply watchful glance, had turned away.

But the woodbox, after all, was not filled. At least, it was not filled immediately; for at the very beginning of gathering the second armful of wood, David picked up a stick that had long lain in one position on the ground, thereby disclosing sundry and diverse crawling things of many legs, which filled David's soul with delight, and drove away every thought of the empty woodbox.

It was only a matter of some strength and more patience, and still more time, to overturn other and bigger sticks, to find other and bigger of the many-legged, many-jointed creatures. One, indeed, was so very wonderful that David, with a whoop of glee, summoned Mrs. Holly from the shed doorway to come and see.

So urgent was his plea that Mrs. Holly came with hurried steps—but she went away with steps even more hurried; and David, sitting back on his woodpile seat, was left to wonder why she should scream and shudder and say "Ugh-h-h!" at such a beautiful, interesting thing as was this little creature who lived in her woodpile.

Even then David did not think of that empty woodbox waiting behind the kitchen stove. This time it was a butterfly, a big black butterfly banded with gold; and it danced and fluttered all through the back yard and out into the garden, David delightedly following with soft-treading steps, and movements that would not startle. From the garden to the orchard, and from the orchard back to the garden danced the butterfly—and David; and in the garden, near the house, David came upon Mrs. Holly's pansy-bed. Even the butterfly was forgotten then, for down in the path by the pansy-bed David dropped to his knees in veritable worship.

HANDY ANDY Says "Here's How"

To Protect Your Fences

By Ray Inman

ARE You particular about fence rows? WHY NOT MAKE THE BEST?

Why SHOULD YOU BE PARTICULAR ABOUT A FENCE ROW? WELL—FOR ONE THING—

A POOR FENCE ROW—

— FREQUENTLY LEADS TO A GOOD FENCE ROW. AND A COUPLE OF ROWERS ROWING ACROSS A FENCE ROW SELDOM GET ANYWHERE

① Remove the old fence and
② Grub out stumps and bushes.

THE ROWERS START ROWING OVER THEIR ROWING AND FORGET TO ROW—IT'S VERY DIFFICULT TO ROW AND ROW AT THE SAME TIME.

③ Plow, disk, and harrow headland for 10 ft.
④ With grader or drag pull dirt up to a ridge at middle.

A ROW OF ROWERS ROWING OVER THEIR FENCE ROW, BECAUSE IN THE END—

⑤ Seed heavily with alfalfa or clover.
⑥ Put in a permanent fence.

IT PAYS TO KEEP A GOOD FENCE ROW.
.....
IT'S ALL VERY ROWDY

Imaginary Bequests Not Worth a Quarter

SOME time ago we received a printed slip from J. Mucha of Ava, N. Y. The slip read as follows:

Dear Friend:

Important news for you. Andrew Drake, West Branch, N. Y. late deceased had the names of 3,000 common people placed on his will all unknown to him such as farmers, laborers, boys and girls all over U. S. Mr. Drake left a different sealed package for each one and authorized us to help the executor distribute gifts worth from \$5 to \$10 apiece. Please enclose 25c for postage. Answer at once.

Sincerely
(Signed) J. MUCHA.

Benevolent gentlemen are not in the habit of leaving wills providing packages for unknown friends so we immediately communicated with a friend in Oneida County. The reply received needs no explanation. It is as follows:

"In reply to yours of October 24 inquiring about John S. Mucha of this town, I have received a number of inquiries from all over the United States relative to some scheme which he is conducting through the mails. This Andrew Drake, whose executor Mr. Mucha claims to be assisting in dispersing with his will, never existed as far as I can find out, so I have turned what evidence I have over to the Post Office Department. John S. Mucha is now under investigation by the Post Office Department."

Parts Returned—No Refund

Our son and some of his friends sent \$28 to the Marvin Northrup Aeroplane Company of Minneapolis, Minnesota as a deposit on a glider. The company acknowledged this stating that the balance was due on delivery. Some time later the boys received a C. O. D. box containing a number of irregular, flat pieces of metal which were undrilled and clearly unsuited for a glider. They paid \$15 on this before they opened it and found that it did not contain glider parts, or at least, no parts that they could use. They returned this box and demanded a refund of \$43.

WE have directed two letters to the Marvin Northrup Aeroplane Company, asking for their side of the story in this case but up to date we have received no letter from them. Because they did not reply to our letter, we wrote to a farm paper located in the west who tells us that they have had some complaints from subscribers against this concern but have been unable to get any satisfactory settlement on them.

Mr. Boorman No Longer An Advertiser

RECENTLY several subscribers have complained to us that they have returned dogs to George Boorman of Marathon, N. Y., but have been unable to get the return of their money. These subscribers mention that they saw Mr. Boorman's advertisement in American Agriculturist. We take this opportunity to mention that we have not carried Mr. Boorman's advertisement since 1929. Naturally we do not feel that we can guarantee advertisers indefinitely and for this reason we are notifying subscribers that Mr. Boorman's advertisement no longer appears in American Agriculturist.

In This Case the Dealer Needs Help

ONE of the largest and most reliable receivers of poultry in New York City has for a long time followed the practice of loaning crates to shippers. This dealer has called to our attention the fact that he has loaned out many of these which have never been returned to him in spite of the fact that he has written personal letters to shippers. These crates cost money and naturally the dealer is interested in furnishing them only as a service to poultrymen who ship to him.

Our readers know that we are always backing up the shipper in every possible way, yet there are two sides

to every question. Here is a case where the dealer has just cause for complaint.

One Concern Finds a Thousand "Suckers" a Day

WHEN Albert Berman and Samuel Topf of Hartford, Connecticut, who operated a homework scheme under the name of Leona Children's Wear, suddenly decided to leave town they left a profitable although questionable business behind them. When Detective Philip Dooley and Mr. George Miller of the Hartford Better Business Bureau

called at their address they found a thousand letters at the door of the office. Practically all of these letters contained a \$2.00 deposit asked for by the company. Fortunately most of the writers had included their return address so they will have their money returned to them. Those who wrote earlier will not be so fortunate as doubtless the two men involved took the money with them.

Warrants have been issued for these two men and it is hoped they will be located although if they are it is doubtful whether anyone who sent money to them will be able to secure the return of it. It is interesting to know that Berman and Topf solicited work from women all over the country except in Connecticut presumably because they felt that these workers would be a little too near home and might call upon them unexpectedly.

The homework racket is costing people, particularly rural people, thousands of dollars every week. We admit that we fail to see why anyone will send a deposit of two or three dollars to an unknown concern with the hope that they will be able to get work in return which they can profitably do at home.

A Belated Inquiry

"Enclosed please find letter my wife received from Princeton Underwear Co. As she had some spare time and is interested in this kind of work, I forwarded to them \$1.50 in the form of check September 29th, and to date we have never received any material nor any reply. We have written to them about it, but they make no reply. A neighbor of mine has had the same experience with these people, as she received their offer about the same time.

"I was suspicious of this in the beginning, as I have read so much about these schemes in your paper every week. I do not care about the loss of the \$1.50 because it is worth that much to have these fakers exposed, as I know you will do if they are such.

"Trust to hear from you as to what you can find out about them."

WE learn in the same mail this was simply another homework scheme to obtain deposits fraudulently from people seeking home employment. After an official investigation this company signed an agreement with the Post Office Department to discontinue business and to have all further mail to them returned to the senders. Apparently, our subscriber's money was received prior to this agreement and there is little chance of his recovering the \$1.50.

We are at a loss to know of a more effective method of warning subscribers against these homework frauds than the frequent publication of these stories, yet we continue to receive complaints. Please investigate before investing!

Fierro and Magee Out of Business

INFORMATION has just come to us that the firm of Fierro and Magee is liquidating its business. We are also informed that this firm has a number of outstanding accounts and that the firm expects to send a check to all creditors soon.

Avoid Sending Cash Through the Mail

There is always some danger that money will be lost when it is sent through the mail. This is particularly true of coins. May we, therefore suggest that when you have occasion to send money to American Agriculturist, either for subscriptions, patterns, embroidery, trespassing notices, or insurance policies that you send either a check or postal money order. Where amounts are very small, stamps will be acceptable.

"I am very happy to write and let you know that the.....Insurance Company has approved my disability claim which you were so kind to take up with them in my behalf. Their agent delivered to me a check this morning for \$138.50, including \$6 premiums paid after disability occurred.

LOWEST PRICES IN OUR HISTORY

Cash or Your Own Terms

My new low prices are the sensation of the engine world. You can now buy one of the world's finest engines at the price you would usually pay for an "ordinary" engine. A Lifetime WITTE will do more work in a day—costs only a few cents for fuel—than several men. It's the cheapest hired man on earth. 312,896 in use all over the world.

DIRECT FROM FACTORY-TO-YOU

My latest engines are the finest ever built; Enclosed—Self Oiling with Timken Roller Bearings that never require adjustment; guaranteed for the life of the engine. Also Pumps and Sawing Outfits. SAVE the dealer's profit—SAVE the expenses and salaries of traveling salesmen—and SAVE the usual "extras" added to the selling price. Remember; you SAVE \$20 to \$200 when you buy from WITTE.

POST YOUR FARM And Keep Trespassers Off

Reduced Prices on TRESPASS SIGNS

Effective October 1, 1930, trespass signs are offered to subscribers of American Agriculturist at new reduced rates in quantities of fifty or more. The new rates are as follows:—

- Per Dozen \$ 1.00
 - Per Fifty 3.50
 - Per Hundred 6.50
 - Per Thousand 60.00
- The price for smaller quantities remains at \$1. per dozen.

Specially worded signs will be made up at slight additional cost. Names and addresses will be imprinted at \$2.00 for the first one hundred and \$1.00 for each additional one hundred.

These signs are made up of extra heavy cloth material that will withstand the severities of the weather.

We unreservedly advise farmers to post their land. The signs we have prepared are worded to comply with Conservation Law.

To avoid loss of cash in mail, send check or money order with order.

American Agriculturist

What would

70° BELOW ZERO

do to your car?

OF COURSE, it will never get that cold in your locality . . . but it *did* around the South Pole, in Antarctica. And you can learn, from the Byrd Expedition, how to safeguard your car against cold as intense and destructive as that. For complete safety, they used Eveready Prestone, the ONE-SHOT anti-freeze. This very day, you can give your car the same protection.

Eveready Prestone is different from all other anti-freezes. It contains no alcohol or glycerine. It was developed in the laboratories of the Union Carbide and Carbon Corporation, and is distributed by National Carbon Company, Inc., makers of Eveready Flashlights and Radio Batteries.

You can put Eveready Prestone in early, and be already prepared when freezing weather comes. One filling lasts all winter. It will not boil off, overheat your engine, or harm any part of the cooling-system, even when the warm thaws come.

Eveready Prestone is economical to use. Because only a single filling is needed, and because it is undiluted, less of it is required than of other anti-freezes. For those who live in the South and other moderate climates, it is available in small-size cans. Under such conditions, many cars can be protected for as little as \$2.50.

More than a million motorists used Eveready Prestone last winter. This year, it has been developed to a point where it offers even greater satisfaction. It is now *green* in color, so that it can be readily identified.

Delay may be costly. . . . You can buy Eveready Prestone everywhere, so take the simple precautions to make your cooling-system water-tight, and *put it in today!*

* * *

The Eveready Hour, radio's oldest commercial feature, is broadcast every Tuesday evening at nine (Eastern standard time) from WEAJ over a nation-wide N. B. C. network of 27 stations.

SPECIAL ISSUE FOR WOMEN

To Make Christmas More Joyful

A Page Full of Good Ideas Which Are Inexpensive

CHRISTMAS is coming—fast—and there are many gifts yet to be got ready. Here is a page full of good ideas which are inexpensive, yet are just what is needed for that gift for the little folks or for folks grown big.

The first item listed, M267, will provide heaps of fun, because of the cheerful red color and the gay Donner and Blitzen stamped on the red sateen bean bags. These figures can be outlined with black running stitches or simply painted in with the strong black dye.

These bags dress up the tree and will be dear to the heart of the child who gets them.

For Sister Sue or for Cousin Mary the pretty coverall aprons, C581, C582, C583, will make a most acceptable gift. They come stamped on a good grade of unbleached muslin in one size to fit 36 to 44, are finished in tubfast binding, embroidery to be done in simple

lazy-daisy, outline and running stitches and in French knots. No. C581 is bound in rose, C582 in green, C583 in tangerine binding. Floss has to be ordered extra.

These delightful 16-inch rag dolls come stamped on a lustrous rayon fabric in varying pretty colors. They are easily finished because the embroidery to be done is simple. Then front and back are sewed together, and

stuffed with rags or cotton batting. Nothing quite takes the place of a rag doll, no matter how many elegant

French dollies a little girl may own. No. C3001, Robin Hood is maize; No. C3002, Baby Doll, is rose; No. C3003, Puppy, is tangerine; No. C. 3004, Bunny, is blue; No. C3005, Kitty, is green.

For the practical business of keeping Baby warm is this dainty sacque No. B5408, in either pink or blue rayon crepe. The flannel interlining and silk lining are also included, besides the

floss for embroidery in pastel shades. Be sure to state which color is desired. For the sole business of keeping Baby amused is this charming little fuzzy lamb No. B5428, stamped on blue and white terry cloth. Even the "squeak" is included.

Anybody likes a door stop and Milk Bottle Mammy No. M658, is such a cunning one that it is deservedly popular. We take it for granted that you can provide the milk bottle, the sand,

a black stocking and a scrap of white for apron and neckerchief. We provide instructions, cutting measurements, the

face design, a pair of shiny pearl eye-balls and enough calico print to make her ample skirt and bandana.

There are never aprons enough for any housekeeper, so here is one she will

like for its practical and decorative purposes. It is stamped on unbleached muslin and there is plenty extra for the pockets. Floss is extra.

For the girl or boy at school this convenient laundry bag, No. M629 that slips onto an ordinary coat hanger will be most welcome. Soiled things are slipped into the opening at the top and

Dolly-Folks Furniture

WAS there ever a little or middle-sized girl who didn't above all things love a doll house! Whether it be built of wooden crates and boxes, or just a group of cardboard rooms, this complete set of miniature furniture is just the thing to make it doll-home-like.

Six full rooms of furnishings, almost fifty articles, comprise the set. There is a dining room suit of dropleaf table, buffet, tea cart, half a dozen chairs, including one armed host chair and a high chair for baby. The library has a grandfather's clock, desk type table, book cases a charming fireplace, three easy chairs, a stool, daybed and end table. Living or music room, kitchen, bedroom, and nursery are equally well furnished, and every single piece from piano to coal bucket makes up as cunning as can be.

This set comes printed on 20 sheets of tough, heavy weight paper which scores and creases well, stands firmly and glues into mighty sturdy little furniture. Each sheet is about 7 by 9 inches. All pieces finish in proportion, the table is about 1½ inches high, the bed 3¾ inches long, etc.

Hand tinting with paint or crayons adds considerably to the beauty of this set which is printed in black only. General directions for cutting, scoring, folding and gluing into shape are included in each order. The entire set will be sent as number 247 at 40 cents. A 16-color wax crayon set for this or other projects is number 648 at 15 cents.

M47 Complete Six-room Set of Paper Doll Furniture.....40 cents
M48 16-color Set of Wax Crayons.....15 cents

can be dumped from the bottom when the blue-bound wave is unsnapped. Heavy muslin forms the bag which comes completely made, bound in fast-color blue with snaps and stamped design. Embroidery thread in coral and black is included, pink for the chain stitch bathing suit and a few other places. About an hour's work is all that is necessary to make it.

Order any of the above articles from Embroidery Department, American Agriculturist, 10 N. Cherry St., Poughkeepsie, N. Y.

Twenty Thousand Grangers at Rochester

Seventh Degree is Conferred on Record-Breaking Class

ALTHOUGH the sessions of the National Grange at Rochester continued from November 12 to 21, there is little question but that Friday, the 14th, when twenty thousand farm folks poured into the city was the big day. It is no small task for a city and for those in charge of the program to take care of such a crowd, and the fact that there was so little confusion should be a source of satisfaction to every person who had anything to do with the program.

Friday was the big day for two reasons. On that day, 11,131 Grangers took the seventh degree, which so far as we can learn, is the largest number of folks ever to take any degree in any fraternal organization in one day. This record was made possible because of the wonderful Grange spirit in New York State, and because of the work done by the New York State Grange officers in making it possible for Grangers to take the sixth degree at a number of special meetings throughout the state during the past few months.

The second reason for the crowd was the list of speakers, which included Governor Roosevelt, Secretary of Agriculture Hyde, James C. Stone, vice-chairman of the Federal Farm Board, and Charles Wilson of the Federal Farm Board. The morning's program consisted of a masters' and lecturers' conference, under the direction of James C. Farmer, national lecturer. A big crowd

attended and were well repaid. Between talks the many friends of John McDermott, champion old-time fiddler of New York State, were again privileged to hear some of the old tunes which John knows so well how to play.

The weather was ideal and in addition to five

special trains from all parts of the state and innumerable busses, thousands of New York State Grangers drove many miles to be there for Friday's program. At first thought it would seem impossible to initiate nearly twelve thousand persons in one day, yet it was done without hitch or confusion. As the Grangers came into the city they went first to the armory where they secured their seventh degree tickets, which designated the hour at which they were to take the degree. The ceremony required about two hours and classes numbering about twenty-five hundred each were initiated throughout the day and far into the evening. It was interesting to note the number of young people taking the seventh degree. Rochester papers commented particularly on the fact that National Master Taber's fifteen-year-old son was among this number. Those who were in the five o'clock class counted themselves fortunate in that they took the degree with Governor Roosevelt, who has been a Granger for years and who joined the National Grange following his talk to a capacity crowd in the armory.

Vice-chairman Stone of the Federal Farm Board was the first speaker on the afternoon program and, as was expected, his talk centered around the activities of the Federal Farm Board. He urged Grangers to support the Farm Board and to be-

(Continued on Page 11)

At the left in the front row are Secretary Arthur Hyde of the U. S. Department of Agriculture and vice-chairman James C. Stone of the Federal Farm Board. The picture was taken at a luncheon in their honor during Grange Week given by Mr. Harper Sibley of the Rochester Chamber of Commerce. The guests included: A. S. Goss of Seattle, of the National Grange executive committee; Mr. A. G. Miner of Rochester; Mr. F. E. Gannett, publisher of a number of daily papers; Mr. L. B. Jones of the Eastman Kodak Company; Dean Copeland of the Chamber of Commerce; Earl Merrill, formerly County Farm Bureau Agent and now farming; Dean Keyes, farmer; Mr. Van Allen; Samuel McCune of the New York Joint Stock Land Bank; Frank Lovejoy of the Eastman Kodak Company, and H. L. Cosline, associate editor of American Agriculturist.

A Central School Comes to Waterville

How Home, Community, and School Work Together

By T. H. TOWNSEND

EDITOR'S NOTE:—Some time ago we published an editorial suggesting that every community needs a Parent-Teacher Association to bring the school and the neighborhood closer together for the common interests of the boys and girls. Answering that editorial our friend T. H. Townsend of Waterville, said that they had such a Parent-Teacher Association in his community, and that as a result of its work, Waterville had one of the best central schools in the State "The best part of it is," says Mr. Townsend, "everybody, both in the village and on the farms, is an enthusiastic supporter of the school. Mr. Townsend was so enthusiastic about this Parent-Teacher Association that we asked him to tell you something about it and he has done so in the short article which follows.

AMOTION picture of Porto Rico, prepared under the supervision of Governor Theodore Roosevelt, had just been shown as the concluding number of our Parent-Teacher program.

"Before we adjourn," said our president, "I would like to ask how many present reside in the part of our community outside the village? I also want to know which one of our farmer members has traveled the farthest to this meeting?"

Count of hands showed that sixty residents of our farming section out of a total of one hundred fifty were in attendance at the meeting. Two parents had traveled six miles, which was the greatest distance.

The Waterville Parent-Teacher Association has tried to do just a little more than carry out the objects

as recognized by the New York State Congress of Parents and Teachers. If one studies the handbook of the Association the objects will be found to be threefold; (1) to develop trained parenthood; (2) to raise the standard of child life, and (3) to bring closer relations between home, school, church, and state.

Our organization has become the center of activity for the entire community. It is the meeting place for both farm and village people.

A typical program may be of interest to the readers of the American Agriculturist. Meetings start promptly at 8 o'clock. The roll call is taken by grades to see which group has the honor of keeping the Parent-Teacher attendance banner

for the coming month. Parents present are able to vote for every grade in which they have pupils. Friends and teachers may vote once only. This contest keeps the children interested and the children are constant reminders to the parents that the first Monday in each month is Parent-Teacher night.

Musical selections are often given on the programs and these include group singing, led by the teacher in charge of the music department; accordion, piano and violin selections or vocal selections. Oftentimes we are able to secure, free of charge, exceptional talent from conservatories in the vicinity.

The meetings are always open to members of the Board of Education when they wish to discuss and present problems of interest to the residents of the district. Our Association has proved to be the place where the residents of the district have been able to really get acquainted with the members of the Board and with the faculty of the school.

Generally, there is a speaker from out of town. These include representatives of the State Education Department, Extension Professors from the State College of Agriculture, District Superintendents, health officers, representatives of farm organizations, etc. And the talks are not just "bologna." We like to be told we have a nice school with fine equipment. However, the speakers usually come right to the point and tell the parents how they can assist in training the young people, as well as handing out a few

(Continued on Page 15)

The beautiful central school building at Waterville, N. Y. The local Parent-Teacher Association helped to get the central district and this modern school building.

Thought for the Week—How Big Is An Acre of Land?

"ONCE asked an old gardener how much land he had and he said with pride that he had one acre; and he added, 'It is a wonderful acre; it reaches to the center of the earth in one direction and it takes in the stars in the other.' This man's farm included not only the pot of gold at the end of the rainbow, but it contained the entire rainbow.

"The size of an acre of land varies directly with the size of the man who manages it. The larger the man, the larger the acre. I do not know that anyone has yet determined how large an acre of land really is; but judging from the size of a plant that a woman grows in a potful of soil, it must exceed all calculations that have yet been made . . . A man is not the best farmer until his acre grows larger every year, in produce or in serenity or in both."

—DR. LIBERTY H. BAILEY in "The Harvest"

"Women of No Occupation"

SOME days ago as we sat watching the upturned faces of a large number of farm women at a meeting and noted how care, hard work, and responsibility had set their mark upon them, we remembered what Uncle Sam calls the housewife in his census reports—"Women of No Occupation."

Someone has said that it takes more courage to wash dishes year in and year out than it does to shoot a bear. Some historian also remarked that it took two New England mothers to raise one New England family. All of us know that without the hard work and good management of the wife and mother, no home, and particularly no farm home, could last a year, and yet the housewife is called, "the woman of no occupation."

For this lack of respect for their profession, the women themselves are largely to blame. No one is going to think more of your own business than you do yourself, and unfortunately few girls ever think of homemaking as a career. Women compete with men in every other trade to the neglect of the greatest trade of all for which they are especially fitted. We have no quarrel with women in business but if more of

them were in homes there would be less unemployment right now and more successful homes.

Teachers and psychologists well know that a child is made or broken largely before he is ten years old. Who is the one person chiefly responsible for that child's early impressions? The mother, of course.

Everyone knows too that a husband's success in the world is largely dependent upon the quiet support of the wife in the home. If he leaves that home in the morning cheerful, contented and happy, his chances of success are increased a hundredfold.

More and more scientists have come to see, also, the vital effect upon the health of the individual of well selected and well cooked food and the whole general home environment for all of which the woman is responsible.

We have always been an enthusiastic supporter of the Home Bureaus not only for their teachings of better methods of homemaking, but more especially because they help to show women the tremendous importance and dignity of the profession of homemaking. "Women of No Occupation", maybe, but if homemaking is not a real occupation then none of the rest of us have any.

Only Eighteen Per Cent of Highways Are Improved

IT is estimated that more than ten billion dollars have been spent on the building and maintaining of hard roads in the United States in recent years—such a huge sum that it is beyond the grasp of the human mind. Yet in spite of all this expense and effort, only about eighteen per cent of our highway system is now improved. The rest is in the mud. It should be obvious that if the Federal and State governments really want to do something to help the great majority of American farmers, they can turn their attention to improving the dirt roads. On this point let us repeat what we have said several times recently. The Federal government is planning to expend large sums on the highways to relieve the unemployed. Instead of spending this money on great trunk lines why not put it where it will do farmers some good as well as the unemployed; that is, use these extra highway funds for building better dirt roads?

Much progress has been made recently in New York through the equalization of highway funds whereby the poorer sections of the State will receive two and three times as much State aid for dirt roads as heretofore. This new money is now under the direction of the county engineer, and it should result in much better local roads. New York is also experimenting to find the best and cheapest way to improve town highways for it is plain that there is not money enough to build these back roads as State highways are built, nor is it necessary. Someone has said that what is needed to replace these dirt highways is not "limousine" roads but "flivver" roads.

It is hopeful that so much interest is now being shown in the problem. When we began to talk about dirt roads in these columns years ago there was little said about it elsewhere. It has been a pleasure to see interest grow until now "how to improve the town highways" is one of the leading topics on the programs of all the great farm organizations.

The Country Is a Good Place to Live

TODAY on the streets of New York I saw unemployed women selling apples. It was nothing new to see men selling apples, but the movement was over two weeks old before women took it up. One woman had her little three-year-old boy seated on an apple crate beside her while she disposed of her apples. This is one aspect of city life that very often escapes those who feel that the farm is a hard place to make a living.

On my way to the office I passed a bread line which has increased in length every day since it

started. The papers are full of the talk of unemployment, public speakers are urging all kinds of remedial measures, and yet, until you have some concrete evidence, it is hard to visualize just how it affects people. There is no need of becoming hysterical over it, but the gospel of good cheer needs to be preached if ever it did.

There is a long, hard pull ahead, but gloom and pessimism will not lighten the load a bit. When the outlook is darkest is the time to brace up and meet it bravely without scattering depression and discontent. Farm people are bound to get the back-kick of the depression because of the lessened power of city consumers to buy, but, after all, the farm is much the best place to live this winter. Therefore, it is to farm folks that we must look for the light and cheer needed in all this talk of gloom, "Talk up and not down" is still a mighty good slogan to follow.—G.W.H.

Beautify the School Grounds

A PROJECT of lasting value to our rural sections is the Rural School Beautification Contest described on Page 5 of this issue. Taking, as it does, years to reach the full glory of perfection in growing trees, shrubs, and flowers, we can see that it will afford more and more pleasure as time goes on.

It has been figured that no investments yield so large returns as do plantings about a home or public building. They greatly enhance the actual value of real estate. But mere delight—like all esthetic values—cannot be measured in actual dollars and cents. It is chiefly to feed the soul of student and passerby that this contest is being sponsored by the New York State Federation of Home Bureaus, encouraged by state prizes from AMERICAN AGRICULTURIST and Mrs. Henry Burden.—G. W. H.

Try Shipping Eggs by Mail

WITH possibilities of a difficult year ahead of poultrymen it is a good time for them to look around to find better markets for their eggs. An excellent market possibility is that of shipping eggs directly to consumers. It has its problems and drawbacks, of course, but the fact remains that hundreds of poultrymen are already doing it successfully.

One has to be a city consumer to realize how almost impossible it is to get fresh eggs from the stores, even when one buys the best grades and pays the highest prices. We believe that the market for eggs could be increased from 10 per cent to 25 per cent if consumers could be sure of getting a fresh product. Many consumers would go to some inconvenience to obtain good eggs regularly. Here is where the mail proposition comes in. Why not give it a trial? Write some of your city friends or put an advertisement in the classified department of a daily. As a general proposition, it is more satisfactory to send eggs C.O.D. Of course, there are exceptions, but they should be rare. Look up the best possible container for shipping eggs by mail. Write the A.A. poultry editor for suggestions, if you are in doubt about details. Start in a small way, be absolutely certain that every egg is strictly fresh, and it may be that it will not be long before you have a growing and profitable business.

Aunt Janet's Chestnut

A VISITOR to a meeting in rural district, after making a speech, announced that he would be glad to answer any questions that might be put to him. A voice came from the audience:

"You seem to know a lot, sir, about our difficulties. May I ask a question about something which troubles me?"

"Certainly," replied the speaker, nervously.

"How can you tell a bad egg?" went on the merciless voice.

The speaker waited until the laughter died away. Then he replied: "If I had anything to tell a bad egg, I think I should break it gently."

School Yard Improvement Gets Good Start

Contest Winners Plan To Buy Shrubs With Prize Money

THE Rural School Beautification Contest went along without a great deal of noise the past few months and it was a pleasant surprise to many at the recent Home Bureau Federation meeting to find out how much had really been accomplished.

American Agriculturist prizes to the winning schools went respectively to Hector District School No. 17 at Perry City, Schuyler County; to Brockville School, Orleans County; to Fleming School, District No. 2, Cayuga County; and to Ashford School, Township No.

ance completely before the newer educational ideas which make much of a child's play activities. The school which provides no play ground or no play equipment will soon be left behind the march of progress.

As for the plantings, New York State abounds in wonderful material and where there is co-operation to get it, the cost need not be prohibitive to any school group. But the main thing is to start right, with plans that are approved by experts at landscaping and then stick to the plan. In this way,

teachers are employed there, one of whom is Mr. Chadwick.

"Although the foreign element predominates in the school, the children are very interested in beautifying the grounds and are willing to help with the planting. Mrs. Theta Brown, a resident of the village, has consented to supervise the planting and arrangement of shrubs according to the drawing submitted for the contest.

"One of the first tasks of the school is to remove the present poor soil and replace it with more fertile soil to be used for the planting. This, of course, will take time and money. The prize of \$25.00 will be used to start this work and until this is accomplished little else can be done. The teachers are endeavoring to secure a small appropriation from the trustees of their district to aid them in the work."

Mr. Chadwick has his bit to say about the value of cooperation in this project: "The Rural School Beautification Contest somewhat surprised me. My name has been in the paper and congratulations have come in and I have felt rather guilty. I am a believer in cooperation. In our district there is Mrs. Theta Brown who loves flowers and also knows how to plant and grow flowers and shrubs. I called her in and we discussed the contest. Neither of us thought of the prize that might be won. What we were interested in was that we might work up a plan for beautification of the school grounds which we might get our district to develop. So the value of cooperation has again been proven.

"Now Mrs. Brown is still going to cooperate and with the help of the boys and girls we are going to try and develop the work so that our school surroundings shall be second to none."

Eunice Heywood, Home Bureau Manager of Cayuga County, writes the following: "This school receiving the prize is located in the village of Fleming, five miles south of Auburn, and there are not more than thirty homes in the village. It is a two-room school and the teachers were induced to enter the contest through the efforts of the Home Bureau. One or two Home Bureau women gave a good deal of their time in assisting with the plans.

"Both the teachers and Home Bureau women around Fleming are making plans to carry out the improvement in the spring of 1931. I believe a social of some sort is to be given to raise money for the grading as there is a good deal of grading to be done before any planting can be started.

"The money which they will receive from you, will be added to money which they received as prizes for exhibits displayed at the Cayuga County Fair to purchase shrubs and seed their lawn."

"The picture was taken from across the state highway and shows practi-

Country School

*There certainly will come
a day
As men become simple and
wise
When schools will put their
books away
Till they train the hands and
the eyes;
Then the school from its
heart will say
In love of the winds and the
skies:*

*I teach
The earth and soil
To them that toil,
The hill and fen
To common men
That live just here;*

*The plants that grow,
The winds that blow,
The streams that run
In rain and sun
Throughout the year;*

*The shop and mart
The craft and art,
The men to-day
The part they play
In humble sphere;*

*And then I lead
Thro' wood and mead
By bench and rod
Out unto God
With love and cheer.
I teach!*

—LIBERTY HYDE BAILEY,
in "Wind and Weather"

Hector District School No. 17 at Perry City in Schuyler County won the fifty dollar prize in the 1930 Rural School Beautification contest.

13, Cattaraugus County, the County Home Bureau in each case holding the prize money in trust until the school decides how it shall be used. And it will not stretch the imagination much to guess that the schools will want to make their dreams of beautiful surroundings come true by following out the plans which have been approved for planting.

But this is getting the cart before the horse; you will be wanting to know how it all got started, who did it and where we go from here.

The State Federation of Home Bureaus started it by the usual procedure of appointing a committee which got worthy assistance from the State Department of Education, from the State College of Agriculture, from 4-H Clubs, and from the Farm Bureau. Score cards were prepared telling what points were considered necessary in planning an attractive, useful school-ground, county committees were formed, county prizes arranged for, bulletins on planting were given out, and the schools started work on making plans, for this contest was on plans only. There will be a contest next year between those who put their plans into effect as well as another one for plan-making for those who did not enter the contest just completed. There is still so much beautifying to be done, you see.

The accompanying pictures of two of the prize-winning schools show how bare the grounds are to begin with—but next year's pictures of these schools ought to tell a very different story. In every case where a school enrolled in the contest, there was interest on somebody's part in sprucing things up a bit. Perhaps it was the teacher; several times it was a good woman in the community who loved to see things grow. But the important thing is that the school children joined in the plan-making and that fact alone augurs well for the future appearance of rural school surroundings. Not only should the children take more interest in beautifying, but the tendency to destroy will be turned into more useful channels.

No school ground is complete without a place to play, so the plans included that feature. The old idea that it is wicked to play has lost counten-

mistakes are avoided and no work has to be undone.

The story of the contest for the Perry City School winning first prize is told by Miss Constance La Bagh, County Home Bureau Manager of Schuyler County: "Our plan in organizing was very simple. We held a meeting with the Farm Bureau, 4-H Club Leader, two school superintendents, the Farm Bureau chairman, and a Home Bureau executive committee member. At the regular spring conference of teachers I presented the plan and gave them a copy of the contest plans. Upon request the material was given to the school."

From J. Waldene Hine, Home Bureau Manager in Orleans County, comes this first-hand information about the winner of second prize: "Mr. Luther Chadwick is the teacher whose school was awarded second prize in the Rural School Beautification Contest. This school is located at Brockville, New York, and is called Brockville School. The little settlement has a population of approximately 150 people consisting mostly of Italians. The school building is a three-room structure and three

Fleming School, District No. 2, Cayuga County won the fifteen dollar prize awarded by American Agriculturist.

cally the full expanse of the front yard. There is a great deal of space in the back which, according to the plans, they plan to grade, for a lawn and a terrace down to a play ground at the back. As you can easily see, there is not a shrub, nor a spear of grass about the place but there are some lovely old trees."

Caroline J. Pringle, Manager of the Cattaraugus Home Bureau, tells us that Ashford school is in a purely rural section, rather inaccessible. The residents are tremendously interested in making their school more attractive. Stanley Dietz is the teacher and he has been fortunate in getting the cooperation of parents who donated nearly all the plants and shrubs. The children have helped with the planting.

And now we would remind you that these excellent records merely mark the beginning of greater efforts to make rural school yards beautiful all over the state. There will be a contest for plan-making, with prizes given by American Agriculturist, and another contest for actual planting, with prizes given by Mrs. Henry Burden of Cazenovia. If your school is interested, you should confer with your county home bureau manager who has the contest plans and understands about the various committees, the material needed, etc. In spreading this "ministry of beauty", Professor D. J. Bushey and Miss Lucile Smith who do the project work in connection with it can feel that the good they do now will live after them.—G. W. H.

A New Book

"Mrs. Humming Bird's Double and other Nature Stories" by Frances Joyce Farnsworth is not only the painless but very pleasant way of getting many facts about the beasts and the birds. Although each story is complete within itself there is a thread of continuity which would add to the interest for a boy or a girl. It is fine for bedtime stories when read aloud by the father or mother, yet it is quite within the reading ability of a fourth or fifth grader. It includes many of the familiar creatures as well as some not so well-known. The Abingdon Press, New York City. \$1.00.

Perfectly Balanced for Maximum Milk Production

"A way to turn low-price grains into high-grade rations" is the discovery of hundreds of eastern dairy-men this year.

Faced with little market demand, they have found a more profitable way to turn their home grains into money. They have combined them with "Beacon 32" to balance them for profitable feeding. And they are getting more milk at a higher profit than they ever thought those grains could produce.

No other protein concentrate ever gave them such results. No ordinary mixture could. For "Beacon 32" is made with the same care, in the same scientific way as the famous Beacon 24% Dairy Ration.

"Beacon 32" was specially developed for mixing 50-50 with home grains to give a balanced, high-milk-producing ration. Used in this

way it provides *exactly* the right proportion of such concentrates as Linseed Oil Meal, Corn Distillers Grains, Cottonseed Meal, Soy Bean Oil Meal, Gluten Feed and Gluten Meal, in the most palatable and digestible form.

In short, Beacon "32" enables dairymen having home grains to:

1. Make a high milk-producing ration at low cost.
2. Get more milk per cow, at lower cost per quart.
3. Make a greater profit on their grain crop.

That is why so many eastern dairymen are now using "Beacon 32". If you have a supply of grain on hand that you want to make a profit on, order "Beacon 32" from your nearest Beacon dealer—or write us for his name and address.

Feed for HEALTH and you get PROFIT

LIKE spring pasture, Dried Molasses Beet Pulp is succulent and palatable. Dairy cows, beef cattle and sheep like its root-like flavor. It stimulates the flow of digestive juices and aids digestion of other feeds—it livens, invigorates, improves health, increases milk flow and brings rapid economical growth. It puts more money into your pocket!

REDUCES COST OF RATION

Replace some of the heavy feeds in your ration with the light and bulky Dried Molasses Beet Pulp. It's the great vegetable feed for all animals—the regular sugar beet after the extraction of sugar—all the nutritious vegetable tissues of the beet are retained. Present prices make it more than ever a profitable buy.

ORDER EARLY

Remember the demand by farmers who already know the value of Dried Molasses Beet Pulp is large and will pull heavily on early supplies—avoid disappointment and delay by ordering from your dealer now.

Shipments made direct from factory located nearest to buyer.

The Question Box

Sweet Clover for Pasture

I have noticed different articles in your paper about the value of sweet clover for pasture. Will you kindly advise me as to culture and growing methods for sweet clover? Is it practicable for Lewis County? I do not know of any in this section of the state and have always understood it was necessary to have a warmer climate than ours for it. Does it have to be sown each year? Is it difficult to plow after it?

WE see no reason why sweet clover should not do well in your section of the state. The reports we get from dairymen who have tried it are rather enthusiastic.

I believe most dairymen find they can pasture about two cows per acre through most of the summer. Sweet clover is especially handy to have during the middle of the summer when the usual pasture is rather short. Sweet clover needs some lime, although not as much as alfalfa and needs a firm seed bed when it is put in.

Most farmers who have tried it use scarified seed, that is, seed which has been scratched on the surface so that it will absorb water and germinate promptly. The usual procedure is to sow sweet clover with oats as a nurse crop. It can be pastured to some extent during the fall, but its true value comes the following season. This is a biennial so you get a little pasturage in the fall and the following summer from each crop. This, of course, is a legume and adds nitrogen to the soil. You should have no trouble in plowing after this crop.

Sometimes it has been reported that cattle are likely to bloat where they are turned out on sweet clover pasture. I was talking with a dairyman in Washington County the other day who is very enthusiastic about sweet clover. He says that he finds no danger at all so long as the cows are not too hungry when they are turned out on pasture. It will probably not be advisable to turn cows who are very hungry on to sweet clover pasture, particularly when it is wet from dew or rain.

Disease Resistant Beans

"What progress has been made toward developing disease resistant varieties of field beans?"

WELLS Red Kidney and White Imperial are generally recognized as resistant to anthracnose and Michigan Robust is recognized as being resistant to mosaic. This variety also shows some resistance to bacterial blight.

Meaning of Fertilizer Terms

"We have heard reference to fertilizer analysis and also reference to fertilizer formulas. We suppose that these terms have the same meaning. Would you explain to us the difference in meaning?"—V. C., New York.

THE analysis of a fertilizer is usually given in terms of percents of plant food present. For instance, a 5-10-5 contains five per cent of ammonia, 10 per cent of phosphoric acid and 5

per cent of potash. On the other hand, a fertilizer formula consists of the number of pounds of various ingredients which go to make up a ton of fertilizer. For instance, there may be so many pounds of nitrate of soda so many of sulphate of ammonia, a certain amount of superphosphate and some carrier of potash.

Lime, Manure and Fertilizer

"Can lime, commercial fertilizer and manure be used the same year on a crop and get satisfactory results?"—R. M., New York.

THERE are several ways in which this can be done and so far as we know, there is no objection to the practice. If the fertilizer consists of superphosphate this can be added to the manure when it is spread and then the lime can be applied and worked in after the land is plowed. If a complete fertilizer is used it can be put in with the crop.

Clover Rustles Its Nitrogen

Is it ever advisable to add nitrogen carrying fertilizer when clover is seeded? Of course, nitrogen is commonly needed for the growth of a nurse crop, but so far as the clover itself is concerned the only necessity for nitrogen is enough to get the plants started. Then if it has been inoculated either artificially or because the soil has grown clover before, the nodules on the roots will take care of the nitrogen requirements of the plant.

Building an Underground Storage

"We are planning to build an underground storage house and are wondering if you can give us some idea as to where to get plans and ideas for it."

FARMERS' Bulletin 847 may be obtained by writing to the U. S. Department of Agriculture, Washington, D. C. The Portland Cement Association, 347 Madison Avenue, New York City also has some valuable information available on building concrete storage houses.

Wet Soil Is Cold

Is there any experimental evidence back of the idea that a wet soil is a cold soil?

IT is well known that water heats up much more slowly than soil. In fact, about five times as much heat is required to raise the temperature of a pound of water one degree as is required to raise the temperature of a pound of dry soil one degree.

From these figures it will easily be seen that a well drained soil warms more rapidly than a poorly drained soil. At the same time evaporation is always a cooling process and there is likely to be more evaporation when the soil is wet.

Novel Cure for Pugilistic Cows

D. L. MEANS believes he has found a novel though effective cure for cows inclined to be pugilistic with their rear members of offense and defence. Mr. Means owned a beautiful young Jersey whose black coat shone like satin. She gave every promise of becoming a splendid milk cow, except that her heels would not remain in the proper place when she was being milked. Eyes that should have been soft and trusting glittered with fiery challenge. She repeatedly and effectively repelled all advances made in the vicinity of her nether aids to support and locomotion.

Mrs. Spitfire, as she was popularly known, was about to be sold to the butcher, but Mr. Means' sister pleaded for more time and patience arguing that the cow was worth the effort needed to break the vicious habit. The enterprising young dairyman secured some batteries and a coil and fastened them to Mrs. Spitfire's stanchion. He attached wires long enough to reach the offending members; experimented a little to estimate the proper amount of "juice" necessary.

When milking time came the door was opened and Mrs. Spitfire flirted with her usual amount of assurance and arrogance. The patient milkmaid sat down with her much battered milk pail and began the motions necessary to extract life's greatest food. Bam! Bam! went a hoof against the pail making one more dent in the long suffering milk pail and one more blow to the sorely tried temper of the milker. Mr. Means applied the ends of the wires! Down went the unsuspecting Mrs. Spitfire to her knees. Her head fastened in the stanchion kept her from rolling over. She quickly regained her feet if not her composure, walled her eyes around to ascertain who else could kick with such lightning-like force. Madam milkmaid sat down once more squeamishly but hopefully and squeezed a teat or two. Bam! bam! bam! echoed heels spitefully against the pail. Phist, went wires against sleek legs! Down came the surprised Mrs. Spitfire for the second time with a hoarse, distressed bellow. Realizing that the "powers that be" were somewhat gaining the advantage, she retaliated by "holding up" her milk.

Deciding this was a sufficient treatment for one time, the cow was turned out to ruminate and meditate. There were many repetitions of the above procedure before the stubborn creature became tractable. By the end of the summer anyone could stroke her legs or sit down and milk without danger to temper or limb.—L. H. M.

Cow Testing in Wayne Co. Shows Big Results

WAYNE COUNTY, one of the smallest and most fertile counties in New York State is noted the world over for its fine fruit and muck crops, light winters making it possible for such crops to produce well. Wayne County fruit has many times reaped the "Blue Ribbon" at the New York Fair for its fruit display.

In 1925 census figures show that there were 24,839 cows in the County producing an average of 4575 pounds of milk. This average was found to be too low, so in March, 1928 the first regular Cow Testing Association was organized with twenty-seven members. The average of this first association was 7660 pounds of milk which proved to be considerably higher than the county average of 1925.

On March 1, 1929 the second cow testing Association was organized with 27 more members. The average production was raised this time to 8461 pounds of milk.

On March 1, 1930 the third association was formed, this making eighty-one progressive dairymen with 1020 cows in three regularly organized Dairy-Herd Improvement Associations.—H. M. HUGHES

MILK AND MONEY

flow in Kansas for
this Modern Farmer

This is the dairy herd of E. P. Miller, of Junction City, Kansas. He adds Dr. Hess Improved Stock Tonic to his ration to get extra production.

KANSAS is not all wheat. It has its livestock and its dairy herds. And it has Mr. E. P. Miller, of Junction City, Model Farmer, and leader of the state for the last two years with his 40 head of dairy cows. You'll be interested in his records for these two years and the reason why the second year's production is so much higher than the first.

In his first record year Mr. Miller had an average production per cow of 312 pounds of butter-fat—8776 pounds of milk. In his second record year his production average jumped to 382.6 pounds of butter-fat—10,577 pounds of milk! In other words, he had a cow-average of 70.6 pounds more butter-fat and 1801 pounds more milk in his second year. And his cost of production was 43 cents less a hundred! Why?

Mr. Miller's cows received the same feed and care both record years and both years the herd was pretty much alike in every way. There was one and only one outstanding difference in their treatment. He gave them Dr. Hess Improved Stock Tonic the second year instead of the mineral mixture they had been getting.

Observations made by Mr. Miller show that only one cow was off feed during the entire year on Tonic, while he had no less than twenty cases of this kind the year before. During the year on Tonic he had only one case of retained placenta, and this a first-calf heifer, while there were nine such cases the previous year.

Mr. Miller now adds Dr. Hess Improved Stock Tonic to his ration because he finds it pays a good profit. You can add dollars to your monthly milk check by following the example of this leading Kansas dairyman. See your local Dr. Hess dealer or write us. Dr. Hess & Clark, Inc., Ashland, Ohio.

WINTER BROILERS

DO YOU WANT to make more money from your
fall and winter broilers? Then buy chicks that will
live well and grow rapidly. More broiler growers are
turning to Hubbard Farms chicks each year because
they are assured of uniform quality chicks that will
live practically 100% and will make a 2 lb. broiler
in eight weeks. They know Hubbard Farms' chicks
are always dependable. Every chick we sell is pro-
duced from our own strain of Reds, bred for 14
years for vigor and rapid growth. We have 8,000
breeding birds here on our own farms and every bird is
blood-tested by the State University. Shipped 600,000
chicks last season, all from our own eggs. We guaran-
tee full satisfaction on every order. You cannot go
wrong with Hubbard Farms chicks. Get our catalogue.
HUBBARD FARMS, Box 147, Walpole, New Hampshire.

\$175.00 BUYS

KING PIEBE ORMSBY IDEAL 2d,
NO. 604903

Born Oct. 14, 1929. A very high class individual.
This fellow traces twice in his pedigree, to the great-
est living sire King Ormsby Ideal, Sire of thirteen
daughters with over 1000 lbs. of butter in a year. He
is a Gold Medal Son of a Gold Medal Sire.

He also traces three times to the great century Sire
"Sir Veeman Hengerveld" with twenty-one 30 lbs.
daughters.

Dam: P. A. IRENE. She has recently made in Semi
official test Class B. as a 2 yr. old, in 318 days.
Milk 12848.4. Butter 522.2.

She is a daughter of the great Prilly Adirondac,
from a daughter of King Ormsby Ideal.

W. D. Robens & Son, Poland, N. Y.

FOR SALE One, two-year old and
one yearling Registered
Ayrshire Bull priced for
quick sale. Dam of each a 10,000 pound cow
with 4 1/2 per cent butter fat test.
IROQUOIS FARM, Cooperstown, N. Y.

REGISTERED JERSEY BULL

17 months old, large fine individual. Sire and Dam
both in Register of Merit class A.A.A. The very best in
Jerseydom back of him. Herd fully accredited. Write
for particulars. Price \$125. Eugene F. Wells, Tully, N. Y.

Reviewing the Markets

Milk Prices

November Prices

Dairymen's League prices are based on
milk testing 3.5%. Sheffield on the basis
of 3%.

	Class	Dairymen's League	Sheffield Producers
1	Fluid Milk	3.37	3.17
2	Fluid Cream		2.00
2A	Fluid Cream	2.16	
2B	Cond. Milk		
3	Soft Cheese	2.41	
3	Evap. Cond.		
	Milk Powder		
	Hard Cheese	2.00	1.80
4	Butter and American Cheese, Based on New York City Market quotations on butter and American Cheese.		

The Class 1 League price for October 1929 was \$3.42
for 3.5% milk and Sheffield's \$3.22 for 3%.
The above prices in each class are not the final
prices the farmer receives. The final price received from
the dealer is the result of weighted average.

Butter Closes Firmer

CREAMERY SALTED	Nov. 21, 1930	Nov. 15, 1930	Nov. 22, 1929
Higher than extra	35 1/2-36	35 1/2-36	43 1/2-44
Extra (92 sc.)	35	35	43
84-91 score	28	34 1/2	27 1/2-34
Lower Grades	27	27 1/2	32

The butter market closed a little firmer
as the week of November 22 ended. Dur-
ing the early part of the week there was
considerable fluctuations. On Monday, the
17th, the situation was so strong that the
price went to 35 1/2c, but the advance was
too much and business went to pot, caus-
ing prices to sag to 34 1/2c on extras. As
we have said, in the past, this kind of
business seriously disturbs the trade.
Buyers were cautious and held off to
await developments. Gradually, the mar-
ket settled down and trade again pro-
ceeded. It was not until Friday that the
situation had sufficiently cleared to per-
mit the return to 35c for creamery ex-
tras. In spite of the firmer tone of the
market, there is still considerable anxiety
and uncertainty. Chicago has reported a
slight decline which continues to disturb
our market. As a result, the trend is very
indefinite. The nearness of the holidays
will tend to hold the market steady for
the opening of the week on the 24th.

Cheese Trade Quiet

STATE FLATS	Nov. 21, 1930	Nov. 15, 1930	Nov. 22, 1929
Fresh Fancy	20-21 1/2	20-21 1/2	24 -24 1/2
Fresh Average	23	23	23
Held Fancy			26 -26 1/2
Held Average			23 1/2-24 1/2

The cheese market continues very quiet,
most of the business being done in small
lots. Fresh cheese especially is experienc-
ing very slow movement. There are in-
stances where fresh goods can be bought
at slightly lower prices due to the fact
that replacements can be purchased at
slightly lower prices. Short held cheese
is held with a little more confidence.
There is very little business in round lots,
most of the dealers being satisfied to
take on only enough stock to meet their
immediate trade needs. This hand to
mouth policy is not doing trade any good
and does not indicate any change in pros-
pects. In fact, the cheese market will do
well to hold its own, considering the sit-
uation in other branches of dairy
products.

Nearby Eggs Lower

NEARBY WHITE	Nov. 21, 1930	Nov. 15, 1930	Nov. 22, 1929
Hennery	50-52	52-55	63-65
Selected Extras	46-47	48-50	61-62
Average Extras	35-43	35-45	53-60
Extra Firsts	29-34	29-34	47-51
Firsts	26-28	26-28	42-46
Undergrades	30-34	30-34 1/2	38-43
Pullets	27-28	27-28	35-38
Powes			
NEARBY BROWNS			
Hennery	52-56	52-57	67-69
Gathered	33-50	33-50	50-66

Increasing supplies of large nearby
whites have been responsible for a grad-
ual reduction in prices. The trade is not
absorbing all of the offerings and as early
as Tuesday, November 18, prices were
shaded in view of the lack of outlet for
the offerings of large whites from Jersey.
While white eggs were more than plenti-
ful, browns were just as scarce. How-
ever, with cheaper white eggs on the mar-
ket, the preference for browns became
less marked and they too eased off al-
though they still bring a premium over
the best whites. As the market comes to
a close on November 22 a little steadier
feeling prevails. There is a shortage of
Pacific Coasts, that is purely temporary,
but the sudden bulge in nearby supplies
will fill the gap, and it is not expected
that prices will slip. Undoubtedly, No-
vember 24 will find fairly free buying
for the holiday period. However, we are
a little apprehensive about the market
after that time. This mild weather that
we are having, which is more like late
May or early June than late November,

is not having any detrimental effect on
the lay.

Holiday Poultry a Problem

FOWLS	Nov. 21, 1930	Nov. 15, 1930	Nov. 22, 1929
Colored	15-24	19-25	26-32
Leghorn	18-22	17-21	18-24
CHICKENS			
Colored	18-25	18-24	22-27

BROILERS			
Colored	26-33	25-32	28-36
Leghorn	25-28	23-26	31-33
OLD ROOSTERS	17-18	17-18	20-22
CAPONS	30-35		30-42
TURKEYS	26	15-22	28-32
DUCKS, Nearby	18-23	18-25	21-28
GEESSE	15-16	17	24-25

The market on live poultry for Thanks-
giving holiday is a real problem at this
writing as the market comes to a close
on November 22. Those who follow the
daily radio reports will get a better idea
how the market will be on the 24th and
25th. Turkeys are taking the center of
the stage as far as interest is concerned.
The outlook is a problem, although all
present indications point to a plentiful
supply and we doubt very much if real
choice turkeys go over 35c. At this writ-
ing, the general run of turkeys coming
in by express brings 26c, but some fancys
are worth 30c. Geese have been quite
cheap and there has been quite a swing
in that direction. This has stimulated
the demand and they closed firmer as the
market winds up. Colored fowls have been
slow and easier, while Leghorns are show-
ing more strength. The market has been
extremely good for express receipts of
small chickens, pullets and small broilers.

Meats and Livestock

CATTLE—Steers moderately active,
steady; medium grassers \$8.75-9.15. Cows
slow, about steady. Common to medium
\$4.00-5.00. Low cutters and cutters \$1.50-
3.50.

VEALERS—Scarce, steady. Good to
choice \$11.00-13.50; medium \$7.50-10.50; few
culls \$5.00.

LAMBS—Lambs fairly active. Few good
to choice West Virginias about 50c higher
at \$9.50. Good New York lambs steady at
\$8.50.

COUNTRY DRESSED CALVES—Re-
ceipts moderate all the week but more
than required by the trade, demand being
very slow all through with some carried
over daily. Prices were irregular, ranging
from 8 to 14c per pound grades not count-
ing, mostly 8 to 9c on small, some as low
as 6c, and 10 to 12c on all others. Market
closed irregular with some still unsold.
Fresh receipts per pound: Choice 12-14c;
fair to good 10-12c; small to medium
8-10c.

LIVE RABBITS—Fresh receipts mod-
erate during the week. Demand slow, all
through. Market weak. By the coop, 12-18c
per pound.

The bean market has been unusually
quiet. Demand has been restricted and the
tone easy on most varieties of beans.
Jumbo Marrows bring \$7 to \$7.75; average
Marrows \$6 to \$3.75; Pea beans \$5 to
\$5.75; Red Kidneys \$7.25 to \$8; White
Kidneys \$7.75 to \$8.50; round cranberry
\$5.75 to \$6.50.

The potato market is a sorry affair.
Trade is dull and draggy. Maines in 150
pound sacks bring \$2.35 to \$2.60, in bulk
per 180 pounds \$2.85 to \$3.10. Long Islands
in 150 pound sacks bring \$2.50 to \$2.85, in
bulk per 180 pounds \$3 to \$3.25.

Farm News from New York

Walker Gordon Farm Installs Labor Saving Milker

EVERY section of the United States turned its eyes towards New Jersey recently when the Walker-Gordon dairy farm at Plainsboro, introduced to agriculture the newest idea in labor saving equipment. The rotolactor, as it is called by the owner, is the idea of H. W. Jeffers and was built by the Walker-Gordon Laboratories of the Borden Research Foundation. Essentially it is a circular platform 60 feet in diameter, containing 50 stanchions, which revolves at the rate of 15 feet a minute, and on which 1680 cows can be milked in seven hours. As the platform revolves slowly the cows come up a chute and each, without hesitation, steps on the moving platform and puts her head in the specially constructed stanchion which is automatically closed. Almost immediately three sprays of warm water from different directions washes the hind quarters of the animal, the bath being completed by a man with a hose. Then as the platform revolves a blast of warm air strikes each cow and partially dries her, the drying being completed by another man with a towel. All this time the platform is revolving and each man has his own job to perform as the cows come to him.

Next an attendant milks a few streams from each quarter of the udder into a bucket covered by a fine mesh screen. If there is the slightest evidence of bloody milk or thick milk, the animal is tagged, the machine is not applied, and she is examined by a veterinarian and milked when she gets back to the barn. The machines are next applied and the milk is drawn into the glass container which you will see in the picture. During the remainder of the journey which requires twelve and a half minutes, the milking process is completed. As each cow nears the full completion of her journey an attendant removes the teat cups, turns off the vacuum, the stanchion automatically opens, and the cow finds herself before an open chute. She steps forward and travels down another lane back to the barn.

Looking at this giant machine from the tile and plate glass fitted observatory above the milking floor, one cannot help taking a long-time view of the effect of this new piece of equipment on the future of agriculture. Does this milking machine, as demonstrated at the Walker-Gordon farm, indicate a step towards the substitution of factory methods in the production of milk the same as applied to our industrial establishments? Or does it mean that the time may soon come when great combinations of capital can set up a dairy farm with 1,000 to 3,000 or more cows per unit and replace large numbers of individual farmers who are now producing milk as a cash product?

Should that time come, and it has already arrived at Walker-Gordon, we can look forward to another great change in the set-up of agriculture that will be even more revolutionary than the introduction of many of our major types of farm equipment.

No story of the milking barn is complete without a picture of the man who conceived the idea of industrializing the dairy industry. Henry W. Jeffers, the originator of the idea, is one of the keenest men in agriculture today. He is visionary, yet practical, as is demonstrated in the system of farming that he has developed and put on a highly profitable basis. His system of tenant farming, under which neighboring farmers sell their hay and corn to the dairy company on a contract basis, has proven practical to the milk company and profitable to the farmers who are growing the roughage.

Farm Board Buys More Wheat

THE Federal Farm Board bought wheat to the extent of a million dollars a day during the first fifteen days of November. This purchasing has added ten million bushels to the amount accumulated by the Federal Farm Board earlier in the year until it is now estimated that the Board is holding seventy million bushels of wheat. Chairman Legge of the Federal Farm Board in a recent interview stated that the Board is prepared to continue its purchases indefinitely.

In this connection, it is interesting to note that the directors of the Chicago Board of Trade, who on the whole have

been opposed to the activities of the Farm Board, give the Board credit for averting a panic. Even at that, prices went low enough when on November 18, December wheat went to seventy-three cents. Those men who are old in the business recall that in 1894, the last time that wheat in Liverpool sold as low as it did on November 18, wheat in Chicago sold for around fifty cents.

Three factors stood out as regarding stabilizing activities. First, by holding U. S. grain prices above world prices, the tariff of forty-two cents a bushel automatically became active in keeping out foreign wheat. Second, the activities of the Farm Board indicated further to American grain growers that the Farm Board has been serious in its appeals for the return of wheat production to a domestic basis. Third, the ability of the Farm Board to stabilize prices of wheat, even at a low level created a favorable impression even though former attempts to "peg" prices at \$1.18 were not successful.

National Acclaim for Agricultural Student

A YOUNG lad of seventeen years was the recipient on November 18th at the American Royal Livestock Show at Kansas City, of the highest honor in its line that is offered in the United States. David Ridgeway Johnson, the fifth generation of an old farming family near Lambertville, N. J., and a Freshman at Rutgers, was presented by Governor Caulfield of Missouri with the \$1,000 award and title of "The Star American Farmer", bestowed upon him by the Future Farmers' Association of America as the outstanding student of vocational agriculture in the nation.

Fewer Tomatoes Imported

I HAVE absolutely no idea as to how many tomatoes there are in sixteen million cases, but I have no doubt but that it took a lot of ground to raise the crop. At any rate, we are told on good evidence, that American people every year consume sixteen million cases each of which contains two dozen, three-pound cans. Incidentally, we are told that due to the small Italian crop and to the rather heavy increase in tariff, imports of tomatoes from Italy decreased sixty per cent during the first nine months of this year, as compared to the same period in 1929.

Department Publishes Market Reports

THE New York State Department of Agriculture and Markets, in cooperation with the Federal Department, publishes a number of market reports. Some are daily, some weekly, while others are more in the nature of reviews or forecasts and are put out only occasionally.

The following are officers of the State

Department of Agriculture and Markets. Readers who are interested in getting market reports may write to these offices and ask for a list of reports issued:

Federal State Market News Service, 310 Triangle Bldg., Rochester, N. Y.

U. S. Department of Agriculture, 53 Park Place, New York City.

Dept. of Agriculture and Markets, Walbridge Bldg., Buffalo, N. Y.

Dept. of Agriculture and Markets, 53 Park Place, New York City.

Dept. of Agriculture and Markets, State Office Bldg., Albany, N. Y.

Milk Dealers' Association Again Under Fire

THE Harlem & Bronx Milk Dealers' Association which was organized by Aaron Sapiro, and its affiliated concern, the Distribution Stabilization Corporation, whose president is Samuel Roth, have been charged by Assistant Attorney General Groat, Jr., of New York State as "acting in restraint of trade." Mr. Groat goes further in recommending, when he turned over the minutes of his investigation and the books and records of these two companies to District Attorney Crain,

that these two companies be placed first on the list of "rackets" to be investigated by the committee of citizens to which the District Attorney has appealed for help in ridding New York City of "racketeers."

Samuel Roth, upon interrogation, stated that his company, the Distribution Stabilization Corporation, controlled the Harlem & Bronx Milk Dealers' Association which was, as we have stated above, organized by Aaron Sapiro. Mr. Roth admitted that he had set the amount of his own salary of \$15,000 a year, and also the \$250 per week which Mr. Sapiro receives from milk dealers as counsel in their affairs. But expenses, to which Mr. Roth is also entitled, are heavy, for Mr. Groat discovered that in the four months Mr. Roth has been president he has already drawn approximately \$10,000. Roth, who in his lifetime has had many interests, is known as a "stabilizer", and it was shown in the investigation that some of the \$10,000 of milk dealers' money has gone to "stabilize" the General Taxicab Owners' Ass'n, a new project since Mr. Roth became associated with Mr. Sapiro, although he could not state whether the milkmen knew that their fees were helping the taxicab business or not.

New York County Notes

ULSTER COUNTY—If the provisions of the will of Marion Borden are carried out, the Borden home farm in Wallkill, assessed at a half million dollars, will become a Masonic Home similar to the one now in operation at Utica.

Over fifty Farm Bureau committeemen and their wives met recently at Von Berg's restaurant to discuss Farm Bureau affairs. Mr. C. C. DuMond of Ulster Park, vice-president of the Farm Bureau presided.

It appears that Route 9W, ten miles south of the Saugerties town line, will be built next spring. A committee of the Board of Supervisors on the purchase of rights of way are to start work soon.

CHENANGO COUNTY—This county has recently cooperated with other surrounding counties in forming the Central New York Dairy Record Club. Headquarters will be at Ithaca and through the Club, dairymen will have an opportunity to secure records of milk and butterfat production on their herds at a very low cost. Dairymen will take samples from each cow one day a month and will weigh the grain and hay fed to each cow. The samples and the records will be mailed to Ithaca where the milk will be tested and records mailed back to the dairyman. The cost to the dairyman will be 12c per cow per month.

GENESEE COUNTY—Crop prices are so low that many farmers are discouraged. If farm yields had been fair, low prices would have been all right, but the farmer heavily in debt is hit hard this year. The more well-to-do farmers are holding their crops for higher prices

which I fear is hopeless unless work is found for the jobless. Pea beans are now only 4c a pound; buckwheat, \$1.40 to \$1.50 a cwt; oats, 35c a bushel; potatoes, 80c a bushel; hay has dropped to \$12 a ton; cabbage can be bought for 25c a bushel and can scarcely find a market by the ton. Cows are cheap except a good new milch cow which brings from \$80 to \$100. Ducks that cost 50c each at the hatcheries as ducklings are worth from \$1.00 to \$1.10, which shows a big loss. Poultry is cheaper as meat in the home than it would be to sell, some bringing as low as 50c each. Eggs are 45c to 50c a dozen, the only product that hasn't dropped in price. Apples are so low priced that they are scarcely worth picking. One farmer hiring extra help said he was getting \$5.00 a day which would hardly pay for the labor. Winter wheat looks good and there is lots of fall plowing being done. Farm labor is cheap because so many are facing the winter without a job, yet few farmers can afford to hire.—Mrs. R. E. G.

FRANKLIN COUNTY—It was stated that about 400 Grangers from this county would be in attendance at the National Grange Convention in Rochester. Some of them went by train, others motored. Local Granges campaigned vigorously for a big attendance. Quite a number of those from this county were to take the seventh degree of the Order.

Potatoes continue at 60c; butter, 37c in tubs, 38c in cases. Locally butter retails at prices from 40c to 50c. Prices quoted, unless otherwise stated, are market prices paid to producers. Fresh eggs, 45c to 50c; pea beans, \$3.40; dressed pork, 16c to 18c; Western beef, dressed, 12c to 17c; native beef, dressed, 9c to 11c.

COLUMBIA COUNTY—A heavy rainfall of Saturday night and all day Sunday benefitted wells and streams. Packing houses are closed for season. In the southern part of county guinea fowls were shot by hunters. Not so many deer in some parts of the county. Chicken thieves are busy in Germantown. Two hundred and fifty merit badges have been awarded to Boy Scouts of Columbia County. The Columbia County Poultry Club held its annual meeting in Hudson. Professor L. M. Hurd of the State College of Agriculture discussed various points connected with poultry raising, at the Farm Bureau meeting in Hudson.—Mrs. C.V.H.

WASHINGTON COUNTY—About forty people, mostly turkey raisers, met at the home of Mr. and Mrs. Brede Pederson, to see their flock of 400 turkeys and to listen to a talk on the raising and marketing of turkeys. This talk was given by Professor Hurd of the State College of Agriculture. After the address, Mr. Pederson presented a turkey to the one guessing the nearest to its weight. The turkey went to Mrs. Harry Fuller, who guessed within one ounce. The market for apples and potatoes is slow. Eggs, 40c and 50c per dozen.—H.C.C.

A part of the circular revolving platform at the Walker-Gordon Farm.

Just David--By Eleanor Porter

THE STORY THUS FAR

Because of failing health David's father, a violinist, decides to leave the mountain home where they had lived alone for six years. They start down the mountain on foot, but strength fails the man before they go far. A farmer gives them a lift for a way and they decide to spend the night in a nearby barn where Simeon Holly and his wife find them. David's father is dead.

The next morning David decides to go back to his mountain home and leaves without saying goodbye. He returns hurriedly when Mrs. Holly telephones to a neighbor to tell David that his father left a letter for him. The second letter seemed perfectly intelligible to David, but was not of much help to the Hollys inasmuch as it did not give David's full name.

Because no one else wanted him, David stayed with the Hollys. They soon found that David had queer ideas about work and play. One of his first tasks was to fill the wood box and although he started with good intentions, some exceedingly interesting butterflies soon lured him away from his task.

"Why, you're just like little people," he cried softly. "You've got faces; and some of you are happy, and some of you are sad. And you—you big spotted yellow one—you're laughing at me. Oh, I'm going to play you—all of you. You'll make such a pretty song, you're so different from each other!" And David leaped lightly to his feet and ran around to the side porch for his violin.

Five minutes later, Simeon Holly, coming into the kitchen, heard the sound of a violin through the open window. At the same moment his eyes fell on the woodbox, empty save for a few small sticks at the bottom. With an angry frown he strode through the outer door and around the corner of the house to the garden. At once then he came upon David, sitting Turk-fashion in the middle of the path before the pansy-bed, his violin at his chin, and his whole face aglow.

"Well, boy, is this the way you fill the woodbox?" demanded the man crisply.

David shook his head.

"Oh, no, sir, this isn't filling the woodbox," he laughed, softening his music, but not stopping it. "Did you think that was what I was playing? It's the flowers here that I'm playing—the little faces, like people, you know. See, this is that big yellow one over there that's laughing," he finished, letting the music under his fingers burst into a gay little melody.

Simeon Holly raised an imperious hand; and at the gesture David stopped his melody in the middle of a run, his eyes flying wide open in plain wonderment.

"You mean—I'm not playing—right?" he asked.

"I'm not talking of your playing," retorted Simeon Holly severely. "I'm talking of that woodbox I asked you to fill."

David's face cleared.

"Oh, yes, sir. I'll go and do it," he nodded, getting cheerfully to his feet. "But I told you to do it before."

David's eyes grew puzzled again.

"I know, sir, and I started to," he answered, with the obvious patience of one who finds himself obliged to explain what should be a self-evident fact; "but I saw so many beautiful things, one after another, and when I found these funny little flower-people I just *had* to play them. Don't you see?"

"No, I can't say that I do, when I'd already told you to fill the woodbox," rejoined the man, with uncompromising coldness.

"You mean—even then that I ought to have filled the woodbox first?"

"I certainly do."

David's eyes flew wide open again.

"But my song—I'd have lost it!" he exclaimed. "And father said always when a song came to me to play it at once. Songs are like the mists of the morning and the rainbows, you know, and they don't stay with you long. You just have to catch them quick, before they go. *Now*, don't you see?"

But Simeon Holly, with a despairingly scornful gesture, had turned away; and David, after a moment's following him with wistful eyes, soberly walked toward the kitchen door. Two minutes later he was industriously working at his task of filling the woodbox.

That for David the affair was not satisfactorily settled was evidenced by his thoughtful countenance and preoccupied air, however; nor were matters helped any by the question David put to Mr. Holly just before dinner.

"Do you mean," he asked, "that because I didn't fill the woodbox right away, I was being a discord?"

"You were what?" demanded the amazed Simeon Holly.

"Being a discord—playing out of tune, you know," explained David, with patient earnestness. "Father said—" But again Simeon Holly had turned irritably away; and David was left with his perplexed questions still unanswered.

CHAPTER VI

NUISANCES, NECESSARY AND OTHERWISE

FOR some time after dinner, that first day, David watched Mrs. Holly in silence while she cleared the table and began to wash the dishes.

"Do you want me to—help?" he asked at last, a little wistfully.

Mrs. Holly, with a dubious glance at the boy's brown little hands, shook her head.

"No, I don't. No, thank you," she amended her answer.

For another sixty seconds David was silent; then, still more wistfully, he asked:—

"Are all these things you've been doing all day 'useful labor'?"

Mrs. Holly lifted dripping hands from the dishpan and held them suspended for an amazed instant.

"Are they—Why, of course they are! What a silly question! What put that idea into your head, child?"

"Mr. Holly; and you see it's so different from what father used to call them."

"Different?"

"Yes. He said they were a necessary nuisance,—dishes, and getting meals, and clearing up,—and he didn't do half as many of them as you do, either."

"Nuisance, indeed!" Mrs. Holly resumed her dishwashing with some asperity. "Well, I should think that might have been just about like him."

"Yes, it was. He was always that way," nodded David pleasantly. Then, after a moment, he queried: "But aren't you going to walk at all today?"

"To walk? Where?"

"Why, through the woods and fields—anywhere."

"Walking in the woods, *now*—just walking? Land's sake, boy, I've got something else to do!"

"Oh, that's too bad, isn't it?" David's face expressed sympathetic regret. "And it's *such* a nice day! Maybe it'll rain by tomorrow."

"Maybe it will," retorted Mrs. Holly, with slightly uplifted eyebrows and an expressive glance. "But whether it does or doesn't won't make any difference in my going to walk, I guess."

"Oh, won't it?" beamed David, his face changing. "I'm so glad! I don't mind the rain, either. Father and I used to go in the rain lots of times, only, of course, we couldn't take our

violins then, so we used to like the pleasant days better. But there are *some* things you find on rainy days that you couldn't find any other time, aren't there? The dance of the drops on the leaves, and the rush of the rain when the wind gets behind it. Don't you love to feel it, out in the open spaces, where the wind just gets a good chance to push?"

Mrs. Holly stared. Then she shivered and threw up her hands with a gesture of hopeless abandonment.

"Land's sake, boy!" she ejaculated feebly, as she turned back to her work.

From dishes to sweeping, and from sweeping to dusting, hurried Mrs. Holly, going at last into the somber parlor, always carefully guarded from sun and air. Watching her, mutely, David trailed behind, his eyes staring a little as they fell upon the multitude of objects that parlor contained: the haircloth chairs, the long sofa, the marble-topped table, the curtains, cushions, spreads, and "throws," the innumerable mats and tidies, the hairwreath, the wax flowers under their glass dome, the dried grasses, the marvelous bouquets of scarlet, green, and purple everlasting, the stones and shells and many-sized, many-shaped vases arranged as if in line of battle along the corner shelves.

"Y—yes, you may come in," called Mrs. Holly, glancing back at the hesitating boy in the doorway. "But you mustn't touch anything. I'm going to dust."

"But I haven't seen this room before," ruminated David.

"Well, no," dignified Mrs. Holly, with just a touch of superiority. "We don't use this room common, little boy, nor the bedroom there, either. This is the company room, for ministers and funerals, and—" She stopped hastily, with a quick look at David; but the boy did not seem to have heard.

"And doesn't anybody live here in this house, but just you and Mr. Holly, and Mr. Perry Larson?" he asked, still looking wonderingly about him.

"No, not—now." Mrs. Holly drew in her breath with a little catch, and glanced at the framed portrait of a little boy on the wall.

"But you've got such a lot of rooms and—and things," remarked David. "Why, daddy and I only had two rooms, and not hardly any *things*. It was so—different, you know, in my home."

"I should say it might have been!" Mrs. Holly began to dust hurriedly, but carefully. Her voice still carried its hint of superiority.

"Oh, yes," smiled David. "But you say you don't use this room much, so that helps."

"Helps!" In her stupefaction Mrs. Holly stopped her work and stared.

"Why, yes. I mean, you've got so many other rooms you can live in those. You don't *have* to live in here."

"'Have to live in here!'" ejaculated the woman, still too uncomprehending to be anything but amazed.

"Yes. But do you have to *keep* all these things, and clean them and clean them, like this, every day? Couldn't you give them to somebody, or throw them away?"

"Throw—t h e s e—things—away!" With a wild sweep of her arms, the horrified woman seemed to be trying to encompass in a protective embrace each last endangered treasure of mat and tidy. "Boy, are you crazy? These things are—are valuable. They cost money, and time and—and labor. Don't you know beautiful things when you see them?"

"Oh, yes, I love *beautiful* things," smiled David, with unconsciously rude emphasis. "And up on the mountain I had them always. There was the sun-

rise, and the sunset, and the moon and the stars, and my Silver Lake, and the cloud-boats that sailed—"

But Mrs. Holly, with a vexed gesture, stopped him.

"Never mind, little boy. I might have known—brought up as you have been. Of course you could not appreciate such things as these. Throw them away, indeed!" And she fell to work again; but this time her fingers carried a something in their touch that was almost like the caress a mother might bestow upon an aggrieved child.

David, vaguely disturbed and uncomfortable, watched her with troubled eyes; then, apologetically, he explained:—

"It was only that I thought if you didn't have to clean so many of these things, you could maybe go to walk more—to-day, and other days, you know. You said—you didn't have time," he reminded her.

But Mrs. Holly only shook her head and sighed:—

"Well, well, never mind, little boy. I dare say you meant all right. You couldn't understand, of course."

And David, after another moment's wistful eyeing of the caressing fingers, turned about and wandered out onto the side porch. A minute later, having seated himself on the porch steps, he had taken from his pocket two small pieces of folded paper. And then, through tear-dimmed eyes, he read once more his father's letter.

"He said I mustn't grieve, for that would grieve him," murmured the boy, after a time, his eyes on the far-away hills. "And he said if I'd play, my mountains would come to me here, and I'd really be at home up there. He said in my violin were all those things I'm wanting—so bad!"

With a little choking breath, David tucked the note back into his pocket and reached for his violin.

Some time later, Mrs. Holly, dusting the chairs in the parlor, stopped her work, tiptoed to the door, and listened breathlessly. When she turned back, still later, to her work, her eyes were wet.

"I wonder why, when he plays, I always get to thinking of—John," she sighed to herself, as she picked up her dusting-cloth.

After supper that night, Simeon Holly and his wife again sat on the kitchen porch, resting from the labor of the day. Simeon's eyes were closed. His wife's were on the dim outlines of the shed, the barn, the road, or a passing horse and wagon. David, sitting on the steps, was watching the moon climb higher and higher above the tree-tops. After a time he slipped into the house and came out with his violin.

At the first long-drawn note of sweetness, Simeon Holly opened his eyes and sat up, sternlipped. But his wife laid a timid hand on his arm.

"Don't say anything, please," she entreated softly. "Let him play, just for to-night. He's lonesome—poor little fellow." And Simeon Holly, with a frowning shrug of his shoulders, sat back in his chair.

Later, it was Mrs. Holly herself who stopped the music by saying: "Come, David, it's bedtime for little boys. I'll go upstairs with you." And she led the way into the house and lighted the candle for him.

Upstairs, in the little room over the kitchen, David found himself once more alone. As before, the little yellow-white nightshirt lay over the chair-back; and as before, Mrs. Holly had brushed away a tear as she had placed it there. As before, too, the big four-posted bed loomed tall and formidable in the corner. But this time the coverlet and sheet were turned

(Continued on Page 14)

Twenty Thousand Grangers at Rochester

(Continued from Page 3)

come members of some cooperative organization so that they may avail themselves of its help. Although admitting that the Federal Marketing Act and the Farm Board are undoubtedly far from perfect, he emphasized the fact that it was the most important far-reaching farm legislation which had ever been passed. Vice-chairman Stone stated that he did not blame the grain dealers and others handling farm products for making all the profits they could, but in his opinion, the fact that these interests have been so bitterly opposed to the Federal Farm Board is good proof that the Board is really doing something to help producers get more for farm products.

Mr. Stone also called attention to the fact that the Federal Marketing Law is designed not only to take care of surplus production, but also to prevent it. He emphasized the necessity for balancing production so that it will more closely meet market demand.

Secretary Arthur W. Hyde of the U. S. Department of Agriculture, singled out surplus production and lack of adequate organization as the chief causes of current agricultural distress. "Many of us," said Secretary Hyde, "do not like the law of supply and demand and to some it appears to be a monstrous fiction created by buyers and dealers to beat down the price of farm commodities. But like it or not, there it is; nobody invented it. It is merely a statement of the way in which buyers and sellers have acted and will act when given conditions. It applies to every product of human toil from wheat to automobiles."

The Secretary pointed out that if one man owned all the wheat land in America he would undoubtedly cut production to meet demand. While the wheat land never will be owned by one man, the same problem faces every producer of wheat and, for that matter, every producer of any farm product. Although giving credit for work done by farmers' organizations, Secretary Hyde emphasized the fact that there is no one organization that can say, "Here is a body which speaks for most of the six million farmers in the United States, and which wields their collective power."

Governor Roosevelt, who arrived from Albany late in the afternoon, was driven on to the armory floor and spoke to a capacity crowd from his car. Although talking to a group which contained delegates from practically every state in the Union, he confined his remarks to New York State agriculture. He told those present of the activities of the New York State government, dating back to the selecting two years ago of an Agricultural Advisory Commission, composed of leading farmers and farm organization leaders, and headed by Henry Morgenthau, Jr., publisher of American Agriculturist. As a result of the recommendations of this Advisory Board, taxes on farm property have been equalized and greater state aid given for better schools and better roads. The Governor also explained at some length the work done by the state and the different City Departments of Health, in maintaining the New York City milk market for dairymen in the New York Milk Shed.

The Governor's remarks, however, were not confined to what has already been done. Looking into the future, the Governor made the following pledges:

- 1.—To continue the equalization of the tax on real property.
 - 2.—Extension of the good roads system.
 - 3.—To work for revision of the code looking toward modern town and county government.
 - 4.—To aid in reducing the wide spread between what the farmer gets for his product and what it brings in the market.
- It may sound a little like putting the cart before the horse, but yet some mention should certainly be made of

THE LONGEST FORWARD STEP IN MOTOR OIL

the new SOCONY MOTOR OIL

Perfected...proved... in every way

THIS is an announcement so important to every owner of farm equipment that we put aside all technical language and tell it to you in the simplest words.

We have produced the New Socony Motor Oil which gives you—to a greater degree than any other—what you want and should have in a motor oil . . . *full lubricating value*.

In the new Socony Motor Oil "full lubricating value" means something more than it ever has meant before. For we have perfected and proved for you not just one or two but *every characteristic* a motor oil should have.

Here are five reasons for changing today to the New Socony Motor Oil:

1. Perfected Lubrication. Less wear on your motor. The new Socony Motor Oil is made from a Paraffin Base crude, selected because of its greater inherent oiliness (adsorption). Exclusive New Socony Process gives additional lubricating value.

2. Minimum Oil Consumption. Will not break down. No engine heat or pressure severe enough to decompose this oil or destroy its lubricating value. Only through contamination by foreign matter which finds its way into the crankcase can the life of this oil be limited.

3. Easy Starting in Coldest Weather. Selected Paraffin Base oil . . . completely de-waxed. More fluid at low temperatures than any other oil. Instant lubrication. Less drain on your battery.

4. Fuel Economy and Increased Power. Maintains proper "body" at all engine temperatures. Result: perfect piston seal, maximum power, and minimum fuel consumption.

5. A Clean Motor. New refining process reduces to a minimum all harmful elements which cause carbon, gum and sludge. The new Socony Motor Oil insures a clean motor.

STANDARD OIL COMPANY OF NEW YORK

the program the first two days. We know that National Master Taber is very popular in New York State and no doubt he is just as popular in every state. His address of welcome at the opening session stressed the necessity of equality for agriculture. He emphasized the need for stabilization of values, a higher price level for farm commodities, a more justly distributed burden of taxation, the extension of the Federal Farm Loan system, and a readjustment of the nation's freight rate structure.

Our readers will be glad to know that New York State came through to win first prize in a lecturer's contest recently started by National Lecturer Farmer. The lecturer who won this honor was Mrs. R. E. Simmons of Copenhagen Grange in Lewis County. New Hampshire ran New York a hard race and came in second through the efforts of Mrs. Hazel L. Smith of Mon-

roe, New Hampshire. In fact, the Eastern States took the majority of prizes as Robert T. Shelton of Fairfield, Connecticut, took fourth and Mullward Patten of Tophon, Maine, took fifth.

At Thursday's session, leaders of cooperative farm organizations had a prominent place on the program. Those who talked were: C. A. Ewing, president, National Livestock Marketing Association; Fred H. Sexauer, president, Dairymen's League; C. E. Huff, president, Farmers' National Grain Corporation, and Howard E. Babcock, manager, the Grange League Federation Exchange.

As this is written, the Grange is still in session and will be for several days. The meetings, however, are for the transaction of National Grange business which will be reported in coming issues.

Not the least of the benefits secured

from attendance at such a meeting, are the old friendships renewed and the new ones made. Everyone talked to the person next to him and exchanged news and opinions on farm matters. Seldom, we believe, has a more orderly crowd been assembled. The City of Rochester opened its homes to its farm friends and we know that the thousands attending the Grange sessions conducted themselves in such a way that the City of Rochester will be glad to have them come back again at some future date.

Owners of forest plantations in New York state should familiarize themselves with the provisions of the Fisher Law.

* * *

With timber prices where they are now, it is poor economy to cut and sell the smaller trees which will double their own value in a few years.

Little Recipes for Little Cooks

by *Betty*

Lesson Number
Twenty-one

Would You Like to Get a Dinner for All the Family?

Betty Tells You How!

DEAR LITTLE COOKS:

Isn't it lots of fun to stir up something good for supper while mother gets everything else ready? But did you ever try getting a whole meal for the family ready, on time, all by yourself? Not so easy, I know, because I've tried. It's so easy to forget to start things in time, or get busy on one dish and forget all about the rest of the meal. It looks easy when mother does it but, O, my! it wasn't for me. But when I have practiced as long as mother it will be easier.

This time I am sending you a few recipes that will help you to know what to fix when mother is gone or sick and you have to cook.

I wish you lots of good luck with the first meal you prepare all by yourself.

With love to the little cooks,

BETTY.

Criss-Cross Potatoes

First wash and peel as many potatoes as you think will be needed for the meal. Cut each potato into long strips like pencils and put in cold water.

Boil these potatoes in salted water for five minutes. Then drain off the hot water. Grease, or butter, a baking dish with butter or bacon fat and put in the potato, laying the long finger-like pieces criss-cross each other to look neat and pretty. Pour melted butter over the top, using about one tablespoon to each potato. Sprinkle the top with paprika and bake till brown and crispy. It will take about 30 minutes in a hot oven.

Finely chopped parsley looks pretty sprinkled over before serving. A deep glass pie plate is good for these potatoes because it gives them more of a nice brown appearance than if you pile them in a deeper dish. This is a fine dish to serve with eggs, fish, or cold meat where there is no gravy.

If there are cold boiled potatoes all ready and I am in a hurry I just cut the cold potatoes into pencils and put them in a baking dish and pour over melted butter and bake them. They are almost as good as freshly cooked ones and lots easier for a little cook.

Delicious Baked Ham

I take a slice of smoked ham about one and one-half inches thick and trim off the rind and put the ham in a baking dish. If it is pretty salty, I put milk on to cover at first. Mother will know how salty it is.

After the ham has baked in the milk half an hour I pour off the milk and spread the ham

with a thick layer of—what do you suppose?—apple butter! Bake it slowly until tender, adding a little water and more apple butter if it seems dry before it gets tender. This is awfully good, but if you want something very special—for company maybe—it is nice to serve sweet potatoes with the ham.

Best-Ever Prune Pudding

Here is a fine recipe for a dessert when you are doing the cooking. It is good to eat, not expensive, and it is one you can get ready early and then you don't have to worry about dessert when you are busy with potatoes, meat, and vegetables.

Small Recipe

6 or 7 prunes.
½ cup cold water.
¼ cup sugar.
¼ inch piece cinnamon.
¼ cup + 2 tablespoons boiling water.
1½ tablespoons cornstarch.
¼ tablespoon lemon juice.
½ teaspoon lemon rind grated.

Large Recipe

½ lb. prunes.
2 cups cold water.
1 cup sugar.
1 inch stick of cinnamon.
1 ½ cups boiling water.
¼ cup cornstarch.
1 tablespoon lemon juice.
½ tablespoon lemon rind grated.

If there are no prunes cooked, I need to begin this pudding the night before. I pick over and wash the prunes and soak over night in the cold water. In the morning I cook them slowly in the same water they were soaked in. I cook them a long time till they are soft. Then I cool the prunes.

Next I take the pits or stones out of the prunes. I put the prune meat or pulp back in the juice and heat it again. I add boiling water and cinnamon and let this cook slowly on the stove while I grate the lemon rind and squeeze out the juice.

Now I measure the cornstarch and add just enough cold water so it will pour when I have it well mixed. I add the cornstarch and water very slowly because if I dumped it all in at once it would lump and I don't care for lumpy pudding or gravy. Really, about the only lumps I am really fond of is lump sugar.

So I add the cornstarch slowly and stir fast so it won't lump. When it has thickened and begins to look kind of clear it is ready to add the lemon rind and juice. Now cool and serve with whipped cream. You can add nuts at the very last, but it is good enough without.

Of course, you will want a vegetable in the meal you cook because they are so awfully important for

See This Cooker!

This is a waterless cooker, which means that a very small amount of water is needed when using this method of cooking. It has a very close-fitting lid and retains the heat well. For the same reason, very little of the flavor and food value escape. Fresh vegetables that contain natural water can be cooked most satisfactorily by this process. After the heat is regulated, the kettle needs very little watching. Do not confuse the waterless with the pressure cooker with which a very high temperature may be secured.

good health. Mother and our school nurse both say so, so I guess it must be so.

You can make a nice vegetable salad from cabbage shaved off very fine and raisins and peanuts. Have you tried that?

There are lots of nice creamed vegetables any little cook can fix if she knows how to make the cream or white sauce (Lesson 4).

It seems to me that most any little cook could get a whole meal now from the recipes in her scrapbook if she had them well practiced before she tried to do enough for a meal all at once.

One little cook wrote me the cutest letter. It seems they had no bread for supper so her mother made muffins and the little cook teased to make baking powder biscuits, so her mother let her. Now, here's the joke: the mother forgot the baking powder in her muffins and the little cook remembered it in her biscuits so hers were best. Don't forget the baking powder if YOU bake biscuits or muffins for a meal when mother goes away.

Sweet Potatoes

I wash as many sweet potatoes as I have people to serve and boil the potatoes in their jackets till they are nearly soft. Then I drain off the water and let them cool a little. Then when I can handle them I peel them and bake them a little. I sometimes put them around the ham in the baking dish if it is large enough to hold them.

I pour a little butter and sugar that I have melted together over the potatoes. About one tablespoon of sugar, one-half tablespoon of water and one-fourth tablespoon of butter is enough to melt for each sweet potato. Put on a little of the sweet syrup and let the potatoes brown and pretty soon add more syrup to keep them from getting dry.

Put the slice of ham in the center of the platter and arrange the "sweets" around it. A few sprigs of parsley will make it look all dressed up and pretty.

Betty never guesses. When the recipe calls for certain weights, she always gets the exact amount by using the household scales. To be sure of getting good results, she finds it always pays to follow the directions carefully.

Winter Decorations

Berries, Seed-pods, Trailing Vine or Branching Thorn Can Add Beauty to the House's Interior

WHETHER the home is a three room cottage or a mansion, plant decoration forms a very important part in it. Those darker corners of the living and dining rooms, the walls of the hall and bedrooms can all be lightened by just the right arrangement of flowers, berries, or vines. Especially during the winter months do we need this added brightness when the days are cold and so often dark and gloomy.

If it is the walls that are to give us cheer then we will need some of the little wall pockets, as they are called, from the five and ten cent stores. The china ones with softly blended colorings are best. Never the highly colored, oriental-looking ones as they detract from our leaves and berries.

Gather a few branches of evergreens, the pine, cedar, or balsam, (the hemlock foliage falls too quickly to be of

it, uniquely, with branches from the locust tree. Nothing more. The glossy dark thorns and twigs of the locust contrast with the silver linings of the milkweed pods. In gathering the locust care should be taken not to pierce the flesh with the thorns which are very sharp and sometimes poisonous. This arrangement should be placed in bowls or vases that have small openings at the top, never in flaring holders.

The Chinese lantern plant hardly needs an introduction. It is very beautiful alone or with other plants. Black is its favorite background although brown or bronze can be used.

Oftentimes we find low, square or round glass jars in the rubbish or cellar. These can be given a few coats of black paint and will serve for many of our flowers and plants.

The mountain ash combines nicely with the seed pods of the common ash. Then there are the cat tails of the low wet places. And another shrub that we use with milkweed, the Japanese barberry. In fact, there are so many trees and plants that lend themselves to us for winter that all we need for original combinations is a walk across the fields or along the roadsides. And two things to remember; let simplicity be the guide in arrangement and never cross Nature by placing her plants in unnatural positions.—E. C. R.

Typically French

2809

GIRL'S DRESS PATTERN NO. 2809 is modeled after the most popular French imports of the season with its brief yoke and beruffled trim. If one wishes to omit the ruffles, the edges may be picoté. Matching bloomers add another desirable feature. Cotton broadcloth, pique, percale, swiss, jersey or challis could be made most attractive in this pattern which cuts in sizes 2, 4 and 6 years. Size 4 requires 2½ yards of 39-inch material with ½ yard of 35-inch contrasting. PRICE, 15c.

use), and arrange about three branches to each wall pocket, letting the branches hang down against the wall. Place twigs of bitter-sweet or the black privet berries in the pocket letting them fall in natural positions. If the black privet berries are used, it will be well to add one or two branches of the dark red sumac. This adds richness and color.

The orange bitter-sweet is, in itself, a decoration. It may be used in any number of interesting and pleasing ways. It should never occupy a dignified vase or be combined with any of the stately plants. It is beautiful when allowed to twine naturally with ivy in a low green or bronze bowl, to trail over a plate of artificial or real fruit on the buffet or holiday table.

There are some very common plants that may be used in winter. The teasel is one, and, combined with sumac, will add greatly to the plan of any room. It should stand loosely in a medium-sized vase of pottery or metal, never in glass.

The milkweed, what possibilities it suggests, and in what numerous positions we may place it! Let us combine

Holiday Candies

Cracker-Jack

- 1½ quarts popped corn
- 1 cup brown sugar
- ½ cup molasses
- ¼ cup water
- ½ tablespoon vinegar
- 1 tablespoon butter
- ¼ teaspoon salt
- 2 cups shelled peanuts.

Pop the corn and remove all unpopped kernels. Have corn in a large pan so there will be plenty of room to stir it while pouring over the syrup. Boil the sugar, molasses and water to 270° or a hard ball. Add vinegar, butter and salt. Also add the peanuts which have been browned in the oven. Pour over the corn and mix well, then press into small oblong pans about 3 by 5 or 4 by 6 inches. Press very lightly so the corn is not broken. Makes 6 to 10 cakes, depending on the size.

Apricot Panoche

- 3 cups brown sugar
- 2/3 cup condensed milk
- 2/3 cup water
- 3 tablespoons white corn syrup
- 3 tablespoons butter
- ½ cup chopped dried apricots

Mix sugar, water, corn syrup and butter and boil to 230°. Add apricots and continue boiling to 234°. Cool, to 120°, and beat till creamy. Pour into buttered pans.

Cocoanut Burrs

- 1 cup dates
- 1 cup figs
- Moist Cocoanut

The dates and figs should be put through the food grinder. Moisten hands with cold water, then knead the mixture to a uniform mass. Shape into small acorn or burr shapes. Toast the cocoanut a golden brown in the oven, then roll each acorn or burr in it, until well coated.

Chocolate Caramels

- 1 cup corn syrup
- 2 cups sugar
- 3 squares chocolate
- 1 cup milk
- 1 teaspoon vanilla
- ½ cup butter
- 1 cup condensed milk

Mix together all but the vanilla and cook, stirring constantly, to the hard ball stage, 244°. Add vanilla and pour into buttered pan. Cool, mark, and cut into squares. Wrap in waxed paper.

Cream Caramels

- 1 cup walnuts
- 2 cups sugar
- 1 teaspoon vanilla
- 1 cup water
- 2 cups corn syrup
- ½ cup butter
- 1 cup condensed milk

Combine all but vanilla and nuts and cook to the hard ball stage, 244°,

stirring constantly to prevent burning. Add vanilla and chopped nuts and pour into a buttered pan. When cool mark into squares and when cold cut and wrap in waxed paper.

Peanut Butter Fudge

- 2 squares chocolate
- 1/3 cup peanut butter
- 1 tablespoon butter
- 2 cups sugar
- 1 tablespoon corn syrup
- ½ cup evaporated milk
- ¼ cup water

Melt chocolate, add peanut butter and butter and stir till smooth. Add sugar and corn syrup and milk mixed with water and cook to soft ball stage, 234°. Cool, beat till creamy and pour into a buttered pan. Cut in squares when cool.

Notes for Home Milliners

THE basque beret might be said to have influenced the entire trend of millinery this season. The newest hats (caps is more appropriate) grow tinier and tinier with more and more of the forehead exposed until the on-looker catches his breath with alarm each time one passes, so positive is he

Smart All-Day Frock

2805

FROCK PATTERN NO. 2805 with the puffs at the elbows introduces new interest in sleeves, while the circular fullness of the skirt is cleverly arranged to make the hips look slim. For all-day use canton crepe is much used, but if for more dressy occasions black chiffon velvet is more elegant. The pattern cuts in sizes 16, 18 years, 36, 38, 40 and 42 inches bust measure. Size 36 requires 4¼ yards of 39-inch material with ½ yard of 27-inch contrasting and 1¼ yards of ¾ inch edging. PRICE, 15c.

TO ORDER: Write name, address, pattern sizes and numbers clearly and correctly and inclose with correct remittance in stamps (do not send coin). Add 12c for one of the new fall and winter catalogs and address to Pattern Department, American Agriculturist, 10 N. Cherry St., Poughkeepsie, N. Y.

that at any minute it will slip off the back of the fair head.

However, there is a practicality to the new mode that cannot be denied. Anyone can have one, or two, for just a few pennies. Glance at your last year's felts and decide which one fits you best and will best match this year's costume. The crown must fit your head snugly without a lining, or it will not do for this type of hat. Cut the brim off and up over the forehead in front as high as is becoming to you. It is best to shape it over the forehead a little at a time. Now that it is cut, if the crown does not hug the forehead as it should, take two or three tiny tucks in the middle of the back. Next, run gros-grain ribbon in the same or a contrasting color about an inch in width, around the inside of the crown so that the barest bit of it shows beneath the edge, say one-eighth of an inch. By the way, when one sews on felt hats, the method is a tiny catching stitch on the outside and a long stitch inside, evenly spaced. Now, put your hat on; take another length of the same ribbon, place the middle of it at the middle of the edge in back and draw it around the hat on both sides tying it in a bow at the side front. The bow should be about three inches long, and should be placed just above the edge of the crown. Flatten the bow, spreading the loops, and tack the loops to the hat. Then tie another piece of ribbon, which may or may not be of a contrasting color, around the crown so that this bow rests just above the first bow, say, a half inch above. Tack the loops of this bow, and tack the two ribbons together to the crown at the edge in back. No lining is necessary for this type of hat.

If your felt is black, white ribbon around the inside of the hat, black for the first and lower bow and white again for the bow above would be very smart. Dark blue and white is also good, as are dark blue and pink, black and pink, brown and orange, green and yellow or dark green and light green, and any number of complementary combinations.

NOTE—In an early issue will be directions for a hat for the matron.

—C. V. S.

Health to All

SINCE 1907 the sale of Christmas seals has been the chief means of stamping out and controlling tuberculosis. The death rate from this disease has dropped from 178.5 per 100,000 population of 79.2 per 100,000

in 1928, more than a 50% drop. But even so, tuberculosis kills more people between the ages of 18 and 45 than any other disease.

It is to prevent further losses from this dread disease which prompts the National Tuberculosis Association to sell Christmas seals every year. The funds received in this manner go to provide open air classrooms, preventoria and health camps where the under-par children can be taught to make health a habit. Since tuberculosis is primarily a disease of youth, the efforts of the association are directed towards the safety of childhood.

Buy and use as many as possible of the Association's Merry Christmas seals. They are only a penny apiece, but pennies make dollars and the dollars do the work of the Association health program.

Just David

(Continued from Page 10)

back invitingly—Mrs. Holly had been much disturbed to find that David had slept on the floor the night before.

Once more, with his back carefully turned toward the impaled bugs and moths on the wall, David undressed himself. Then, before blowing out the candle, he went to the window kneeled down, and looked up at the moon through the trees.

David was sorely puzzled. He was beginning to wonder just what was to become of himself. His father had said that out in the world there was a beautiful work for him to do; but what was it? How was he to find it? Or how was he to do it if he did find it? And another thing; where was he to live? Could he stay where he was? It was not home, to be sure; but there was the little room over the kitchen where he might sleep, and there was the kind woman who smiled at him sometimes with the sad, far-away look in her eyes that somehow hurt. He would not like, now, to leave her—with daddy gone.

There were the gold-pieces, too; and concerning these David was equally puzzled. What should he do with them? He did not need them—the kind woman was giving him plenty of food, so that he did not have to go to the store and buy; and there was nothing else, apparently, that he could use them for. They were heavy, and disagreeable to carry; yet he did not like to throw them away, nor to let anybody know that he had them: he had been called a thief just for one little piece, and what would they say if they knew he had all those others?

David remembered now, suddenly, that his father had said to hide them—to hide them until he needed them. David was relieved at once. Why had he not thought of it before? He knew just the place, too—the little cupboard behind the chimney there in this very room! and with a satisfied sigh, David got to his feet, gathered all the little disks from his pockets, and tucked them well out of sight behind the piles of books on the cupboard shelves. There, too, he hid the watch; but the little miniature of the angel-mother he slipped back into one of his pockets.

HANDY ANDY Says "Here's How"

To Brighten Up the Home

By Ray Inman

Brighten your home life with a bright kitchen . . .

If kitchen has one ceiling light, use 100 watt bulb in a large opalescent globe.

A LIGHT CREAM TINT ON WALLS AND CEILING WILL BRIGHTEN ROOM AT LEAST 100 %

Add light over sink and table if possible

The Service Bureau

A Department Devoted to the Interests, Welfare and Protection of A. A. Readers

Subscribers Claim Misrepresentation

TWO subscribers from different sections of the state have written us practically identical letters of their experiences with the National Board of Trade of New York City. Both men report that an agent of the National Board of Trade called on them and asked for a list of delinquent accounts which was to be published in a "credit rating directory." Our subscribers claim they were promised a free copy of this credit rating directory if they would cooperate with the company and give them a list of delinquent accounts.

This was done and in a short time our subscribers learned that their creditors were getting dunning letters from the National Board of Trade. On writing to this concern both subscribers were informed that they had signed a contract giving the National Board of Trade the right to collect these debts.

We Are Glad to Help

I RECEIVED a check from _____ for \$6.60 for eggs shipped to New York in June. I had written four times on this claim but received no response. I send my sincere thanks for your help as I feel sure that without it I could never have collected this. I consider it a Christmas gift.

I am showing your letter to my friends and telling them of your excellent service, which, I hope, will help to boost your paper.

Both these men emphasize the fact that they had no intention of placing these accounts in the hands of any collection agency. We are mentioning this in order that our subscribers who may be in business will investigate very carefully before they put their names on any paper which has to do with accounts due them.

Right now we are getting an unusual number of complaints against collection agencies. It appears that some at least of these companies put out a contract which is very favorable to them, but not so favorable to the men for whom they are collecting. We also get stories now and then from men who have given accounts to collection agencies stating that they are unable to get any accounting from the agency as to how much they have collected.

The whole trouble in this case lies in the fact that the agent of the collection company tells one story but when it comes to a show down is court the name of our subscriber on a contract is the best evidence that the company can present. A subscriber may say that the agent told him this or that, but that is not likely to hold much weight in court when they can show his name on a contract. Do not sign anything that you have not read and do not understand.

How to Get Permission for a Cattle Pass

On our place it is necessary for us to turn cows across the road to another pasture. Because of the heavy motor traffic this is rather dangerous and inconvenient. Under what circumstances could we build an underpass under the road which is soon to be improved and who would stand the expense for this?

WE referred this letter to the Division of Highways, Department of Public Works who reply as follows:—

"Replying to your inquiry as to how to proceed to procure a cattle pass where a new road is being built, I have to say that if the highway is a town highway you should make written application to town superintendent for permission to build a passageway. The town superintendent with the consent of the town

board, may grant the permission therefor.

If the proposed passageway for a cattle pass is to be on a state or county highway you must obtain the permission of the county superintendent and the consent of the Superintendent of Public Works who will prescribe certain conditions and regulations for its construction.

The best way to go about this is to lay the matter before the district engineer, if the pass is to be on a state or county highway to be improved, and he will give the approximate cost for installing the cattle pass; and, if your application is granted and all conditions met by you, he will include it in the plans or arrange for its construction, at your expense, along with the whole improvement. If the highway is now being improved, the district engineer, upon request, will send a representative from his office to go on the ground with you and determine as to the best location for the pass, and give you an estimate of its approximate cost to you."

Putting Up "Trespass" Signs

TRESPASSING signs are all right but from the way a number of them are tacked on trees, I think it a good plan to call attention of your readers to a better method.

Some people just nail those signs on trees with roof nails and in a very short time the sign is lost, although the nails are still in the tree. They should be put on a board 12 or 13 inches square and then nailed on the tree. In this way the tree will not be damaged and the signs will last longer.

This may be out of season but it just came to my mind as I rode by a piece of woods the other day and saw fine trees with signs nailed on them.—F. L. K., New York.

A Central School Comes to Waterville

(Continued from Page 3)

doubtful compliments to the school teachers.

Just recently a Superintendent of Schools said to the parents, "Don't wait until you get mad to come to school. Go call on your youngsters' teachers before something has gone

Have You a Friend in This List ?

HERE is a list of claims paid to American Agriculturist subscribers in another county. For your information and to show you what a service we are giving to our readers, we plan to continue to print these lists for a few weeks.

If you live in Tioga County you doubtless know of several of those who have been protected against travel accident injuries at low cost.

Thrown from wagon—fractured rib	
Charles Meade, Newark Valley	30.00
Auto accident—fractured ankle	

wrong. Get acquainted with the members of the faculty," and to the teachers, similar advice was given.

And as to accomplishments, our Association was instrumental in securing a fine new central school building. It was through an educational campaign carried on at the Parent-Teacher meetings that the residents of village and farm became thoroughly acquainted with the central school proposition, and what it could accomplish. Would the new central district want a kindergarten? Should a school nurse be employed? These matters were discussed at the meetings and the information passed on to the Board of Education that they met the approval of this representative group.

The suggestion that a motion picture machine be purchased was made to the members of the Board and this piece of apparatus has become one of the most used in the entire school. Pictures of history, geography, and science classes are secured, as well as for the Parent-Teacher meetings, Girl Scouts, Firemen's meetings, Farmer organization meetings, etc.

Our Association has sponsored an entertainment course consisting of four numbers, a concert, and health talks for the school children. The latter are carried on through cooperation with the school nurse.

One object at the meetings for the present year is to acquaint the parents of the district with the new courses which have been introduced. The Agriculture Department, under its professor, will give a demonstration at one meeting. The Home Economics Department, under the supervision of the teacher in charge, will give another program; the school nurse, the kindergarten teacher and the athletic director will each have a turn.

The year is closed with an annual banquet at which the school athletic teams and the school orchestra are always honored guests.

Such is the work of this rural Parent-Teacher Association, which has become the one organization in the community where everyone can meet together for educational and recreational purposes.

To the objects listed by the State Congress of Parents and Teachers, our local group has added, "To become the center of educational and recreational activities for the farm and village people of the Waterville community."

What About Tomorrow?

What May Happen When All Move to the Cities

EDITOR'S NOTE—George Russell, famous in literary circles the world over, is a great Irish poet and philosopher. He has also had a leading part in organizing Irish farmers. Mr. Russell, whose pen name is AE, is now lecturing in America. The address on this page is similar to several delivered by him in various parts of this country. His theme is "If America is to endure, we must preserve our rural civilization." He is issuing a great challenge to America.

I HAVE come to your country to speak not only on poetry but on the building up of a rural civilization. You may wonder whether I, who come from the smallest state in the old world, could have anything wise or fitting to say on this to you who are citizens of the vastest and wealthiest state in the new world. My answer is, that in this size matters nothing. The small state may be regarded as laboratories, where principles can be applied and tested, and problems solved more swiftly than in great states. You may remember that in ancient Greece there were states no larger than an Irish county or an English shire, and it was there that the political wisdom of Europe was born and neither Plato nor Aristotle have ceased to be profound thinkers to our imagination.

Well, Ireland is so small a state that an

By GEORGE RUSSELL, (AE)

intelligent man can see all its important problems in relation to each other. And agriculture was our greatest problem. For the big cities in America and England were devouring our people. You may wonder what authority I have to speak upon a rural civilization. When I was last in your country I was speaking as a poet of my comrades in the Irish literary revival, and it is not customary to regard poets as wise counsellors upon economic problems. But in my country the poets have always been as much concerned about their country as about their art, and there was no important movement in my lifetime in which the poets did not play an important part. It was their part to give vision and imagination and warmth to movements which might otherwise have been dull and uninspiring.

I was for twenty-five years a colleague of Sir Horace Plunkett in his famous Agricultural Organization Society, which was the first body among the English speaking people to promote agricultural cooperation in a considered and scientific way.

You will remember

that economics has been known as the dismal science. Lest you should think I am impractical, I, who speak to you, have organized thousands of farmers into agricultural and dairy societies, and have drawn up rules for agricultural banks and organized scores of them, and by not one of these did any member ever lose a penny.

It was delightful to me to meet farmers, to be present at their committee meetings, and listen to the rich humor and practical wisdom with which they transacted their affairs. I was present at a committee meeting of an agricultural bank where a member had applied for a loan of five pounds to enable him to get a new suit of clothes. But by the rules money could only be lent for profitable or productive purposes, and the committee did not see how this young man could make a profit out of his suit of clothes and pay the society back. So, they called the man and questioned him, and he explained that there was a girl down the lane who had a tidy little farm of her

(Continued on Page 17)

A contrast in environments. Cities doubtless have their advantages, yet who of us would not prefer that our boys and girls have the advantages of wholesome, fresh food, pure air and sunshine, and the opportunity to roam the fields and have their own pets?

If you tried to lift
this *Shorthorn Bull*
with your foot!

EDELLYN FAVORITE, Grand Champion Shorthorn Bull, 1929 International (after a drawing made from a photograph).

Men's short brown boot: comes in knee to hip lengths

LIGHTER!
TOUGHER!

Men's 15-inch black Du Bois

Women's Zipper in swagger-tan

Men's four-buckle all-rubber gaiter

Goodrich

Rubber footwear for every member of the family
—another B. F. Goodrich Product

And yet the excess weight in ordinary boots makes you waste that much energy every day

THIS prize bull—Edellyn Favorite, Grand Champion Shorthorn at the 1929 International—tips the scales at 2,250 pounds . . .

Every day that you wear ordinary boots, you lift more than that much weight *with your feet!* The strain on your energy is the same whether you do it bit by bit or all at once—whether you drag too-heavy boots around, or try to lift that bull.

If your pair of Goodrich boots weighs only four ounces less than your former pair of ordinary boots, you save lifting 2,420 useless pounds in a single day! For you cover at least 5½ miles in a working day; you take at least 9,680 steps doing it. In ordinary boots, that means lifting at least 2,420 pounds unnecessarily.

Wear a pair of Goodrich boots! You will discover that they are not only *light* boots, but *tough* as well! The B. F. Goodrich Footwear Corporation, Watertown, Mass.

A Handful of Mail

Commends A.A. Yellowstone Tour

IN receiving my copy of the American Agriculturist today I was very much interested to read of the proposed tour to beautiful Yellowstone Park and it is because of that interest that I write you to commend and congratulate you in planning such a trip for your readers and to request of you to mail me whatever literature you may have on the trip. I, of course, do not know what the future has in store for me, nevertheless I intend making the trip with my wife if it is at all possible. I would also like to know what the rate of fare will be for a couple occupying a drawing-room in Pullman car. It is undoubtedly a fact that a great many of the A. A. readers have often times expressed a desire to make a trip to the West and to the nation's playground and only neglected doing so because of the many questions entertained regarding traveling, etc. and which could not be decided, as referred to in the A. A. But as it is, with everything being arranged for on the trip, I feel that a great many of us will make the trip, particularly those that have never been to the Park—and to those I will say—"Join the A. A. party on the trip to Yellowstone and you will not only fully enjoy your stay in the Park, but you will have a most pleasant time on the way."

Fare Is Reasonable

Add to this the reasonable rate of fare and the fact that everything in regard to travel will be taken care of and that the tour will be conducted to everyone's satisfaction. My wife and I had many times talked of making a trip to California and visiting some of the many places enroute, but years went past and still we merely talked about it. Finally two years ago I decided that we would go and after being assured by my wife that she could be ready in four days, I made reservations and on the fourth day we left on what really was the most wonderful trip we had ever experienced. We made several "stop-offs" and while I again say that the entire trip was a very pleasant one, the five and a half days at Yellowstone Park will never be forgotten. We have many pictures, taken by us, to act as a very cheerful reminder.

The meals and the various hotels in the Park are the very best, all that anyone can possibly eat and everything the very best. The Rangers and, as a matter of fact, all employees of the Park and hotels are of high class and certainly very polite and courteous. The help generally is high school and college students, teachers, etc. spending their vacation while working in the Park. The bears in the Park attract the attention of most people as they come from the woods to the road sides begging for sweets. These are the black and brown-faced bear of the one family, while further back in the woods one may see the grizzly, moose, elk, etc. One can have any questions answered, regarding animals, their habits, etc. or on anything in the Park by the Rangers, whose duty it is to do so.

It is my hope that as many readers as possible will take advantage of your

tour to the West with their cameras and enjoy nature as it produces in the Park, and during the long winter nights after the stock has been fed and supper dishes put away, pull the chairs up to the fireside and once again go over the trip to Yellowstone pointing to the pictures that were taken and I will wager that when A. A. again plans a trip we will all want to be No. 1 on the list of tourists.

With my kind wishes to you, I remain,
F. G., N. J.

EDITOR'S NOTE—Following our recent announcement that AMERICAN AGRICULTURIST would conduct a ten-day tour from New York State to the Yellowstone Park and return on August 1st next summer, we have received a large number of letters asking for more information. We are very glad to send pamphlets describing the trip in detail and pointing out all the interesting things that may be seen. You are under no obligations, of course, in asking for this information. Reservations do not have to be made yet. If you did not see the article describing the proposed trip, you will find it on the first page of the November 15th issue.

How We Solved the Fire Problem

OUR community has done a great deal to solve the rural fire hazard. New Berlin and vicinity have purchased the first rural fire truck to be owned in New York State, I believe. This consists of modern fire fighting apparatus mounted on a Ford A chassis. The booster tank holds eighty gallons and of course is always filled ready for use. There is two hundred feet of hose connected to the booster tank and the truck also carries eight hundred feet of two and one half inch hose to use in connection with the pumper which is three hundred gallons per minute.

Now to explain how this rural truck was purchased, is of interest. Some of the local firemen canvassed the outlying districts and asked for pledges to buy a fire truck for use at county and farm fires. Nearly all of the farmers and farm owners in the community for perhaps a radius of five miles subscribed and then collected to buy our rural fire truck at a cost of \$3500. Now when there is a fire in the country there is modern fire apparatus and volunteer firemen to go to do what they can to put out the fire and save other buildings nearby. The success of the equipment really depends on the water supply available. If there is a pond, river or brook nearby much can be done in saving buildings in case of fire. Since January 1st, the rural fire truck has been to 19 different fires. The truck is kept in the fire house with the village owned truck. Certain men are appointed as drivers for the rural truck by the village board the same as for the other truck.

Every community should have a rural fire truck I believe and the expense to the farmers is small in comparison to the amount of protection such service gives to farm buildings.

Here's hoping every community may have the needed protection against fire.

"Darn it, if one o' me big brothers was littler, or one o' me little brothers was bigger, maybe I'd get shoes 'round here that'd fit—almost!"—LIFE.

A Correspondence Course for Cows!

Orange County Dairymen Mail Milk Samples to State College

DOWN in Orange County, New York, there is a group of dairymen who have found a way of reducing production costs at least twenty-five cents per hundred pounds. This group of progressive dairymen have been religiously keeping these records on their individual cows now for over a year and are beginning to get results.

In order to find out more about this dairy record keeping work in Orange County, I decided to make a trip to Middletown. Upon arrival at the Erie Station, I inquired for the Farm Bureau office, because I have learned to know that when in search of any information concerning agriculture, the Farm Bureau is the place to head for. Upon arrival, I asked for Mr. Davis, the County Agent, and related the purpose of my visit. My first question was:

"What can you tell me about that system of dairy record keeping which is being carried on by many dairymen in this county? I have heard considerable about it."

"Well," Mr. Davis replied, "just come downstairs with me and I think you can get the whole story about this dairy record club which is being carried on in Orange County."

We went down one flight of stairs and at the bottom I saw a door upon which was lettered, "Orange County Dairy Record Club Laboratory." County Agent Davis lead the way in.

Inside, I saw a well arranged milk testing laboratory. There was a large thirty-six bottle electric Babcock test machine, test bottles, water baths, sink, drying ovens, and other mis-

By C. G. BRADT

cellaneous equipment. On the left were located two desks, a typewriter, and a calculating machine. I gained the impression at once that it was in this part of the laboratory where all the records were computed for the members of the club. I found out later that I was correct. Next, I was introduced to Mr. Ray Bender who is in charge of the laboratory and Mrs. Davis, his assistant. While at the record club laboratory, many questions came to my mind. The first was, "How does this record club operate and what

does the dairyman get in return for his membership?" Mr. Bender replied, going into detail regarding the whole set-up and operation of the service.

"In the first place," he said, "the dairyman joins the club for one year, paying six months in advance at the rate of twelve cents per cow per month. A minimum charge of \$1.20 per month is made. After enrollment the service is started at once unless the dairyman specifies a later time.

"After the member is enrolled, he is mailed a small wood box in which are a number of tin sample cans. If the dairyman has twelve cows, he is sent a box with twelve cans; if fifteen cows a box with fifteen cans. Also in the box is a report sheet, a stamped envelope in which to return the completed report to the laboratory, and an address sticker with return postage attached which the dairyman pastes on the outside of the box when he is ready to remail it back to the laboratory. The whole system is complete in every detail and arranged for the convenience of the dairyman.

"When this sample box arrives in the mail, the dairyman knows that it is time to weigh the milk from each cow in the herd and to take a sample of her milk. He does this both night and morning on but one day each month. He will also record the pounds of grain fed each cow, the per cent protein, and the price. The kind of roughage is also reported. All the equipment that the dairyman needs is a milk scale. All other things are

Janet Armstrong of St. Lawrence County and the Jersey calf that won sixth place at the National Dairy Show. Records are necessary in order to breed this kind of a calf.

The Progress of Rural Electrification

An Analysis of the Situation and a Suggested Program

By M. C. BURRITT

ON January 1, 1930, electric central station power was available to 53,060 of the 160,120 farms in the State of New York, according to the latest available estimates of the Empire State Gas & Electric Association. This means that not more than one-third of all our farms now have electric service.

Dr. G. F. Warren of Cornell University is sponsor for the statement that

"The time has come when all the farms in the moderately prosperous areas of this State need electric power. Electric light for barns, poultry houses, and the homes; power for household work, for operating milking machines, and for many other farm operations, is now essential. It seems probable that electric cooling of milk will become a general practice in the near future."

With this broad statement of an ideal, most of us will agree. Of course, we do not expect that electric power will be made instantaneously available to all. Ability to meet the necessary expenditure for building the lines and installing the equipment, and the necessity of utilizing the remaining useful life of present gas engine equipment, require time for adjustments. It seems to me, however, that we will achieve this ideal more rapidly and more completely with an adequate program upon the objectives of which we are in practical agreement and which the public agencies and the farm organizations concerned can unitedly support. It is such a program that I intend to propose.

We must deal with a multiplicity of conditions. There is a wide variation in electric rates. There

has been wide variation in the plans of extending lines to farms, but much progress has been made in this respect during the past year as a result of the initiative of Governor Roosevelt's Agricultural Advisory Commission, in discussing the matter and securing the cooperation of the

If You Are Interested in Electric Service

THE story on this page is a summary of an address given recently by M. C. Burritt, at a meeting of the Genesee Country Association. Mr. Burritt is well known to all readers of A.A. as our Western New York contributing editor, and a member of the New York State Public Service Commission.

There is so much interest in extending rural lines that we know you will be interested in what Mr. Burritt has to say. In giving the talk, Mr. Burritt emphasized the fact that inasmuch as the Public Service Commission has not taken definite action on the points he brought up, he was merely expressing his personal opinion about these matters.

If you are interested in getting electricity for your farms, do not fail to read Mr. Burritt's story. It will be continued in an early issue.

electric companies of the State. But there is still much opportunity for improvement in the direction of simplification and standardization of both extension plans and rates.

The merging of small local companies and the consolidation of groups of these operating companies into still larger units under a unified control, ought to result, and to a degree has resulted, in the simplification and the lowering of rates. I anticipate that we shall realize still further benefits from these mergers and consoli-

dations. Unless they are practically interpreted into improved service and rates satisfactory to the public it will be increasingly hard for the companies to justify them. Few consumers are likely to be satisfied with rates so complicated in form that they require an expert to explain their meaning and application. Nor will the majority of us be satisfied that the consolidations and mergers really affect the economies and efficiencies in operation and management claimed for them, unless early and substantial reductions in rates are the practical results of them. Simplified and lower rates are easily understood and constitute the best evidence of whether or not these latest developments in the public utility field are in the public interest.

The electric companies do not generally seem to realize the potential importance of the farm as a consuming unit for electricity. Heretofore, they seem to have regarded the farmer, generally, as a household user only, when in fact he uses electricity in production as well. Extension plans in the past appear to have been based solely on the number of customers, with no regard for their potential use of current. The possibilities of growth in average farm consumption of electricity are illustrated by data gathered by the New York State College of Agriculture, on 100 farms, in 1926, 1928, and 1929. In 1926 the average consumption was 609 kwh per farm; in 1928 these same 100 farmers increased their average kwh consumption to 967; and in 1929, to 1230 kwh. And there is a record of at least one farm in this state whose annual consumption approximates 12,000 kwh.

Although the consumption of electricity on farms has heretofore been but a small percent of the total consumption, it is clearly apparent that when practically all the farms are on service

Thought for the Week

THE day returns and brings us the petty round of irritating concerns and duties. Help us to play the man, help us to perform them with laughter and kind faces, let cheerfulness abound with industry. Give us to go blithely on our business all this day, bring us to our resting beds weary and content and undishonored, and grant us in the end the gift of sleep.—ROBERT LOUIS STEVENSON—*A Morning Prayer.*

Argument Over Long Island Potatoes

POTATO growers of Long Island are much concerned because the chain stores are buying potatoes from the West and from Prince Edward Island and selling them on Long Island right in the heart of one of the greatest potato regions in the world.

Our sympathies are, of course, with the farmers always on an issue of this kind. It does seem as if a great commercial concern doing a retail business in a farm community should give some thought, even at some inconvenience, to the welfare of the local community.

Yet there is, it seems to us, something for farmers to think about in this situation. We understand that one of the arguments given by chain store people as to why they import outside potatoes is that they are carefully graded to uniform size, and that is what the consumer wants. Now, looking at this from the consumer's standpoint, we know that this is so. Every housewife knows that either for baking or boiling, potatoes all of the same size are much better. Here again is another example of the constantly changing demands of consumers and the need of farmers of so adjusting their business as to give consumers what they want when they want it.

Cutting Off Our Noses

ONE of the troubles of American farming right now is caused by increased production of farm crops in Europe. For much of this increased competition, Americans are themselves to blame.

Take Russia, for example. For thousands of years the Russian peasants have farmed with crude tools and hand labor, little better than the methods of Moses' time. Then suddenly, the Soviet government imports millions of dollars worth of modern farm machinery from this country, hundreds of American mechanics to direct the operation of the machinery, and more hundreds of American scientists to help organize

Russia's new agriculture and apply scientific methods in farming. The natural result, of course, is more production which comes back to swamp the world's markets and to plague our farmers.

Russia has millions of fertile acres. It has more millions of the cheapest labor in the world. Add to this combination American machinery and brains to direct the machinery and to use new methods and what can we expect?

A press release on the desk as we write enthusiastically, reports a great importation of new tractors into the Nile Valley in Egypt. Every little while we read, too, about some party of agricultural scientists and professors off to Europe for a year or two to teach our competitors how to farm. This has been going on for years and is one reason why there is no export demand for wheat.

Feeding Straw to Horses

THIS is the beginning of the time of year when the average farm horse "eats his head off".

On thousands of farms, from now to spring, a horse eats more than he can earn during the rest of the year. How can these costs be cut down some?

One answer is, of course, the tractor, which costs nothing when it is not working, but horses must still be used to some extent on practically all eastern farms.

We are wondering if horses are not fed a little too well during the winter months. Some cost figures from Iowa show that one group of farmers fed each horse \$54 worth of grain, \$18 worth of hay and \$4 worth of pasture with only a limited amount of straw during the year. Another group fed only \$24 worth of hay and grain. During the working season these farmers turned their horses out nights and during the slack time the horses were fed chiefly on straw and cornstalks. Each group of farmers got about the same amount of work out of the horses, but it cost one group about \$48 a year more to keep each horse than it did the other.

A good many farmers take considerable pride in keeping their horses very fat and sleek. We are not advocating any starving process, of course, but is there not something to think about here in the way of cutting down expenses? Another suggestion is to keep horses warm in the winter time. Some time spent fixing up the stables so that they are above the freezing point may save a lot of feed which the horse has to burn up to keep warm.

Old Sayings in Your Neighborhood

IN every neighborhood there are from one to a dozen old slang sayings that have a certain meaning not recognized outside of the community. Wallaces' Farmer, a Standard Farm Paper, calls attention to the word "workbrittle", used in certain sections of Pennsylvania, which means "hands not idle" or "busy working". The meaning of this word was followed back and found to have originated in Warwickshire, England, as early as 1670.

Some time ago two good friends from Schoharie County—laughingly called each other "slughters" in the A. A. office. The term was new to us, but it seems it is a common one in Schoharie County, and means "poor white trash". It came originally from the name of a governor who was thoroughly detested by the people of Schoharie County and vicinity.

How many of you have heard the expression, "He kicked the bucket"? Nearly everyone knows what it means, but how did it get started? What connection has it with dying? Back in the neighborhood where the writer was raised there was a good old farmer who never believed in swearing, but he could put considerable emphasis on occasion into the expression, "ginger to grindstones". We have always remembered this because it seemed to be rather expressive, in spite of the fact that it has no particular meaning.

Where did the slang, "Not on your tintype"

originate, and "23, skiddoo", and dozens of others. We think it would be very interesting to have a lot of letters from our readers giving some of the old sayings that have been familiar to you since childhood, and if possible telling some of the history of these sayings. Let us hear from you. We will pay a dollar for every good letter on this subject that we can use.

The Farmer Buys at Retail and Sells at Wholesale

YESTERDAY we were in a little country village store when a farm woman came in and bought some supplies for her home. Every time, before purchasing an article, she asked the merchant the price of it, and of course had to pay the price without any question.

Last fall, I stood in the door of a freight car visiting with a dealer who was buying potatoes from farmers, and every time a farmer drove up with a load of potatoes, he asked the dealer what he was giving that day.

Right there in those two situations you have the chief trouble with the farm business today. It is a subject that has been talked about over and over, and one that is difficult to remedy, but real, lasting prosperity and practical farm relief will never come to the country until the farmer can at least put his own price on his product instead of asking the dealer, "What will you give?"

No other business in the world could have lasted so long on a system of buying all of the supplies at retail prices and selling all of the products at wholesale prices, with all of the prices both ways dictated by the other fellow.

A little progress is being made. Farmers are cooperating better than they used to, and this may be part of the answer. Certainly no one individual farmer is in position to put his own price on his product and get it. The only way he can do it is in cooperation with other farmers.

Another answer to the problem is more knowledge on the part of the farmers as to what the consumers want, and when they want it, so that the right product can be offered to the market at the right time. This brings in the question of storing the surplus and distributing the proper quantity of the product evenly throughout the year.

Some day we are going to wake up to the absurdity of our present marketing custom of farm products. If agriculture is to endure, Old Man Necessity will slowly but surely force farming into some kind of a system of orderly marketing.

Eastman's Chestnut

ONE of the best old scouts working for the farmers in New York State is Charles Taylor of Cornell University. Although Charlie is not so old, he has had a long and enviable record in agricultural work. He was a farm boy, a teacher of agriculture, a County Agent, Assistant County Agent Leader, and now he has charge of the short courses in agriculture given at the State College each winter. He is also responsible for the farm programs broadcast by Cornell Station WEAL.

Best of all, Charlie is a prince of good fellows, one whom we all like to see coming for a visit. His hobby is fishing. Did you ever notice that most chronic fishermen are good fellows? Well, the story goes that Charlie was on a fishing expedition for a little vacation in the Adirondacks. A stranger came along.

"Doing anything?" he asked.

"Doing anything", said Charlie. "Why, I caught forty bass out of this creek yesterday!"

"Say, do you know who I am?" inquired the stranger.

"No, can't say as I do."

"Well, I am the county fish and game warden."

Charlie did some quick thinking and after a moment's hesitation, he exclaimed, "Well, say, do you know who I am?"

"No. Who are you?"

"I am the biggest liar in Tompkins County!"

Notes from the Publisher's Farm

THE last of my 1930 apple crop has gone to market and has been sold. It has been my policy for the last five years to sell the whole crop at once and not speculate on future prices by putting apples in storage. I feel that the plan of selling my crop outright each year has proven,

HENRY MORGENTHAU JR., a private individual who is an expert in the distributing of fruit and produce handle my output.

I sold 2,504 bushels of No. 1 apples for \$2,904.40 and 7,070 bushels of No. 2 apples for \$6,174.00. The No. 2 grade were apples which had been damaged by hail.

I sold more cider apples this year than ever before as a lot of them were so badly injured by hail that they would not make even a No. 2 grade. I took to the cider mill 391,960 lbs. of cider apples which brought \$1,633.70. I do not think that I have to point out to our readers that I did not make any money in the apple business this year. The sad part of the story is that there would have been a handsome profit if it had not been for the hail storm.

* * *

I have been breeding registered Holsteins since 1916 and I must say that I got a real thrill when the yearly records came through this week for six cows, five of which are the daughters of FISHKILL SIR MAY HENGGERVELD DEKOL and the sixth cow is a full sister of Fishkill Sir May Hengerveld DeKol. Not only was Fishkill Sir May Hengerveld born and raised on my farm but every one of these six cows as well. I am listing below the records of these cows because it proves conclusively to me that it is possible through the consecutive use of a proven herd sire to build up a uniformly high producing herd:

Daughters of Fishkill Sir May Hengerveld DeKol

Fishkill Girl Colantha Sir May

At 2 yr. 7 mo. 16 da.
Milk 18,180.1 lbs.
Butter 823.9 lbs.—In 365 days.
Butterfat 3.6 % Class B.

Fishkill Steuben Aaggie Sir May

At 2 yr. 7 mo. 27 da.
Milk 17,670.0 lbs.
Butter 834.0 lbs.—In 365 days.
Butterfat 3.8 % Class B.

Fishkill Ulster Colantha DeKol

At 2 yr. 6 mo. 24 da.
Milk 14,558.4 lbs.
Butter 673.4 lbs.—In 365 days.
Butterfat 3.7 % Class B.

Fishkill May Clothilde Inka

At 3 yr. 3 mo. 19 da.
Milk 12,978.0 lbs.
Butter 669.3 lbs.—In 342 days.
Butterfat 4.1 % Class A.

Fishkill Cedar Hengerveld Inka

At 3 yr. 6 mo. 14 da.
Milk 18,356.5 lbs.
Butter 862.1 lbs.—In 365 days.
Butterfat 3.8 % Class A.

Full Sister of Fishkill Sir May Hengerveld DeKol

Fishkill May Segis DeKol

At 4 yr. 7 mo. 13 da.
Milk 19,232.8 lbs.
Butter 832.4 lbs.—In 365 days.
Butterfat 3.5 % Class B.

During the past twelve months we have been milking all of our test cows three times a day and we have found that we are getting approximately 30% more milk and butterfat from these cows than if we had milked them twice a day. I feel that in Fishkill Sir May Hengerveld DeKol we have really a great herd sire and I believe that after you have read the latest records of his five daughters and one full sister that you will agree with me. I want

to draw your particular attention to the butterfat test of these cows. You will note that they average well above 3½%. Practically all of my cows trace back to DUTCHLAND COLANTHA SIR INKA. His daughters were all low testers. By this I mean that they would test between 3% and 3.3%, so it seems that in Fishkill Sir May Hengerveld Dekol we have a bull which has the faculty of not only increasing the production of his daughters over their dams but the extremely rare power of having the butterfat percent of his daughters uniformly higher than their dams.

I have just received our herd summary from the Dairy Improvement Association for the year January 1929 to January 1930. We ran our herd in two parts—one part being a purebred Holstein herd and the other a purebred Jersey herd. Our Jersey herd consisting of 26 animals, averaged 6,469

lbs. of milk that tested on the average 5.15% of fat—equalling 333.2 lbs. of fat per animal for the year. Our Jerseys returned us \$6.07 per hundred pounds of milk. The value of their product was \$393. The cost of the feed was \$112. per cow and the income over the feed cost was \$281. per cow. Our feed cost per hundred pounds of milk was \$1.73.

Now let us compare this with our Holstein herd:—54 cows produced on an average for the year of 8,895 lbs. of milk that tested 3.53% of butterfat—equalling 314.5 lbs. of fat per cow for the year. The average return per hundred pounds of milk was \$4.31 and the total value of the product per cow was \$383. We gave each cow \$128. worth of feed, leaving an income over feed cost of \$255. per cow. Our feed cost per hundred pounds of milk was \$1.43.

It is interesting to note that our

Jerseys gave us \$1.76 more per hundred pounds of milk than did our Holsteins and that our Jerseys returned \$26. per cow more income over feed cost than did our Holsteins. Finally, due to the fact that our Holsteins produced 2,426 lbs. of milk more per year than our Jerseys we find the interesting fact that the cost of feed per hundred pounds of milk for our Holsteins was 30c per hundred pounds less than for our Jerseys.

It seems to me that any dairyman who expects to stay in business during these difficult times will find it necessary to have a real knowledge as to his cost of producing milk and the only way I know of getting facts and figures similar to those I have given above about my own herd, is for a dairyman to be a member of some kind of a Dairy testing and recording Association.

Henry Morgenthau Jr.

What Hard Times in the City Mean

By E. R. EASTMAN

dressed, and evidently very poor. She came in and shyly held out her hand in which was an old crumpled one dollar bill. "For the poor", she said, and while the father bowed low, she turned and hastily went away. It was the widow's mite.

"What kind of men", I asked, "are these who come seeking charity?"

"All kinds," said he. "Many are panhandlers and deadbeats, but there are also many men of character who never have asked for charity before, men who possibly have gone for days with no place to sleep and little to eat, and who are sadly under-clothed."

"Let me tell you the story of one of these," continued the father. A policeman found him leaning dejectedly against a post near but not in the bread line. The policeman began to talk with him and found that he was nothing but a child, only nineteen. He had tried but had failed to get work and for days had had little to eat. The policeman brought him to my study. "What can you do for this boy?" said he. Well, I found him a suit of underclothes, a pair of old but whole shoes, a suit of clothes, and a worn but warm overcoat.

"Now," I said to the boy, "go forth. Try to get work, but come back here when you are hungry and we will keep you alive."

"The boy left. A few days later he

showed up again a different person, eyes bright, body erect and shoulders back, a smile on his face.

"Father, I found some work," said he. "Now, thanks to you, everything is going to be all right."

As the father concluded the story there were tears in his eyes; a smile illumined his face. "Such experiences," he said simply, "bring me happiness and repay me for all the hard work and worry."

A day or so later I went down for a visit with W. T. Clemens, Secretary of the Social Welfare Committee of the Greater New York Federation of Churches, a group which, perhaps more than any other agency, has done more to help the unemployed get jobs and to take care of those who are destitute because of lack of work.

"We dislike to see too much publicity about the bread lines," said Mr. Clemens, "because they are the havens of the deadbeats. Whenever the bread lines are started, tramps and panhandlers from all over the country flock into the city to get the free handouts. The majority of the men in the line are not worthy of help. Unfortunately, there are some there, particularly in times like these, who do need help, so they have to be maintained."

"Our great problem, however, goes back of the bread lines. It is to take care of those worthy but destitute people who never would think of entering a bread line."

"There are in this city alone," continued Mr. Clemens, "probably at least 300,000 people without work, and of this number, at least 150,000 are destitute. To take care of these, especially the women and the children, is our problem and our job, and of course the best way to do this is to help them by putting them in a position to help themselves."

One could fill this paper with harrowing stories of literally thousands of city families who are now living in want and destitution. Many of these poor people had one wage earner, maybe earning \$25 a week in prosperous times. These families, often consisting of several children, live in small flats of two or three or four rooms heated with a small coal stove. There never was money enough to go around in good times. At present hundreds of these families do not have money to buy coal. Therefore there is no heat in their flats, and often not enough food for one good square meal a day. They have been taught to drink milk, but in recent months there has been no money to buy milk, one reason, incidentally, for the surplus.

The city of Yonkers where I live is generally regarded as a prosperous city, but I am informed that many children are now coming to school each day with no underclothes.

Mr. Clemens went on to outline for me what the churches cooperating with other welfare agencies are doing in the way of organizing employment

(Continued on Page 22)

At Your Doorstep

By DR. J. W. HOLLAND

The A. A. Philosopher

THE papers carry this story. A farmer at Moose Lake, Minnesota, started out to kill a deer. All day he tramped the bush in search of his quarry.

Dr. John W. Holland

At evening he returned tired and hungry, only to find that two hunters had killed a fine buck in his barnyard.

He said, "The next time I start out for a deer, I will look well to my own doorstep."

What a wealth of truth there is in such an incident.

A man in Oklahoma sold his "well-nigh worthless land", and moved to Texas to prospect for oil. A few years later he came back to Oklahoma in rags, to learn that a "big gusher" had been struck on his former farm.

John Howard Payne thought little of his home until he found himself lonely in a foreign land. Then he wrote the world's heart classic,—

"Home, Sweet Home."

Through the rosy haze of distance common things seem precious.

We are all richer than we know.

At our own doorsteps is the truest love that we shall ever know. The reciprocal affections of happy home-life do not need the housing of a mansion. So often when riches come in at the front door, love and contentment fly out at the back.

Not long ago a woman complained to me of what she supposed was trouble. Three children and a husband's meagre salary, constituted her cross. When she told me that they had never had to call a physician, that they owned their little home, that they loved each other, I told her that she was a millionaire and did not know it.

"Having therefore food and raiment let us therewith be content" is one of the wisest sayings in the Bible.

At our own Doorstep is our supreme chance at life. Not "off" somewhere, but beneath our own feet is where glory is. He who cannot find happiness where he is, will rarely find it elsewhere. The habit of looking far off for the blessings of God is the pursuit of a mirage. Rainbows have no pots of gold at their iridescent ends. Men find their pots of gold under the bows of their hat bands.

The Progress of Rural Electrification

(Continued from Page 3)

lines, and their household and farm consumption approximates its possibilities, that this percentage will be very materially increased—at least doubled. And the distribution of the load will make it very desirable business.

Progress Depends on Four Factors

Progress in reducing the costs and increasing the use of electricity on farms depends, I believe, upon four factors. These are:

1. The plan of extension of lines.
2. The rates and the form of rates.
3. The adequacy and cost of wiring of farm premises.
4. The purchase and use of electric appliances.

There are, of course, other factors which enter into the problem, to some of which I shall refer, but these four are, I believe, the vital ones. While the method of extension of the lines and the amount and form of the rates are important, from the standpoint of getting electricity actually used on farms and in farm homes, more depends at present, in my opinion, on the adequacy and the cost of wiring of premises and upon the purchase and use of electric appliances than upon the other two factors. I believe that I can show that this is true. I do not mean to minimize the need for better extension plans and rates. It is important and necessary that both cost less. But they are not now the principal factors limiting the use of electricity.

1. Extension of Electric Lines

Electric companies estimate the annual cost of owning and operating a rural line at from 18 per cent to 20 per cent of the cost of making the extension, so that it is obvious that the cost of the line enters largely into the price of electric current. The cost per consumer obviously depends on the density of the population on the line. The number of residences on country lines varies from two to six and averages about four customers per mile of line. In the past there have been many different plans for assessing and distributing these costs among the customers, most of which have been unsatisfactory and all of which have been expensive.

The Adirondack Plan

The so-called "Adirondack" plan, or modifications of it, has now been filed with the Public Service Commission in this state for, and is now available to practically 90 per cent of the state. This plan is simply a name for a standard line construction plan which results in a minimum charge of \$24 per month per mile as a revenue which must be guaranteed to the company by one or more individuals residing on each mile of line. Thus, for example, if there were only one customer on a mile of line under this plan he would have to guarantee the company \$24 per month. Four customers on a mile would have to guarantee \$6 each, or twelve customers, \$2 each, per month. Although this plan is not entirely satisfactory it is generally conceded to be the best plan available and should be the basis of any effort for improvement.

Advantages of the Plan

The principal advantages of the Adirondack plan are, that it is definite, simple in application, that it eliminates bargaining and barter, and that it requires no capital contribution on the part of the consumers. This latter has been a very objectionable feature of most of the extension plans in the past. The form of the plan also results in an effort on the part of the applicants to obtain as many consumers as possible on each extension. It further limits extensions, because those who have little chance of using more than \$1 worth of electric current per month, for example, would probably not want to make a minimum guarantee of \$2 or more per month. The plan also simplifies the problem of serving the isolated summer camp, which is a troublesome one in certain areas.

The Disadvantages

Great step in advance though it is, the Adirondack plan has certain disadvantages. Under it the company deals

with the applicant as an individual rather than as one of a group of consumers. It imposes a heavy burden on small consumers, or those whose monthly consumption is below the required minimum guarantee, but none at all on the large user whose monthly consumption is above the minimum guarantee.

The plan is also dependent on the number of users rather than on the potential use, and does not tend to stimulate large consumption per user. It does not favor the gradual development of the line. If all the possible consumers are not ready for service at any one time, those who do want service may not then be able to afford to build the line, and may buy home plants, which then makes it more difficult than ever for the group as a whole to get station service.

The Area Plan

These disadvantages have led to the consideration of the so-called area plan as a means of developing a more economical basis for the extension of lines for both the company and the consumers and as a more equitable arrangement. Such a plan would basically involve an extension or an expansion of the Adirondack plan over a much larger area than that served by the single line, and provide practically for serving all of the economic farm units within the proposed area. This plan was given consideration by a special committee of the last legislature and on its recommendation provision was made, among other things, for the study and development of Area plans by the Public Service Commission. Some of these area studies are now being made.

Under the Adirondack plan the more accessible and thickly populated areas are always developed first to the practical exclusion of the back and more sparsely settled areas, because of the fact that the larger the number of users per mile the less the minimum charge for each user. The effect of such a piecemeal development is to make it increasingly difficult for the poorer areas to get service. The cream having been skimmed off, the objection is now raised that further extensions are uneconomic.

Lighting Districts

One of the means which may be useful in working out a practical area plan is a possible modification of the so-called lighting district. Section 260 of the Town Law provides that the town board of a town, or the town boards of contiguous towns together, may establish one or more lighting districts for these towns, and that they may enter into contracts for the furnishing of power for lighting the highways. It is well known that many of these lighting districts have been established. It has been said of this law that it permits people to do something which they do not generally want to do in order to do something which they do want to do; in other words, many lighting districts are established in order to aid persons residing in those districts to get electric power lines built and available for private use and not really because they want the highways lighted. We have not been able to give sufficient thought to this matter to have definite suggestions to make at this time, but it might be possible by extension of the lighting district idea to use that as a means of encouraging the development of the area plan for the extension of electric lines.

Seed Potato Growers Adopt New Grades

THE New York Cooperative Seed Potato Association, composed of approximately 150 growers of Certified Blue Tag seed potatoes of all varieties, has grown to the point where it reaches out into most commercial potato sections where seed potatoes are bought. In meeting the demands for seed potatoes they have found that the buyers wanted something better than table stock grades when they buy certified seed at seed prices. To meet this demand they have adopted new grades which result in a more uniform seed potato than the former product which was graded according to U. S. No. 1.

The new grades consist of potatoes which have passed the field inspection requirements of the New York Seed Improvement Cooperative Association and consist of potatoes of one variety which are well shaped, free from blemishes and damage. Each of the different kinds of defects is explained explicitly in the grade so that the buyer and the grower who packs the seed each has a very clear understanding of what the potatoes are to be when packed under these grades. By this grade the buyer of certified seed gets a superior article, uniform in size, certified as to disease freedom, and a certainty that he has the best seed potato that can be grown.

This Association, whose trademark, is a "Blue Tag", also found that there was a demand for small size certified seed as well as the larger size which has heretofore been most popular. Therefore, the new grades call for a Blue Tag Fancy which meets all the grade requirements and is 2 inch minimum to 14 ounces maximum in size. The Blue Tag Standard size is also graded according to the new grade and consists of potatoes 1½ inch to 2 inch in diameter. Both these sizes are certified by the New York Seed Improvement Cooperative Association and graded as above indicated.

This is regarded by both the customers of the Association and the membership themselves as a great step in advance. The buyer is satisfied and a satisfied customer is the best advertisement. The grower of seed takes a great pleasure in his product and likes the idea of having the two sizes, both of which are certified. This step is going to result in a better reputation for Blue Tag Seed, satisfaction for all concerned, and an increase in volume and demand for Blue Tag seed potatoes.

Sunflowers Make Good As a Green Manure Crop

SUNFLOWERS are proving a highly satisfactory green manure crop in New Jersey. They are replacing stable manure on many of the market gardens in the New York metropolitan area, and have been found equally as satisfactory under all conditions.

In a three year test conducted by H. E. Harmon, agricultural agent of Essex County, sunflowers have out-yielded all other green manure crops that can be grown. In competition with sudan grass, buckwheat, soybeans and corn, the sunflower produced more humus than any of the others. It has been estimated that a crop of sunflowers, within six weeks of seeding is equivalent to 15 tons of good stable manure to the acre. This demonstration has been conducted on 19 farms in the county during the test period and similar results have been secured in each instance.

The Essex County area, where the sunflower has been tried out, is the center of a great suburban development, situated within a few miles of New York City, where farm land is worth from \$1,000 to \$4,000 an acre. In recent years, the market gardeners in this area have been finding it very difficult to secure a sufficient amount of stable manure to maintain the fertility of their soils, and they have been forced to turn to substitutes in the form of cover crops.

The sunflower has proven a double

blessing to the growers. It not only produces a large amount of humus in a short time, but it can be sown in the fields between crops and then plowed under without interfering with the usual crop rotation. The usual practice is to sow the sunflower seed at anytime between June 15 and August 28, depending on the time that the land can be spared. It is customary for the growers to take off a crop of spring lettuce, spinach, early beets or bunch onions. Then follows a few weeks when formerly the ground would be idle until it was time for the planting of the fall crop as celery, lettuce, carrots or spinach. It is during this period that the growers have turned to sunflowers for their green manure crop.

The seed is sown broadcast at the rate of one and one-half to two bushels per acre. The seed is usually harrowed

in the ground as the soil is mostly in a fairly loose condition, free from weeds or other grasses. Most of the growers are sowing ordinary poultry feeding sunflower seed. This grade has been found to germinate equally as well as the more expensive stocks on the market. Outside of the cost of sowing it has been found that the crop can be put in for less than \$5 an acre.

As Essex County is an intensive market garden area, and the growers usually keep the land busy throughout the season, and the sunflowers do not have a very long period to make a growth, some fields are plowed under within three weeks after planting while others are left for a six week period. It has been found that the sunflowers turned under at three weeks have made a growth of about 12 inches while those left for six weeks have stood 45 inches in height. County Agent Harmon, estimates that where the sunflowers are left for five weeks, the growth is equivalent to an application of 15 tons of stable manure to the acre, worth approximately \$75 at current prices.

So satisfactory has this plan proven that many growers are arranging to cover their farms at least once in every two years with the sunflower green manure crop and to discontinue the use of stable manure.

1931 Model Now Ready To Go!

INTERNATIONAL

The triple-combination body available for the new Six-Speed Special is easily converted from the 60-bushel grain box, shown here, to a flatbed platform, or a roomy stock rack.

« BRIEF FACTS »

Wheelbase: 136 inches
Rated Capacity: 1½ tons
Engine: Powerful and unusually economical
Clutch: Single dry-plate
Final Drive: Spiral bevel gear of the 2-speed type, providing, with the transmission speeds, 6 speeds forward and 2 reverse
Springs: Semi-elliptic front and rear. Auxiliary rear springs quarter elliptic
Brakes: 4-wheel mechanical

The new Six-Speed Special is sold and serviced by 161 Company-owned branches and dealers everywhere.

It's the NEW International SIX-SPEED SPECIAL

NOW we round out the new line of International Trucks by announcing an up-to-the minute Six-Speed Special.

In addition to retaining all the famous features of the original Six-Speed Special the new truck is finer in every way. Increased power, 1½-ton rating; smoother operation and handling; greater comfort for the driver; improvements throughout making for sturdiness and long life; and new, attractive design of hood, radiator and body that distinguishes all the models in the new International line.

The original Six-Speed Special gave the world something new in performance. Its 2-speed rear axle won the approval of truck users the world over. It was the first heavy-duty speed truck to offer six forward and two reverse speeds, providing instant speed for the hard, smooth roads or tremendous pulling power for tough going under full load.

If you need real cost-cutting economy and efficiency in your hauling, let the new Six-Speed Special handle your loads. Ask the nearest branch or dealer to demonstrate. Write for the "Six-Speed Special" folder.

Perfectly Balanced for Maximum Milk Production

"A way to turn low-price grains into high-grade rations" is the discovery of hundreds of eastern dairymen this year.

Faced with little market demand, they have found a more profitable way to turn their home grains into money. They have combined them with "Beacon 32" to balance them for profitable feeding. And they are getting more milk at a higher profit than they ever thought those grains could produce.

No other protein concentrate ever gave them such results. No ordinary mixture could. For "Beacon 32" is made with the same care, in the same scientific way as the famous Beacon 24% Dairy Ration.

"Beacon 32" was specially developed for mixing 50-50 with home grains to give a balanced, high-milk-producing ration. Used in this

way it provides exactly the right proportion of such concentrates as Linseed Oil Meal, Corn Distillers Grains, Cottonseed Meal, Soy Bean Oil Meal, Gluten Feed and Gluten Meal, in the most palatable and digestible form.

In short, Beacon "32" enables dairymen having home grains to:

1. Make a high milk-producing ration at low cost.
2. Get more milk per cow, at lower cost per quart.
3. Make a greater profit on their grain crop.

That is why so many eastern dairymen are now using "Beacon 32". If you have a supply of grain on hand that you want to make a profit on, order "Beacon 32" from your nearest Beacon dealer—or write us for his name and address.

Apple Pomace Gets Results

Mis one of the essentials for successful dairying. It is, therefore, very interesting to find a successful cow man who gets an average production from his herd of around nine thousand pounds but who grows practically no corn. Here is how he does it.

A year or two ago this man and his son who works with him, heard of feeding apple pomace and decided to try it out on a small scale. At first they fed only a little, but later learned that it might be fed up to fifty pounds a day, so they immediately increased the feeding up to this amount. The other day I was on this farm when the pomace was being fed. It had a rather strong, sour odor, but not much stronger than corn silage. The cows seemed to like the feed and cleaned it up thoroughly. At present, the entire herd is being fed about fifty pounds once a day and are also being given one feeding of pea vine silage.

The apple pomace costs nothing, except the drawing and there has been practically no time during the past year when it has been impossible to get a supply. It is not stored on the farm, but enough for a few days is drawn as needed. It seems to keep perfectly in a pile at the cider mill.

The pea vine silage costs this dairyman \$2.00 a ton, which he says is much cheaper than the cost of raising corn silage. It would be logical to ask how this farm is operated without raising corn. The answer is that most of the cultivated land is in alfalfa and sweet clover. The alfalfa is used for hay and the sweet clover for pasture. When it is necessary to plow up a piece it is put into cash crops and as a result, very little grain is grown on the place. This way of managing might not fit every farm, but it is making money for this dairyman.

How to Get More Out of Dairy Feed

DAIRYMEN are well aware that the cost of feed totals pretty close to one-half the entire cost of milk production. At the same time, it does not pay to skimp on the dairy ration so the problem revolves itself into ways of feeding a well balanced ration at as low a cost as possible.

Dairymen who are interested in lowering feed costs will find some valuable information in farmers' bulletin 1626 which can be obtained by writing to the Office of Publication, U. S. Department of Agriculture, Washington, D. C. The following are some of the conclusions about cattle feeding, found in the bulletin:

In planning the winter ration, provide at least one hay (legume preferred), one succulent, and a concentrate mixture containing three grains.

The order of feeding roughage, suc-

culents, and concentrates has no effect on milk production.

Feed concentrates as often as the cow is milked. Roughage and succulents may be fed twice a day.

Feeding concentrates wet has no advantage over feeding them dry.

Soak at one time only as much beet pulp as can be fed in 24 hours.

Cows will eat more of a coarse, stemmy hay if it is run through a cutter, although the digestibility of the feed is not affected. Grinding hay or other dry roughage does not pay.

There is no advantage in mixing ground roughages and ground concentrates except that a small quantity of ground roughage may be used to lighten a heavy ration of concentrates.

Corn fodder cut and treated with a converter, which changes some of the starch to sugar, has been found to possess no advantage over corn silage in cost, palatability, or quantity of milk produced.

Always feed highly flavored feeds just after milking. It is advisable also to do all the feeding at this time.

Immediately after a cow has calved, give her a small quantity of a warm bran mash.

Before feeding such feeds as root crops, potatoes and apples, run them through a feed chopper.

A cow not in good condition because of disease may be helped by a tonic. The tonic is a medicine and should be used as such. A healthy, well-fed cow needs a tonic no more than a healthy person needs medicine.

A Correspondence Course for Cows!

(Continued from Page 3)

furnished by the club, even the sample dipper and a book in which to file the completed reports."

Now what does the dairyman get in return? "In the first place," Mr. Bender said, "the dairyman will get milk and butterfat production records on every cow in his herd. He will know which are high testers and which are low testers. He will have a record of the grain consumed and the pounds of grain fed for each one hundred pounds of milk."

"These records, when carried along from month to month, will tell the dairyman which are his good cows and which his poor ones. The record club makes a splendid means of culling the boarder cow. These records will also assist him to feed economically according to production."

At the end of the year, I was told that each club member receives a herd summary record which gives the yearly records on the whole herd and also the record on the high cow and the low cow in the herd. The milk produced in the year is valued at an average price and the grain consumed by each cow is figured at a fair price. This difference between value of product and cost of grain will equal the return above grain cost.

Another important part of this series (Continued on Opposite Page)

Feed for HEALTH and you get PROFIT

LIKE spring pasture, Dried Molasses Beet Pulp is succulent and palatable. Dairy cows, beef cattle and sheep like its root-like flavor. It stimulates the flow of digestive juices and aids digestion of other feeds—it livens, invigorates, improves health, increases milk flow and brings rapid economical growth. It puts more money into your pocket!

REDUCES COST OF RATION

Replace some of the heavy feeds in your ration with the light and bulky Dried Molasses Beet Pulp. It's the great vegetable feed for all animals—the regular sugar beet after the extraction of sugar—all the nutritious vegetable tissues of the beet are retained. Present prices make it more than ever a profitable buy.

ORDER EARLY

Remember the demand by farmers who already know the value of Dried Molasses Beet Pulp is large and will pull heavily on early supplies—avoid disappointment and delay by ordering from your dealer now.

Shipments made direct from factory located nearest to buyer.

vice is the personal help and attention which each member receives. Mr. Bender plans to visit each member at least once a year and to discuss the club records with him. Monthly service letters giving valuable dairy hints are also sent each man.

"How many cows are now enrolled in the record club," I asked. "Two thousand sixty during the month of September," was the reply.

Couldn't this valuable service be extended to some of the surrounding counties providing, of course, that you were able to take care of it without interfering with the work in your county?"

"Yes," said Mr. Bender, "that is exactly what we are doing. We now have twenty members in Sullivan County, nine members in Delaware County, and three in Rockland County. The Farm Bureaus in these three counties are in charge of all enrollments in their respective counties. We merely do the work of testing and record-keeping. This cooperative plan is functioning very well and enrollments in these outside counties are growing from month to month."

"It seems to me," I said, "that since this record club is accomplishing so much in Orange and surrounding counties that the service should be extended to other counties of the state."

"That is exactly the plan. Already, another regional laboratory has been established at Gowanda, in Cattaraugus County, and another is under way at Ithaca. "I believe, in time," said Mr. Bender, "that other laboratories will be established in the North Country and in Eastern New York. With five of these regional laboratories located about the state, the dairy record club service will be made available to every New York State dairyman, no matter where he lives. What greater service could the Farm Bureaus and the State College render the dairy industry?"

Questions About Cleaning Solutions for Milking Machines

How frequently should the hypochlorite solution be renewed? What causes the solution to lose its strength?

A general rule which is sometimes given is that the solution should be changed once a week in cold weather and twice a week in warm weather. A hypochlorite solution gradually loses strength and this action takes place more rapidly when it is warm. Light also increases this depreciation so that the solution should at all times be kept covered and away from the light. Any organic matter which goes into the solution also causes it to lose strength rapidly, and consequently the jar in which the rubber parts are kept should be covered to keep out dirt and the milking machine parts should be clean before they go into the solution.

At what strength should commercial hypochlorite solutions be used in disinfecting rubber parts of milking machines?

The following method is given by Professor James Brew in a publication on cleaning and sterilization of milking machines, prepared for the New York State Department of Health:

"Divide the percentage of active chlorine in the sterilizer by the number of parts of chlorine per million parts of water desired in the solution, then multiply the quotient by 10,000. The product obtained indicates the number of ounces of water to be used for each ounce of sterilizer. Any other unit of weight can be substituted for the ounce. To illustrate: A solution is to be prepared which will have 50 parts of chlorine in 1 million parts of water, a commercial product being used which contains 2.5 per cent chlorine:

2.5 plus 50 equals .05.

.05 times 10,000 equals 500 (ounces of water to 1 ounce of sterilizer). Hence, to make a solution the strength of which is to be 50 parts of active chlorine in 1 million parts of water, from a sterilizer containing 2.5 per cent of active chlorine, it is necessary to use 1 ounce of the sterilizer to 500 ounces of water."

What strength hypochlorite solution should be used?

According to the regulations of the New York State Health Department the strength of a hypochlorite solution for milk containers or utensils other than bottles should be 100 parts of available chlorine per million parts of water.

LARRO Keeps Her Hitting On All Four...

Do you have any two or three teated cows in your herd?

A cow with a lost quarter or two can no more produce milk at a profit than a carbon-clogged motor can pull a car up a hill on two cylinders. **You've got to keep them hitting on "all four"!**

Variation in the cow's feed upsets her health—causes off-feed condition and constipation—results in **UDDER TROUBLE** and very often lost quarters.

Larro Dairy Ration is a protector of good udders for the same reason it is an unequalled milk producer. **Larro builds health that boosts production and holds it up.** Larro builds health that eliminates off-feed days, constipation and **UDDER TROUBLE.**

Larro Health and greater dairy profits are facts—facts that prove themselves wherever and whenever Larro is fed—for Larro is always the same, yesterday—today—tomorrow.

Put your cows on Larro! Keep them "hitting on all four" then—you'll get better results from every cow—and more profit.

Reviewing the Latest Eastern Markets

Milk Prices

Dairymen's League prices are based on milk testing 3.5%. Sheffield on the basis of 3%.

Class	Dairymen's League	Sheffield Producers
1 Fluid Milk	3.37	3.17
2 Fluid Cream		2.00
2A Fluid Cream	2.16	
2B Cond. Milk		
Soft Cheese	2.41	
3 Evap. Cond. Milk Powder		
Hard Cheese	2.00	1.80
4 Butter and American Cheese, Based on New York City Market quotations on butter and American Cheese.		

The Class 1 League price for October 1929 was \$3.42 for 3.5% milk and Sheffield's \$3.22 for 3%.

The above prices in each class are not the final prices the farmer receives. The final price received from the dealer is the result of weighted average.

Butter Fails to Regain One-Half Cent Loss

CREAMERY SALTED	Nov. 28, 1930	Nov. 21, 1930	Nov. 29, 1929
Higher than extra	34 1/2-35	35 1/2-36	43 3/4-44 1/2
Extra (92 sc.)	34		43
84-91 score	27 1/2-33	28	34 1/2-42
Lower Grades	26 1/2-27	27	27 1/2-31

With the opening of the last week in November, the butter market suffered another upset which caused a 1/2 cent loss on the price of extras. The market opened in an unsettled condition and presented a decidedly irregular tone, extremely variable due to the uncertainty in the immediate outlook. Buyers cannot be criticized for showing caution. No one knows which way the trade is going and therefore the only course to pursue is a hand to mouth policy. Statistically, the market is in a sound condition, but that has no bearing under the present circumstances. Business conditions in New York City are very unsatisfactory and they dominate the sentiment in the market infinitely more than statistics.

On Tuesday, November 25, the market continued unsettled although trade in fancy butter was reasonably good, due mainly to the fact the trade was taking on stock for the holiday. Although most of the buying was over by Tuesday P. M., nevertheless, trade continued reasonably good on Wednesday. The sudden turn to colder weather had a bolstering effect both in New York and Chicago. However, the recovery was not sufficient to revise prices on fresh goods. The improvement was more noticeable in the future market and Thursday, of course, was a closed holiday. Friday found the market well cleared of stocks and in some quarters top grades were short of requirements, which held prices full firm. Poultry shipments had taken precedent over butter and considerable of the latter was delayed in arriving. It is expected that this will be available very shortly and accordingly the trade deemed it unwise to force prices up, fearing another disastrous break.

As we go to press, the market is just fair. The demand is nothing more than ordinary as most of the buyers had stocked up pretty well on Monday and Tuesday for the balance of the week. Due to the fact that the late shipments are expected before the market opens on Monday, we look for no increase on the first day of December. If, by chance, storms develop and transportation is hindered, then we expect to see an upward revision.

The statistical condition of the market that we mentioned previously is worthy of note. Up to November 21, the four principal cities reported over seven million pounds less butter in storage than they had on hand at the same time last year. From November 14 to November 21 the out of storage movement in the four cities this year was approximately 500,000 pounds short of the out of storage movement during the same period last year.

Cheese Market Very Quiet

STATE FLATS	Nov. 28, 1930	Nov. 21, 1930	Nov. 29, 1929
Fresh Fancy	20	20 1/2	24
Fresh Average			23
Held Fancy			26
Held Average			23 1/2-24 1/2

The cheese market has been extremely quiet, especially on fresh goods. There is so little business transpiring that it is difficult to establish quotations. This gives the market a decidedly weaker trend, which is further emphasized by the fact that cheap replacements obtainable in the West give the market a slightly easier tone. The Western markets have been showing less strength of late. However, New York gets little or no fresh cheese from the West, being interested chiefly in early fall and summer

made goods. Well cured cheese is held with reasonable confidence. Fresh cheese is easily bought at concessions. It is only due to the fact that very little fresh cheese is arriving from upstate New York that prices hold as they do. Upstate producers will do well to hold their cheese and give it some curing before they send it to the Metropolis. A flood of fresh cheese in New York City would knock prices to "smithereens."

Gathered	33-47	33-50	50-63

The sudden turn to cold weather throughout the country has been a blessing to the egg market. Values have stiffened considerably, although as yet prices have not reached last week's level. The market opened on the 24th about 3 cents under the close of the week previous. Offerings of fresh eggs showed considerable increase and receivers showed a desire to move goods promptly. It was felt that after Tuesday buying would quiet down and that just before and after the holiday the market was going to register pain and agony.

On Tuesday, receipts continued liberal. The anxiety of the dealers was more apparent and their desire to clear fresh goods caused another slip in prices on practically all classifications. Even at the decline eggs did not move out any too readily. Supplies of large fresh whites were heavy from all sections. On Wednesday, the market showed a little more strength following the reports of a cold wave in the West. However, the reports did not entirely overcome the burdensome supply of fancy white eggs.

There was no business on Thursday, but on Friday, there was a considerable change in sentiment. New York suffered record low temperatures which continued on to the end of the week. In spite of the liberal supplies of fancy nearby eggs trade showed consistent improvement and the market closed firmer on nearbys. Whether or not there will be any improvement over the week-end remains to be seen. There are plenty of eggs available at the moment and for several moments to come. A prolonged cold spell will undoubtedly help the egg market. However, a prolonged cold spell will work untold suffering on thousands of people in the cities, where the unemployed are enduring untold hardships.

Statistically, the market is just a shade better than it was. On November 21, the ten cities making daily reports had slightly less than three million cases of eggs in storage, while a year ago at the same time the same cities reported somewhat over two million cases. From November 14 to November 21, the out of storage movement in the ten cities was approximately 25,000 cases in excess of the movement during the same period last year.

DUCKS, Nearby			
	18-25	18-23	20-28
GESE			
	18-25	15-16	21-22

The New York live poultry market is not as bad as some would have us believe. All lines of poultry moved well. Turkeys did especially good. Many in the trade attributed this to the fact that fancy roasting chickens in some cases brought more money than good quality turkeys. In talking with retailers and wholesalers on Wednesday evening, it appeared that the turkey market was pretty well cleaned up and it was said without fear of contradiction that the Christmas turkey market was going to see better prices. Some nearby turkeys reached over 40 cents on Wednesday, showing how strong the market wound up. The best price they brought on Tuesday was 38c for choice birds, while just fairly good stuff brought no better than 37c. In order

to bring top prices however, the birds had to show class.

Slaughter houses reported that turkeys, ducks and geese had excellent sale. Fowls and chickens did not move so readily and on Friday, the terminals reported slow sale of fowls and chickens. The extremely cold weather was expected to help the fowl market over the week end.

Express receipts are light and the demand was very selective on fowls. It is well that supplies are not heavy for the express market on colored fowls is closing weak, and Leghorns show a downward trend. The freight market is dominating the express market on chickens, which are slow. Capons are not moving well. It is a little too early for them and other lines of poultry offer more advantageous buying. Capons are at their best around New Years and a little thereafter.

The Thanksgiving market on poultry once more showed the demand for quality goods. It is not too soon to consider your Christmas market. If you have not a good local market communicate with some of the reliable receivers in New York City and let them know what you have. However, do not expect any money for ordinary produce. Holiday buyers do not wish it.

Fruits and Vegetables

The first touch of real winter bumped the apple market and improvement was experienced all along the line. Nice stock not only held firmer but prices advanced. As yet, ordinary stock is not bringing any more money but is moving out more freely. Pears are also selling well, offerings of which are light.

State cabbage is holding steady. The cold weather is going to make corned beef and cabbage a favorable dish and we would not be surprised to see prices show some improvement. Bulk cabbage from New York State closed at \$17 to \$20, with some Danish bringing \$22 to \$24.

The onion market was favored by the colder weather and prices show improvement. Store sales of Orange County yellows and reds range anywhere from 90c to \$1.50 per hundred.

The cold weather has practically finished the Jersey lettuce and spinach deals.

New York State celery is steady at \$1.50 to \$2.50 per crate. State hearts are bringing 90c to \$1.25 per dozen bunches.

Cold Weather Should Help Beans

The sudden change in the temperature should prove beneficial to the bean market which has been more or less in the doldrums for a long time. Demand has been very weak and most of the varieties have been showing a tendency to work downward. There has been some improvement in country prices on red kidneys, but up to this writing there has been no material change in the city market. Average Marrows are still bringing from \$6 to \$6.50, while Jumbos bring from \$7 to \$7.50. Common pea beans are worth only \$5, while choice stock brings up to \$5.75. Some Red Kidneys can be had for \$7.50 per hundred, while nice stock, grading choice, commands \$8.50. White Kidneys sell over the same range as Red Kidneys. It is hoped that bean soup will become popular as the winter advances.

Potatoes Show Improvement

Cold weather has stimulated the demand for potatoes and the market shows an upward trend. Maines in 150 pound sacks are bringing \$2.50 to \$2.75, while Long Islands are worth 25c more. Bulk goods per 180 pounds from Maine have been bringing \$2.90 to \$3.20, while Long Islands generally bring from \$3 to \$3.35. As yet there has been no pronounced improvement in the price levels, but we would say that the trend is toward higher levels.

Hay Market Quiet

There has been very little snap to the demand for hay this week. However, receipts have been extremely light which has been a distinct advantage to the market. Prices are no higher, but they show a much steadier tone. Straight timothy of which there is practically no No. 1, to speak of, has been bringing from \$22 to \$28 per ton. Very little hay has sold at \$28 because of its scarcity. Sample hay has been bringing from \$15 to \$20. Mixtures of grass or clover have been bringing from \$19 to \$25. Oat straw \$12, rye straw \$14. The indications are

that we are going to see another week of light supplies and if this continues we would not be surprised if values advanced before our next report.

Meats and Livestock

CATTLE—No Steers nor bulls on sale. Few cows strong to 25c higher. Good grades up to \$6.75. Common to medium \$4.00-5.50. Low cutters \$2.00-3.50.

VEALERS—In light supply, around 50c higher. Good to choice New York \$11.50-14.00. Medium \$8.00-11.00. Cull and common \$5.50-7.50.

HOGS—Around 25c higher. Choice 160 lbs. \$9.25. Good 260 lbs. \$8.15.

LAMBS—Lambs in light supply, 25c to 50c higher. Good New York lambs \$9.00. Medium \$7.00-8.50. Common throwouts \$5.50.

COUNTRY DRESSED CALVES—Receipts light to moderate all the week. Demand slow in early part improving at end and better and firmer feeling existing. Market steady. Fresh receipts per pound: Choice 14-15c; fair to good 12-14c; small to medium 9-12c.

COUNTRY DRESSED PIGS—Receipts light to moderate. Sales in small quantities only. Per pound: Roasting, 12-15 lbs. 22-24c; Pigs, 15-20 lbs. 18-20c; 22-30 lbs. 16-18c.

LIVE RABBITS—Fresh receipts moderate during the week. Demand slow all through with prices higher in early part only. Market weak. By the coop, 15-20c.

Stanek Wins Husking Championship

HUSKING corn is not exactly a lost art in New York State, although by far the greatest part of the crop now goes into the silo. We doubt, however, if there is a New York resident that could keep within hailing distance of Fred Stanek of Iowa, who has just won his third national corn husking championship. Out in the West they get just as enthusiastic over these husking championships as we do in the East over pitching horseshoes. Stanek at the recent contest husked 30.34 bushels of corn from the field in eighty minutes. This means that he had to husk forty-five ears of corn a minute or pretty close to an ear every second.

Say
no more—
I'm sold!

THAT'S what I told the chap who introduced me to pipe-joy, with a first load of P.A. I knew I was slipping the instant I opened the tidy red tin and got a full whiff of that tantalizing Prince Albert aroma. "If the taste is half as good as *that*," I said . . .

Half as good? It was cool as the wife's reminder of an anniversary—sweet as her smile when you prove you've remembered the date. Refreshing? Yes, sir! Mild and mellow

and long-burning, that's what it was. Was I sold? Ask me another!

As far as I'm concerned, Prince Albert is the world's greatest tobacco for pipes or roll-your-own. There must be millions of others who feel the same way about it, because P.A. is sure a world-beater, any way you figure it. On the word of a friend, get some P.A. this very day. Load-up and light-up . . . and learn the truth direct!

Here you are—TWO full ounces of downright pipe-joy.

PRINCE ALBERT
—the national joy-smoke!

"No work today...

the tractor has bunions!"

If your tractor wore boots, you would buy it the very best boots you could find. Just think what it would cost you in time wasted and repair charges if that tractor broke down right in the middle of the spring plowing.

But your feet are a lot more important pieces of farm machinery than your tractor. If your *feet* break down, *everything* stops. It's even painful to get out and feed the hogs, let alone doing a full day's work. And there isn't any service station that can do a quick repair job on a pair of broken-down feet.

So it's mighty important that you protect your feet—and nothing protects your feet against breakdowns like a fine

pair of boots. Good-fitting, comfortable boots help to prevent corns and bunions, chilblains and blisters, and many ordinary foot troubles.

**Rubber footwear for the entire family.
For work, dress and play.**

"U.S." Blue Ribbon Boots—The minute you slip on a pair you recognize the superior qualities—fit and comfort. Red uppers with white soles or Ebony black with white soles. Three lengths—knee, medium, hip.

"U.S." Blue Ribbon Walrus—(All-rubber arctic.) Try this one for that early morning cold weather work. You'll like it. Slips right over your leather shoe. Kicks off in a jiffy. Built to stand the hardest usage. Four, five or six buckles.

Style for the modern farm wife—Do you know that Paris style authorities have declared Gaytees the most stylish women's overshoes in the world? You'll be especially attracted by the many different colors and fabrics of Gaytees—there's one that will just match your coat.

Gaytees come in cloth or all rubber—in high or low uppers. Snap fastener, Kwik-glide fastener, or 4 buckles. Look for the name "Gaytees" in the shoe.

For Son and Daughter—Keds are the most popular canvas rubber-soled shoes in America. They give barefoot freedom—encouraging the feet to healthy growth—yet afford the protection you want. They are not "sneakers." They are the chosen shoe of star athletes because they are so comfortable and healthful for the feet. Recommended by physicians and gymnasts.

We know that. So, when we make a pair of "U.S." Blue Ribbon Boots, we start with the design of your feet. We mould these boots on special aluminum lasts that duplicate the shape of your right foot and your left foot. We build each boot, inch by inch and piece by piece, so that it will fit around your toes and instep and ankle like a glove. We leave plenty of room for free movement, but not enough to cause chafing. We put extra thickness at the wear-points, but we're careful about too much weight—we don't want your Blue Ribbon Boots to weigh you down. **The boot that's comfortable is the boot that fits!**

"U.S."

BLUE RIBBON

this Christmas own the radio praised by MARCONI

Senatore Guglielmo Marconi, the great scientist who invented radio, acclaims the new Radiola Super-Heterodyne as "a great advance in Radio."

In performance and price the new Radiolas are especially suited to the farm!

WHAT a useful, practical gift... not only affording glorious hours of home entertainment, but also home education for the young, helpful household hints for mother, weather forecasts, crop news, market reports and other business services for father! It's more than a musical instrument—it's a farm necessity!

What an amazing instrument—this new RCA Radiola Super-Heterodyne! So highly developed that Marconi himself, the inventor of radio, acclaims it "a great advance in radio reception."

So pure in tone, so alert in performance that it is indeed worthy to carry the greatest stamp of approval in radio—the RCA trademark, the symbol of the world's foremost radio organization. The new Radiola, with its remarkable power and performance, is an ideal instrument for rural homes located at great distances from broadcasting stations. It brings in even far-away stations, strong and clear, with life-like tone.

New Features—Low Prices!

What fascinating new features... models with the very latest electric phonograph... so you can have the pleasure of directing your own musical programs... home recording... so you can have the amusement of making "talkie" records of your own voice, or of radio programs you would like to hear again... remote control... so you can change stations from your easy chair... tone color control... so you can adjust tone quality to suit your own taste.

Only four Christmases ago, a Radiola Super-Heterodyne console cost \$570. Now, with all the great developments of the last four years, the model 80 illustrated comes to you for \$142.50, less Radiotrons.

Whether You Have Electric Service—or Not!

No matter where you live, RCA Radiola has an instrument to suit your needs. Four different models operate from light sockets. For battery operation we recommend the Radiola Model 22, a highly perfected Tuned Radio Frequency circuit.

Go to your nearest Radiola dealer. He's a dependable merchant selling the world's most dependable musical instrument—the Radiola. Hear the various Radiola models—and look for the RCA trademark on the dial. Insist on this guarantee of future satisfaction!

RCA

Radiola

SUPER-HETERODYNE

New RCA Radiola Super-Heterodyne Model 80—Screen grid—9 tuned circuits—magnified, illuminated tuning dial—improved volume control—local-distance switch—push-pull power amplifier—improved electrodynamic speaker—handsome walnut cabinet—\$142.50, less Radiotrons. Also de luxe model and Radiola with electric phonograph.

RCA Radiola Model 22—(Tuned Radio Frequency) operated by batteries—at a price all can afford! Screen-grid receiver for battery operation. With enclosed RCA loudspeaker. A wonderful value for the money. An excellent set for receiving your favorite station with amazing clearness and lifelike reproduction of tone. Beautiful cabinet.

We don't know just what kind of records you've been keeping this year or how you figure your costs but we urge you to make them as complete as possible. It's the only way to make sure you are eliminating all waste and making the greatest possible profits.

Here is a good example of how it helps to keep careful records. We know a couple of farmers in Ohio who live right across the road from each other. They both work about the same acreage and raise the same crops.

One of them is very progressive. He makes use of every modern method possible, and keeps accurate figures on everything he does. He knows what it costs to feed his cattle and what the return is when he sells them. In the fall, after corn-picking time, he knows exactly what every bushel costs—including seed, labor, tractor, fuel and oil, repairs, etc.

With such records in front of him he has been able every year to lower costs at some point or another. And the result is greater profit. It is evident too. He has a beautiful home and a new car—everything about his place looks prosperous.

But the farmer on the other side of the road was very much different, in spite of the fact that his land was just as good and he had just as much of it. He looked far from prosperous. We asked him how much it cost him to put in his corn. He looked puzzled for a moment. He had no records and finally made a couple of wild guesses that varied considerably. Well, it was no wonder he wasn't making money.

Naturally, we were interested in the lubricants these two farmers used in their tractors. Our more successful friend was using the highest quality oil he could buy. His cost records showed him that he saved money that way. You've probably guessed what his neighbor does. Yes, he buys low-priced, inferior oils. Since he keeps no records, it's only natural he should figure that he was saving money by purchasing oil at low prices. And yet he wondered why his tractor was such a wreck and had hardly enough power to pull a drag, let alone make a plow bite in. He was losing money on the operation of his tractor.

In this little story you have the exact

Do a thorough job of storing your tractor for the winter. It will add extra years of life.

reason why so many modern farmers use Mobiloil. They know, for instance, that Mobiloil holds its rich lubricating character right up to and beyond the 60-hour draining period. And during those 60 hours, Mobiloil does a *complete* lubricating job.

Mobiloil protects bearings, pistons and piston walls from wear. It does not cause excessive carbon deposits. It's no wonder farmers save money with Mobiloil when it accomplishes so much toward eliminating repair and overhauling costs.

Besides, Mobiloil helps the tractor develop more power, saves fuel and keeps it working like new over a longer period of years.

In Mobiloil, ALL the essential properties of a full duty oil are present and in correct proportion for your tractor engine.

These properties are: (1) **OILY CHARACTER**—provides moving parts with rich lubrication—and holds down wear; (2) **RESISTS HEAT**—lasts longer—keeps down oil consumption, and makes for economical use; (3) **CONTROLS CARBON**—keeps hard carbon deposits from piling up in your cylinders; (4) **OXIDATION CONTROL**—keeps oil systems from clogging, and valves from sticking and gumming.

Here's some information that may prove valuable for you to remember when it comes time to start the spring work.

This summer, some of our men traveled around over the southwest calling on farmers. They just stopped here, there and everywhere, looking into the transmissions of tractors. They found quite a few that were not in any too good condition because the farmer had been running the machine for two seasons, without cleaning out the transmission and putting in fresh oil.

It is really mighty important that you renew the oil in the transmission every season—*twice* a season if you use the machine a great deal.

For transmissions use Mobiloil "C" or Mobilgrease in the summer, and Mobiloil "CW" in the winter. They will protect the gears from wear and add extra years of life to the machine. Consult the Mobiloil Chart for the correct grade.

Applying the grease gun and turning down grease cups every day, during the busy season, is just another part of the good lubrication a tractor needs.

We've developed a grease for pressure

A black and white photograph of a man in a military-style uniform sitting at a desk, writing in a notebook with a fountain pen. An ink bottle is on the desk to his left.

The correct grades of Gargoyle Mobiloil for engine lubrication of prominent passenger cars, motor trucks and tractors are specified below. If your car is not listed here, see the complete Chart at your dealer's.

Follow winter recommendations when temperatures from 32°F. (Freezing) to 0°F. (Zero) prevail. Below zero use Gargoyle Mobiloil Arctic.

Farm News from New York

Milk Organizations Agree on New Schedule for Grade A Premiums

EVERY present or prospective producer of Grade A milk in the New York Milk Shed will be vitally interested in the action just taken by the Dairymen's League, the Sheffield Farms Producers, and the New York Milk Conference Board. This action consists of the adoption of a new schedule for premiums on Grade A milk designed to encourage the production of Grade A milk with a higher percentage of butterfat.

Let us for a moment review the situation which brought about this action. The consumer naturally expects a better milk when he buys Grade A than if he buys Grade B. One of the important things considered by the consumer when judging milk quality is the cream line. It is generally recognized that the cream line of Grade A milk is no better than for Grade B, the difference between the two grades at present consisting of different sanitary requirements in the production of the milk and a higher standard for bacteria content for Grade A milk.

Grade B Standards Have Been Raised

For the past several years the dairymen making Grade B milk have been asked to meet additional requirements in the way of sanitation which have raised the average quality of Grade B milk without comparable raises in requirements for Grade A, and which have also increased the cost of producing Grade B milk. Efforts made for some time past to increase the Grade A market have not met with marked success and a new schedule of Grade A premiums adopted will, it is believed, stimulate consumer demand for Grade A milk and at the same time give the producer a better price. For some time past, the production of Grade A milk has been increasing more rapidly than the demand for it.

The plan itself, which was submitted by a committee of the Conference Board, has been contemplated for more than a year. American Agriculturist has consistently taken the stand that the best way to get the kind of milk that the consumer wants at the time when he wants it, is to provide a price incentive to the producer. Briefly, the new scale of Grade A premiums gives to the producer who produces 3.5 per cent milk, the same premium for Grade A that he now gets. Those who produce milk with less than 3.5 per cent butterfat will receive less than their present premium, while those that produce better than the 3.5 per cent milk will receive a higher Grade A premium. In other words, the dairyman who produces milk higher than 3.5 per cent will receive more for Grade A milk than he does at present. The plan, by the way, goes into effect January 1.

After the first year of operation, the premium on milk testing less than 3.3 per cent will be reduced, providing a correspondingly greater incentive to the dairyman to produce Grade A milk with a higher butterfat content. The requirements as to bacteria, cooling, delivery, etc. will continue the same as they are at present. The adoption of the policy follows the fundamental principle of giving the market what it wants.

The Schedule

The following is the schedule of premiums as adopted by the three organizations and which will go into effect January 1.

Premium Schedule from July 1 to March 31			
Butterfat Test	1st Premium	2nd Premium	
	10,000 Or Less Bacteria	25,000 Or Less Bacteria	
3.0	.15	.05	
3.1	.20	.075	
3.2	.25	.10	
3.3	.30	.15	
3.4	.35	.20	
3.5	.40	.25	
3.6	.45	.30	
3.7	.50	.35	

Premium Schedule from April 1 to June 30

Premium Schedule from April 1 to June 30			
Butterfat Test	1st Premium	2nd Premium	
	10,000 Or Less Bacteria	25,000 Or Less Bacteria	
3.0	.05	.025	

3.1	.075	.05
3.2	.10	.05
3.3	.15	.075
3.4	.20	.10
3.5	.25	.15
3.6	.30	.20
3.7	.35	.25

After one year 3.3 milk and lower will receive 5c less premium. This applies only to 1st premium of the 9 months' period from July 1 to March 31.

Farm Organizations Back of Farm Board

THE position of the Federal Farm Board has been strengthened considerably by action taken at a recent meeting of the Senate Committee on Agriculture. We say this because those attending, including Senator Charles L. McNary of Oregon, Chairman of the Committee; L. J. Taber, Master of the National Grange; Sam Thompson, president of the American Farm Bureau Federation; C. E. Hough, representing the Farmers' Union, and Senator Burton Wheeler of Montana, made it clear that the Federal Farm Board has the backing of farm organizations and the Senate Committee on Agriculture.

Following the meeting of the Committee, it seems to be generally admitted, first, that farm organizations will not demand additional farm relief legislation during the coming short session of Congress, and second, that Congress will advance between \$150,000,000 and \$250,000,000 to aid the Farm Board in its present attempt to stabilize grain prices by market operation. In this connection, it has been pointed out by one observer that the present price which the Farm Board is trying to maintain, namely 76c a bushel, as approximately the same relation to world prices that the domestic price of wheat would have if the export debenture system, which has been consistently advocated by the Grange, were in effect. This might be construed as an argument

that the present system is working quite as well as the export debenture plan would.

Another important agreement reached was that something must be done to restrict the sale of grain futures, to transactions where the delivery of the actual grain is contemplated. Chairman Legge pointed out that sales on the Chicago wheat market alone last year amounted to twenty times the amount of the actual wheat produced in the United States. Eight hundred million bushels of wheat were produced and sixteen billion bushels were sold on the Chicago market. No definite recommendations were reported as to the method by which this control will be worked out.

A Chance for a Prize

OUR younger readers who are boys between the ages of twelve and nineteen, would perhaps be interested in joining The Fisher Body Craftsman's Guild. Entry blanks may be secured from any motor car dealer who sells cars equipped with Fisher Bodies. This Guild is supporting a contest with more than nine hundred awards to the total value of \$50,000, and including four university scholarships.

The program has been endorsed by Dan Beard, national commissioner of the Boy Scouts of America, and by vocational training instructors. A number of prominent men have also signified their approval by consenting to act on an honorary board of judges.

New Buffalo Market Completed

THE new Elk Street market at Buffalo was dedicated on November 29, with appropriate exercises. This new terminal has been built through cooperation of officers and directors of the Elk Street Market Corporation and the New York Central Railroad.

Recently, while talking with a number

of vegetable growers near Buffalo, they expressed regret that two market sites for Buffalo seem to be inevitable. In addition to the Elk Street market already mentioned, work is progressing rapidly on the new Clinton-Bailey market. It seems to be the consensus of opinion that both of them will not continue to be operated as farmers' markets. Right now it seems that the majority of producers are favoring the Clinton-Bailey site.

On the Air

THE farm programs of Station WGY at Schenectady become more interesting and valuable with each broadcast. As we have mentioned before, WGY has arranged this fall to have speakers of no little standing in the agricultural world, and their messages are without exception filled with helpful information for those confronted with rural and farm problems. We urge you to tune in every Wednesday noon on Station WGY.

At that time, AMERICAN AGRICULTURIST presents up-to-date farm news, and a farm question box is conducted by E. W. Mitchell. The guest speakers, outstanding in agriculture, that Station WGY has secured are:

Edward H. Thomson, president of the Federal Land Bank at Springfield, on "Financing the Farmer Through the Federal Land Bank at Springfield", on December 15th.

Kenneth A. Howlett, a farmer of Orleans County, who will speak on December 22nd on the subject, "A Progressive Farmer's New Year's Resolution."

Other speakers will be Dean Mann of the New York State College of Agriculture; Henry Morgenthau, publisher of AMERICAN AGRICULTURIST and Chairman of Governor Roosevelt's Agricultural Advisory Commission; and Honorable Arthur M. Hyde, secretary of the U. S. Department of Agriculture. The dates and subjects of these speakers will be published later. Tune in on WGY.

New York County Notes

GENESEE COUNTY—This fine Indian summer weather is greatly appreciated. We have had a fine fall and there is a great deal to be thankful for. Because of the dry weather, a light winter is predicted. A great many wells are dry. There is a great movement throughout the county to give help to the unemployed.

A regional achievement meeting of the members of 4-H Clubs of Oakfield, Bethany, Alabama, and Batavia was held November 19, at the Batavia Court House. Professor R. M. Adams of the vegetable gardening department of the New York State College of Agriculture, was the principal speaker and John Walker, County Club Agent, awarded certificates and achievement pins to about forty members. The prizes awarded exhibits were: Potatoes, 1st Robert Shearer, 2nd Donald Bowman, 3rd Thomas Neth; rope halter and broom holder, Arnold Cranston; bird house, Phillip Cranston, and towels, Jennie Cranston. Two members of each county were elected members of the Genesee County 4-H Council. Those elected were: Arnold and Jennie Cranston, Alabama; Elizabeth Sharp, and George Eggers, Jr., Oakfield; Elsie Gallup and Robert Shearer, Bethany; Thomas Neth and Ethel Whitcomb, Batavia. Fall plowing is still going on and farmers are busy hauling their winter's supply of wood. The Oakfield High School is closed for two weeks because of an epidemic of scarlet fever.—MRS. R. E. G.

TIOGA COUNTY—Over one hundred Grangers from this county were in Rochester on the 13th and 14th to take the seventh degree. The many Granges in this county are a big aid to farmers in many ways. The four new bridges being erected in the town of Owego are nearing completion. The fair weather has hastened the work considerably. No rain of any amount in weeks or months; streams and river (Susquehanna) very low. Many springs and wells are dry or nearly so. Many are drawing water from the creeks for the home and barn supply. If winter sets in without soaking rains it will be a calamity. Farm work has progressed rapidly as no stormy days have retarded it. Everybody busy as suppers, amusements, and meetings of various varieties fill the time.—MRS. C. A. B.

National Grange Takes Action on Resolutions

ONE of the last items of business of the sixty-fourth session of the National Grange at Rochester, was action on the many resolutions presented for consideration. We are unable to give a full report of every resolution and a discussion of it, but the following are some of those that seem to be most important to our readers. In addition to passing a resolution recommending a complete study of the tax situation by the National Grange, that body placed itself on record for taxation based on ability to pay, and also adopted a report of a committee on taxation headed by A. S. Goss of Oregon. This report said in part:

"We would especially emphasize the belief that real estate cannot and should not bear the ever increasing burden of the cost of government."

Three phases of the tax situation were mentioned in the report. First, the expenditure of money. The necessity of constant vigilance to prevent extravagance was emphasized and budget laws recommended as one of the best methods of control. Second, the method of raising money, which it was stated, should be based on ability to pay or benefit received. Third, administration of laws. In this connection, it was stated that good administration depends upon the vigilance of taxpayers in electing honest and capable citizens to office.

For Rural Electrification

Another resolution approved of the plan for the development of rural electrification, and declared for public development and operation of water power when public regulation fails to accomplish its purpose.

The Federal Farm Loan system came in for some attention. A committee on cooperation from Kansas reported that our Federal Farm Loan system is the greatest cooperative financial system in the world, but that two conditions have developed which

were not foreseen by the framers of the act. First, the recent speculation in stocks resulted in such a drain on funds that no money has been available for investment in farm loan bonds at interest rates permitted under the law. The second complication is the effect on the law of the depression. The committee made the following recommendations:

1. A substantial revolving fund for purchasing land bank bonds during periods of depression, such bonds to be sold when the market is favorable.
2. Some sort of reserve to carry foreclosed farms over periods of depression and avoid dumping them on a depressed market.
3. A greater spread than one per cent on certain classes of loans.
4. A more liberal policy in defining the farm unit.
5. The committee favored clarifying the double liability of stockholders and an increase in the reserve of local associations.

Stand on Prohibition

Two resolutions expressed the stand of the National Grange on temperance and prohibition. The first put the Grange on record to the effect that the prohibition laws should not be tampered with until some better practical plan for the control of the liquor traffic is brought forward. The second resolution says, "We vigorously oppose all efforts to nullify our existing laws. The National Grange reaffirms its stand in support of temperance and we demand strict enforcement of the Eighteenth Amendment and all laws supporting it."

National Master Taber gave those attending a final word when he emphasized the necessity of leadership. The National Master stated that he believed the National Grange should continue its policy of blazing the trail rather than to follow on behind the program of some other organization.

New Jersey Egg Auctions Meeting Opposition

NEW JERSEY'S two egg auction markets are now at the cross-roads of their existence. Both have been in operation for several months, and both have attained unusual success. It is estimated that as a result of selling eggs over the auction block, the producers have realized close to \$10,000 more than if they had sent the same eggs to the highest priced stores in New York.

At the present time, both auctions are going strong and they are realizing top prices on practically all of the eggs that are offered. There has not been a week since the auctions have been started that they have not received higher prices than prevailed in New York, with the producer being saved the cost of shipping to market.

In the face of these successful records and the added profits that the producers have been receiving, there are certain forces at work in both the Toms River and the Flemington areas, that would delight in tearing down these recently developed markets. There are certain producers, as well as dealers or egg buyers, who are undertaking to undermine the organizations that have been built up for the protection of the local producers.

There are poultrymen in both sections who are playing directly into the hands of those certain dealers who are offering poultrymen a premium of one or two cents per dozen above the New York price for their eggs in an effort to keep them off of the auction. It has also been brought out that some dealers are intimidating the producers by making statements that the auction will not be able to handle the supply of eggs when the spring surplus comes in April and May.

Conceding that there could be such a thing, the egg producers who are listening to the words of advice from these unscrupulous dealers who are circulating these unfounded reports, should look for a minute at the other picture that has been created by the auction markets. There has developed another outlet besides New York that will pay just as high, or higher, prices than this great distributing center. Today, Flemington and Toms River have taken a lead and are outselling New York.

Keeping in mind the fact that many buyers are driving fifty miles and paying higher premiums than they would be compelled to pay in the Greenwich Street market, there is ample evidence that they will continue to pay top prices even in periods of peak supplies.

Then the producers who sell over the auction market are selling a product that is graded according to State Standards, and which are packed better than eggs from any competing district. A dealer who once buys the New Jersey standard-packed eggs, will never go back to average grades as long as the quality is kept at existing levels.

In the spring, the hatcheries will take the surplus eggs from both Flemington and Toms River. It will be recalled that in last week's American Agriculturist, James Wiesel, Frenchtown, stated that 40,000,000 eggs go to the hatcheries every year.

A final achievement of the egg auction is the fact that producers who sell on the market are receiving three to five cents above the top New York price, while before the market was opened they were doing well if they received within five cents of the top.

To one who has been in close touch with the egg auctions in New Jersey, and who has witnessed the buyers of farm produce in New York and Philadelphia at close range, the situation in the auction districts where opposition has developed, saddens one's heart. These egg auctions represent just another step in the farmer control of his products, and it shortens the route by just that amount from the farm to the table. The extra five to ten cents between what the farmer now receives over what he was formerly paid, represents profits that the middleman demands and for a service that the producer can render and in that way receive a larger share of the consumer's dollar.—AMOS KIRBY.

Buy yourself a New Dress

with the extra egg money

That's just one hint of what you can buy with extra money from your chickens. Even with a small flock you can soon make enough extra money to buy yourself a dress if you follow our advice. And the additional profit from a large flock will buy not merely a dress, but a number of extra things for yourself or your family.

Get More Eggs by Feeding Pearl Grit

You will be surprised to find how easy it is to get extra eggs—dozens of them a month—from your flock. Simply place Pearl Grit in boxes and hoppers where your chickens can eat what they want. Do this now. In the winter fowls need Pearl Grit most of all. It's also the time when extra eggs pay best.

Pearl Grit is made from the whitest, purest limestone into pearly pebbles that fowls find attractive and eat readily. It gives them both the grinding material and the lime they need in natural form.

Ask for this Book

Read our free book, "The Poultry Raiser's Pay Envelope." Write us for it today. And get Pearl Grit from your dealer. It comes in 10-lb. boxes and 100-lb. sacks. If your dealer doesn't have it, we'll see that you get a supply. For the sake of extra egg money, start feeding Pearl Grit at once.

What About Tomorrow?

(Continued from Page 1)

But by the rules money could only be lent for profitable or productive purposes, and the committee did not see how this young man could make a profit out of his suit of clothes and pay the society back. So, they called the man and questioned him, and he explained that there was a girl down the lane who had a tidy little farm of her own, and he thought if he had a new suit of clothes he could blarney this girl into marrying him. Rural wisdom considered his case and decided, wisely I think, that if the girl would not have him in the old suit of clothes she would not have him in the new. I never met more sincere, natural and kind people than the small farmer in my own country, with rich humor and even poetry in their minds. One small farmer whom I met while I was on an organizing tour almost made me forget my work, which was to take him and his friends and make them into good business men. He was in his shirt sleeves leaning on a spade, and he began to talk to me out of the folk imagination. He told me of an enchanted city under the Bureen Hills in Galway and of lights over the fairy myths, and of a vision he had of Queen Mreave, the queen of the western host of faery, whom he called the Beauty of all Beauty, and I was so moved that I forgot for the time all about my duty of making him a business man, for he brought me back to my other business of poetry, and I made this poem about him, which I call The Gates of the Mountain:

*It's a lonely road through bogland to
the lake of Carromore,
And a sleeper there lies dreaming
where the water laps the shore
Though the moth wings of the twilight
in their purples are unfurled,
Yet his sleep is filled with music
by the masters of the world.*

*There's a hand as white as silver that
is fondling with his hair,
There are glimmering feet of sun-
shine that are dancing by him
there.*

*And half open lips of fairy that were
died a faery red
In their revels where the hazel
tree its holy cluster shed.*

*"Come away", the red lips whispered,
"all the world is weary now,
'Tis the twilight of the ages and it's
time to quit the plow
O the very sunlight's weary ere it
lightens up the dew,
And its gold is changed and faded
before it falls to you."*

*Though your Coleen's heart be tender,
a tenderer heart is here
What's the starlight in her glances
when the stars are shining clear,
Who would kiss the fading shadow
when the flower face glows
above,
'Tis the beauty of all beauty that is
calling for your love.*

*O the great gates of the mountain have
opened once again,
And the sound of song and dancing
falls upon the ears of men.
And the land of youth lies gleaming,
flushed with rainbow light and
mirth.
And the old enchantment lingers in the
honey heart of earth.*

You'll notice how I was traitor for the time to my work, and while the outer man was brim full of economic information, the inner man was thinking of fair land and was crying out passionately "Tis the twilight of the ages and it's time to quit the plow."

Now, to turn from my country to yours; I have been frightened as a human being by the exodus of the rural population to the cities which have sprung up so magically in half a century. There was nothing like the modern city in the ancient world. The capital of the ancient Roman Empire had not a greater population than a million people or thereabouts. In the ancient world travel was difficult, dangerous and expensive. The world outside the village was full of vague

perils. The countryman was often serf or slave, and even if oppressed, he could not leave the land. And he was oppressed.

Civilization has always been a flare-up on a few square miles of brick and mortar. Outside the great cities, except for the villas of the wealthy or a percentage of strong farmers, there has always been this depression, apathy and ignorance of the finer things of life. I have no doubt Babylon was a mighty city, but I cannot imagine any Babylonian grandeur in the heart of the farmer. Most probably under the whip of an overseer he was growing grapes to make the Babylonian king drunk.

Even in the middle ages the world was not known fully and geographers would put on their maps when they knew nothing about the place "Here be dragons" or "Here be Lions". Then came the discovery of the steam engine, and when the railway ran along the land and the swift steamer across the sea, the long pent up disgust of the countryman with his lot broke out and the rural exodus began. This is likely to affect you more dangerously than the nations in the ancestor continents, for you have achieved a greater mobility in your civilization than the world has known before. But what is it leading you to?

Rural Civilization Necessary

In the last ten years 4,000,000 people have left the land in the United States. 19,000,000 acres have gone out of cultivation and 76,000 farms have ceased to exist as farms. One of your economists says that 20% of your population are now on the farms, 15% is enough to produce all the food that is required, 10% properly educated could do it. Yet those who remain produce more than ever before. The agricultural engineer and the agricultural scientist came to the aid of the depressed farmer. They acted like the elephant of myth who saw the motherless chickens and said "I will be a mother to the poor little things" and lie down upon them. The survivors of their tenderness are really able to produce more, but what is going to happen to your civilization if this process goes on?

If 90% of your people live in big cities and only 10% on the land, I believe that must be a peril to life, to the quality of your humanity. Humanity is like that ancient giant Antaeus, who drew strength from touching the earth. In London I was told that only one Londoner of the 4th generation was known. I met him, a creature of aches and ailments since his birth. I looked with terror on the shrunken anaemic and bloodless population, the third generation of factory works about Lancashire. For I could find in those shrivelled forms no likeness to that noble Adam, the Father of all humanity, which Michael Angelo painted on the roof of the Sistine Chapel. And it maddens one to think that man, the immortal, the divine, about whom so many prophecies were made, could retrograde to the brute in foeted slum, or mirky alley where the devil hath his many mansions, where thousands of families live each in one room, where no function of the body can be concealed.

The Devil Exacts His Price

Doctors have told me that many of these slums are so overrun with vermin that the only condition on which a man or a woman could purchase sleep was that they were drugged with drink. The psalmist says, "The Lord gives sleep to his beloved". But in these dark city slums men and women must pay the devil his price for a little of the peace of God.

You do not fear this fate. At present your cities are teeming with vitality because they are fed from the yet unexhausted countryside and by the sturdy peasantries of the old world. But what is to happen to you if only 10% remain on the land, and in two or three generations more of these

(Continued on Page 22)

Make it! Taste it! Compare!

See what a difference Calumet's Double-Action makes

Want proof? Want to know why Calumet is the most popular baking powder in the world? . . . the favorite baking powder of millions of women?

Just make a Calumet cake—you'll see! You'll see the difference Calumet's Double-Action makes. New delicacy of texture! Extra tenderness! Superb flavor!

Calumet brings this extraordinary success to baking because it acts *twice*—not just *once*! The first action, which begins in the mixing bowl, starts the leavening. Then, in the oven, a second action begins. It continues the leavening. Up! . . . up! . . . it keeps raising the batter and holds it high and light. Cakes, muffins, quick breads bake beautifully, even though you may not be able to regulate your oven temperature with utmost accuracy.

All baking powders are required by law to be made of pure, wholesome ingredients. But not all are alike in their action nor in the amount that should be used. And not all will give equally fine results in baking. Calumet is scientifically made of exactly the right ingredients, in exactly the right proportions to produce perfect leavening action—Double-Action!

Try Calumet. Try it confidently—even if you're a beginner you'll have marvelous luck. Remember to use only *one* level teaspoon of Calumet to each cup of sifted flour. This is the usual Calumet proportion and should be followed for best results—a splendid economy which the perfect efficiency of Calumet's leavening action makes possible . . . Get the wonderful new Calumet Baking Book. Mail coupon NOW.

CALUMET

The Double-Acting Baking Powder

A Product of General Foods Corporation

© 1930 G. F. CORP.

1st ACTION 2nd ACTION

MAKE THIS TEST

Naturally, when baking, you can't see how Calumet's Double-Action works inside the dough or batter to make it rise. But, by making this simple demonstration with Calumet Baking Powder and water in a glass, you can see clearly how Calumet acts twice to make your baking better. Put two level teaspoons of Calumet into a glass, add two teaspoons of water, stir rapidly five times and remove the spoon. The tiny, fine bubbles will rise slowly, half filling the glass. This is Calumet's first action—the action that Calumet specially provides to take place in the mixing bowl when you add liquid to your dry ingredients.

After the mixture has entirely stopped rising, stand the glass in a pan of hot water on the stove. In a moment, a second rising will start and continue until the mixture reaches the top of the glass. This is Calumet's second action—the action that Calumet holds in reserve to take place in the heat of your oven. Make this test to-day. See Calumet's Double-Action which protects your baking from failure.

To End a Cough In a Hurry, Mix This at Home

To end a stubborn cough quickly, it is important to soothe and heal the inflamed membranes, get rid of the germs and also to aid the system inwardly to help throw off the trouble.

For these purposes, here is a home-made medicine, far better than anything you could buy at 3 times the cost. From any druggist, get 2½ ounces of Pinex. Pour this into a pint bottle, and add plain granulated sugar syrup or strained honey to fill up the pint. This takes but a moment, and makes a remedy so effective that you will never do without, once you have used it. Keeps perfectly, and children like it.

This simple remedy does three necessary things. First, it loosens the germ-laden phlegm. Second, it soothes away the inflammation. Third, it is absorbed into the blood, where it acts directly on the bronchial tubes. This explains why it brings such quick relief, even in the severe bronchial coughs which follow cold epidemics.

Pinex is a highly concentrated compound of genuine Norway Pine, containing the active agent of creosote, in a refined, palatable form, and known as one of the greatest healing agents for severe coughs, chest colds and bronchial troubles.

Do not accept a substitute for Pinex. It is guaranteed to give prompt relief or money refunded.

If You Give Money

Pride Need Not Be Hurt if Money is Presented Tactfully

If one so desires, money may be given as a Christmas remembrance without offense to the receiver. There are many ways of doing this.

One old lady who loved to knit was given a pound of yarn neatly wound into balls one Christmas. Upon using the yarn she found a crisp bill in the center of each ball!

If one is clever at sketching, a "picture" of a Christmas tree, or any

in one afternoon of movies" and "Mix contents with a shopping trip" are good "prescriptions."—MABELLE ROBERT.

Living the Golden Rule

GOLDEN Rule Week has grown out of Golden Rule Sunday, the benefits of which were first applied to orphaned children of Bible lands from whence came the Golden Rule precept. But it has grown so that now it is not limited by time or space. The time has been designated as December 7 to 14, a week instead of Sunday alone, so that public schools, service clubs, and business agencies could take part as well as the Sunday schools and churches. Each is

This is the Ashford School in Cattaraugus County which won the \$10.00 prize given by American Agriculturist in the recent Rural School Beautification Contest under the auspices of the Home Bureau Federation.

kind of a tree or plant, may be drawn upon good quality drawing paper. Get shiny dimes or any other coins, for amount you wish to give, and attach them to the picture so that they appear as either decorations or fruit. Pack paper flat between cardboards or frame it without glass in a "ten-cent store" frame. A drop of mucilage or glue will hold each coin in place, yet allow easy removal.

A woman desiring to give money to a friend, yet not wanting to appear offensive about it, bought a book she knew the friend would enjoy. The book had several illustrations. The woman placed a bill at each of these and using a tiny bit of "stick-em", fastened the tissue around the edges to make an "envelope" for the money. The illustrations were not marred for the pages scarcely showed where the tissue had been fastened down, so carefully was this done.

The tree idea can be carried out in other ways than by sketching; a tiny tree or a branch may be set into a pot or basket, or a potted plant may be used to bear the shining fruit which

RAG DOLLS C121 TO C124 will be most acceptable to the children for Christmas, being something very different from any they have had before. They come stamped on bright colored, fade-proof material in following colors and sizes: No. C121 Circus Queen, 9x16 inches, tangerine; No. C122, Clown, 9x16 inches, is yellow; No. C123, Kitty, 12x16 inches, rose; No. C124, Rex, 12x16 inches, blue. Cotton batting or rags may be used to fill. Price, each 25c. Floss for one, 15c; for two or even for four, 25c. Order from Embroidery Department, American Agriculturist, 10 North Cherry St., Poughkeepsie, N. Y.

asked for a minimum gift of the difference in cost of a frugal Golden Rule dinner and the usual bountiful Sunday dinner. Wherever there is a local Golden Rule committee in the church or in any other organization, this money goes to them and they forward it to the Golden Rule Foundation, Lincoln Building, 60 E. 42nd Street, New York City. If there is no local committee, individual contributions can be sent direct to the Foundation.

None of the funds go for expenses, but all are used for the type of work the donor wishes, for organizations, for institutions, for charity, or for any worthy object recommended by the Foundation's committee on Research, Information and Survey. The 200,000 malnourished school children in Porto Rico have been helped by the Foundation and their only nourishing meal of the day, the school lunch, has largely depended upon such assistance. The National Child Welfare Association of China cabled, "Five thousand famine children dying daily." Fifty-three similar calls from twenty different countries were answered through Golden Rule Sunday gifts last year.

Cure the Christmas Cake

THE Christmas fruit cake made several weeks before the holiday season saves time for the house wife and gives the cake time to blend and develop a good flavor, according to the New York state college of home economics. It should be stored tightly covered in a cool dry place, and several clean, sound apples should be placed in the container to keep it moist.

A pound of butter is creamed thoroughly as the first step in making the fruit cake recommended by the college, and to this is added, mixing thoroughly, one and one-quarter pounds of brown

sugar. Ten beaten egg yolks, and the grated rind of two oranges and one lemon should then be turned into the butter and sugar, and stirred in carefully. One-half teaspoon of soda should be stirred into a cup of molasses, until foamy, and this mixture, with one cup of black coffee and the juice of the oranges and lemon, are added to the other ingredients alternately with one

Turtle Pillow or Door Stop

Here is a chubby green turtle. His oilcloth body is shaped to make him high enough for a stool, a rather thick pillow or a door stop. All of the top parts are jade green and all underneath parts bright yellow, of excellent quality oilcloth. Darker green yarn blanket stitching finishes the edges with running-stitch markings for the shell. The turtle is 19 inches long from nose to tail tip and about 11 inches broad. There are no eyes; he's really inoffensive and the most lovable thing in turtles that we have seen. Stamped oilcloth, green and yellow is number 664X and includes enough dark green thread to complete. Price for all materials is only 50 cents.

We also have an oilcloth Frog, number 244, that provides all stamped materials and thread for 50 cents.

M664X STAMPED OILCLOTH AND THREAD FOR TURTLE.....50 CENTS
Order from Embroidery Dept., American Agriculturist, 10 N. Cherry St., Poughkeepsie, N. Y.

pound of flour. Sift together and add another half-teaspoon of soda, one teaspoon of salt, one of cloves, and two each of cinnamon, mace, and nutmeg. Cut one glass of tart jelly into small pieces and stir into the mixture. The jelly need not be mixed thoroughly with the ingredients.

Three pounds of raisins and currants should be washed, drained and dried, and one pound of citron cut in thin strips.

This fruit should be thoroughly mixed with one cup of flour. This mixture is next added gradually with the flour, and when all ingredients are thoroughly combined, fold in the stiffly beaten whites of ten eggs.

This recipe makes about fifteen pounds of cake, which may be baked in one large pan or in several small ones. Pans should be lined, bottom and sides, with three sheets of greased paper. If made into one large cake, steam for four hours and then bake for one hour in a slow oven (250°). The cakes may be baked without steaming. Many people prefer the heavier crust which is the result of a long slow baking. Let the cake cool in the pan, but place the pan on a rack.

TINTED "COACH" PILLOW NO. B5447 comes stamped on peach-colored rayon taffeta with floss and foundation for working included. This is something new and very attractive in the line of pillows. Price \$1.10 each. Order from Embroidery Department, American Agriculturist, 10 North Cherry St., Poughkeepsie, N. Y.

Tested Recipes

Cakes to Be Made When Eggs Are High

Chocolate Loaf Cake

4 tablespoons melted butter or other shortening
1 cup granulated sugar
1 cup sour milk
1/2 cup cocoa dissolved in boiling water
1 teaspoonful soda dissolved in cold water
2 cups flour
1 teaspoon vanilla (if desired)

I sometimes use sour cream in place of sour milk and then reduce the amount of shortening according to the richness of the cream.—MRS. E. D. New York.

Cold Water Spice Cake

1 cup sugar
1/2 cup shortening
1/2 cup raisins
1/2 teaspoon (or more if desired) of each allspice, cinnamon, nutmeg
1 cup cold water

Let this mixture come to a boil and then set aside to cool. Add a pinch of salt, 1 teaspoon soda, dissolved in a little water, 2 cups of flour.—MRS. E. D., New York.

Apple Sauce Cake

1 cup sugar
1/4 cup shortening
1 cup apple sauce
1 teaspoon soda in 2 table-
spoons water
1 teaspoon cloves
1 teaspoon cinnamon
1 cup raisins
2 cups flour

Beat until very smooth.—MRS. E. D., New York.

Johnny Cake

In making Johnny Cake add a generous cup of cooked squash after mixing according to your usual recipe. Here is the one I use:

1 cup corn meal
1/2 cup flour
1/4 cup sugar
1 teaspoon salt
1 teaspoon soda dissolved in 1 cup sour milk

Add at the last one egg well beaten.—MRS. E. D., New York.

Escalloped Cabbage

In a greased baking dish put a layer of bread or cracker crumbs (I usually use both), then a layer of finely

shredded raw cabbage, liberally seasoned with pepper, salt and dotted with butter. When the dish is sufficiently full, cover with thin cream or milk. Put a cover on the dish and bake about half an hour in moderately hot oven.—MRS. E. D., New York.

Cooking Carrots

For variety in serving carrots try slicing them with onions. Cover with boiling water and cook until tender.

Distinctive Mode

2825

FROCK PATTERN NO. 2825 has a snappiness that recommends it to most figures. In black canton crepe with white bands at the neckline it is extremely distinctive in style. The pin tucks at shoulder and natural waist line offer opportunity to adjust fullness to each individual figure, for this dress depends upon its lines for its chic. The pattern cuts in sizes 16, 18 years, 36, 38, 40 and 42 inches bust measure. Size 36 requires 3 3/4 yards of 39-inch material with 1/4 yard of 27-inch contrasting. PRICE, 15c.

TO ORDER: Write name, address, pattern sizes and numbers clearly and correctly and inclose with correct remittance in stamps (do not send coin). Add 12c for one of the new fall and winter catalogs and address to Pattern Department, American Agriculturist, 10 N. Cherry St., Poughkeepsie, N. Y.

Do not drain off any water but serve in this juice with pepper, salt and a little butter.—MRS. E. D., New York.

Savory Pork Roast

Cut a four pound pork roast and sprinkle liberally with salt and pepper. Dredge with flour and put in roasting pan. Brown in quick oven, add two cupfuls hot water, one teaspoonful mixed pickle spices tied in cheese-cloth bag, one good-sized onion, sliced, and one small red pepper shredded. Bake three hours. A dressing may be made of crumbs, onion, a chopped apple, and a beaten egg, and baked in side of pan the last half hour. Make a gravy of liquor in bottom of pan to serve with the meat.—L. M. T.

2803

DRESS PATTERN NO. 2803 is of the tailored utility style that easily slips under the winter coat. Light-weight tweed, crepe woolen or canton crepe would easily be adapted to this design which cuts in sizes 36, 38, 40, 42, 44 and 46 inches bust measure. Size 36 requires 4 3/4 yards of 39-inch material with 5/8 yards of 35-inch contrasting. PRICE, 15c.

TWO HELPERS INSTEAD OF ONE IN EVERY BAR

That's why

FELS-NAPTHA IS THE WISEST KIND OF WASHDAY THRIFT

ON WASHDAY, the bargain most worth seeking is the one that saves you. And that leads you straight to Fels-Naptha.

For Fels-Naptha brings you not simply more "bars" for your money—but more help. The extra help of two active cleaners brought together in one golden bar. Soap, yes—unusually good golden soap, the dirt-remover. And in addition, naptha—the grease-dissolver.

Together, this busy team loosens even stubborn dirt and washes it away. Together, they do the hard rubbing for you. And they get your clothes so sweetly fresh, so thoroughly clean and white, that you'll be delighted.

Fels-Naptha saves your hands, too. That's because it works so quickly you don't have them in water long. Try it and see! Use Fels-Naptha in tub or

machine. For soaking or boiling. In hot, lukewarm or even cool water. Look for the big, generous bars at your grocer's. For convenience sake, get the 10-bar carton and have extra help handy for all your washing and household cleaning.

SPECIAL OFFER—We'll be glad to send every user of laundry soap a Fels-Naptha Chipper. Many women who chip Fels-Naptha into their washing machines, tubs or basins find this chipper handier than a knife. Use it and Fels-Naptha to make fresh, golden soap chips (that contain plenty of naptha!) just as you need them. Send only a two-cent stamp to help cover postage, and we'll mail you this chipper without further cost. Write to-day. Dept. 1-12-6, Fels & Company, Philadelphia, Pa.

THE GOLDEN BAR WITH THE CLEAN NAPTHA ODOR

FELS-NAPTHA

ACID CONDITION

the common cause of pain and discomfort after eating - -

GET RID of your dread of pain after eating. Eat without fear of "indigestion," sour stomach, disagreeable gas or headaches.

When your food ferments, "disagrees," lies like a lump in your stomach, it's a sign of too much acid. You need not resort to crude methods—take instead an anti-acid that will correct the condition. Phillips' Milk of Magnesia.

A spoonful of this pleasant-tasting, soothing fluid neutralizes many times its volume of acid. It restores the proper alkaline balance to an acid-soaked stomach and bowels—assists these organs to function as they should.

Phillips' Milk of Magnesia is what you need when a bad breath, coated tongue, headaches, nausea or biliousness indicates an over-acid condition. Take a spoonful today and for several days and see how it sweetens the system. You won't be nearly so liable to colds or sickness. All drugstores—in 25c and 50c bottles.

Genuine Milk of Magnesia is always a liquid—never a tablet. Look for the name Phillips' on the bottle.

PHILLIPS' MILK OF MAGNESIA

Just David--By Eleanor Porter

THE STORY THUS FAR

Because of failing health David's father, a violinist, decides to leave the mountain home where they had lived alone for six years. They start down the mountain on foot, but strength fails the man before they go far. A farmer gives them a lift for a way and they decide to spend the night in a nearby barn where Simeon Holly and his wife find them. David's father is dead.

The next morning David decides to go back to his mountain home and leaves without saying goodbye. He returns hurriedly when Mrs. Holly telephones to a neighbor to tell David that his father left a letter for him. The second letter seemed perfectly intelligible to David, but was not of much help to the Hollys inasmuch as it did not give David's full name.

Because no one else wanted him, David stayed with the Hollys. They soon found that David had queer ideas about work and play. One of his first tasks was to fill the wood box and although he started with good intentions, some exceedingly interesting butterflies soon lured him away from his task.

However, David works very hard to please and gradually becomes accustomed to his new tasks. He cannot understand the Holly lack of time to do interesting things. Mrs. Holly cannot go walking so David suggests that she throw away the treasures in her spare room which is open only for weddings and for funerals. Because he can see no use for them, David hides the gold pieces which his father left him, in a little cupboard behind the chimney in his room.

* * *

David's second morning at the farmhouse was not unlike the first, except that this time, when Simeon Holly asked him to fill the woodbox, David resolutely ignored every enticing bug and butterfly, and kept rigorously to the task before him until it was done.

He was in the kitchen when, just before dinner, Perry Larson came into the room with a worried frown on his face.

"Mis' Holly, would ye mind just steppin' to the side door? There's a woman an' a little boy there, an' somethin' ails 'em. She can't talk English, an' I'm blest if I can make head nor tail out of the lingo she *does* talk. But maybe you can."

"Why, Perry, I don't know—" began Mrs. Holly. But she turned at once toward the door.

On the porch steps stood a very pretty, but frightened-looking young woman with a boy perhaps ten years old at her side. Upon catching sight of Mrs. Holly she burst into a torrent of unintelligible words, supplemented by numerous and vehement gestures.

Mrs. Holly shrank back, and cast appealing eyes toward her husband who at that moment had come across the yard from the barn.

"Simeon, can you tell what she wants?"

At sight of the newcomer on the scene, the strange woman began again, with even more volubility.

"No," said Simeon Holly, after a moment's scowling scrutiny of the gesticulating woman. "She's talking French, I think. And she wants—something."

"Gosh! I should say she did," muttered Perry Larson. "An' whatever 't is, she wants it powerful bad."

"Are you hungry?" questioned Mrs. Holly timidly.

"Can't you speak English at all?" demanded Simeon Holly.

The woman looked from one to the other with the piteous, pleading eyes of the stranger in the strange land who cannot understand or make others understand. She had turned away with a despairing shake of her head, when suddenly she gave a wild cry of joy and wheeled about, her whole face alight.

The Hollys and Perry Larson saw then that David had come out onto the

porch and was speaking to the woman—and his words were just as unintelligible as the woman's had been.

Mrs. Holly and Perry Larson stared. Simeon Holly interrupted David with a sharp—

"Do you, then, understand this woman, boy?"

"Why, yes! Didn't you? She's lost her way, and—" But the woman had hurried forward and was pouring her story into David's ears.

At its conclusion David turned to find the look of stupefaction still on the others' faces.

"Well, what does she want?" asked Simeon Holly crisply.

"She wants to find the way to Francois Lavelle's house. He's her husband's brother. She came in on the train this morning. Her husband stopped off a minute somewhere, she says, and got left behind. He could talk English, but she can't. She's only been in this country a week. She came from France."

"Gorry! Won't ye listen ter that, now?" cried Perry Larson admiringly. "Reads her just like a book, don't he? There's a French family over in West Hinsdale—two of 'em, I think. What'll ye bet 'tain't one o' them?"

"Very likely," acceded Simeon Holly, his eyes bent disapprovingly on David's face. It was plain to be seen that Simeon Holly's attention was occupied by David, not the woman.

"An', say, Mr. Holly," resumed Perry Larson, a little excitedly, "you know I was goin' over ter West Hinsdale in a day or two ter see Harlow about them steers. Why can't I go this afternoon an' tote her an' the kid along?"

"Very well," nodded Simeon Holly curtly, his eyes still on David's face.

Perry Larson turned to the woman, and by a flourish of his arms and a jumble of broken English attempted to make her understand that he was to take her where she undoubtedly wished to go. The woman still looked uncomprehending, however, and David promptly came to the rescue, saying a few rapid words that quickly brought a flood of delighted understanding to the woman's face.

"Can't you ask her if she's hungry?" ventured Mrs. Holly, then.

"She says no, thank you," translated David, with a smile, when he had received his answer. "But the boy says he is, if you please."

"Then, tell them to come into the kitchen," directed Mrs. Holly, hurrying into the house.

"So you're French, are you?" said Simeon Holly to David.

"French? Oh, no, sir," smiled David, proudly. "I'm an American. Father said I was. He said I was born in this country."

"But how comes it you can speak French like that?"

"Why, I learned it." Then, divining that his words were still unconvincing, he added: "Same as I learned German and other things with father, out of books, you know. Didn't you learn French when you were a little boy?"

"Humph!" vouchsafed Simeon Holly, stalking away without answering the question.

Immediately after dinner Perry Larson drove away with the woman and the little boy. The woman's face was wreathed with smiles, and her last adoring glance was for David, waving his hand to her from the porch steps.

In the afternoon David took his violin and went off toward the hill behind the house for a walk. He had asked Mrs. Holly to accompany him, but she had refused, though she was not sweeping or dusting at the time. She was doing nothing more important, apparently, than making holes in a piece of white cloth, and sewing them

up again with a needle and thread.

David had then asked Mr. Holly to go; but his refusal was even more strangely impatient than his wife's had been.

"And why, pray, should I go for a useless walk now—or any time, for that matter?" he demanded sharply.

David had shrunk back unconsciously, though he had still smiled.

Oh, but it wouldn't be a useless walk, sir. Father said nothing was useless that helped to keep us in tune, you know."

"In tune!"

"I mean, you looked as father used to look sometimes, when he felt out of tune. And he always said there was nothing like a walk to put him back again. I—I was feeling a little out of tune myself to-day, and I thought, by the way you looked, that you were, too. So I asked you to go to walk."

"Humph! Well, I—That will do, boy. No impertinence, you understand!" And he had turned away in very obvious anger.

David, with a puzzled sorrow in his heart, had started alone then, on his walk.

CHAPTER VII

"YOU'RE WANTED—YOU'RE WANTED!"

It was Saturday night, and the end of David's third day at the farmhouse. Upstairs, in the hot little room over the kitchen, the boy knelt at the window and tried to find a breath of cool air from the hills. Downstairs on the porch Simeon Holly and his wife discussed the events of the past few days, and talked of what should be done with David.

"But what shall we do with him?" moaned Mrs. Holly at last, breaking a long silence that had fallen between them. "What can we do with him? Doesn't anybody want him?"

"No, of course, nobody wants him," retorted her husband relentlessly.

And at the words a small figure in a yellow-white nightshirt stopped short. David, violin in hand, had fled from the little hot room, and stood now just inside the kitchen door.

"Who can want a child that has been brought up in that heathenish fashion?" continued Simeon Holly. "According to his own story, even his father did nothing but play the fiddle and tramp through the woods day in and day out, with an occasional trip to the mountain village to get food and clothing when they had absolutely nothing to eat and wear. Of course nobody wants him!"

David, at the kitchen door, caught his breath chokingly. Then he sped across the floor to the back hall, and on through the long sheds to the hayloft in the barn—the place where his father seemed always nearest.

David was frightened and heartsick. *nobody wanted him*. He had heard it with his own ears, so there was no mistake. What now about all those long days and nights ahead before he might go, violin in hand, to meet his father in that far-away country? How was he to live those days and nights if nobody wanted him? How was his violin to speak in a voice that was true and pure and full, and tell of the beautiful world, as his father had said that it must do? David quite cried aloud at the thought. Then he thought of something else that his father had said: "Remember this, my boy,—in your violin lie all the things you long for. You have only to play, and the broad skies of your mountain home will be over you, and the dear friends and comrades of your mountain forests will be all about you." With a quick cry David raised his violin and drew the bow across the strings.

Back on the porch at that moment Mrs. Holly was saying:—

"Of course there's the orphan asylum, or maybe the poorhouse—if they'd take him; but—Simeon," she broke off sharply, "where's that child playing now?"

Simeon listened with intent ears.

"In the barn, I should say."

"But he'd gone to bed!"

"And he'll go to bed again," asserted Simeon Holly grimly, as he rose to his feet and stalked across the moonlit yard to the barn.

As before, Mrs. Holly followed him, and as before, both involuntarily paused just inside the barn door to listen. No runs and trill and rollicking bits of melody floated down the stairway to-night. The notes were long-drawn, and plaintively sweet; and they rose and swelled and died almost into silence while the man and the woman by the door stood listening.

They were back in the long ago—Simeon Holly and his wife—back with a boy of their own who had made those same rafters ring with shouts of laughter, and who, also, had played the violin—though not like this; and the same thought had come to each: "What if, after all, it were John playing all alone in the moonlight!"

It had not been the violin, in the end, that had driven John Holly from home. It had been the possibilities in a piece of crayon. All through childhood the boy had drawn his beloved "pictures" on every inviting space that offered,—whether it were the "best-room" wall-paper, or the fly leaf of the big plush album,—and at eighteen he had announced his determination to be an artist. For a year after that Simeon Holly fought with all the strength of a stubborn will, banished chalk and crayon from the house, and set the boy to homely tasks that left no time for anything but food and sleep—then John ran away.

That was fifteen years ago, and they had not seen him since; though two unanswered letters in Simeon Holly's desk testified that perhaps this, at least, was not the boy's fault.

It was not of the grown-up John, the willful boy and runaway son, however, that Simeon Holly and his wife were thinking, as they stood just inside the barn door; it was of Baby John, the little curly-headed fellow that had played at their knees, frolicked in this very barn, and nestled in their arms when the day was done.

Mrs. Holly spoke first—and it was not as she had spoken on the porch.

"Simeon," she began tremulously, "that dear child must go to bed!" And she hurried across the floor and up the stairs, followed by her husband. "Come, David," she said, as she reached the top; "it's time little boys were asleep! Come!"

Her voice was low, and not quite steady. To David her voice sounded as her eyes looked when there was in them the far-away something that hurt. Very slowly he came forward into the moonlight, his gaze searching the woman's face long and earnestly.

"And do you—want me?" he faltered.

The woman drew in her breath with a little sob. Before her stood the slender figure in the yellow-white gown—John's gown. Into her eyes looked those other eyes, dark and wistful,—like John's eyes. And her arms ached with emptiness.

"Yes, yes, for my very own—and for always!" she cried with sudden passion, clasping the little form close. "For always!"

And David sighed his content.

Simeon Holly's lips parted, but they closed again with no words said. The man turned then, with a curiously

Just David

(Continued from Opposite Page)

baffled look, and stalked down the stairs.

On the porch long minutes later, when once more David had gone to bed, Simeon Holly said coldly to his wife:—

"I suppose you realize, Ellen, just what you've pledged yourself to, by that absurd outburst of yours in the barn to-night—and all because that ungodly music and the moonshine had gone to your head!"

"But I want the boy, Simeon. He—he makes me think of—John."

Harsh lines came to the man's mouth, but there was a perceptible shake in his voice as he answered:—

"We're not talking of John, Ellen. We're talking of this irresponsible, hardly sane boy upstairs. He can work, I suppose, if he's taught, and in that way he won't perhaps be a dead loss. Still, he's another mouth to feed, and that counts now. There's the note, you know,—it's due in August."

"But you say there's money—almost enough for it—in the bank." Mrs. Holly's voice was anxiously apologetic.

"Yes, I know," vouchsafed the man. "But almost enough is not quite enough."

"But there's time—more than two months. It isn't due till the last of August, Simeon."

"I know, I know. Meanwhile, there's the boy. What are you going to do with him?"

"Why, can't you use him—on the farm—a little?"

"Perhaps. I doubt it, though," gloomed the man. "One can't hoe corn nor pull weeds with a fiddle-bow—and that's all he seems to know how to handle."

The Question Box

Selling Rock for Roads

"A contractor is going to use 8000 cubic yards of crushed stone in this vicinity. They will cost him about \$25,000 delivered in car lots. I have the required amount of stone in my fences. The contractor would have to set up a crusher and cart the stone an average of 1600 ft. What would be a fair price for the stone?"—R.S.F., N.Y.

IN reply to your inquiry about a fair price to charge a contractor for the stone in your fences would say that this will depend a great deal on what type and quality of stone you have as compared with that which he can buy at about \$3.00 per cubic yard, on whether you or he will deliver the stone to the crusher. Also you should consider the point as to the cost of replacing your stone fences and whether you would prefer the stone or the new fences.

I believe that if you deliver the stone piled at his crusher, he can furnish the crusher and power and crush the stone at a cost of not to exceed \$1.00 per ton, including the labor for feeding it to the crusher. So that he could afford to pay about \$2.00 per ton for the rock piled at the crusher. Just what it will cost to load, haul, and dump the rock will depend on conditions, how close you can get a truck to the fences, how rough the going will be, and so on. I believe that with two dump trucks and about four men, you could do the hauling for around \$1.10 per cubic yard. Hence I should say that the stone in the fences should be worth from 85 to 95 cents per cu. yd.

Or you might make a still better deal by having about three trucks, one extra man at the crusher to help the driver unload directly into the crusher and thus save the extra handling, and about three extra men to help with the loading, say at \$2.25 to \$2.50 per cu. yd. unloaded right into the crusher. This is considerably like guesswork without knowing your conditions closely.—I.W.D.

One-Inch Pipe Too Small

"Will a one-inch pipe 720 feet long be large enough to carry all the water which a windmill will pump with a 3½ by 10 inch cylinder in a well 36 feet deep? Water will be pumped into a tank about 30 feet above well."

HE friction in a one-inch pipe 700 feet long will be too heavy to take the water from a 3½ by 10 inch cylinder, when added to lifting the water 36 feet in the well and 30 feet above into a tank. This will be especially noticeable when the mill is pumping in a stiff breeze. I should say that a 1¼ inch pipe should be the smallest which should be used. The difference in the cost between one and 1¼ inch pipe laid six feet or more in the ground is too small to risk the danger of trouble and wasted power.—I.W.D.

Cleaning Out An Old Well

"I want to use a well that has not been used for a couple of years because the water had a bad smell and taste to it. I tried to clean it out but as the water comes in faster than I can take it out it is a hopeless job that way. It is the nearest well and I want to pipe the water in the house. How can I make it safe for drinking and what could be done to make it softer as it is very hard."—C.E.F., N.Y.

FIRST have the water tested by your local doctor or board of health to see just what the cause of the bad taste and smell is. Often such smells are from mineral impurities like sulphur or iron and in themselves may be harmless. Sometimes such impurities can be removed and the water made usable by proper treatment, but the kind of impurity must be known before deciding on the sort of treatment it should have. If the taste and smell come from cesspool or stable contamination, the disease germs could be killed by treating with chloride of lime, chlorine gas,

iodine, or some of the other common disinfectants used for treating city drinking water. Still most people do not care to use such water, at least until it has been filtered and aerated as well as disinfected. If none of your local doctors or health officials can test the water themselves, they can have it done for you.

As regards the softening of the water, it is impossible to do it with any success in the well and is rather bothersome to have to do it every time the wife wants to use it for washing, washing the hair, and so on, and it seems to me that a water softener is the best solution for that sort of a problem. We have been using one now for over a year and find that it is entirely satisfactory in every way. The softened water requires only one-half as much soap as the very best cistern water, and only about one-sixth as much as the unsoftened water.—I.W.D.

What Hard Times in the City Mean

(Continued from Page 5)

and putting the unemployed in touch with jobs. Space will not permit describing all of the splendid work which is being done to find jobs for the job-

What About Tomorrow?

(Continued from Page 17)

great cities of yours must perpetuate themselves from their own inherent vitality? It is not only in the country that the engineer and scientist enable fewer people to produce more. It is happening in the cities of the old and new world.

By mergers, by rationalization, by more efficient machinery, and organization, fewer people are needed to produce what is required. Will this go on? I think so. I see in your country and in Europe gathering multitudes of workers for whom there is no employment. The very perfecting of the industrial system is bringing this about. Will not your unemployed gather in dark slums and in one room as they do in Europe, so that life will fester into rottenness.

It is because I foresee this, that I wish to get the reformers and foreseers in your country to think of building up a rural civilization, something which the world has never yet seen. It is the noblest and most practical of human enterprises, the building up of a civilization. And it will need the highest political genius to so organize the rural community that something of the culture and prosperity of so great a state will be reflected in the men in the villages and fields.

I think you need at least 20% of your people to continue as a rural community. And, if fewer people can produce all the food required, you must try to intersperse your agriculture with rural industries, with production supplying raw materials for the urban industries, and organize your small farmers cooperatively on the land, so that you will gradually create what I call a social order which will affect character.

A social order you must have. One man in every hundred is a freak, a creature lit up from within, a poet, a saint, an artist, a musician or reformer, a person who acts from his own will and his own center. As for the rest, they are mainly what the social order makes of them. You must open vistas before the small farmers, for only a vast hope can arouse people from a vast despair. I think that true economics are like the true poems spoken of by your Whitman, who said: "The true poems bring none to his or her terminus, or to be content and full. Whom they take, they take into space to behold the birth of stars, to learn

less. It is enough to say, however, that in terrible times like these in the cities, one gets a new respect and love for the churches, their pastors, and other welfare workers representing all creeds who almost sweat blood to give help where help is needed. This work is well organized and real progress is being made.

Let those country folk who are complaining about hard times on the farms, and especially those boys and girls who are attracted by the glitter of the cities and the high salaries in town, give heed and thought to the conditions that are now prevailing in those same cities.

Times are hard on the farm, but there are no bread lines in the country. There is always plenty of food and a warm place to sleep. As I looked at the faces of hundreds of men standing in the bread line, most of whom had never before accepted charity, I thought how much the most of us have to be thankful for. Last week practically every farmer sat down to a full Thanksgiving table. Let us not, like the Pharisee, thank God that we have more than other men, but instead, as we continue to enjoy not only the necessities but many of the luxuries of life, let us forget the petty annoyances and disappointments of the past year and thank God for agriculture and the farm home which is still the best place in the world in which to live.

I have read the A. A. for a good many years and have always appreciated it, but now that I have saddled the burden of a farm to pay for onto myself, I have a warmer regard for it than ever. It is so easy to read.

one of the meanings, to launch off with absolute faith, to sweep through the ceaseless rings and never be quiet again."

Though you may not be able to give so wide a vision to the average man, you can at least make him feel that he is not in a *cul de sac* or an economic morass out of which he cannot extricate himself. I think, too, you should teach him to have more initiative, and to be self reliant, and not to be always going with hat in hand to the state. It is not a manly policy, and when I think of Joan of Arc I feel it is not even womanly.

I would like lastly to supplicate aid from the poets and literary men, those who are or should be concerned for the spiritual side of your civilization, that they might bring their imagination to bear upon the work of building up a rural civilization with an appropriate culture. It would not, I think, be too difficult to get fine poets like Robert Frost, Vachel Lindsay or Carl Sandburg to be interested in this idea. In the agricultural organization in my own country there were no less than four poets who took part in the work, for they felt that what was deepest and most profound in the culture of a nation was born not in the cities but in the silence of the fields. In the cities everyone is drawn from central depths to brilliant surfaces, and the deeps are not sounded, and men come at last to dread loneliness and to fly from the soul which appears only in solitude, and so they exile the spirit from their life.

I will conclude this talk by becoming the poet again, and will speak for you some verses about this exiled majesty which is only met in silence and meditation, but to which all must come at the end.

Sometimes, when alone

*At the dark close of day,
Men meet an outlawed majesty
And hurry away.*

*They come to the lighted house,
They talk to their dear,
They crucify the mystery
With words of good cheer.*

*When love and life are over,
And flights at an end,
On the outcast majesty
They lean as a friend.*

Persistence Won

ONCE in a while we get a claim where a successful settlement offers us unusual satisfaction. The following tells of such an instance:

About 10 months ago a subscriber wrote us claiming that the driver of a car ran into his fence, took down a section and a corner post, then ran into the yard and destroyed an Elberta peach tree that was just bearing its second crop of fruit. The driver of the car was insured and our subscriber asked \$25 damages.

Following this he wrote to the head office to refer the complaint to the proper branch office. The complaint dragged along and we finally wrote to the Department of Insurance of the State of Pennsylvania asking if they could not do something to jog up the insurance company a little bit. The Pennsylvania Insurance Department advised us that they had communicated with the company who stated that the claim would be handled in a short time. We then received a letter from the insurance company to the effect that in their opinion \$25 was too great a price to pay for one peach tree. During all this time our subscriber had had no communication direct from the insurance company. We asked the Pennsylvania Insurance Department to follow the matter further which they very kindly did. On September 24, nearly 10 months from the time when the matter was first called to their attention we received a letter from the insurance company inclosing a release to the sum of \$25 which we sent to our subscriber for his signature. The release was signed and returned to us and we have the promise of the company in writing that the check for \$25 will be sent to our subscriber.

Behind the Scenes

OUR subscribers know our attitude on companies that send agents through the country soliciting pictures for enlargement. In this connection, the following letter which has just been received by us may be of interest to our subscribers:

American Agriculturist,
Dear Sirs:
"We are advertising our new Metallic painting which sells for \$7.95 and a coupon plan is being used. Please find one of the coupons inclosed. This plan is being used very satisfactorily by several

of the rural papers, therefore, we thought perhaps you might be interested.

"We sell this coupon to our customers for 5c each. They present their subscriber with one of the coupons with each subscription, making it possible for their subscriber to secure one of our \$7.95 Metallic paintings for \$1.95. This works very satisfactorily inasmuch as there is no further trouble after delivering the coupon to the subscriber as the subscriber deals directly with us. We might also state that we guarantee perfect satisfaction in every case and many repeat orders come from the effect of the deliveries.

We might also state that we will take advertisement in your paper to a sufficient amount to cover the cost of the coupons which we charge you. In other words, if you buy \$100.00 worth of coupons from us, we will take advertisement in your paper to the amount of \$100.00 advertising the \$7.95 painting."

We know our subscribers have enough confidence in American Agriculturist so they will not even need to ask whether or not we accepted this offer. You will find no advertisement offering to enlarge pictures in the columns of American Agriculturist.

State Troopers Arrest Writer of Bad Check

RECENTLY a subscriber sent us a claim which involved a protested check given him for potatoes. We referred this claim to Captain W. W. Robinson of the Batavia barracks of the New York State Troopers. Very promptly we received a report from Captain Robinson stating that the man who gave this check had been arrested, fined \$10.00, and that the man's father had signed a note to cover the amount of the fine, the original bad check, and the protest fees at the bank.

We want to take this opportunity to express our appreciation, and the appreciation of our subscribers, to Captain Robinson as well as the Captains of every Troop in the State who have been so kind and efficient in following up cases we have brought to their attention.

The giving of a check without funds in the bank to cover it is a misdemeanor and we suggest to our readers that where they have experiences of this kind that they give the facts to the nearest State Trooper. This, of course, is especially effective in local

cases. Where checks are given by New York dealers it is fairly easy to get them settled up where the checks are made out by responsible parties or by licensed and bonded commission dealers, but not so easy to get a settlement where they are made out by irresponsible persons. We wish to emphasize, however, that anyone who receives a bad check, does have a legal hold on the maker of it and can have him arrested and fined.

Otsego Products Goes Bankrupt

I am enclosing a check from Otsego Products Corporation which was returned on account of insufficient funds. Would you please investigate as I would like

At Your Service

MY vocabulary is poor and am at a loss to find words in appreciation of the wonderful service you render subscribers, judging from my share. I'd hate to think there was no American Agriculturist with its Service Bureau. Not that the other departments are without merit. The Service Bureau is like a trusted and reliable friend. When everyone and everything else fails I can depend on the American Agriculturist for help. Hope you will always be able to continue your great work else I'll find myself in many sad fixes.

* * *

A few weeks ago I wrote you about a bill. Yesterday I received a check from them for the full amount of money—\$21.10, and I wish to thank you very much for writing them about it. They have owed me for over a year and I shouldn't have gotten it if it hadn't been for your kindness.

The money on it. I have three receipts for eggs which have never been paid for at all. This company has been buying eggs through this section twice a week for nearly two years. We understand they have recently moved to New Jersey, but their trucks still operate from Edmeston.

AFTER some investigation we have learned that the Otsego Products Corporation has gone into bankruptcy owing truck drivers and clerks several weeks' salary as well as a number of our subscribers for products shipped to them. So far as we are able to determine, the company has no assets and apparently there will be no possibility of collecting from it. As we have frequently stated in the past, we are more than glad to report to subscribers on the financial standing of any buyer of farm produce on request.

Roberts Realty Has License —A Correction

ON our November 1st Service Bureau page we stated that the Roberts Realty Company of Buffalo and Detroit were not licensed to sell real estate in New York State. This information was given us from a source which we considered reliable but now we learn that the facts were not true and that the Roberts Realty Company does have a license to sell real estate in this state. We are more than glad at this time to correct this error. The Buffalo Better Business Bureau, in response to an inquiry, states that they have received no criticism or complaints against this company since they began business in Buffalo.

Avoid Sending Cash Through the Mail

There is always some danger that money will be lost when it is sent through the mail. This is particularly true of coins. May we, therefore suggest that when you have occasion to send money to American Agriculturist, either for subscriptions, patterns, embroidery, trespassing notices, or insurance policies that you send either a check or postal money order. Where amounts are very small, stamps will be acceptable.

Whether it is a dairy feed or a mash, for hogs or horses, Arcady Wonder Feeds are the finest you can buy—mixed by special formulas to give your stock and poultry the maximum in feeding. Your dealer carries Arcady Wonder Feeds. See him today or write us direct.

ARCADY FARMS MILLING COMPANY
Dept. 53 Brooks Building, Chicago, Ill.

Builds Bigger Milk Profits

Clip Your Cows with New Stewart Clipper

U. S. Department of Agriculture recommends clipping of cows' udders, flanks and underline, so cows can be cleaned before milking by simply wiping with a damp cloth. Progressive dairymen are boosting their milk profits as high as \$1.40 a month for each cow by using a Stewart Clipper. A clipping machine will pay for itself every month on a farm having 4 milk cows and 3 horses.

Write for Free Catalog today!

Describes full line of Stewart Clippers. Hand models as low as \$14.00; complete 1/4-h. p. electric as low as \$45.00 f.o.b. Chicago. Also tells of extra profits through clipping. At your dealer's or sent direct for \$2 down, balance on delivery. Satisfaction guaranteed or money back.

Chicago Flexible Shaft Company
5664 Roosevelt Rd., Chicago

OKLA. FARMER KILLS 172 RATS IN ONE NIGHT

K-R-O (Kills Rats Only), writes Mr. —, Hulbert, Okla., brought this remarkable result. K-R-O is the original product made from squill, an ingredient recommended by U. S. Government as sure death to rats and mice but harmless to dogs, cats, poultry or even baby chicks. You can depend on K-R-O (Kills Rats Only), which has become America's leading rat exterminator in just a few years. Sold by all druggists on a money back guarantee.

Post Your Farm And Keep Trespassers Off

We have had some new signs made up of extra heavy material because severe storms will tear and otherwise make useless a lighter constructed material. We unreservedly advise farmers to post their land and the notices we have prepared comply in all respects with the laws of New York, New Jersey and Pennsylvania. The price to subscribers is \$1.00 a dozen; \$3.50 per fifty; \$6.50 per hundred; \$60 per thousand.

Check or Money Order must accompany order.

250 PRIZES

for "Way-Back" Memories

HERE'S your chance to win two pairs of Ball-Band rubber footwear—your own selection. 200 pairs will be given for the best letters of early experiences with Ball-Band. 50 additional pairs will be given for the best photographs taken on the farm twenty or more years ago. Search your memory for a prize-winning letter—and the family album for a picture. This offer expires March 31, 1931. Tear off the Red Ball trade-mark below and send it in with your letter.

Somewhere in your family album—or in a forgotten box of snapshots in the attic—maybe you'll find prize winning pictures like these.

Do you remember the days of "puffed" sleeves and long, full skirts? Perhaps it was then you bought your first Ball-Band footwear.

Search among "way back" memories

—for prize winning letters
and pictures

or more years ago. (All pictures—including prize winners—will be returned if requested.)

Year after year our skilled craftsmen have met your footwear needs with better quality always at reasonable prices. Today the Red Ball trade-mark brings you that *natural*, light-on-the-foot feeling you want in modern footwear. Yet the live, tough rubber in them will wear longer than it's reasonable to expect.

We prepare rubber for but one purpose—the making of quality footwear. We've developed many special compounds—for the heel, for the sole, for the toe. The stout linings and fabrics you see in Ball-Band are knit in our own factory. Each part, rubber or fabric, is perfected for the particular job it must do; each adding to that *plus* wear you have learned to expect of Ball-Band.

Your entire family's needs are cared for by our full line of over 800 items, including Mishko-sole leather work shoes. There's a Ball-Band dealer near you. If you do not know his name, write us. And remember to look for the Red Ball trade-mark.

MISHAWAKA RUBBER & WOOLEN MFG. CO.
482 Water Street, Mishawaka, Indiana

Look for the Red Ball

BALL BAND

Built-to-the-foot

BOOTS / RUBBERS / ARCTICS / GALOSHES / CANVAS SPORT SHOES /
LEATHER WORK SHOES / WOOL BOOTS AND SOCKS

Ball-Band galoshes will hold their neat, erect shape throughout the season. All are "styled to the shoe" for dainty, snug fit and smart appearance by our Style Committee. At the upper left is the "light-as-a-feather", all-rubber Savoy.

Light weight rubbers made by Ball-Band fit snugly, smartly. They're so light you hardly know you have them on, yet they are made of live, firm, tough rubber that will give surprisingly long wear.

Ball-Band Arctics are built to welcome punishment. Reinforced at every point with live, tough rubber. Cloth Arctics for cold and snow, and all-rubber styles for mud and wet.

Shrines of America

The Old Viking Mill

IT WAS in the year 1000, almost 500 years before Columbus made his historic voyage, that Leif Erickson, Norwegian viking, made the first voyage from the old world to North America. His voyage was only one of several, for the vikings were an adventurous and fearless crew. While no permanent settlement resulted, the old viking left a monument in the shape of an old stone mill, which still stands at Newport, Rhode Island. Here it is in the picture as it stands today, surrounded by a protecting fence. It is truly a national shrine, for it is the oldest handiwork of the white race on the North American continent.

This is the first of a series of special cover pages on "Shrines of America" which will appear during the coming months.

This Winter..

look out for

"slacker cows"

... SAYS

Dr. Bancroft

This coming winter may find feeding conditions somewhat aggravated because of the drouth which has been more or less nationwide... The pastures in some cases have suffered. The falling off in the quantity and quality of succulent green pasturage will in some instances have a bearing on the condition in which the cows start the winter season.

Every dairyman knows that when the digestive apparatus of the cow goes on a strike there is a suspension of milk-flow and, if the animal recovers, it is usually impossible to get her back to her full flow of milk during the lactation period. She joins the ranks of the unprofitable slacker cows that so often destroy the profits of the herd. Troubles of this kind can best be avoided by providing a sufficient supply of early-cut, easily-digested hay, with succulence in the form of good silage, roots, or beet pulp. The grain ration should be well balanced and frequently drugs or minerals are indicated. A prescription of alternatives, tonics and laxatives is often useful.

Ernest H. Bancroft
V. M. D.

Dr. Bancroft, Chairman of Vermont State Board of Veterinary Examiners, Vice-Pres. of Vermont Dairies, Inc., and Editor of Vermont Dairy News, in a recent issue of which the above advice appears.

Dry feeding . . . following poor pastures
. . . a severe strain on productive vigor
Digestive disturbances will cut production
. . . medicinal conditioning urgently needed

With improved prices on dairy products the wise cow-owner can reap a top profit by adopting regular Kow-Kare conditioning as a herd practice during the barn-feeding period. This famous preparation is a scientific blend of Iron, the great blood purifier, combined with potent drugs, roots, herbs and pharmaceutical minerals. The action of these highly concentrated agents is to improve and regulate the digestion and assimilation . . . enable the cow to consume and convert into milk a full diet of dry and concentrated feeds, without strain on bodily health.

Countless dairymen add to their milk income many times the slight cost of regular Kow-Kare conditioning. Their cows eat better, look better, produce better . . . and go to pasture in the spring in full vigor.

Before and during calving, when so much vitality is diverted to the

growing unborn calf, Kow-Kare is especially valuable in aiding the reproductive organs to function normally and produce a vigorous offspring.

This highly concentrated, open-formula conditioner is sold generally by feed, drug, hardware and general stores, \$1.25 and 65¢ sizes. Mailed postpaid if your dealer is not supplied.

His Last Will

One of the Strangest Ever Probated

EDITOR'S NOTE:—This document is the last will and testament found in the pocket of an old, ragged coat belonging to one of the patients of the Chicago poorhouse after his death. According to the Newark (N. J.) Museum, which has printed copies of the will, the man had been a lawyer, and the will was written in a firm, clear hand on a few scraps of paper. So unusual was it that it was sent to a lawyer. He read it before the Chicago Bar Association, and a resolution was passed ordering it probated. Now it is on the records of Cook County, Ill.

I, Charles Lounsberry, being of sound and disposing mind and memory, do hereby make and publish this my last will and testament, in order, as justly as may be, to distribute my interest in the world among succeeding men.

That part of my interests which is known in law and recognized in the sheepbound volumes as my property, being inconsiderable and of none account, I make no disposition of in this my will. My right to live, being but a life estate, is not at my disposal, but, these things being excepted, all else in the world I now proceed to devise and bequeath.

ITEM: I give to good fathers and mothers, in trust for their children, all good little words of praise and encouragement, and all quaint pet names and endearments; and I charge said parents to use them justly, but generously, as the needs of their children shall require.

ITEM: I leave to children inclusively, but only for the term of their childhood, all and every, the flowers of the fields and the blossoms of the woods, with the right to play among them freely according to the customs of children, warning them at the same time against thistles and thorns. And I devise to children the banks of the brooks and the golden sands beneath the waters thereof, and the odors of the willows that dip therein, and the white clouds that float high over the giant trees.

And I leave to the children the long, long days to be merry in, in a thousand ways and the night and the train of the Milky Way to wonder at, but subject, nevertheless, to the rights hereinafter given to lovers.

ITEM: I devise to boys, jointly, all the useful, idle fields and commons where ball may be played, all pleasant waters where one may swim, all snow clad hills where one may coast, and all streams and ponds where one may fish, or where, when grim winter comes, one may skate, to hold the same for the period of their boyhood. And all meadows, with the clover blossoms and butterflies thereof; the woods with their appurtenances; the squirrels and the birds and echoes and strange noises, and all distant places which may be visited, together with the adventures there found. And I give to said boys each his own place at the fireside at night, with all pictures that may be seen in the burning wood, to enjoy without let or hindrance or without any incumbrance or care.

ITEM: To lovers I devise their imaginary world, with whatever they may need, as the stars of the sky, the red roses by the wall, the bloom of the hawthorn, the sweet strains of music, and aught else they may desire to figure to each other the lastingness and beauty of their love.

ITEM: To young men, jointly, I devise and bequeath all boisterous, inspiring sports of rivalry, and I give to them the disdain of weakness and undaunted confidence in their own strength. Though they are rude, I leave to them the power to make lasting friendships and of possessing companions, and to them exclusively I give all merry songs and grave choruses to sing with lusty voices.

ITEM: And to those who are no longer children or youths, or lovers, I leave memory; and bequeath to them the volumes of the poems of Burns and Shakspeare and of other poets, if there be others, to the end that they may

live the old days over again, freely and fully, without tithe or diminution.

ITEM: To our loved ones with snowy crowns I bequeath the happiness of old age, the love and gratitude of their children, until they fall asleep.

Investigate First

SOMETHING has come to my attention which I feel might bear investigating and I know of no better agency to do it than American Agriculturist. In southwestern New York, that is, in Chautauqua County and also across the line in Pennsylvania, some men are organizing what they call the Farmers' Collective Purchasing Organization. This organization is sponsored by J. C. McWilliams and L. W. Archibald of Warren, Pennsylvania, and Charles Warren of Jamestown, New York.

We understand that this organization requires a membership fee of \$10, which a farmer must pay before he can even attend the first meeting. As we understand it, local organizations are being organized with officers who are to hold regular meetings. The men back of it claim to save farmers large amounts on feeds, gas, oil, groceries, clothing, and other supplies.

We have not been able to learn that the organization has any headquarters or any definite relations with any large concerns manufacturing feed or other farm supplies. It occurs to us that if such an organization should fail to do all the things as claimed for it, as would seem quite possible, that it would be a distinct setback to the co-operative movement, inasmuch as it has been organized on what might be termed a cooperative basis. We believe that anyone who is approached to join this organization should at least make some investigation to learn the financial and moral responsibility of those who are backing it.

EDITOR'S NOTE:—We are glad to pass this information on to our subscribers. Certainly our subscriber is absolutely correct when he suggests that our readers should investigate before they part with \$10. If those backing the idea are honest, they will welcome investigation, but if the investigation proves that they are not on the square, you will save your \$10, and perhaps more besides. As a general principle, we have always felt that it is not wise to be too hasty about joining an organization that promises too much in the way of savings or service.

Fine Book on Farm Mechanics

ONE of the finest books I have seen recently so far as being helpful to the average farmer is concerned, is "Principles of Farm Mechanics", by M. A. and W. M. Sharp, and published at \$3.00 by John Wiley and Sons, New York City. This is a book of over 260 pages and nearly 350 diagrams and charts and nearly every page contains hints and suggestions which any good farmer can use to advantage. The chapters on rope work, soldering, glazing, care of tools, and machinery repairs are alone well worth the cost of the books.

KID: I want a drink!—LIFE.

Some Questions on Contagious Abortion

What You Want to Know About the Worst Dairy Disease

THIS is the first of a series of short articles in the form of questions and answers about contagious abortion, that great cattle scourge which causes more losses than any other disease. We suggest that you save these articles for future reference. Much of the information in this first article is based on reference material published by the University of Nebraska and written by L. Van Es in bulletins and circulars issued by the Iowa State College of Agriculture. In an early issue we will discuss measures for the control of abortion.

* * *

What is meant by abortion?

It is the casting out of the dead or impaired body of the unborn animal from the maternal body before the unborn animal, known as the embryo or fetus, has gone its full time. In an abortion the fetus is always dead or impaired by injury or disease. It differs from premature birth in that with premature birth the young animal may be perfectly healthy but is simply born before its full time.

* * *

What causes abortion?

Abortion is always caused by injury or disease. These may be a mechanical injury like cows slipping and falling, the result of an acute infection in the mother, the wrong kind of diet, lack of sufficient food in the diet, or to specific infection. All of these causes are of little consequence except the last one; that is, infection causes more than 99 per cent of all abortions. The infections are the result of the action of certain bacteria.

* * *

What is the relation of the fetus or unborn animal with its dam?

An understanding of this relationship makes it easier to understand the causes of contagious

abortion. The unborn animal is known as an embryo during its earlier stages and as the fetus during the latter months that it is in the body of its mother. The embryo is started from the union of the egg cells formed in the female with the fertilizing elements of the male. This union renders cell multiplication possible and by a series of cell divisions and groupings the formation of the young animal is brought about and completed.

During this process of life formation, the most wonderful and the least understood in all the problems of science, the embryo or fetus must derive all its sustenance from the maternal body. It requires food and oxygen and necessarily the waste products of its own body must be eliminated. The needs of the fetal body are precisely those of the adult body. The difference lies merely in the manner of supplying them. The embryo, or fetus, may be regarded as a parasite and lives a parasitic existence, until the fateful event of its birth. For this purpose it is provided with the most adequate equipment to obtain its life-giving substances from the mother body. This equipment consists of temporary structures in the form of membraneous covering, lying in a more or less intimate contact with, or attachment to the walls of the uterus. These attachments, known as the fetal membrane, may be regarded as the scaffolding used in building the new individual. They are the connecting life links between the young animal, or fetus, and its mother. When birth comes, these membranes are cast off from the mother body as the so-called afterbirth.

Each body, that is, that of the mother and that of the fetus, have their own separate circulation. Sticking up from the walls of the fetal membrane are an infinite number of little conical projections. These penetrate in to the uterus wall of the mother and make the contact with and the

attachment to the maternal body. Each of these little projections is called a villus. It has a rich supply of blood vessels and by its penetration into the substance of the uterus wall, the capillary vessels of the villus lie in the closest contact with those of the uterus. So close are these two sets of capillaries, that is, those belonging to the fetus and those belonging to the mother animal, and so thin are the walls of both sets of capillaries, that it is possible for certain substances to pass from one set to the other and vice versa by a process known as osmosis.

It is in this manner that the fetus receives nearly all of its nutriment and oxygen from the circulation of its mother, while by the same route, it yields to the latter, that is, to the mother, such waste products as are formed during its life process. It is thus that the mother both feeds its young and eliminates its waste products. By understanding this close relationship between the mother and the unborn animal, it is easy to understand how anything that affects the mother will also affect the fetus.

Any damage, therefore, to the fetal membrane, or anything that interferes with that wonderful close contact between the fetus and the womb of its mother, will jeopardize and endanger the welfare, health, and life of the unborn animal. It will do this by shutting off or interrupting the supply of food and oxygen from the mother to the fetus and stop the elimination of waste matters from the fetus to the mother. Any lengthy interruption of this kind will, therefore, cause the death of the fetus, and as soon as the fetus is dead or seriously injured, the mother body discharges it, and this is called abortion. As already stated, the chief cause of abortion is bacteria which enter the mother's body and act upon the tissues either of the fetus itself,

The Progress of Rural Electrification

A Discussion of Rates, Wiring, and Possible Uses on the Farm

By M. C. BURRITT

EDITOR'S NOTE—Last week on this page we gave you the first installment of an article on the progress of rural electrification by M. C. Burritt, a member of the New York State Public Service Commission. Here is the second and last installment of the article. If you have not already read what Mr. Burritt had to say in last week's issue, we suggest that you take time to read it before you read this.

* * *

M. C. Burritt

ELECTRIC rates appear to the layman to be very complicated. No consumer is likely to be satisfied with a rate, the factors determining which, he does not readily understand.

Many factors enter into rate-making. This is not the time or the place for a detailed discussion of these factors. Suffice it to say that they may be roughly put into three groups:

- I. A cost of distributing facilities.
- II. An energy charge.
- III. A demand charge.

Distribution costs consist mainly of pole line charges, largely maintenance and depreciation, transformers and consumers' meter costs, and meter-reading, accounting, and billing. All these costs vary with the number and location of consumers rather than with the amount of current used. The energy charge is based on the cost of current and depends to a large extent on the amount used.

Types of Rates

These various factors, which enter into rate-making, result in varying types of rates. The simplest form of rate is known as the "Straight-

line" rate, which includes all the factors in one charge. While this is simple, it is sometimes unjust. Another form is known as the "Block rate" in which the energy charge is varied according to the amount of current consumed; for example, the first 30 kwh might be billed at 9c per kwh; the next 100 kwh at 8c per kwh, and all above 130 kwh at 5c per kwh. Such a form of rate encourages consumption providing one has the facilities to use the current; otherwise, not.

The form of rate which is being more and more stressed by the companies, and which has an obvious element of justice in it when it is understood, is the fixed, or service charge. This is an amount of money required to be paid to cover what are known as consumer costs, that is, costs occasioned by the consumer, regardless of the amount of electric current which he may use. These are chiefly distribution facilities, such as lines, transformers, meters, accounting and billing. The demand form of rate is a charge for each k. w. of possible demand, measured by meters, or connected load, or sometimes by the number of square feet of room space, by counted rooms or demand units.

Amount of Rates

The charge for electrical energy throughout the state varies from 2c to 13c per unit, according to the amount of the fixed or service charge, the efficiency of the companies, the density of population, and the volume of use. Occasionally rates as high as 20c result from seasonal use, or through the effect of a minimum bill. Charges per unit vary inversely with the amount of consumption. In the cases cited above as to the increasing consumption of electricity on 100 farms, it is interesting to note that in 1926 when

the average consumption per farm was 609 kwh, the average cost per kwh was 10.4c, while in 1928 when the average consumption was 967 kwh, the average cost fell to 7.8c per kwh, and in 1929 when it was 1230 kwh, the average cost was 6.7c per kwh.

The Adequacy and Cost of Wiring of Farm Premises

The amount of current consumed depends almost directly upon the extent and adequacy of the wiring of one's premises. But the initial cost of wiring and of the appliances is also more and this necessary investment is very often the factor which is most likely to limit both the availability and the use of electricity.

Costs of wiring premises range from \$75 to \$1,000. It is estimated that a complete wiring job which will permit the use of 100 kwh and up, per month, could cost from \$250 to \$850, the latter figure representing the maximum cost for an average house and family. The average cost of wiring on 1181 farms, studied by the College of Agriculture for 1927, was only \$258.74. Obviously this amount of wiring was not enough to permit the maximum use of electricity. Frequently the principal objective in wiring is lighting, and there is neglect of provision in the wiring job for power as well as light. These standards should be that it may approximate five per cent of the A fair rule as to the cost of wiring is said to be that it may approximate five per cent of the cost of the buildings.

The question is frequently raised as to why farm wiring can not be done by the owners themselves. Farmers often object to paying electricians \$1.25 per hour when they themselves are compelled to work on a basis of approximately 40c or 50c per hour. There can be no sound

Thought for the Week

*Do all the good you can,
By all the means you can,
In all the ways you can,
In all the places you can,
At all the times you can,
To all the people you can,
As long as ever you can.*

—John Wesley's Rule

What Has Happened to Prices?

THE following interesting statement is taken from Farm Economics published by the New York State College of Agriculture and written by Professors G. F. Warren and F. A. Pearson.

"For the three months, July, August, September, wholesale prices of all commodities remained stationary at an index of 123. Apparently the most, if not all, of the present decline is over. Prices have declined from an average of 143 for the same months last year to 123 this year. A drop of 20 points in a single year indicates what this has meant to American business inventories.

"This decline also indicates the great misfortune of those who bought in advance of need. After such a serious experience it is to be expected that prices must rise somewhat before active buying begins. No such drop in prices has ever occurred except after the War of 1812, after the Civil War and in 1920-1921.

"At farm prices in October, the following ten farm products were higher than the average of wholesale prices; buckwheat, beans, potatoes, sweet potatoes, apples, chickens, butter, milk cows, milk, and veal calves.

"The beef cattle index was 123, the same as the average for all commodities.

"The following six farm products were below the average of wholesale prices, but were above pre-war prices; corn, hay, eggs, lambs, wool and hogs.

"The following eight products were below pre-war; oats, barley, wheat, rye, flax seed, cotton, sheep, and horses.

"Wheat is worth about one-half as much as last year and prices have been running about 80 per cent of the prices before the war. The carryover was large and the world crop was good."

In spite of the fact that as stated above wheat is half what it was last year to farmers, there has been little reduction in the price of bread to consumers. What both farmers and consumers need is some way of making the middleman share at least a part of the losses from reduced prices.

One of the greatest offenders in our whole distribution system is the man who comes next to the consumer, that is, the retailer. He is the first to put his prices up and the last to mark them down.

Limousine Roads

"I note an editorial in the American Agriculturist under date of Nov. 22nd entitled "A Suggestion for Dirt Road Farmers" that I fear may be misleading. I refer particularly to the first sentence in the second paragraph in which you say "this money has not long been available." The so-called Dirt Road Act

did not go into effect until September 1st of this year and no money has as yet become available from that law. Money to carry out the provisions of that law will be appropriated by the Legislature which convenes January 7, 1931.

"A decreased tax, if any, should show in the next town tax levy. I have been told that some towns are going to levy the same tax as in the past and use the increased aid to be received from the State for an enlarged highway program."

WALTER L. PRATT.

MR. PRATT, who is Chairman of the Committee of Taxation and Retrenchment of the New York State Assembly, is right. What we had in mind in that part of our editorial to which he refers in the above letter, was the use of the gasoline tax money in building county roads. The money to carry out the provisions of the so-called Dirt Road Act is not yet available.

Incidentally, Mr. Pratt is to be commended for his hard work for this dirt road bill, the first act of any consequence to pull New York State farmers who live on dirt roads "out of the mud."

The Federal Government will soon make greatly increased appropriations for highway improvement, but practically all of this money will go for main and expensively built highways and little to improve dirt roads. We have suggested to the Federal Department and to many others that the one way to bring practical farm relief to millions of American farmers is to make money available to build narrow, hard, farm-to-market highways to replace the present dirt roads. Editors of the Standard Farm Papers have responded favorably to this suggestion but not the Federal Government. Farmers' organizations themselves, while talking a lot about improving dirt roads, are not bringing any pressure to bear to use some of these millions of dollars appropriated for highway purposes for giving the farmers who live on unimproved roads some real road service. What American rural life most wants now is not more "limousine" but more "flivver" roads.

Another Series of A.A. Cover Pictures

WITH this issue of American Agriculturist we are beginning another series of cover pictures called "Shrines of America." You will recall that recently we printed a series called "Songs that Mother Used to Sing." Hundreds of letters from our readers indicated that these songs were the most beautiful and interesting covers that we ever published, and that is saying a lot. Well, we are going to make another prediction and that is that you will like the "Shrines of America" covers even better than you did the "Songs that Mother Used to Sing."

With each cover is a brief historical statement. It will not take you long to read it, but it took one of the editors of Prairie Farmer days to look up the facts and prepare these historical stories for you. May we suggest that you preserve carefully these covers which, you will find, will make one of the most interesting scrap books that you ever put together, giving you a rather complete history of America in beautiful form.

Apples for Health

EVERYONE has heard the old adage about apples keeping the doctors away, but here is a new one. More than a thousand dentists holding an annual meeting in New York City recently were told by one of their leaders that apples keep the dentist away. They have a mouth cleansing quality that no other fruit possesses, and taken after meals, they have the same effect as a tooth brush in cleaning the teeth, with the added advantage that the acid content aside from its food value is of assistance in promoting the flow of saliva in the mouth, which is also beneficial to the teeth.

There is an under-consumption of apples as compared with other fruits. The big sale of apples on street corners in New York City by thousands of unemployed has helped the apple market and taught people to eat apples who had not used them before. Unfortunately, none of these apples were grown in the East.

A commendable movement to advertise apples

nationally is promoted by a national apple-advertising association known as "Apples for Health," with headquarters at 58 East Washington Street, Chicago, Illinois. This organization already has done good work but is limited by lack of funds. The officers and directors represent every section of the United States. All are growers who are working for the benefit of the whole apple industry. No one of the officers receives any pay. We commend this organization and the good job that it is trying to do to apple growers everywhere.

My Recipe for Happiness

WHEN the fathers of our country wrote that great document, the Declaration of Independence, they stated that the three fundamentals of life were life itself, liberty, and the pursuit of happiness. Whether we know it or not, no matter who we are or what we are doing, every person is trying to get a little happiness out of life and bring happiness to those we love. Is it not tragic, therefore, that the majority of people are unhappy most of the time?

In spite of all of its drawbacks, the chances for happiness on the farm are as good, if not better, as in any other occupation. To be sure, there is often not much money, but money is by no means a synonym for happiness. It has been our fundamental philosophy for many years that most of the people fail in realizing happiness because they have not developed appreciation of the simple things of life such as love, friendship, association with books and flowers, and all of the many other parts of our environment which the farmer has even a better chance to enjoy than his city cousin.

In order to bring this philosophy of happiness home to our readers, we offer some prizes for the best letters on the subject of this editorial, "My Recipe for Happiness." The letter must come from somebody who lives on a farm and must be written from actual experience. It should show what country life has meant to you in the way of real happiness. Here is a chance to write out of your heart something that may be of help to thousands of others. Prizes will be five dollars for the best letter, three dollars for the second best letter, and one dollar each for as many as we can find room to publish. Letters should be not more than three hundred words, should be carefully written on one side of the paper, and addressed to the Editor, American Agriculturist, 461 Fourth Avenue, New York City. Contest closes January 17th, 1931.

Eastman's Chestnut

I GAVE the following Chestnut over WGY recently, but it is funny enough, it seems to me, to be worth repeating here for the benefit of those who have not heard it:

The tramp printer blew into the small town and got a job on the weekly paper one week. The next week he got drunk, and the day after the paper appeared he left town again. Among other interesting items, he was responsible for the following:

"William Smith, the only son of Mr. and Mrs. Josiah Smith, and Miss Lucy Anderson were disposed of at public auction at my farm, one mile east, in the presence of seventy-five guests, including two mules and twelve head of cattle.

"The Rev. Mr. Jackson tied the nuptial knot for the parties, averaging 1,250 pounds on the hoof. The beautiful home of the bride was decorated with one sulky rake, one feed-grinder and two sets of work harness, nearly new, and just before the ceremony was pronounced, Mandel & Sons' wedding march was rendered by one milch cow, five years old, one Jersey cow and one sheep, who, carrying a bunch of bride's roses in her hand, was very beautiful. She wore one light spring-wagon, two crates of apples, three racks of hay, one grindstone of mousseline de soie and trimmed with about one hundred bushels of spuds. The bridal couple left yesterday on an extended trip."

Master Farmers Dignify Agriculture

IN two recent issues of American Agriculturist we have given our readers a glimpse at some of the Master Farmers who were named in 1929. Here are short sketches of the remainder of those named last year, as well as the names of the 1930 Master Farmers who were selected in the State of New Jersey, through the cooperation of Pennsylvania Farmer and American Agriculturist.

The New York State Board of Master Farmer Judges has already had one meeting and another meeting will be scheduled soon. The Master Farmers in New York State who were finally chosen by the Judges will be awarded this distinction by American Agriculturist at a banquet to be held during Farmers' Week at the New York State College of Agriculture in February. Governor Franklin D. Roosevelt will present the medals to them.

The Master Farmer movement is attracting great attention not only in New York State, but throughout the entire United States. Frequently we

entire county if not farther. Mr. Gibson's son Harden seems to be following in his father's footsteps. Although he has plenty of farm work to do, he finds time to act as local leader for a group of young boys.

* * *

THOMAS FIFE,
Madrid, St. Lawrence County.

WE sometimes feel that friends are too much inclined to wait until after a man leaves this world before telling of his fine qualities. With this thought in mind it is refreshing to find an exception. Any man who wins such a glowing tribute from a friend, as is contained in the letter received with Mr. Fife's nomination for the honor of Master Farmer, can well feel that he has accomplished much in this world even should he die penniless. What better resolve can a man have than to so live that he may honestly win such a recommendation? Here is the letter:

"May I propose that Mr. Thomas R. Fife, Madrid, St. Lawrence County, New York, be named as Master Farmer.

"I have known Mr. Fife all his life. I knew his forbears. Like Mr. Fife they were men and women of the highest character, loftiest ideals and purest patriotism. While Mr. Fife did not start life as a poor boy, he did not let that swerve him from the path of sobriety, uprightness and industry. He has succeeded in spite of it. He has added to his patrimony. He is of the type that could have started without a dollar and succeeded not only financially but would have been a distinct asset to any com-

munity, because of his character, his example, and steadfastness of purpose. He has won success on a farm, making it productive and attractive, where most men would have barely eked out an existence.

"Mr. Fife is a graduate of the College of Agriculture at Cornell University. He is a leader of the Scotch Presbyterian Church in his community of which he is a member. He is a member of the Grange and takes part in all things for the betterment of his community and town. Mrs. Fife is also

Mr. and Mrs. Thomas Fife

a woman of character, ability and charm. They have raised a large family, given to each a liberal education, and sent them out into life where they are useful and attractive members of society, a credit to their parents and an honor to their state."

* * *

MINOR C. BROKAW,
Interlaken, Seneca County.

MR. and Mrs. Brokaw started farming when Mr. Brokaw was twenty-one years of age with, as he says,

"nothing but our heads and our hands." Before they were able to get on their feet, Mr. Brokaw assumed an obligation of considerable size through backing which he gave to a friend in need. In spite of this setback and in spite of some sickness, crop failures, and other troubles which come to all of us, Mr. Brokaw stuck by the business and has

New Jersey 1930 Master Farmers Named

FOR the past two years the Pennsylvania Farmer and American Agriculturist have co-operated in naming several New Jersey Master Farmers. At a recent meeting of the Board of Judges, consisting of Dr. Jacob G. Lipman of the New Jersey State College of Agriculture; William B. Duryee, New Jersey Secretary of Agriculture; and H. E. Taylor of the Federation of New Jersey Boards of Agriculture.

Four New Jersey farmers were named to receive this honor from the two papers. These men are:

Wilfred S. Hibler,
Newton, Sussex County

William Schober,
Monroeville, Gloucester County

John Weed,
Vineland, Cumberland County

George Smith and Son,
South River, Middlesex County

Master farmer medals will be presented to these four men chosen by the Pennsylvania Farmer, American Agriculturist and the Board of Judges at a banquet at New Brunswick, on December 17. Governor Morgan Larson will personally present the medals to these men.

built up a profitable farm business. Apples is perhaps the most important crop, but in addition Mr. Brokaw sells quite a lot of wheat and other cash crops.

Mr. and Mrs. Brokaw have four children. Three of them have received college degrees; two of them at Cornell University and one at Colgate and Chicago Universities. When Mr. Brokaw started to set out apple trees over twenty years ago, one of his neighbors told him that he would never live to see a crop from them. In spite of this gloomy prediction, he had faith in the future and he picked the first crop from some of his trees when they were seven years of age and has never failed to have some kind of a crop since. Mr. Brokaw has been characterized by some friends as a mechanical genius and on his farm, machinery does every piece of work which it can be made to do.

Mr. Brokaw is a deacon in the Baptist Church and for years made his influence felt as teacher of a young men's class. He is a member of the local Farm Bureau and local Grange.

* * *

CARL A. MOTT,
Dryden, Tompkins County.

MODESTY is one of the fine characteristics of every Master Farmer. Mr. Mott, however, has this characteristic to such a marked degree that one appreciates his true worth only after knowing him for some time.

Good farming is essential before a man is given the honor of Master Farmer and all we need to say in this respect is that Mr. Mott and his son, Alton, have a herd of forty-four Holsteins with an average production of 10,500 pounds of milk. Every dairyman knows that it requires plenty of work and perseverance to breed up a herd to such a production. In addition to the dairy, the farm grows seven acres of potatoes and two acres of cabbage as cash crops.

While it is in no sense necessary that a man take his son into partnership in order to be a Master Farmer, it always seems to us especially fitting that it should be so. Alton Mott is on a farm adjoining his father's place and

the two men have worked together closely for the past ten years.

A friend recently expressed what we feel is the right idea in stating that while a farmer could get along without modern conveniences, that he could see no reason why he should not have as fine a home as his village neighbor. Mr. Mott evidently feels the same way because the home is equipped with electric lights, hot and cold water, and many labor-saving appliances.

Then again, Master Farmers are good citizens and we find that Mr. Mott is a trustee in the Presbyterian Church, has been Master of his Grange, and has acted as committeeman of his local Dairymen's League unit, then as secretary of the Tompkins County sub district, until he was elected county president.

* * *

HERBERT P. KING,
Trumansburg, Seneca County.

IT is one thing to make money, but an entirely different thing to serve the agriculture of one's own county and state. Seneca County has been experiencing a change in its type of agriculture due to a loss of the hay market and to a certain extent of other cash crops. Herbert King has been unusually active in working out a new Seneca County Agricultural program, which will mean so much to farmers there.

Herbert King started farming for himself in 1900 without much in the way of capital and through hard work and good management has built up a profitable business. Fruit is the main product on his farm, the total area of

Mr. Herbert King

apples, peaches, cherries, plums, and pears being seventy-three acres. But what in our opinion is more important, he is also making it possible for his family of three children, to acquire training which will fit them to become useful citizens.

At considerable sacrifice to himself, Herbert King has given of his time to farm institute work and through it, to make friends in practically every county of the State.

A mere recital of positions held does not do justice to the work he has done. He has served his County Farm Bureau well as vice-president, as director, and as president. He is a member of his Grange and has interested himself in promoting both boy and girl Scout work in this community.

Professor F. B. Morrison says that if the poorest cow of every low-producing herd was sold to the butcher that the dairy surplus problem would disappear over night. The best way to locate that cow is to join a dairy herd improvement association. Bulletin E 124 explains the workings of such associations, including the cost and the results that may be expected.

Mr. Jess Gibson and his two sons

are asked, "What are the qualifications which must be met before this honor is given?" Briefly, a Master Farmer must be a good farmer and as Liberty Hyde Bailey would say, "He must leave the land better than he found it." Yet he must do far more than that. The Master Farmer award is given on three points—farming, community service, and family life. In addition to making his fields yield heavily, or his animals produce bountifully, a Master Farmer must show wherein he has served his community and his neighbors, that he considers labor-saving appliances in the home as important as they are in the barn or fields, and that he has given his children an opportunity to get an adequate training which will fit them to be useful citizens.

* * *

JESS GIBSON,
South Hartford, Washington County.

IN order to be chosen as Master Farmers men must have made a financial success of their business. At the same time we expect that every Master Farmer could show a bigger bank account had he spent less money in educating his family and less time working without pay for those things which make a community a better place in which to live.

Mr. Gibson is a successful farmer. His Holstein herd averages better than 10,000 pounds of milk a year. In addition to this source of income, he grows a considerable acreage of potatoes every year and has a sizeable flock of hens. We are convinced, however, that the record Mr. Gibson has made in vigorously supporting everything that will help his community is of far more importance than any fortune he might have acquired. Mr. and Mrs. Gibson have a fine family of four children, two girls who are married and live nearby. Of the two boys, one has finished Cornell and is at home with his father and the other is still a student.

Every man needs a hobby and quite possible Mr. Gibson has several. However, we did learn that the reputation which he has made in amateur theatricals has spread at least throughout the

"Don't gamble with your radio enjoyment... USE RCA RADIOTRONS"

says **MCMURDO SILVER**
President
SILVER-MARSHALL, INC.

"**RADIO** owners cannot be too often warned against careless vacuum tube buying. Exhaustive tests by our engineering staff have demonstrated that RCA Radiotrons have the quality which provides the best insurance of the fine performance built into every Silver Radio. RCA Radiotron quality and dependability safeguard against interference, weak signals, fading and other troubles caused by inferior tubes. We say to all owners of Silver Radio: 'Don't gamble with your radio enjoyment by using inferior tubes when genuine RCA Radiotrons are easy to get anywhere.'"

RADIO ENGINEERS ADVISE:

Replace all the vacuum tubes in your radio set with RCA Radiotrons at least once a year. This is the only sure way to maintain good performance and minimize disagreeable noises and other troubles caused by inferior tubes. RCA Radiotrons will give you the maximum in selectivity, sensitivity and tone quality.

Old tubes may impair the performance of the new.

RCA RADIOTRON CO., INC. HARRISON, N.J.

This is the 25th in a series of endorsements of RCA Radiotrons by the leading radio manufacturers.

THE HEART OF YOUR RADIO

POST YOUR FARM And Keep Trespassers Off

We unreservedly advise farmers to post their land. The signs we have prepared are worded to comply with Conservation Law.

Per Dozen	\$ 1.00
Per Fifty	3.50
Per Hundred	6.50
Per Thousand	60.00

Specially worded signs will be made up at slight additional cost. Names and addresses will be imprinted at \$2.00 for the first one hundred and \$1.00 for each additional one hundred.

These signs are made up of extra heavy cloth material that will withstand the severities of the weather.

To avoid loss of cash in mail, send check or money order with order.

Painted, two coats 1.85
With double thick glass 4.00

The quality product of America's largest hotbed sash mill. Genuine tidewater red cypress, select grade, joints blind, well mortised, tight-fitting. No knots or checks. Smooth finish and sides absolutely parallel to prevent gaps that let cold in.

Pure white lead paint applied by a process that fills all corners, etc. Double thick glass bedded in special putty of our own grinding.

These sash are extra strong to stand any weather for years without rotting, weakening or paint and putty chipping. Easily the best you can buy. Satisfaction guaranteed.

Low price also on greenhouse construction material or complete erection, including heating and benches.

Metropolitan Greenhouse Mfg. Corp.
1345 Flushing Ave., Brooklyn, N. Y.

Rejuvenating an Old Orchard

Will it pay to attempt to bring an old orchard which has been neglected for a number of years into production?—G. D., New York.

THIS will depend on a good many factors. First, are the varieties in the orchard desirable? Second, are the trees themselves in fairly good shape? Third, are you located in a section where apple growing is profitable and is the orchard in a location and on a soil which is favorable for them?

If you can answer all these questions in the affirmative it will doubtless pay to bring it back into production. This will consist of a thorough spray program, probably the addition of some commercial fertilizer and pruning to lower the heads of the trees. As a result of severe pruning, water sprouts are likely to grow rather readily. Some of these can be left for the production of limbs and the rest of them will have to be removed. In this connection it may be worthwhile to write to the U. S. Department of Agriculture, Washington, D. C. for a copy of farmers' bulletin 1284 on apple orchard renovation.

Lime for New Jersey Vegetables

THE 1928 census of the New Jersey Department of Agriculture indicates that 143,000 acres of New Jersey land is being used to grow vegetables. The following are the crops grown with their acreages:

Crops	Acreage
Asparagus	10,500
Beans, lima	2,800
Beans, string	12,000
Beets	1,000
Cabbage	6,800
Cantaloupes	3,400
Carrots	1,300
Celery	1,325
Cucumbers	2,040
Eggplant	1,210
Lettuce, spring	1,300
Lettuce, fall	1,000
Onions	3,000
Peas	5,150
Peppers	7,500
Spinach	2,720
Sweet Corn	18,500
Sweet potatoes	15,000
Tomatoes for market	11,500
Tomatoes for canning, etc.	33,000
Watermelons	2,000

With the exception of watermelons and tomatoes, it appears that all of these crops grow best on a soil which is fairly well supplied with lime. Experiments carried on for a number of years have given the following results:

Beets and carrots were grown in 1927; beets, carrots, peppers, cabbage, and sweet potatoes in 1928, and sweet corn, string beans, lima beans, peppers, and eggplant in 1929.

In every case for the three years the yields were much increased where lime was used. Beets and carrots were a failure on the unlimed plot. The failure in this case was due in part to the fact that the acid soil had a very depressing effect on germination.

Sulphur for Potato Scab

To what extent is the use of sulphur recommended for the control of potato scab?

WE referred this question to William H. Martin, plant pathologist with the New Jersey Agricultural Experiment Station who replies as follows:

"We are still recommending the use of sulphur for the control of potato scab. We, however, advise the use of this material only where scab has been very severe the previous year and the grower has no other soil which is adapted to potatoes. Where there is only a slight infection of scab we recommend the use of an acid fertilizer. We have found this to be very satisfactory and, as a result of its general adoption by the potato growers of the

state, potato scab is no longer a serious factor in the production of the crop.

"I don't think that inoculated sulphur is being used very extensively in New Jersey at the present time. I know of a few growers each year but it is not generally used. This, of course, is attributed to the fact that scab is no longer a serious problem and it is only in rare instances that the disease is sufficiently severe and the pH values sufficiently high to warrant the adoption of the treatment. In one case this year, for example, one of our prominent growers in northern Jersey sent in soil samples with pH values of 6.8. He reported that scab has been bad in this field in the past and we recommended the use of six hundred pounds of inoculated sulphur per acre. We rarely encounter a case of this kind now, however, and in most cases the pH's are sufficiently low so that merely by adding sulphate of ammonia to the fertilizer we are able to secure good control of scab.

The Effectiveness of Old Spray Materials

Do spray materials depreciate when they are stored or do they retain their effectiveness indefinitely?

THE term "spray materials" covers quite a lot of ground. Some materials will retain their effectiveness for a long time whereas with others there is a depreciation. For example, nicotine dust may lose part of the nicotine because this is a volatile substance which escapes into the air. Consequently, nicotine dust becomes less effective unless it is stored in an air-tight container.

Another material which loses in effectiveness when exposed to the air is calcium arsenate. The carbon dioxide in the air acts on this material changing some of it to calcium carbonate and at the same time increasing the amount of water-soluble arsenic, a material which causes the burning of foliage. Most spray materials are chemical compounds which do not lose strength when stored, although there may be an undesirable physical change through loss of water in the case of such materials as paste arsenate of lead and concentrated Bordeaux mixture.

Clover Sickness

What is the meaning of the term "clover sickness" and is there any way by which it can be remedied?

THE term is rather a vague one and is generally applied to any soil where clover does not seem to grow as well as it once did. Probably the chief lack is lime, although sometimes failure may be due to use of seed which is not well adapted to the section.

Remedies for Baldwin Spot

Has any remedy for Baldwin spot yet been found?

IT appears that Baldwin spot is caused by an irregular water supply during the growing season. Consequently, anything which will tend to keep the moisture supply uniform will help to control Baldwin spot. Probably the chief way to do this is to increase the supply of humus in the soil. It is also recommended that excessive pruning be avoided.

Yields in the Hudson Valley

What is the average yield per acre of Baldwin and McIntosh in the Hudson River Valley?

WHILE it is difficult to give average figures, we believe that the twenty to thirty year old Baldwin tree should average around 12 bushels per tree and that McIntosh should yield approximately the same.

Some Questions on Contagious Abortion

(Continued from Page 3)

or the surrounding ones from which it gets its blood.

chance of a germ being transmitted from cow to cow on the hands of the milker.

Why is contagious abortion such a problem? It is probable that contagious abortion causes more loss to dairymen than any other single disease, possibly more than all other diseases combined. We hear much about the ravages of T.B. in cattle and the losses from T.B. are certainly very great, but they are small compared to those from contagious abortion. Abortion causes loss through the death of the aborted calf, through the interference with milk and meat production, through its compelling the breeders of the country to maintain a greater number of breeding animals and through the general decline of the value of the animal itself.

The University of Nebraska kept records of losses from abortion on the University herd from 1896 to 1929. Out of 1,226 calvings during this long period, 180 abortions occurred, and the financial loss for the thirty-two years amounted to \$28,561. Of course, this herd was more valuable than the average farm herd, but these figures give some indication of the losses that this disease is costing the dairy industry.

Why is the disease which causes most of the abortions called the Bang abortion bacillus?

Because it was Bang, a scientist, who first discovered and isolated bacteria which causes nearly all of the trouble.

Does the Bang abortion bacilli cause actual disease in mature cattle?

No. Its only effect is on the fetus.

How does a cow or herd become infected with Bang abortion bacilli?

There must be direct or indirect contact with infected animals before a previously healthy herd can get the disease. Such infections can come from newly purchased stock, by animals returning from stock shows or sales, or indirectly, the infection may come about through feed stuff which, in some manner, has become contaminated. One of the most common ways for infection is through milk from infected cows. Unfortunately, milk is a great carrier of most bacteria. Infection may stick to the hands of the dairymen, to utensils, or be spread by persons who have been in contact with aborting animals, or with animals that have recently aborted.

Can a cow become infected with abortion from the bull?

It was formerly thought that this was one of the chief sources of infection but now, some competent investigators say that the bull is not a dangerous source of infection. Some claim that there can be no infection from this source at all. Most agree, however, that there is some danger from the bull, either because his own blood is infected or because he may carry the infection from one cow to the next.

What is the usual way, the most common way, by which a cow may become infected?

Through the digestive canal, that is, by drinking polluted water or milk, or through eating fodder or bedding which has become soiled by aborted calves, after-birth, or uterine discharges of cows which have recently aborted. In this respect, cows should never be allowed to devour after-birth.

Another common source of infection is through the teats. There is considerable

Where do the germs of abortion concentrate after entering the body?

In the pregnant uterus they are particularly attracted by the fetal tissues. Another common place where abortion bacilli congregate is in the cow's udder. It is probable that the udders of practically all cows which actually abort are temporarily infected.

How and when does a cow throw off the largest number of Bang bacilli?

When the abortion occurs or when the calf is born. At that time, an infected animal throws off millions of bacilli and it is at this time that the whole premises, including the pastures, stables, feed and the water are most likely to be contaminated. It is, of course, true that large numbers of cows are infected with the bacilli who do not always abort but bring through a calf to maturity. These cows, too, as well as those who actually abort, eliminate great numbers of abortion bacilli and it is at calving time, therefore, that the greatest care should be taken by dairymen to prevent the spread of disease.

As already mentioned, milk is a great source of contamination, all the more dangerous because it is a regular day by day source. When fed to calves, milk may be the means of scattering bacilli and this avenue of elimination must also be given consideration in preventing the spread of the disease.

Does the disease develop in young animals?

Probably not. It is not until the approach of sexual maturity, that the bacillus finds in the animal opportunity to maintain itself and to flourish in large numbers.

When is contagious abortion most likely to occur?

It may occur during any stage of pregnancy but the great majority comes between the fourth and the eighth month with the most during the seventh month. One investigation showed that 50 per cent of contagious abortions occurred during the seventh month.

What are some of the symptoms of abortion?

Signs of a coming abortion are much the same as with a normal birth. The external genital becomes swollen and a thick mucous may be discharged. The udder swells or "springs," preparatory to the function of milk secretion. Flanks become sunken in and the ligaments of the pelvis soften.

Is there danger to the cow when she aborts?

The cows usually have little difficulty. If the expulsion takes place during the latter period of pregnancy, the membranous sack is ruptured and the fetus proper expelled first, to be followed later by the membranes, which are then commonly spoken of as the afterbirth. The danger here is that the afterbirth is quite likely to be retained and therefore it behooves dairymen to give close attention to an abortion during the latter part of the pregnancy. There is more than usual danger at this time also of septic inflammation followed by sterility.

Is there much loss of milk from a cow which aborts?

Yes, this is one of the greatest losses from the disease, but if the abortion occurs during the later part of pregnancy, the cow may give nearly as much milk as she normally would.

When abortion gets to a herd are all of the animals likely to abort?

No. Sometimes more than half the cows will abort during a certain year and then maybe next year there will be few abortions, to be followed a year later by a large number again. Or again, there may be a few abortions occurring regularly each year.

How long may a cow be expected to carry the infection after she ceases to abort?

In some cases for many years. This fact makes the disease hard to combat. Some animals may go several years, having normal births and then begin to abort again. This may be due to a new infection, of course, but it is more likely to be caused by the old germs which have been carried along through the years.

Reviewing the Latest Eastern Markets

Milk Prices December Prices

Dairymen's League prices are based on milk testing 3.5%. Sheffield on the basis of 3%.

Class	Dairymen's League	Sheffield Producers
1 Fluid Milk	3.37	3.17
2 Fluid Cream		1.70
2A Fluid Cream	1.86	
2B Cond. Milk		
Soft Cheese	2.11	
3 Evap. Cond. Milk Powder		
Hard Cheese	1.90	1.60
4 Butter and American Cheese. Based on New York City Market quotations on butter and American Cheese.		

The Class 1 League price for December 1929 was \$3.42 for 3.5% milk and Sheffield's \$3.22 for 3%.

The above prices in each class are not the final prices the farmer receives. The final price received from the dealer is the result of weighted average.

Butter Regains Lost Ground

CREAMERY SALTED	Dec. 6, 1930	Nov. 28, 1930	Dec. 7, 1929
Higher than extra	37	37 1/2	44
Extra (92 sc.)	36 1/2	34	43 1/4
84-91 score	28	36	32 1/2
Lower Grades	26 1/2	27 1/2	31

The week ending December 6 opened with a greatly improved butter market. Over the previous weekend strength had developed in various quarters and when the market opened on December 1 the strength crystallized and prices advanced. Prices continued to advance on Tuesday and Wednesday. On Thursday the sharp upward movement strained the position of the market considerably and the tone became unsettled. Friday experienced better buying interest and on Saturday there was a fair movement of butter at 36 1/2c for 92 score. However, a decline of 1c at Chicago tended to soften the tone of the New York market and the market closes with a little price shading. In view of the wide differential between New York and Chicago, it appears quite doubtful that we will be able to hold the present price level, for it is expected that much butter will be diverted from the Middle West to the Atlantic seaboard.

On December 5 the four principal markets reported holdings of slightly over 36,000,000 pounds, approximately 7,750,000 pounds less than they held at the same time last year. The big factor in the statistical condition of the market lies in the fact that from November 28, to December 5 the four principal cities withdrew from storage 3,538,603 pounds compared with a withdrawal during the same period a year ago totaling 2,735,895 pounds.

Cheese Prices Lose a Fraction

STATE FLATS	Dec. 6, 1930	Nov. 28, 1930	Dec. 7, 1929
Fresh Fancy	20-21	20	21 1/2
Fresh Average			
Held Fancy			26
Held Average			23 1/2

There has been so little business transpiring in the cheese market that it is quite difficult to get any concrete idea of what is going on. There is an extremely light movement in fresh New York State whole milk flats. This is fortunate for there is little or no demand for this class of goods. As a matter of fact, since Wisconsin offered cheese at lower rates it has been impossible to realize the former outside quotations on fancy fresh flats. The best price we hear of is 21c.

During the first week in December there was a little better inquiry for well cured cheese. Many of the large users of cured cheese have been cutting into their own stocks quite steadily and are now forced on to the market to replenish their supplies.

The ten cities making daily reports had on December 4 about 2,500,000 pounds less cheese on hand than they held a year ago. This is the bright side of the statistical condition of the market. The darker side lies in the fact that the out of storage movement is considerably less than it was a year ago.

White Egg Prices Break Sharply

NEARBY WHITE	Dec. 6, 1930	Nov. 28, 1930	Dec. 7, 1929
Hennery	37-39 1/2	45-47	59-61

Average Extras	31-34	35-41	52-57
Extra Firsts	29-30	29-34	48-50
Firsts	26-28	26-28	42-46
Undergrades	27-28	30-33	43-46
Pullets	25-26	27-28	
Pewees			

NEARBY BROWNS	Dec. 6, 1930	Nov. 28, 1930	Dec. 7, 1929
Hennery	41-43	46-52	60-66
Gathered	30-40	33-47	55-62

The egg market blew up, or cracked to pieces, whichever way you wish to describe the situation. A flood of fancy large white eggs from the Pacific Coast over-

whelmed the New York egg market and prices went to the dogs. This sharp increase in the supply caught the market without adequate outlets at existing price levels. Retailers have been getting relatively more money than the wholesale market price justified. Retail values have been holding a high position whereas wholesale costs have been on the decline. Consequently the movement of eggs has been more or less stagnant and the situation was complicated when heavy supplies rolled in from the West. The only way to move eggs was to lower the price. This had the desired effect for the market steadied somewhat toward the close. The sharp break came on Thursday, December 4, after which the market steadied on the choicest classifications. However, receivers are anxious to keep their floors clean as no one seems to know whether or not the bottom has been reached. As the week came to a close there were unmistakable evidences of lighter receipts from nearby points. It was believed that many nearby shippers had swung to other markets. At the same time, colder weather is believed to have cut into nearby production. Advices continue to come in of some increase in shipments of fresh eggs from the Central West.

In commenting on the market break, the *Producers Price-Current* states "It is necessary to go back to the year 1900 to find prices for fresh eggs quoted as low as at present in early December."

Live Fowls Sell Better

FOWLS	Dec. 6, 1930	Nov. 28, 1930	Dec. 7, 1929

CAPONS	28-35	32-35	32-40
TURKEYS	25-30	40-	30-37
DUCKS, Nearby	19-25	18-25	21-26
GESE	19-22	18-25	21-23

The live fowl market was considerably improved during the first week in December. Express receipts of fowls were light and cleared quickly from day to day. Although the market closed on Saturday with a little less trading, it is not expected that this will have much effect on Monday's market for supplies have not been burdensome and heavy carry-overs are not anticipated. The freight market has been steady and firm throughout. Supplies of fowls have not been excessive and at times it looked as though premiums would be in vogue. The price range on fowls has been much narrower.

Most of the chickens are quite staggy and these are not moving well. Broilers, on the other hand, have been meeting a very active demand. Unfortunately, prices were forced beyond buyers' ideas and the active trading that characterized the broiler market early in the week disappeared toward the close and left the market on broilers very much in doubt. At times like this, when the buying market is active, but very critical and cautious, it appears to be poor business policy to try to force prices. A fraction of a cent or two may cause buyers to swing away to some other commodity and kill the market. That is what happened this week in broilers. It appears to be a "penny wise and pound foolish" policy.

Those who contemplate shipping to New York for the Christmas holiday market should time their shipments to arrive in the New York market sometime on December 22 but not later than the 23rd. On those days retailers are buying and getting their stock in shape for the retail trade on the 24th. Anything that is held over the holiday is apt to lose money.

The Produce Market

The potato market is beginning to show signs of life. At the close of the market on December 6, potatoes were held with confidence and the market ruled firm and showed signs of advancing. Maines in 150 pound sacks are bringing \$2.85 to \$3, while Long Islands were bringing \$3 to \$3.25. Bulk goods per 180 pounds from Maine were quoted at \$3.25 to \$3.50 while Long Islands closed at \$3.50 to \$3.75.

There is no material change in the apple market. Trade rules fair although fancy stock has been moving a little more freely. The general range of varieties in baskets are as follows: Baldwins 50c to \$1.50; Greenings 50c to \$1.75; McIntosh 75c to \$2.50; Northern Spy 75c to

\$1.75. Barreled goods, Baldwin \$2 to \$5; Greenings \$2 to \$6; Jonathans \$2 to \$4.50; Kings \$2.50 to \$5; McIntosh \$3 to \$7; Northern Spy \$2.25 to \$5.50.

The cold weather helped the cabbage market. Danish in bulk has brought from \$25 to \$28 per ton.

Carrots in New York State are beginning to pick up bringing from \$1 to \$1.10 on the street for unwashed goods.

Red Kidney beans as indicated in last week's report turned sharply higher. On December 6 the market closed at \$9 to \$9.75. Other varieties showed no improvement.

Good onions are held with more confidence following the turn to colder weather. However, mild weather prevails at this writing and there is some question whether the market will show any reaction in prices. Thus far, quotations are unchanged.

Tune in on the A. A. radio market reports every noon from WEA. These give the daily fluctuations and give you the most immediate information available. Poultry, egg and produce shippers should use this service, especially.

The above quotations taken from the weekly feed letter of the N. Y. S. Dept. of Agr. and Markets are for straight earlots, f.o.b. Buffalo. Prices on mixed cars and less than earlots are higher. Consult your local freight agent for freight rates to your station.

Meats and Livestock

CATTLE—Steers fairly active, strong to 25c higher. Four loads good 1250 to 1300 pound steers \$10.00. Cows slow, steady to weak. Few good \$7.00. Common to medium \$4.25-5.75. Low euters and cutters \$2.50-4.00. Bulls steady. Common to medium \$4.50-6.00.

VEALERS—Steady. Good to choice \$12.00-14.50. Medium \$8.50-11.50. Cull and common \$5.50-8.00.

LAMBS—Lambs slow, steady to 25c lower. Deck Good New York lambs \$8.50. Few mediums \$8.00-8.25.

COUNTRY DRESSED CALVES—Receipts light to moderate all the week. Demand fair all through; small scarce and prices slightly higher and firmer. Market steady. Fresh receipts per pound: Choice 14-16c; fair to good 12-14c; small to medium 10-12c.

COUNTRY DRESSED PIGS—Receipts light to moderate. Sales in small quantities only. Per pound: Roasting, 12-15 lbs. 22-26c; Pigs, 15-20 lbs. 18-21c; 22-30 lbs. 16-18c.

LIVE RABBITS—Fresh receipts moderate during the week, and stock accumulating. Demand slow all through. Market weak. By the coop, 12-18c.

HOTHOUSE LAMBS—Some stock arriving, real demand not yet started, small sales good to fancy, each \$7.00-9.00, imitations, each \$3.00-5.00.

Fancy Hay Scarce

There was a very noticeable shortage of fancy hay arriving in the market during the week ending December 6. Receipts as a whole showed a gradual reduction as the week progressed. At the same time, the demand for No. 1 timothy in large bales was active, which placed this class of merchandise at a premium. The bulk of the buyers was obliged to take No. 2 or No. 3 to fill their requirements. As a result of the situation, prices advanced \$1 per ton and the market closed steady and firm. Timothy prices ranged from \$23 to \$29. Sample hay sold from \$16 to \$20. Mixtures of clover or grass sold anywhere from \$19 to \$26. The straw market has been dull. Oat straw bringing \$12 and rye straw \$14.

Farm News from New York

Short Session of Seventy-first Congress Convenes---County Notes

THE short session, or as some call it, the "lame duck" session of the Seventy-first Congress convened December 1. The term "lame duck" has come to be used to characterize those congressmen who, although they were defeated at the last session, are still in Congress. When the Constitution was made, travel was slow and in spite of automobiles, railroads, and airplanes, congressmen still must wait several months after they are elected before they can take their places at Washington.

The chief items of business which will be brought up before this session are the routine appropriation bills, unemployment relief, and Federal anti-racketeering resolutions. The opening session was rather hectic. A group of several hundred Communists attempted to hold a radical demonstration in the east plaza as Congress was convening. Police dispersed the mob by the use of tear gas bombs. There seems to be a well-defined desire on the part of leaders to clean up business during the session and to avoid the necessity for an extra session of Congress, because of a fear that such an extra session might slow up economic recovery.

The President's message to Congress was not given by him personally, but was read in both Houses of Congress. The unemployment situation received an important place in the message. According to the President, construction work already authorized, and the continuation of policies of government aid, will require an expenditure of close to one-half billion dollars annually. In order to speed up government construction as an aid to unemployment during the next six months, the President asked for an appropriation of between one hundred million and one hundred and fifty million dollars.

The need for rigid economy was stressed if a Federal deficit is not to be encountered.

Changes in the Immigration Law were recommended for the purpose of ridding ourselves of criminal aliens. The President recommended that Congress provide methods of strengthening the government to correct abuses whereby many aliens have entered the country in violation of Immigration Laws.

Speaking of the economic depression, the President pointed out that this situation is not confined to the United States, but is more or less worldwide.

Railroads Seek Relief, Too

A RECENT news report states that the Association of Railway Executives will demand some legislative relief from Congress. It is generally acknowledged that trucks and busses have taken away much business which formerly went to railroads. As we understand it, the position of the railroads is not that they should be released from government regulation or that legislation should be enacted to prohibit these forms of transportation, but rather that they should be subjected to the same regulations which the railroads themselves now have.

In other words, the railroads desire to have all forms of interstate transportation under the jurisdiction of the Interstate Commerce Commission.

Dairy Improvement Association Results

AT present, New York State has sixty-six dairy improvement associations with over 31,000 cows, on which records are being kept. For the month of October, the herd of A. T. Personius of Cayuga County, took first place among these animals in average milk production, with an average of 1,499 pounds of milk per cow. The first three places for milk production were very close, second place going to the herd of Jay Harbeck of Allegany County, with a production of 1,494 pounds of milk per cow, and third place to Ray Deuel of Onondaga County, with an average production of 1,491 pounds of milk per cow.

High place for average pounds of butterfat produced goes to the herd of Harry Smith of Onondaga County, with a record of 52.1 pounds of butterfat; second place to the herd of Alex Thomson & Sons of Ulster County, with 51.9.

Part of this herd was milked three times a day. Three herds produced an average of between 50 and 51 pounds of butterfat a month; namely, the herds of Emil Stone of Franklin County, James Young of Allegany County, and Ray Deuel of Onondaga County.

Grade Crossing Elimination

THE New York State Public Service Commission has approved the elimination of 93 railroad grade crossings during 1931, which will require an expenditure of \$33,887,700. These crossings are located in Nassau and Westchester Counties. They also approved the carrying over of 82 grade crossing eliminations from the 1930 program, which will bring

Wholesale Milk Prices Down

EFFECTIVE Monday, December 8, the Dairymen's League Cooperative Association and the Sheffield Producers, reduced the price of class one milk forty-seven cents per hundred. It is confidently expected that this will result in a drop of one cent per quart to metropolitan consumers. This reduction comes just four months after an advance of forty-seven cents per hundred in class one prices.

It is worthy of note that this reduction did not come as a result of any demand either from producers or from the metropolitan press. The reason, we understand, is that independent milk is coming into the cities in unusual quantities. This milk, of course, is sold as loose milk in grocery stores and in a way does not come into direct competition with bottled milk. However, loose milk has been down as low as seven cents a quart and this price attracted many consumers who had bought bottled milk in the past. As a result, the bottled trade was losing much of its trade and it was felt advisable to reduce wholesale prices in order to keep this business.

Dairymen can well ask themselves whether, if loose milk continues to be sold as low as seven cents a quart, it will be possible to maintain city prices of bottled milk even at fifteen cents. It might be said, of course, that loose milk cannot be sold for seven cents unless dairymen are willing to sell their milk to independent producers at a price which will enable them to do it.

the total estimated cost to over \$70,000,000. These eliminations will be paid for as follows: Fifty per cent by the railroad, 49 per cent by the State Government, and one per cent by the county in which the crossing is located. The counties will bear only a small part of the expense contemplated when the plan was originally outlined. The taking of this burden from the counties and putting it on the state came as a result of the recommendations of Governor Roosevelt's Agricultural Advisory Commission.

Figures on Our Dry Summer

NO one will deny that it has been a dry summer, yet it is interesting to see the actual figures which show that it was even worse than we thought it was. Figures published by the U. S. Department of Agriculture show that many states had less rainfall during several summer months than they have ever had since weather reports have been kept. For the months from December to August, New York State had 30 per cent less rain than normal; New Jersey had 21 per cent less than normal; and Pennsylvania had 58 per cent less than normal. Not a single state east of the Rocky Mountains had normal rainfall during the three principal months and about a half dozen states had less than one-half the normal amount.

As a result, many wells that have been holding out all summer have given up the fight and in some sections dairymen are still hauling water for their herds.

Dutchess County To Hold Farm Electrification School

On December 18 and 19 the Dutchess County Farm Bureau will conduct a two day school on the subject of Farm Electrification. The school will be held in the Poughkeepsie Grange Hall. There will be separate sessions for dairymen and poultrymen. B. A. Jennings, F. B. Wright, J. D. Brew, R. F. Bucknam and L. M. Hurd will address the school.

Federal Aid Roads

DURING 1930, 9,349 miles of Federal aid roads were completed in 48 states and Hawaii. The amount of Federal funds dispersed during the year were \$75,880,963, something over \$6,000,000 less than for the year 1929. At the close of the fiscal year there were in the Federal aid system, 193,049 miles of highways.

Appointed on Fair Board

APPOINTMENT of Mrs. Eliza Keates Young, of Milton, Ulster County, N. Y., as a member of the State Fair Advisory Board has been announced by

Commissioner Berne A. Pyrke of the Department of Agriculture and Markets. This board cooperates with the Department in plans for the New York State Fair at Syracuse.

The other members of the State Fair Advisory Board are: Datus Clark, Peru; A. R. Mann, Dean of the State College of Agriculture, Ithaca; F. P. Graves, Commissioner of Education, Albany; C. R. White, President of the State Farm Bureau Federation, Ionia; Henry Morgenthau, Jr., Hopewell Junction; Senator George R. Fearon, Syracuse; F. J. Freestone, Master of the New York State Grange, Interlaken; and R. W. Quackenbush, Cornwall-on-Hudson.

No Birth Control Among Codling Moths

THE Geneva Entomologist who predicts an exceptionally large family of codling moths next spring may be a pessimist or he may be just foresighted. It does seem a little harsh to make these predictions just before Christmas. However, forewarned in this case should be forearmed. The reason for the prediction is that unusual weather conditions last spring and summer resulted in an unusually large number of codling moth worms in many New York State orchards. Thorough spraying at the right time next spring will discourage them.

New York County Notes

CATTARAUGUS COUNTY—November closed with little or no rainfall. The month was excellent for fall work and getting the winter's wood supply although reports from most of the county state that it has been too dry for ploughing. Farmers report ensilage dry and of inferior quality. Granges have been holding harvest suppers and Hallow-eve parties throughout the month. The Dairymen's League held its monthly county session in Leon on November 29, and the annual meeting of the Farm and Home Bureau was held in Salamanca on December 2, with a morning session of reports and election of officers and the afternoon session featuring an address by Rev. H. L. Somers of Canisteo.

Walter Griffin of Great Valley and J. M. Burdick of Little Valley had the highest test cows for October; the former testing 77.5 pounds of butterfat and the latter 49.8. Both are Holstein Friesian. Other high average records were held by Lewis Jones, L. S. Green, Arnold Gold, and Leon Wright.

In the egg-laying contest for October conducted by the Farm Bureau, William Kahler of West Valley and H. Brown of Salamanca have the highest production flocks. Both are flocks under 300 birds and had a 50 per cent production.—M.M.S.

CHAUTAUQUA COUNTY—We are enjoying (?) our second heavy snowfall of the season. The snow is estimated to be fully two feet deep on the level. Roads are full and traffic stalled, especially on the side roads. Since the heavy storm of October 19 and 20, the weather has been fine and the dirt roads were never better at this season of the year. Usually November is a season of mud, ruts and hubs, but this storm started November 24. In fact, it has been too dry in some ways. Those who were short of water have had little relief and the ground had become too dry for plowing, which is something very unusual at this season.

Mill Creek, quite a sizeable stream that flows through the center, is dry most of its length. The town highway force here are using the favorable conditions to haul gravel on the hill roads. We imagine that the "oldest inhabitant" will have to strain his memory to recall another fall that will duplicate the one just past and still good farms are being abandoned. In this section for the past two years, the Land Banks have been getting back farms about as fast as they placed loans a few years earlier.—A. J. N.

FRANKLIN COUNTY—Farmers in this county have most of their fall work finished. It has been a fine fall, but with very little rain. Many wells have gone

dry and farmers are drawing for their stock. Some have dug deeper and have a good supply. The Farm Bureau canvass was successful with an increased membership. Farm produce keeps low. There is not much demand for potatoes; the price paid growers is around 60c a bushel. Eggs are bringing 45c a dozen; apples, \$1.00 a bushel for good grade. The monthly Dairymen's League meeting was held in Malone on November 24 and was addressed by Rush Lewis and well attended.—H.T.J.

SARATOGA COUNTY—Plowing is nearly finished. It was very dry and the tractors were a wonderful help in plowing hard land. We had snow and wind on the forenoon of Thanksgiving Day. Much rain is needed in order to water cattle during winter—a nice one came Sunday, but more is needed. Eggs are 50c per dozen and scarce. Pork and beef are cheap; turkeys and other poultry are cheaper than for a number of years. A number of people are going out of the turkey business.—L.W.P.

STEUBEN COUNTY—Weather very cold with some snow. The thermometer was down to zero the morning of the 2nd. Roads are good and autos can go everywhere so far. There is not much rain and no mud. Some bad places have been improved with stone foundations. Potatoes, 60c to 65c, but none are moving. Some threshing not done yet.—D.C.F.

Little Recipes for Little Cooks

by Betty

Christmas Cookies and Christmas Goodies!

Here Are Some for You to Make Your Very Own Self

Lesson Number 22

Dear Little Cooks:

It's hard to believe that it's a whole year since I wrote you candy recipes before and wished you "Merry Christmas." And just think we will finish our two years of little recipes next month. Will you be kinda sorry, I wonder? I guess I'll be lonesome without all your nice letters and recipes and everything.

This year mother is going to let me have some of her cookie dough to cut out special Christmas cookies. Stars and Christmas trees and Santas or gingerbread boys to hang on the tree and to give to little folks. Will you make some too? I shall frost the Christmas tree ones and sprinkle them with colored sugar or the very tiny candies for cakes, etc. They will be so pretty.

I do wish you all the very merriest Christmas you've ever had and a happy time making candy.

With best Christmas love,
BETTY.

Trace this star on cardboard and use as cookie pattern

the divinity is stiff enough so I can drop spoonfuls on a buttered paper or platter and the drops will stand up nice. If they flatten out, the candy should be beaten a little longer.

If I want a chocolate divinity, I put

a piece of chocolate in the hot divinity and let it melt as I stir and beat.

When it is ready to drop, you can add nuts if you like.

Uncooked Fudge Balls

Here is a recipe for fudge balls that is easy because it doesn't even need to be cooked and of course you don't need to worry about whether it is done or not.

1 square of chocolate, melted.	2/3 tablespoon cream.
1 teaspoon butter.	1/2 teaspoon vanilla.
1 tablespoon egg, beaten.	1/2 pound of powdered sugar.

First I melt the chocolate in a bowl and then I add butter, egg, cream, vanilla, and last of all the powdered sugar. If you don't know how much powdered sugar a pound is, I'll tell you that it is about 2 cups so 1/2 of a pound for the small recipe would be about 2/3 cup.

Anyway you must keep on adding sugar and mixing well till the mixture is thick enough so you can handle it in your hands. A little powdered sugar on your hands helps keep this fudge from sticking. Take a small piece and shape it like a marble. Then you can finish it with a nut meat or you can roll the ball in cocoanut or in chopped nuts.

Pinoche (or penoche)

This is a brown sugar fudge that is awfully good, try it this Christmas.

Small Recipe.
1 cup brown sugar.
1/4 cup milk.
1/2 tablespoon butter.
1/4 teaspoon vanilla.
1/4 cup peanuts, pecans or walnuts.

Large Recipe.
2 cups brown sugar.
1/2 cup milk.
1 tablespoon butter.
1 teaspoon vanilla.
1/2 cups nuts.

Mix the sugar, milk, butter together in a saucepan and cook. Stir only enough so it won't burn. Test it like fudge dropping a spoonful into a cup of cold water and when it forms a soft ball it is done. Add vanilla and nuts.

Cool well till it feels just a little warm, not hot at all. Beat with a spoon till nearly stiff and then pour on a buttered plate and when cool mark off in squares.

Ginger Snaps

A recipe to use for Christmas cookies to hang on the tree.

3/4 cup shortening.	4 cups flour.
1 1/2 cups sugar.	1 teaspoon cinnamon.
2 eggs.	1 teaspoon ginger.
3/4 cup molasses.	
4 teaspoons soda.	

Cream the shortening, add sugar gradually, mix well, add beaten eggs and molasses. Add the soda which has been dissolved in 4 teaspoons of hot water. Sift flour once before measuring. Sift flour, cinnamon and ginger together and add to the other mixture. Roll thin and cut out cookies. Bake in a moderate oven about 15 minutes. Take cookies off the pan while hot.

Butterscotch

For Brown Sugar Taffy

Small Recipe	Large Recipe
1 cup brown sugar.	2 cups brown sugar.
1 teaspoon vinegar.	2 teaspoons vinegar.
1/2 cup butter.	1 cup butter.
1/2 cup water.	1 cup water.

I measure everything and put it all into a saucepan to cook. I stir it well before it starts cooking and then I do not stir any more because if I did my candy might "sugar" and you all know butterscotch isn't a sugary kind of candy.

When it begins to boil as though it was getting quite thick, it's about time to test it so I get a cup or glass of the coldest water I can find. I drop a few drops of candy into the cold water and if it runs around and makes the water look cloudy it needs more cooking. If it goes plunk! to the bottom of the glass and stays in a hard ball that I can lift out with a spoon and hold in my hand and it seems quite solid it is done and I mustn't cook it a single second longer.

While the candy cooks, I always get a plate or platter ready and I butter it well so my candy won't stick to it.

Then I drop small spoonfuls of candy on the plate. I leave a little room between the drops so the pieces won't stick or run together even if they do spread a little. I let them get very cold and then they are ready, and they are so good!

Another way to fix this butterscotch is to pour it out about 1/2-inch thick on the buttered plate, cool and mark off in squares.

Butterscotch Taffy

If you like the taste of butterscotch you will want to try pulling it like any taffy.

Pour the cooked candy on a buttered plate just as you did before and as it cools fold in the outside edges because they always cool first and folding in the outside once in a while as the candy cools makes it all get ready to pull at about the same time. When it is cool enough so I can handle it, I butter my hands well and take a piece and pull it till it gets stiff. It's a good plan to hold your hands in cold water just before buttering because the candy doesn't stick so to cold hands.

Be sure to have clean hands! If you don't maybe your taffy will look like my little brother's. He was helping, you know little

brothers always want to when you're having fun, and the taffy was white, but his was a funny gray before he got through pulling it because he never thought to wash his hands. I guess boys don't unless they are told, at least little three-year-old boys don't!

Divinity Fudge

Small Recipe	Large Recipe
1 cup sugar.	2 cups sugar.
1/4 cup water.	1/2 cup water.
1/4 cup corn syrup.	1/2 cup corn syrup
1 egg white.	(white is nicest).
	2 egg whites.

For divinity fudge I measure out the sugar and put it in a saucepan. Then I measure out the syrup and put it in and the water, too. I stir it and put it on to cook. I do not stir after this. While it cooks, I beat the egg white very stiff, till it stands alone. When the syrup gets quite thick I try it and if the syrup spins a heavy thread from the spoon it should be done.

Then I get ready to pour it right away. If someone else can help me and pour the syrupy candy while I beat, all the better. I pour the syrup on slowly and stir or beat very hard and fast. When the hot syrup is all poured on the egg white I take a rotary egg beater (that's the kind you turn a handle or wheel) and beat it till its gets too stiff to turn the beater any longer.

Then I must keep on beating with a spoon till

Christmas Hints for the Wise

A Bit of Originality Is as Welcome as the Most Expensive Gift

"I must be different, and I want to make it all myself!" These were Joan's specifications for Grandmother's gift. Now Grandmother had an old time patchwork quilt upon her bed, and this supplied the suggestion for the present. Joan made three small pillows each a foot square, and slipped them into crazy-patchwork covers, which her

"doing" also, so instead of giving my quintet a party during Christmas week, we had a most joyous one beforehand, when the entertainment consisted of making ornaments for the Christmas trees. Crepe paper, stickers, scissors, paste, popcorn, cranberries, all sorts of material were on hand for the young craftsmen, and a delightful time was spent in making decorations. Then a simple menu of home-made cookies and sandwiches was served. Perhaps from an artistic viewpoint the ornaments could not compete with the purchased variety but "exceeding great joy" was mixed up with their making, and after all, isn't that the main thing at Christmas?

Birds on Christmas Tree

CHILDREN always enjoy making ornaments for the trees and very attractive ones may be made by cutting birds from cardboard which has been first covered with gay papers,

The Angelus, in wood-like metal frames, and religious subjects, all in good colorings are good for remembrances. Really good handkerchiefs for all, and pure fresh candies are two staples. Good towelings, cretonnes, etc., may be had for making into pretty gifts.

If you have not yet become acquainted with the possibilities of the five and ten cent store, it will pay you well to look well through its bargains when you are next in town. You'll find many late contrivances for housekeeping there, too!—M. B.

Clothe Child for Weather

RIGHT clothing has much to do with child health, and careless dressing often means that a baby swelters in woollens on hot summer days and in winter is given an open-stitch sweater which is too porous for protection from the severe cold.

When choosing the child's wardrobe this fall, it is well to select clothes to suit varying temperatures. For outside wear in cold weather, clothing should be chosen to hold the heat of the body. Two light-weight garments are warmer than one heavy coat, since the layer of air between them is a non-conductor of heat and will prevent the escape of heat from the body. A light-weight coat, loose enough to allow the wearing

of a sweater under it on cold days is a good choice. A cravenetted, or water-proof, one-piece garment of the cover-all type for outdoor play in snowy weather is also useful.

It is necessary to use judgment about bare skin in both warm and chilly weather in spite of its current popularity. Neither sun-blister nor goose-flesh is good for the small child; so sun suits and bare legs should not be overdone. In New York state the child's knees should be covered in winter.

When choosing suits and dresses for children the temperature of the home should be considered, too. Children who live in steam-heated houses need only light-weight underwear and cotton dresses for inside wear. This will prevent them from becoming over-heated when they come in from outside play. If the rooms seem chilly, a sweater can be put on easily; heavy underwear and thick wool dresses can not be so easily removed when the child is hot.

—N. Y. College of Home Economics

Bring Cheer to Dark Homes

MAUD BALLINGTON BOOTH comes forward with her annual appeal for donations for the Christmas fund to carry on relief work among the wives and children of prisoners. These funds are handled by the Volunteers of America whose work among prisoners is heartily endorsed by prison wardens and chaplains. Mrs. Booth writes that toys, dolls, clothing and money from those in happier homes will do much to lighten the cloud of sorrow in the homes of families where the husband and father is in prison. Any donations should be sent to Mrs. Ballington Booth, the Volunteers of America, 34 West 28th St., New York City.

The Christmas Want Book

"WHAT to get for Christmas" is more or less of a puzzling question, so I took a small note book and at the head of each page wrote the name of one of the family. The book was decorated with Christmas seals, and a pencil was attached by a gay ribbon. Then the home folks were requested to write a list of what they wished beneath their names, and the book, hung in an accessible place, was a great help in choosing gifts.—A.B.S.

To prevent stains on the hands while dyeing or tinting garments, tie the dye in a piece of cheese cloth and put it in a soap shaker. Dissolve the dye by shaking it in the warm water.

Candles which have been kept in the refrigerator will burn more evenly and slowly.

Lovely for Little Girls

PANTIE FROCK PATTERN NO. 2835 is charming for the little girl of 1, 2, 4 and 6 years. Cotton broadcloth, linen, gingham check, wool jersey or wool crepe in the pretty "kiddie" colors or patterns would be both attractive and useful. Size 4 requires 2 1/4 yards of 39-inch material with 3/8 yard of 32-inch contrasting and 1 1/8 yards of edging. PRICE, 15c.

small fingers had cheerfully made. The pillows were placed one on top of the other and tied with gay ribbon, beneath which was slipped a card bearing this verse:

"Three little pillows for Grandmother's bed,
For her back, or her elbow, her neck,
or her head,
For nighttime or daytime, for sleep or a snooze,
These three little pillows I hope she can use!"

Christmas Tree Salad

Cottage Cheese Pimiento Cheese
Sliced Pineapple Chopped Parsley
Mayonnaise

Cut slices of pineapple in two, to form crescents, and place on a salad plate. Place a mound of cottage cheese in the hollow of the crescent, to suggest a miniature mountain. Cut pieces of pimiento cheese in triangular shape, and roll the triangles into little cones, like Christmas trees. Then roll in chopped parsley till they are well "greened." Place the large end of a toothpick in the bottom of the "tree" to form a trunk, and the pointed end into the mound of cottage cheese. Then you have a miniature mountain, topped by a pine tree and resting on a frozen lake base. The mayonnaise is served separately.—E. D. Y.

Where There Are Children A Before-Christmas Party

If there are children in the home, (and what is Christmas without them?) there is much done for them at Christmastime, which is surely as it should be. But small folks truly enjoy

Tink the Doll

TINK may be taken to heart by any sized youngster and most likely be carried back to college by Sister Diane! Any girl who has a room of her own is apt to have an array of clever dolls inhabiting it, and Tink is really clever from his merry whimsical face to his turned-up felt toes. You know one can't be ordinary with a nose of black felt, sand in certain portions of one's anatomy that makes him perch securely on a chair arm or bed post, and a bell on the cap so tiny that it only says "Tink" and not "tinkle." Stamped materials, felt, sateen, oilcloth coat, hand tinted cheeks, in fact everything but the stuffing may be ordered as No. M245 at 60 cents complete to finish this doll.

M245 ALL MATERIALS FOR DOLL 60 CENTS

Order from Embroidery Department, American Agriculturist, 10 N. Cherry St., Poughkeepsie, N. Y.

such as is used for lining envelopes. Brush the birds with glue, and sprinkle with the tiny beads which are used for lamp shades and other fancy work. (A salt-cellar is helpful in sprinkling). The result will be gay ornaments which sparkle beautifully in the light. Other forms, as a star or a fish could be used for the ornaments.—A. B. S.

At the Five-and-Ten

DO you use your nearest five-and-ten? Many buy gifts there and at a saving. For kiddies there are sturdy snow shovels; miniature red gas tanks, cars, mechanical toys, puzzles, books, modeling clay, stencils and silhouettes, tools, marbles, dishes, wee cooking utensils, really good socks and stockings, crayons and innumerable other childish treasures.

For grown-ups there are many toilet preparations in small sizes. The foremost "brands" are found there. Attractive stamped goods, towels, child's dresses, aprons, and rompers, bureau sets, etc., and an excellent line of crocheted and embroidered cottons and other fancy work essentials are on their counters.

Tiny reproductions, perhaps eight by five inches of famous pictures such as

Smartly Slenderizing

DRESS PATTERN NO. 2859 is designed in every detail to make one look slender. Black canton crepe with white collar and cuffs, or faint pink or turquoise blue would be very smart indeed. The close hip and flaring skirt are very good features also. The pattern cuts in sizes 36, 38, 40, 42, 44 and 46 inches bust measure. Size 36 requires 4 yards of 39-inch material with 3/4 yard of 35-inch contrasting. PRICE, 15c.

TO ORDER: Write name, address, pattern sizes and numbers clearly and correctly and inclose with correct remittance in stamps (do not send coin). Add 12c for one of the fashion catalogues and address to Pattern Department, American Agriculturist, 10 N. Cherry St., Poughkeepsie, N. Y.

Just David--By Eleanor Porter

THE STORY THUS FAR

Because of failing health David's father, a violinist, decides to leave the mountain home where they had lived alone for six years. They start down the mountain on foot, but strength fails the man before they go far. A farmer gives them a lift for a way and they decide to spend the night in a nearby barn where Simeon Holly and his wife find them. David's father is dead.

Because no one else wanted him, David stayed with the Hollys. They soon found that David had queer ideas about work and play. One of his first tasks was to fill the wood box and although he started with good intentions, some exceedingly interesting butterflies soon lured him away from his task.

David is considered a real problem by Mr. Holly. The boy hears him say that no one wants him and goes to the barn loft where he can feel that his father is near him. He is missed by Mrs. Holly who cannot resist telling him that she does want him. David is happy again, but Mr. Holly feels that it is just another mouth to feed with the mortgage coming due at the bank soon.

"But he can learn—and he does play beautifully," murmured the woman; whenever before had Ellen Holly ventured to use words of argument with her husband, and in extenuation, too, of an act of her own!

There was no reply except a muttered "Humph!" under the breath. Then Simeon Holly rose and stalked into the house.

The next day was Sunday, and Sunday at the farmhouse was a thing of stern repression and solemn silence. In Simeon Holly's veins ran the blood of the Puritans, and he was more than strict as to what he considered right and wrong. When half-trained for the ministry, ill-health had forced him to resort to a less confining life, though never had it taken from him the uncompromising rigor of his views. It was a distinct shock to him, therefore on this Sunday morning to be awakened by a peal of music such as the little house had never known before. All the while that he was thrusting his indignant self into his clothing, the runs and turns and crashing chords whirled about him until it seemed that a whole orchestra must be imprisoned in the little room over the kitchen, so skillful was the boy's double stopping. Simeon Holly was white with anger when he finally hurried down the hall and threw open David's bedroom door.

"Boy, what do you mean by this?" he demanded.

David laughed gleefully.

"And didn't you know?" he asked. "Why, I thought my music would tell you. I was so happy, so glad! The birds in the trees woke me up singing, 'You're wanted—you're wanted'; and the sun came over the hill there and said, 'You're wanted—you're wanted'; and the little tree-branch tapped on my window pane and said, 'You're wanted—you're wanted!' And I just had to take up my violin and tell you about it!"

"But it's Sunday—the Lord's Day," remonstrated the man sternly.

David stood motionless, his eyes questioning.

"Are you quite a heathen, then?" catechised the man sharply. "Have they never told you anything about God, boy?"

"Oh, 'God'?—of course," smiled David, in open relief. "God wraps up the buds in their little brown blankets, and covers the roots with—"

"I am not talking about brown blankets nor roots," interrupted the man severely. "This is God's day, and as such should be kept holy."

"'Holy'?"

"Yes. You should not fiddle nor laugh nor sing."

"But those are good things, and beautiful things," defended David, his eyes wide and puzzled.

"In their place, perhaps," conceded

the man stiffly; "but not on God's day."

"You mean—He wouldn't like them?"

"Yes."

"Oh!"—and David's face cleared. "That's all right, then. Your God isn't the same one, sir, for mine loves all beautiful things every day in the year."

There was a moment's silence. For the first time in his life Simeon Holly found himself without words.

"We won't talk of this any more, David," he said at last; "but we'll put it another way—I don't wish you to play your fiddle on Sunday. Now, put it up till to-morrow." And he turned and went down the hall.

Breakfast was a very quiet meal that morning. Meals were never things of hilarious joy at the Holly farmhouse, as David had already found out; but he had not seen one before quite so somber as this. It was followed immediately by a half-hour of Scripture-reading and prayer, with Mrs. Holly and Perry Larson sitting very stiff and solemn in their chairs, while Mr. Holly read. David tried to sit very stiff and solemn in his chair, also; but the roses at the window were nodding their heads and beckoning; and the birds in the bushes beyond were sending to him coaxing little chirps of "Come out, come out!" And how could one expect to sit stiff and solemn in the face of all that, particularly when one's fingers were tingling to take up the interrupted song of the morning and tell the whole world how beautiful it was to be wanted!

Yet David sat very still,—or as still as he could sit,—and only the tapping of his foot, and the roving of his wistful eyes told that his mind was not with Farmer Holly and the Children of Israel in their wanderings in the wilderness.

After the devotions came an hour of subdued haste and confusion while the family prepared for church. David had never been to church. He asked Perry Larson what it was like; but Perry only shrugged his shoulders and said, to nobody, apparently:—

"Sugar! Won't ye hear that, now?"—which to David was certainly no answer at all.

That one must be spick and span to go to church, David soon found out—never before had he been so scrubbed and brushed and combed. There was, too, brought out for him to wear a little clean white blouse and a red tie, over which Mrs. Holly cried a little as she had over the nightshirt that first evening.

The church was in the village only a quarter of a mile away; and in due time David, open-eyed and interested, was following Mr. and Mrs. Holly down its long center aisle. The Hollys were early as usual, and service had not begun. Even the organist had not taken his seat beneath the great pipes of blue and gold that towered to the ceiling.

It was the pride of the town—that organ. It had been given by a great man (out in the world) whose birthplace the town was. More than that, a yearly donation from this same great man paid for the skilled organist who came every Sunday from the city to play it. To-day, as the organist took his seat, he noticed a new face in the Holly pew, and he almost gave a friendly smile as he met the wondering gaze of the small boy there; then he lost himself, as usual, in the music before him.

Down in the Holly pew the small boy held his breath. A score of violins were singing in his ears; and a score of other instruments that he could not name, crashed over his head, and brought him to his feet in ecstasy. Before a detaining hand could stop him, he was out in the aisle, his eyes on the blue-and-gold pipes from which seemed to come those wondrous sounds. Then his gaze fell on the man and on the banks of keys; and with soft steps he

crept along the aisle and up the stairs to the organ-loft.

For long minutes he stood motionless, listening; then the music died into silence and the minister rose for the invocation. It was a boy's voice, and not a man's, however, that broke the pause.

"Oh, sir, please," it said, "would you—could you teach me to do that?"

The organist choked over a cough, and the soprano reached out and drew David to her side, whispering something in his ear. The minister, after a dazed silence, bowed his head; while down in the Holly pew an angry man and a sorely mortified woman vowed that, before David came to church again, he should have learned some things.

CHAPTER VIII

THE PUZZLING "DOS" AND "DON'TS"

WITH the coming of Monday arrived a new life for David—a curious life full of "don'ts" and "dos." David wondered sometimes why all the pleasant things were "don'ts" and all the unpleasant ones "dos." Corn to be hoed, weeds to be pulled, woodboxes to be filled; with all these it was "do this, do this, do this." But when it came to lying under the apple trees, exploring the brook that ran by the field, or even watching the bugs and worms that one found in the earth—all these were "don'ts."

As to Farmer Holly—Farmer Holly himself awoke to some new experiences that Monday morning. One of them was the difficulty in successfully combating the cheerfully expressed opinion that weeds were so pretty growing that it was a pity to pull them up and let them all wither and die. Another was the equally great difficulty of keeping a small boy at useful labor of any sort in the face of the attractions displayed by a passing cloud, a blossoming shrub, or a bird singing on a tree-branch.

In spite of all this, however, David so evidently did his best to carry out the "dos" and avoid the "don'ts," that at four o'clock that first Monday he won from the stern but would-be-just Farmer Holly his freedom for the rest of the day; and very gayly he set off for a walk. He went without his violin, as there was the smell of rain in the air; but his face and his step and the very swing of his arms were singing (to David) the joyous song of the morning before. Even yet, in spite of the vicissitudes of the day's work, the whole world, to David's homesick, lonely little heart, was still caroling that blessed "You're wanted, you're wanted, you're wanted!"

And then he saw the crow.

David knew crows. In his home on the mountain he had had several of them for friends. He had learned to know and answer their calls. He had learned to admire their wisdom and to respect their moods and tempers. He loved to watch them. Especially he loved to see the great birds cut through the air with a wide sweep of wings, so alive, so gloriously free!

But this crow—

This crow was not cutting through the air with a wide sweep of wing. It was in the middle of a cornfield, and it was rising and falling and flopping about in a most extraordinary fashion. Very soon David, running toward it, saw why. By a long leather strip it was fastened securely to a stake in the ground.

"Oh, oh, oh!" exclaimed David, in sympathetic consternation. "Here, you just wait a minute. I'll fix it."

With confident celerity David whipped out his jackknife to cut the thong; but he found then that to "fix it" and to say that he would "fix it" were two different matters.

The crow did not seem to recognize in David a friend. He saw in him, apparently, but another of the stone-

throwing, gun-shooting, torturing humans who were responsible for his present hateful captivity. With beak and claw and wing, therefore, he fought this new evil that had come presumably to torment; and not until David had hit upon the expedient of taking off his blouse, and throwing it over the angry bird, could the boy get near enough to accomplish his purpose. Even then David had to leave upon the slender leg a twist of leather.

A moment later, with a whirl of wings and a frightened squawk that quickly turned into a surprised caw of triumphant rejoicing, the crow soared into the air and made straight for a distant tree-top. David, after a minute's glad surveying of his work, donned his blouse again and resumed his walk.

It was almost six o'clock when David got back to the Holly farmhouse. In the barn doorway sat Perry Larson.

"Well, sonny," the man greeted him cheerily, "did ye get yer weedin' done?"

"Y—yes," hesitated David. "I got it done; but I didn't like it."

"Tis kinder hot work."

"Oh, I didn't mind that part," returned David. "What I didn't like was pulling up all those pretty little plants and letting them die."

"Weeds—'pretty little plants'!" ejaculated the man. "Well, I'll be jiggered!"

"But they *were* pretty," defended David, reading aright the scorn in Perry Larson's voice. "The very prettiest and biggest there were, always. Mr. Holly showed me, you know,—and I had to pull them up."

"Well, I'll be jiggered!" muttered Perry Larson again.

"But I've been to walk since. I feel better now."

"Oh, ye do!"

"Oh, yes. I had a splendid walk. I went 'way up in the woods on the hill there. I was singing all the time—inside, you know. I was so glad Mrs. Holly—wanted me. You know what it is, when you sing inside."

Perry Larson scratched his head.

"Well, no, sonny, I can't really say I do," he retorted. "I ain't much on singin'."

"Oh, but I don't mean aloud. I mean inside. When you're happy, you know."

"When I'm—oh!" The man stopped and stared, his mouth falling open. Suddenly his face changed, and he grinned appreciatively. "Well, if you ain't the beat 'em, boy! 'Tis kinder like singin'—the way ye feel inside, when yer 'specially happy, ain't it? But I never thought of it before."

"Oh, yes. Why, that's where I get my songs—inside of me, you know—that I play on my violin. And I made a crow sing, too. Only *he* sang outside."

"Sing—a crow!" scoffed the man. "Shucks! It'll take more 'n you ter make me think a crow can sing, my lad."

"But they do, when they're happy," maintained the boy. "Anyhow, it doesn't sound the same as it does when they're cross, or plagued over something. You ought to have heard this one to-day. He sang. He was so glad to get away. I let him loose, you see."

"You mean, you *caught* a crow up there in them woods?" The man's voice was skeptical.

"Oh, no, I didn't catch it. But somebody had, and tied him up. And he was so unhappy!"

"A crow tied up in the woods!"

"Oh, I didn't find *that* in the woods. It was before I went up the hill at all."

"A crow tied up—Look a-here, boy, what are you talkin' about? Where was that crow?" Perry Larson's whole self had become suddenly alert.

"In the field 'way over there. And somebody—"

"The cornfield! Jingo! Boy, you don't mean you touched *that* crow?"

"Well, he wouldn't let me *touch* him," half-apologized David. "He was so

Just David

(Continued from Opposite Page)

afraid, you see. Why, I had to put my blouse over his head before he'd let me cut him loose at all."

"Cut him loose!" Perry Larson sprang to his feet. "You didn't—you didn't let that crow go!"

David shrank back.

"Why, yes; he wanted to go. He—" But the man before him had fallen back despairingly to his old position.

"Well, sir, you've done it now. What the boss'll say, I don't know; but I know what I'd like ter say to ye. I was a whole week, off an' on, gettin' hold of that crow, an' I wouldn't have got him at all if I hadn't hid half the night an' all the mornin' in that clump o' bushes, watchin' a chance ter wing him, jest enough an' not too much. An' even then the job wa'n't done. Let me tell yer, 't wa'n't no small thing ter get him hitched. I'm wearin' the marks of the rascal's beak yet. An' now you've gone an' let him go—just like that," he finished, snapping his fingers angrily.

In David's face there was no contrition. There was only incredulous horror.

"You mean, you tied him there, on purpose?"

"Sure I did!"

"But he didn't like it. Couldn't you see he didn't like it?" cried David.

"Like it! What if he didn't? I didn't like ter have my corn pulled up, either."

HANDY ANDY Says "Here's How"

To Keep Your Roof from Rotting

By Ray Inman

Don't leave straw on your barn roof.

Patches of straw left on the roof by the straw blower should be swept off.

Straw catches and holds moisture, causing any roof to deteriorate very rapidly

Moisture and acid from decomposing straw are ruinous to galvanized iron

20 YEARS AGO

Twenty years ago, Lord Farms started with the strain of S. C. White Leghorns we have today. It is safe to say that a large part of the successful poultry farms in the east today have been built on Lord Farms stock to some extent.

During these twenty years we have made steady improvement in our stock. By continuous trapnesting and individual pedigreeing and wing-banding of thousands of chicks, we are now in a position to offer chicks by the thousand that were sold by the dozen at high prices a few years ago.

Our Grade-A Chicks now all come from stock that good poultrymen would have been proud to own one pen of a few years ago.

We have probably as many breeding birds on our own farm as any one in the Eastern States. So we know that our stock is all we claim for it. Buying from Lord Farms is different than buying from an ordinary hatchery. Lord Farms customers are successful.

Any one planning for next spring's chicks should get our catalog and bulletins describing our plants and the four men, all in one family, who are giving their lives to this work. Write today. Lord Farms, 85 Forest St., Methuen, Mass.

Getting a Start With Poultry

"I am asking your advice on the best way to start in chickens. I have a five acre farm and also a barn 20x20 and a small hen house 12x12 and a larger house 16x36 feet. They are all in one so they can be used as one house. How many hens could I keep in that much room."

"They will have a run of four acres. I will have to buy all feed, and will have a building 12x12 for a brooder house. Do you think I can make any money with them. I will have to buy all my chicks in the spring. Will you tell me the best way to go at it, the feed for chicks and the way to get rid of lice and keep them well. I will get a coal brooder."

THE best way to start in the chicken game is to work for a year or more on the farm of some successful poultryman, and thus learn the business.

In case you are not in a position to do this the next best thing is to enroll in the correspondence course in poultry flock management offered free to residents of New York State by the New York State College of Agriculture. You should address your application to Supervisor, Farm Study Courses, Cornell University, Ithaca, N. Y. The course will give you the information on feeding, control of lice and mites and dozens of other necessary and important details.

You could keep 340 hens in the 3 rooms you mention, allowing 3½ square feet of floor space per bird.

If you do the work of caring for the flock you should be able to make money on them, perhaps two dollars per hen. If you hire much help you will need two brooder houses for that of the profits. You should start with baby chicks. About 800 should be enough to give you 340 pullets. You will need two brooder houses for that many. For the first season you could use one of the hen houses.—L. E. WEAVER.

Poultrymen Grow Healthy Chicks

TWELVE New York State counties, namely Cayuga, Chautauqua, Columbia, Delaware, Greene, Madison, Monroe, Schenectady, Schuyler, Suffolk, Sullivan and Wayne, have this year followed a program to decrease losses of baby chicks. In these twelve

counties 798 poultrymen have agreed to follow six recommendations made by the College of Agriculture. These recommendations are: buy chicks early, start with well-bred chicks, practice clean brooding, raise the chickens on clean ground, follow clean feeding practices and keep the pullets growing.

Judging from past experience, following these practices will materially lessen losses among baby chicks.

About Plans for Brooder House

"Please give me some detailed information on the construction of a colony brooder. Which is more economical heating system, electricity or hot water? We have a hatch coming off next week."

TO give detailed information on the building of a colony brooder would require too much time and space for a letter. I am, therefore, asking the Poultry Department at Cornell to send you their bulletin which contains plans and descriptions.

Hot water is usually lower in cost for a brooder than electricity. However in a "colony" system we use coal stoves or oil stoves, but not hot-water. Electricity has the advantage of being so much more easily handled and reduces the worry of brooding so much that people usually consider the extra cost as being more than off-set.—L. E. WEAVER.

Avoid Egg Losses from Red Mites

TO control red mites, paint the wood work with some strong, oily, penetrating material. Carbolineum; creosote, crude carbolic acid, and kerosene mixed in equal parts; white wash; waste crank case oil; and lime sulfur are all recommended.

Red mites appear in all poultry houses as warm weather approaches. The mite is a small, spider-like creature which lives during the day in the cracks and crevices around the perches and nests and comes out at night to feed on the fowls. When well filled with blood the vermin looks red, hence it is often called red mite. Ordinarily it is grey in color.

The Progress of Rural Electrification

(Continued from Page 3)

objection to an individual owner doing his own wiring, especially under such a disparity of wage conditions, providing he knows what the standards of construction are and is able to install his wiring in accordance with these standards so that it will meet the requirements of the Code. Costs may be reduced somewhat by contracting on a costs plus basis, with an arrangement by the owner to furnish a helper.

The Purchase and Use of Electric Appliances

When we are able to secure electric current most of us think only of electric lights. Lighting the average house would probably require not more than 30 kwh per month, which would amount to about 300 kwh per year. Potential household use however, if all practical electrical appliances including water heaters, were available and used, would be approximately 5000 kwh per year. A completely electrically equipped large poultry farm of 1500 hens has a potential use of around 9000 kwh, while a well-equipped dairy farm might use as much as 12,000 kwh per year. These figures give some idea of the possibilities for the development of loads and of potential demand on the farms of the state.

Most of the common household uses require very little current. If, to the lights in an ordinary farm house, with a family of four persons, there is added a small electric water pump, an electric washer, electric iron, percolator, vac-

uum cleaner, and other minor equipment, the total amount of consumption might reach about 600 kwh a year, or 50 kwh per month.

The addition of a refrigerator, range and water heater would raise the annual consumption to about 5000 kwh. This amount of consumption should not cost more than \$25 a month or about \$300 a year.

If now we add the possible yearly use of electric equipment on the poultry farm with lighting both for the laying flock and for chicks, water warmers, mash mixers, and brooders, it would result in 4000 kwh per year, in addition to the household use. This would mean a total use for an electrically equipped poultry farm of about 9000 kwh per year, which would entail an annual cost for power of approximately \$400 a year, or \$30 to \$35 a month.

The electrified dairy farm of 30 cows equipped with an electric milker, water pump, milk cooler, water heater, ventilators and a 5 HP motor for ensilage cutting and feed grinding would require nearly 7000 kwh per year in addition to the household uses. This would give a total consumption of about 12,000 kwh, which ought not to cost more than \$450 to \$550 annually, or \$40 to \$45 a month.

Of course there are a number of other small items that might be added, such as warming pads, sewing machine

(Continued on Page 16)

New Jersey State Police Get Action

SOME time ago a New Jersey subscriber wrote us about a protested check totaling over \$400.00 given to her by a buyer of turkeys. The check came back from the bank marked "No funds" and our subscriber had been unable to get her money although it had been about six months since the turkeys were sold. Acting on some advice given her by local authorities she

Our Pay

THIS is to let you know that I have received Mr. personal check for \$40 and also to thank you people for bringing it about. I don't know what your system is but it sure does bring results, as I am positive that I never would have received any of it otherwise. I have been trying for some time and got no results.

I would be only too glad to pay you for your trouble by sending you a check, but as you do not accept any money, all I can do is to send you my sincere thanks and to let you know that I shall always speak a good word for the A. A. whenever opportunity offers.

had secured a judgment against the maker of the check but had been unable to collect anything on it. We called this case to the attention of the New Jersey State Police inasmuch as the giving of a check without funds to cover it is a misdemeanor. Sergeant C. J. Campbell of the New Jersey State Police investigated, secured a warrant for the arrest of the maker of this check and incidentally, uncovered a number of interesting facts.

In the first place it developed that the maker of the check had made good on a part of the check which money, however, never reached our subscriber. Sergeant Campbell in the course of the investigation was informed that it would be useless to try to have the check made good as the man had gone out of business and had no money. The Sergeant, however, had a different opinion. Following the advice of Sergeant Campbell our subscriber secured a warrant, the maker of the check was arrested and we are glad to report that full settlement has been made.

We wish to take this opportunity to thank the New Jersey State Police for their fine cooperation on this case. Without their help, it is doubtful if our subscriber would ever have received the money. With their cooperation, the whole case was settled very promptly.

Who Would Sign This?

NO subscriber who reads the Service Bureau page regularly should have any doubt as to opinion of the Service Bureau about all picture enlarging schemes. There is no question but that when you sign an order for one you are signing a legally binding contract. Apparently these companies are not anxious to have their methods aired in court as we have never heard of a case where they have brought legal action to collect.

We are copying two statements contained on a contract which one of our subscribers recently signed with a picture enlarging scheme. These statements are as follows:

And to secure the payment of said amount for merchandise received in good condition, I hereby authorize, irrevocably, any attorney or any Court of Record to appear for me in such court, in term time or vacation, or at any time hereafter and confess a judgment without process, in favor of the holder of this note, for such amount as may appear to be unpaid thereon, together with costs and ten dollars attorney's fees and to waive and

release all errors that may intervene in such proceedings, and consent to immediate execution upon such judgment, hereby ratifying and confirming all that my said attorney may do by virtue thereof.

This is a true statement of goods received, amount paid and balance due Chicago Portrait Company, covering which a promissory note has been given in good faith in connection with which there is no misunderstanding, and the same will not be dishonored, repudiated or denied by me.

It certainly sounds legal and binding. It is our opinion that our subscribers who signed it never read it thoroughly. Judging from past experience, even with these strong clauses in the contract, we believe that this picture enlarging concern will not go so far as to take legal action to collect bills for work they have done.

How to Get Gas Tax Refunds

WE still get an occasional inquiry on the method of securing gas tax refunds for gasoline not used on the highway. The proper procedure is to get a purchase slip or paid receipt from the garage or gas station when the gasoline is purchased. Also ask for a gas tax refund blank. If your garage does not have these blanks, they may be secured by writing to the State Department of Taxation and Finance at Albany, N. Y.

Fill these blanks out carefully, including the affidavit at the bottom. It is usually wise to claim refunds only once in several months. However, the refund claim must be presented within

Have You a Friend in This List?

STRENUOUS efforts are being made to cut down the number of automobile accidents, but, we are sorry to say, these efforts do not seem to be very successful. Every day we read of persons who are injured or killed.

You may be injured while driving your car, while riding in some other car, or for that matter, while you are merely walking on the highway. If you are injured in any of these ways, a personal travel accident insurance policy will help pay the doctor bills. If you live in Jefferson or Madison County here are some of your neighbors who have benefited from this service.

three months from the date of the first purchase. After the claim blanks have been filled out, they should be forwarded to the Department of Taxation and Finance at Albany, N. Y.

Modern Priscilla Discontinues Publication

"MODERN Priscilla" a magazine for women has discontinued publication and Raymond S. Wilkins of Boston, Massachusetts has been appointed as receiver. Any subscriber whose subscription to the "Modern Priscilla" has not been filled should file a claim against the Priscilla Company and send it to Mr. Wilkins at 735 Exchange Building, Boston, on or before February 7th, 1931.

We understand that Mr. Wilkins is trying to secure some publication which will take over the subscription list of "Modern Priscilla" but that if this cannot be done, subscribers will get a dividend providing their proof of claim is filed in accordance with the above notice.

The Unordered Merchandise Nuisance

THIS is the time of year when unordered merchandise is likely to be received in unusual quantities. In this connection we wish to emphasize that if someone sends you a box of Christmas cards with a note saying that your name was suggested by a friend, you are under no obligation to return them unless the sender encloses return postage. Even then, we doubt if you could be held legally liable. You can write the sender a letter saying that they were unordered, that you are charging storage at such a rate per week or per month, and that when the storage charges equal the value of the merchandise you intend to use them to pay storage charges.

This procedure, in our opinion, is the only way that this nuisance of unordered merchandise can be ended.

FYR-PRUF STOVE and NICKEL POLISH

REALLY TWO POLISHES IN ONE

Fyr-Pruf (pronounced Fire-Proof) is a modern polish that cleans and polishes both stove and nickel trim in a single operation . . . imparting a more brilliant and longer lasting lustre. Women use Fyr-Pruf Stove and Nickel Polish unhesitatingly because it is absolutely safe . . . it cannot burn or explode . . . and it will neither stain nor injure your hands. With COLD water and soap it washes off quickly. Never use hot water. Fyr-Pruf is odorless and dustless, too.

The Progress of Rural Electrification

(Continued from Page 14)

motors, electric fans, waffle irons, dish washers, etc., in the household, and clippers, saws, lathes, separators, feed shredder, and motors for farm use, but these are not large items and their current requirements are relatively small compared with those already listed.

But the costs of the equipment are the real problem. They are large and frequently the deterring factor. To illustrate, let us estimate the possible costs of the installation of the equipment above outlined:

The electric iron, vacuum cleaner, washing machine, percolator and other miscellaneous items would amount, say to \$200 or \$250. A water pump and motor, while only requiring an investment of \$125 to \$300 would undoubtedly, and should, lead to an adequately equipped bath room, with an additional cost of \$300 to \$500.

The radio, refrigerator, range and water heater would add \$700 to \$900, making a total for the electrified house, of \$1000 to \$1300.

The added investment in electrical equipment for the poultry farm previously described might amount to \$400 to \$600.

The special dairy farm electrical equipment would cost approximately \$1600, or a total of \$1400 to \$1900 for the completely equipped poultry farm, or \$2800 to \$3300 for the dairy farm.

Of course it would not be necessary to make this complete installation at once, and such equipment could be accumulated gradually, and sometimes at second-hand reduced costs, with much of the work done by the owner. It is obvious that most farmers probably would find difficulty in obtaining money to make an expenditure of from \$1000 to \$3000 for electric equipment even over a considerable period of years. Consequently it is also obvious that here is a limiting factor in the maximum use of electricity, which should have serious attention if we are to secure the fullest application of electricity to agriculture at the lowest possible rates.

Summarizing the above discussion, we find that electric service is, or can be made available practically any where in the state where there are four or more customers per mile who can make reasonable economical use of the current, at a cost of from \$2 to \$6 per month, or \$25 to \$75 per year. And further that wherever minimum monthly bills exceed these amounts the costs of line extensions are entirely absorbed in the costs of current. In other words, the Adirondack plan as at present available would not call for any expenditure on the consumer's part to secure the extension of the line under such conditions of use.

It is clear also that in addition to reductions through increased company efficiency the costs of current per unit can be further decreased as the amount used increases. With the approach toward the maximum possible use of electricity on farms, and the consequent lower cost, it is entirely possible in the future eventually to secure twice as much electricity as now used for but little increased total cost.

The fact that the initial cost of wiring the premises for the reasonable use of electricity costs from \$150 minimum to \$850 for complete service, is a strong deterrent to increased use. Completeness of wiring is a direct measure of the possible use and therefore the service which can be obtained from electricity.

The necessary appliances to use electricity require large initial investments, and they also measure the usefulness of electric service. Full electric house equipment costs from \$700 to \$1300, and maximum farm equipment ranges in cost from \$400 to \$1600 more.

From this summary it is obvious that any program to promote the use of electricity on farms falls into two divisions:

1. Methods of extension and rates.
2. Wiring and appliances.

A Program Extension and Rates

The 1930 Legislature made provision for the first part of this program when it amended section 8 of chapter 488 of the Laws of 1910 to authorize the Pub-

lic Service Commission "to appoint a qualified person whose duty it shall be to formulate and encourage the carrying out of plans of rural electrification, to make research of area developments, line problems, new methods of financing increased use of farm appliances, and similar matters." Such a person, with an assistant has already been appointed in the Public Service Commission, and is at work on the problems outlined by the Legislature. Dr. R. F. Bucknam, formerly of the State College of Agriculture at Cornell University, heads this work. His job will be primarily to work out and secure the adoption of more nearly adequate and satisfactory extension plans and forms and amounts of rates for farm conditions.

The development of adequate and

proper wiring for farm premises and the fuller use of electric appliances is a teaching job which belongs primarily to the extension forces of the State College of Agriculture. It calls for men with special training and with special knowledge in the field of electric engineering as well as for organized and widespread teaching throughout the state such as the agricultural extension forces of the State College are best prepared to organize and supervise.

The need has long existed, and the time is ripe to further round out the college program by adding work in this modern field in which there is much to be done. What is definitely needed is suitable provision by the 1931 Legislature in an amount of from \$15,000 to \$20,000 to establish rural electrification work with proper men and equipment, in the Department of Agricultural Engineering at the State College of Agriculture at Cornell University. Such provision will be requested at the next

American Agriculturist, December 13, 1930

session of the Legislature and we believe that it should be provided in order adequately to supplement the work already provided in the Public Service Commission, and more completely to carry out the recommendations of the Commission on the Revision of the Public Service Commission Law.

The possibilities of the use of electricity on farms to further increase farm efficiency, to add to the comfort and convenience of farm homes, and to lighten the load and lengthen the life of farm people, are undisputed. It appears that the most extensive use of electricity may further revolutionize farming and farm life.

Electric current should be universally available wherever it can be economically used.

An intelligent understanding of the program should lead to the wider use and lower costs of electricity and therefore to larger satisfactions in farming and farm life.

THE BARGAIN IN THE CHECKERBOARD BAG

16 QUARTS FOR 23c. There's a bargain in milk... a bargain that's waiting for you in your very town... in Checkerboard Bags at The Store With the Checkerboard Sign. In this bag are 100 pounds of Purina Cow Chows. In the average 100 pounds of Purina Cow Chows are 16 more quarts of milk than are in the average bag of more than 130 other feeds. This bag of Purina Cow Chows costs an average of 23c more than the average bag of these other feeds. 16 quarts for 23c.

This is the good news which comes from the recent national farm-to-farm feed survey of 18 months... a survey of 505,536 cows... a survey covering the 48 states and Canada... a survey conducted by 870 men... a survey still going on.

When you buy feed for your cows you are buying milk in a bag. Consider, then, what a bargain you get in a 100-pound bag of Purina Cow Chows... 113 quarts of milk... all in 100 pounds of feed and the roughage that goes with it. 16 of these quarts are extra... 16 quarts which cost only 23c... just a bit more than one penny per quart... there's something you can call a bargain! A bargain that comes only in Checkerboard Bags... a bargain that becomes *your* bargain when Purina Cow Chows become *your* feed. Purina Mills, 898 Gratiot Street, Saint Louis, Missouri.

Christmas Everywhere

*Everywhere, everywhere, Christmas tonight!
Christmas in lands of the fir-tree and pine,
Christmas in lands of the palm-tree and vine,
Christmas where snow peaks stand solemn and white,
Christmas where cornfields stand sunny and bright.
Christmas where children are hopeful and gay,
Christmas where old men are patient and gray,
Christmas where peace, like a dove in his flight,
Broods o'er brave men in the thick of the fight;
Everywhere, everywhere, Christmas tonight!*

Power Lines Across Farms

Deal Fairly but Know and Protect Your Rights

By C. R. VANNEMAN

Chief Engineer, N. Y. S. Public Service Commission

RURAL residents are frequently confronted with the question of remuneration which they may be entitled to receive for the right which they grant to electrical corporations permitting them to erect distribution and transmission systems across or along private property. In discussing this problem it is essential that there be a clear understanding of the two systems.

A distribution system is composed of the poles, wires, guys, etc., to support the lines by means of which the energy is brought to the customer's premises. Usually the voltage on such lines varies from 2,200 volts to 6,600 volts. The transmission system is the line carrying the high voltages, that is, from 11,000 volts to 110,000 or higher. These lines are usually constructed on private rights of way off the highways, while the distribution systems are almost universally constructed upon the highways.

Transmission Lines Go Across Country

In the case of transmission systems the corporations seek the right to construct such lines over the private property of the owners, either on the basis of a perpetual easement or by outright purchase of the land. Such lines are always constructed as nearly straight as possible, so that frequently the line staked out by the corporation passes through the center or near the center of farms. The question is frequently asked why these lines may not be placed on those portions of the farms or property where they will be least objectionable to the farmer or owner. The answer depends entirely upon the locality. It is possible sometimes to make changes which will enable the location to be made in the least objectionable manner, and of course, this should be done for reasons which need not be pointed out here. In other cases, it is substantially impossible to make any change.

In the case of distribution systems, the lines are constructed along those highways where they will serve the greatest number, as well as along those where the prospective customers may find themselves in a position to pay the cost of securing the energy.

Determining the Damage

The problem of determining a fair amount to be charged for the privilege of placing these lines on private property is no easy one. It is, however, entirely within the hands of the property owner. His land cannot be used by an electrical corporation without his consent, except in cases where condemnation proceedings have been resorted to. Obviously his consent may be accompanied by a demand for compensation for the privilege which he is granting. In the case of transmission lines, this privilege is one desired by the corporation, and not one which may be directly beneficial to the owner. He, therefore, is within his rights if

he asks compensation which will be commensurate with the privilege which he grants. If the right sought includes the erection of towers, poles, guys, etc., then the compensation should depend upon the extent of occupancy, the interference with normal use of the property, the necessity for removal of woods, orchards, etc. It is not possible definitely to state any rule which will guide in making a demand for compensation. The value of the property will largely control. For instance, the right to cross a meadow or other untilled open land is not so great as that over highly cultivated land.

Occasionally the corporations seek to purchase outright certain acreage upon which they desire to construct transmission lines. Here, of course, the fundamental control is the value per acre of the land. In any event, however, it is within the right of the owner to set his price. The land is his, and it is being sought by another for a purpose, and the owner should determine its value to himself.

Lines Along Highways

The case of distribution systems constructed along highways is somewhat different. In many cases the ownership of the land abutting the highway extends to the center of the highway, so that the right to construct along the highway must be secured from the property owner. In those cases where there is no ownership of the highway vested in the adjacent property or farm owner, then the corporations must secure the necessary consents from the municipal authorities which control the highway.

The value of the right to construct along the highway is equally within the control of the property owner where he has a vested right in the highway. However, there is a very distinct controlling element in this which should not be overlooked. Any compensation asked for the right to construct such a line necessarily goes into the capital cost of the line upon which the corporation may be permitted to earn a return, and obviously increases the cost of the rendition of service. Hence, if an owner demands compensation for the right to construct such lines, he is making it more difficult for himself and his neighbors to secure the service at the lowest possible cost.

Guard Your Rights

The owner has certain rights which he should guard carefully. These lie in the trees, sidewalks, driveways, etc., abutting his property. It is entirely possible to construct proper lines along highways without ruthlessly destroying the shade and fruit trees, and it is the duty as well as the right of every property owner to demand that tree cutting shall be reduced to a minimum and that such as is necessary be done in a manner which will not

(Continued on Page 15)

Feed for HEALTH and you get PROFIT

LIKE springpasture, Dried Molasses Beet Pulp is succulent and palatable. Dairy cows, beef cattle and sheep like its root-like flavor. It stimulates the flow of digestive juices and aids digestion of other feeds—it livens, invigorates, improves health, increases milk flow and brings rapid economical growth. It puts more money into your pocket!

REDUCES COST OF RATION

Replace some of the heavy feeds in your ration with the light and bulky Dried Molasses Beet Pulp. It's the great vegetable feed for all animals—the regular sugar beet after the extraction of sugar—all the nutritious vegetable tissues of the beet are retained. Present prices make it more than ever a profitable buy.

ORDER EARLY

Remember the demand by farmers who already know the value of Dried Molasses Beet Pulp is large and will pull heavily on early supplies—avoid disappointment and delay by ordering from your dealer now.

Shipments made direct from factory located nearest to buyer.

Give Consumers What They Want

Some Suggestions About Raising and Grading Potatoes

GROWERS of most Eastern farm products have been repeatedly urged during the past few years to improve the quality of the stuff they grow in order to compete on the same even terms with stuff shipped in from other sections. Potatoes are no exception to this rule. It is seldom, however, that we hear definite recommendations for improving quality. The following were suggested recently by Professor E. V. Hardenburg of Cornell:

1. A lot of potatoes in New York are grown on grass or clover sod, which is naturally infested with grubs and wire worms which attack the potato tubers. It would seem that the potato rotation must be shortened, or that they not be planted on sod.

Use Land Suited for the Crop

2. A lot of potatoes are grown on soil that is not suited for this crop and will never produce potatoes of the best quality.

3. It is estimated that less than 20 per cent of potato growers use certified seed. Certified seed not only increases the yield, but increases the uniformity and quality of stock.

4. Not less than eighteen bushels of seed per acre should be used and many are using twenty to twenty-five. Using this amount of seed and setting hills 12 inches in the row with rows 32 to 34 inches apart, will produce not only a larger crop, but tubers of a more uniform size, fewer large tubers, and less hollow heart.

5. Spraying or dusting at least six times with plenty of material and three nozzles to the row, is a necessity in most sections to insure sound, healthy tubers.

Harvesting is Important

After producing a crop it must be handled carefully. In the first place, where potatoes are

dug when immature, the skins are very tender. If they are handled roughly the skins will be cut, potatoes will shrink, and appearance will be badly damaged. They should be allowed to lie in the field until they are dry. Hired laborers should be checked carefully to see that they realize the necessity of careful handling.

Many growers in Maine are using garden hose, burlap, and automobile tires on their diggers in places where potatoes might be injured, with excellent results. Many growers are also using splint baskets instead of slat crates in order to reduce injury. Grading is important, but too often this consists merely of removing small tubers. Real grading also removes defective tubers and misshapen tubers.

* * *

Potato and Vegetable Growers Plan Meeting

WHEN the members of the New York State Vegetable Growers' Association and the Empire State Potato Club gather on the tenth floor of the Hotel Syracuse, in Syracuse, on January 7th and 8th, there will not be room enough left for a game of tiddlywinks. The hugh ballroom of over 6,000 square feet will be occupied by vegetable, potato, educational and trade exhibits. Two or three meetings will be going on at a time in different rooms and the corridors will be buzzing with growers who are informally talking over conditions and practices, and getting acquainted with one another.

The New York State Vegetable Growers' Association is rounding out twenty years of history which has seen it grow from a little group of twenty-five or thirty producers until now it includes seventeen affiliated associations and about 3300 members. The association has been a powerful factor in the betterment of producing and

marketing conditions in the state. It has secured appropriations for extensive new research in this field and many of these projects will be the subjects of reports at the Syracuse meeting. The association has championed the interest of the growers in matters of transportation, package standardization, and in many other directions.

4-H Members Have a Part

Among the many features of the meeting is a competitive exhibit of potatoes grown by the junior 4-H club members of the state. There will be a speaking contest on vegetable subjects with four Cornell students in competition. The Premier Potato Contest of the Empire State Potato Club reaches its climax at the meeting, and awards are made to ten growers who have achieved high yields of quality potatoes at low cost. Director C. E. Ladd of Cornell University is to announce the awards at the banquet on Wednesday evening.

This year's program for the state vegetable meeting is unusually attractive. Vegetable growers are particularly urged to send to George W. Lamb, Hubbardsville, N. Y. for copies of the premium list. Liberal offerings have been made and there is every prospect for a fine show of potatoes and vegetables in which all growers in the state are invited to take part.

Programs may be secured from Howard Crandall, Secretary, 417 Hector Street, Ithaca, N. Y.—PAUL WORK.

A Christmas List

THE Rhode Island Extension Service suggests a Christmas list for the farm. Perhaps there is nothing so new about their suggestions and in a sense it might be said that the suggestions (Continued on Page 6)

How to Prevent Contagious Abortion

What About Vaccines, Blood Tests, Sure Cures?

EDITOR'S NOTE—This is the second of two articles, in question and answer form, on a disease that is causing dairymen more loss than all the others combined—contagious abortion. We make no pretense of giving all the information about this cattle scourge, but we have, in these questions and answers, summarized the high spots from several different books and bulletins which you may find helpful and which may save you many hundreds of dollars in controlling this disease. We suggest that you save both articles for future reference.

* * *

What about cures for abortion? Are there any?

No. There are ways of determining when the infection is present and there are many ways of preventing the infection through proper sanitary measures, but beware of the man or the firm or the advertisement that tells you that abortion can be definitely cured.

* * *

What is meant by the blood test for Bang abortion disease?

As a result of infection with abortion bacilli, there form in the animal body substances which can bring about well defined reactions when brought in contact with the bacilli. These reactions are produced in the laboratory as blood tests, one of which is called the agglutination test and the other the complement fixation test. For the purpose of either of these tests, a small quantity of the animal's blood is drawn into a sterile bot-

tle by inserting a hypodermic needle into the jugular vein. The bottles are properly labeled so as to correspond with the numbers of the cows whose blood is contained within. The samples are then forwarded to a laboratory prepared to undertake the required examination.

When a test made with the blood of a given animal yields a positive reaction, this must be accepted as evidence that the animal is, at the time, carrying infection and has been doing so sometime prior to the test. It never means that an animal will abort or has aborted and neither

does it mean the contrary. Neither will a negative test result in any interpretation that the animal involved will not abort. The result of the test merely establishes the fact that the animal in contact was made with the Bang bacillus and that the latter entered the tissues whether it remained there or not.

* * *

What are the greatest values of the blood test?

They show the absence or presence of infection by the bacilli of abortion in a herd and they also give accurate pictures regarding the extent of the distribution of the infection in the herd. Because so many cows remain infection carriers for very long periods, the tests have become more valuable than they were thought to be at first. One investigator has shown that by means of the agglutination test, a herd can be cleaned from infected cattle if the test reaction be undertaken at definite intervals and cows giving a positive reaction be immediately removed. The tests are perhaps most useful when used in connection with new cattle which are to be introduced into an infection-free herd.

* * *

Can an animal or herd develop an immunity, or resistance, to Bang abortion?

Probably to some small extent. It is known that abortions may occur for a time in a herd and then have a tendency to disappear, leading to the conclusion that animals developed an immunity, but it is not a very reliable immunity, however, because in a discouraging number of cases, a cow may have two or three

(Continued on Page 14)

Blonde's Cunning Mouse, owned by John S. Ellsworth, Folly Farm, Simsbury, Conn., was selected as the best female Jersey shown and awarded the grand championship ribbon at the 1930 National Dairy Exposition, St. Louis. In order to win such honors it is necessary that a cow be an outstanding individual and a high producer. In order that she and the herd to which she belongs return a profit, it is also essential that she be healthy.

Henry Morgenthau, Jr. Appointed Conservation Commissioner

WE are sure that AMERICAN AGRICULTURIST's thousands of friends will join with the staff in congratulating Henry Morgenthau, Jr., our publisher, on his appointment by Governor Roosevelt as Conservation Commissioner of New York State. The appointment has yet to be confirmed by the State Senate.

Mr. Morgenthau will succeed Alexander Macdonald who has been Conservation Commissioner since 1922. Under Mr. Macdonald's leadership the Conservation work of the State has made much progress. The forest preserve has been steadily extended. Parks and camp sites for the recreation of the people of the State have been created, and in general, a splendid job has been done. We understand that after long years of service to the public, Commissioner Macdonald is retiring to private life on a pension which he has well earned.

The appointment of Henry Morgenthau, Jr., is in recognition of his service to the rural communities of the State as publisher of AMERICAN AGRICULTURIST and as Chairman of Governor Roosevelt's Agricultural Advisory Commission. Our readers are familiar with the fine agricultural legislation program accomplished largely under the leadership of this Commission. Additional State aid amounting to many millions of dollars has been provided to improve local roads and schools, and reduce farm taxes. It is generally conceded that these new farm laws are the best passed by any State in a generation. These results were accomplished by the splendid teamwork of the farm organizations, the State Legislature and Governor Roosevelt through his Agricultural Advisory Commission. It is perhaps fair to say that all of the different interests were represented on the Commission and that many of the suggestions for the new laws originated with the Commission. Mr. Morgenthau will continue as Chairman of the Agricultural Advisory Commission, and the important office of Conservation Commissioner will give him still greater opportunity to serve both city and rural people.

The responsibilities of the Commissioner of Conservation are enormous. There are now nearly two million acres in the State's forest preserve. These must be guarded, extended where practical, and their use limited to the purpose for which they are intended, that is, the recreation of the people of the State and a haven for our remaining wild life. With the growing interest in reforestation, Mr. Morgenthau will be particularly concerned. He has made much study of this subject. One way to bring practical relief to farmers is to take the poor land out of cultivation by reforestation. The State is already committed to

this policy, and it will be Mr. Morgenthau's job to carry it out.

Every New York citizen is proud of the fact that the Empire State has some of the finest recreational parks in the world. These will be improved and extended on the philosophy that every human being is entitled to recreation, and the finest kind of recreation is that which brings one in touch with nature. All of the game warden are under this Department and the enforcement of the Conservation laws on hunting, fishing, and trespassing, are all a part of the duties of the Commissioner.

So it is clear how important this new position is and how its work is of personal interest to every citizen of the State.

That Mr. Morgenthau will make good those who know him well have no doubt. He is absent from the A. A. office as this is being written, so perhaps this is a good time for me to take you behind the scenes and give you a little personal history. Henry Morgenthau, Jr., is the son of

Henry Morgenthau, Jr.

Henry Morgenthau, Ambassador to Turkey during and following the trying days of the World War, and who won the respect of the entire world by the way he handled the difficult problems of that office.

Henry, Jr., early turned toward rural life interests. He received his first experience in farming as a boy on Western ranches, and after high school, he attended the New York College of Agriculture for a time, and shortly afterwards became the owner and operator of a large fruit and dairy farm in Dutchess County where for the greater part of the year he makes his home. He has made his farm famous in dairy circles because of the success he has obtained in breeding one of the outstanding Holstein dairies in the United States. In addition to dairying he specializes in apple growing on a large scale.

Mr. Morgenthau's constant study of farming and his actual experience as a farmer led him to become intensely interested in farm problems. After considerable thought as to how he could best spend his life to help solve some of them, he purchased AMERICAN AGRICULTURIST in 1922. Shortly afterwards, he did me the honor to ask me to become the editor of this publication. There is no better way of learning a man's good and bad points than working by his side day in and day out for years. I have known few men of more ability and sincerity and more conscientiously devoted to the public good than Henry Morgenthau, Jr. Time and again I have seen him make decisions costing himself and the publication hundreds of dollars. As an editor, I never have any doubt as to where my publisher stands on editorial policies which seem to us to be right, even

though at the time those policies may be unpopular. The first question always is, "Will this work to the good of agriculture?" If the answer is "Yes", he goes ahead in spite of what it may cost us in money or criticism.

You can understand, therefore, the enthusiasm of the entire A. A. staff when the publisher is given such responsible opportunities as Chairman of the Agricultural Advisory Commission and Conservation Commissioner. We know that the public has need of such men.

Fortunately, A. A. will continue to have the benefit of his advice, help, and direction.

—E. R. EASTMAN.

Dairymen Should Not Share All the Reductions

AS we announced last week, prices of fluid milk have been lowered to producers and reduced from sixteen to fifteen cents a quart to consumers. These adjustments had to be made because of the falling off of consumption due to hard times in the cities. The trouble is not over-production, but under-consumption, but the resulting surplus comes just the same no matter what the cause. The reduction of prices of December milk at a time of the year when milk is usually scarce and price at its peak is somewhat discouraging. It indicates, also, more trouble ahead when more cows begin to freshen.

Milk organizations have done a good job in maintaining milk prices as long as they have in the face of a falling market, but they cannot do the inevitable and prices must now be adjusted to the lowered demand.

We do, however, emphatically object to piling all these reductions in milk prices on dairymen alone. Why should the farmer always be the goat? Even before there was any lowering of milk prices, profits to farmers were low when there were any at all. On the other hand, both railroads and dealers have for years made excellent profits from the milk business. Study any large milk dealer's confidential report to its stockholders, and it will be found that such reports almost always show satisfactory dividends.

The surplus of milk cannot be used to justify the price reductions to farmers unless the same logic be applied to all the other factors between producers and consumers. With lowered volume, there must be a surplus of railroad equipment and railroad labor. Railroads state that they have eliminated over 300,000 men as compared with a year ago. If surplus should cause lower prices, why should not the railroad costs and railroad freights also be reduced? Are railroads more vital than farms or farm homes?

Today, there is a surplus of all labor. If that be true, why should not the labor of handling and delivering milk be reduced?

Today, there is a surplus of money. Call rates are two percent. If surplus is the reason for reduced prices, why should the profit of all milk companies not be reduced?

Or, let us go even farther. If farmers are obliged to do without profits for the time being, why should not milk dealers be willing to do so also?

Ingredients of Happiness

WHAT is your philosophy of happiness? What things, simple or worldly, bring you joy, increase the richness of living, and make you happy? Here is a contest for every one of you, because everyone is intensely interested in this subject, whether he or she knows it or not—the everlasting, primitive instinct to be happy, to get as much happiness out of life as possible, and to bring happiness to those we love.

Write us your "Recipe for Happiness." We will give five dollars for the best letter we receive, three dollars for the second best, and one dollar each for as many other letters as we have room to publish. Write your thoughts carefully on one side of the paper and send to the Editor, American Agriculturist, 461 Fourth Avenue, New York City. Letters should be not more than three hundred words, and should be in by January 17th, 1931.

With Our A.A. Boys and Girls

To Make Christmas Merry

Before Christmas

Select or make Christmas cards and send to your friends.

Make ornaments for the Christmas tree.

Cut out stars, crescents, and pretty figures from crepe or Christmas paper,

David Johnson of Stockton, New Jersey, a freshman at Rutgers University and the winner of the one thousand dollar prize offered by the Kansas City Star for the outstanding student of vocational agriculture in the United States. This prize and title "Star American Farmer" was conferred upon him by the Future Farmers of America at the American Royal Livestock Show at Kansas City recently.

paste on cardboard, and make loops of tinsel cord on them to fasten them to the Christmas tree.

String cranberries or popcorn to fasten on the tree. Make or select a suitable gift for each of the family. Help collect pine branches or other evergreens to decorate the house.

Help decorate the house in Christmas colors.

Help trim the Christmas tree.

On Christmas Eve

Put on your warmest clothes and go to sing carols around the Community

James Fisher of Madrid, who won first prize among 4-H Club exhibits with his senior yearling Jersey heifer at the National Dairy Show last fall. James was also winner of the New York Dairy Production Contest, sponsored by the Linseed Meal Educational Committee, and was awarded a trip to the show as the prize. James is fifteen years old and has a herd of five registered Jerseys.

Christmas Tree or under the windows of friends' homes.

Attend Christmas exercises at the church.

On Christmas Day

Open Christmas gifts.

Try out the new playthings.

Have a good run and play outdoors if the weather is fit.

Think up at least two games to play indoors with the rest of the family.

Do what you can to help mother enjoy the day.

Dryden Boy Judges Poultry

TIPPING the scales at exactly 200 lbs. and wearing a perpetual smile that makes him the most popular boy in school Stanton Livermore, fifteen year old son of Ray Livermore, who operates a 230 acre dairy farm three miles from Dryden, is fast becoming a recognized expert in judging and raising poultry.

Because of his ability at the judging contests during the recent State Fair, young Livermore was chosen on the three boy team to represent the Empire State in the vocational Agricultural poultry contest, where similar teams from all over the country competed.

Besides walking six miles in going and coming from school every day,

Stanton Livermore, Dryden High School sophomore who was one of the team who represented New York State in vocational agricultural judging contest at National Poultry Show.

Stanton finds time to manage all high school athletics, be honor man in his agricultural classes and act as secretary for the young farmers' association.—Donald Harrington.

The Adams County Lone Scout Tribe

WHEN O. H. Benson, National Director, purchased his summer home in Adams County, he wrote all of the scouts a get-acquainted letter asking them to cooperate in organizing an Adams County Lone Scout Tribe.

As a result, 9 scouts, 3 boys who will become scouts, and 2 counselors, met at Mr. Benson's summer home at Gurnsey, Pa. on the afternoon of July 26. The tribe was organized and officers were elected as follows: Chief, Charles L. Lott; Sachem and Bugler, William D. Stoops; Scribe, Frederic E. Griest, Jr.; Wampum Bearer, Paul Tyson; Cheer Master, Guy Beamer; Song leader, Ralph Tyson; Scoutmaster, Mr. Frederick Tyson; and Assistant Scoutmaster, Mr. Claire Dull.

On September 1, another meeting was held at Fuller Lake, Pa. State Forest Park. Fourteen scouts attended, also Mr. Benson, Edwin T. Moul, Assistant Scout Executive of the York Council. Instructions in swimming and lifesaving were given by Mr. Tyson.

The third meeting was held at "Black Hole", a spot along a creek, on September 13. Ten scouts attended besides the Scoutmaster. Dr. Ira Henderson of Fairfield, Pa., gave a first aid demonstration. Swimming instruction

Six Boys and Girls to Attend Master Farmer Banquet

When Governor Roosevelt presents to the 1930 New York State Master Farmers, the medals awarded them by American Agriculturist, he will also present medals to five New York State boys and one New York State girl.

The Master Farmer banquet is to be held on February 12, at the New York State College of Agriculture and before that time the names of the boys and girl will be announced. Two of them are being selected by the Board of Master Farmer Judges from among the students in high school vocational agriculture, who, last summer, were awarded the degree of Empire Farmer by the Association of Young Farmers of New York. Two will be selected by the Judges from among the outstanding 4-H Club workers of New York State. One of these will be a boy and one will be a girl. Two others will be selected from among outstanding Boy Scouts who live on farms.

Each of these six will receive from Governor Roosevelt, a solid gold medal, awarded by American Agriculturist, to be known as the 4A award; the 4A being an abbreviation of American Agriculturist Achievement Award. We plan to announce the names of those who will receive the medals on our January boys' and girls' page.

was given by Mr. Tyson. Bugle calls were sounded by William Stoops.

There are 5 second-class scouts in the tribe, 1 first class scout, 2 Lone Scout organizers, and 7 merit badges. All members are Pennsylvania Forest Guides. Seven members of the tribe attended the Region III Rally held at Williams Grove Park on August 24 and 2 members spent one week at Boy Scout Camp, Bathrock.—Charles Lott, R. 4, Gettysburg, Pa.

"Some Punkins"

I AM sending you a snapshot of our little girl, and the pumpkins she raised. This is her story:

"I am a little girl just four years old and weigh twenty-nine pounds.

Last fall when mother was making pumpkin pies I took some seeds from a pumpkin and put them away. When mother planted her garden last spring I asked her if I might plant some pumpkins. Mother said, "Why we have no seed." But when she found I had some seed she told me I might plant them. I took care of them myself, kept all the weeds out, and when Jack Frost nipped the leaves in September I had twenty-nine pumpkins, the largest weighing thirty-two pounds and several weighing twenty-five pounds. My name is Martha Muzzy."

The New York State College of Agriculture has just published a bulletin number 41, which is part 8 of the 4-H handbook, and gives a third year

4-H program in agriculture. This little bulletin tells how to make a rope halter, how to make a broody coop for hens, how to milk and keep milk clean, how to solder, how to make a garden trellis. Four H Club members who are interested can secure this bulletin from their local leader or by writing direct to the New York State College of Agriculture, Ithaca, New York.

Not For Sale

AS I have read in your paper that you would like pictures of boys and girls with their pony, I am sending you a picture of my pony. She is six years

old and her name is Daisy. She is a great pet. She will eat anything that I give her and I am very fond of her and wouldn't sell her for any money. I also have a little sister that likes her too. I hope you will get this in time to print in your next number.—Cresson Brouse, Gouverneur, N. Y.

The BOOK SHELF

"CHAD OF KNOB HILL" the tale of a Lone Scout by Howard R. Garis recounts the thrilling experiences of a farm lad as a Lone Scout. In spite of the opposition of the thankless relative who gives him shelter and food, but overworks him terribly, Chad takes the Scout oath with the moon as witness. The story shows the struggles Chad had trying to live up to the oath and reveals the boy's real character when he saves his harsh relative from disgrace instead of being revengeful because the cousin had destroyed his treasure house for him. Chad discovered a valuable mineral on the cousin's land which is the means of saving his home and his honor.

The love and companionship of a dog which adopts Chad figure all through the story. It is a fine story for boys. Little, Brown and Company.

Wells Are Going Dry

By M. C. BURRITT

THE long beautiful fall came to an abrupt end with a freeze-up before Thanksgiving. Never in my remembrance has there been a finer fall in which to harvest crops and fruit. The drought ripened things early and enabled fruit to put on unusual color.

M. C. Burritt

There was no rain and hence no mud to hamper and delay hauling. The men hardly missed a day in the fields or orchard from September first to freeze-up. The result was that practically everything was harvested by late October. This left almost a month for fall plowing and for repairs, and getting ready for winter. So much more of this work has been done than usual.

But along with the splendid fall for work, due mainly to no rain, we had to take the hardships and extra work which accompany a water shortage. For months now, we have been hauling water both for stock at the barns and for the house cisterns, and hundreds of others have been doing the same. It is the worst condition in many years. When it froze up in late November without the relief of rain there was much concern about a waterless winter for the prospect of hauling water in cold weather is far from a pleasant one. But now at the end of the first week in December it has thawed again and a good rain has partly filled cisterns if not wells.

With the freeze-up cabbage prices rose to ten and twelve dollars per ton

to growers, but heavy shipments have begun again and prices are now off from these figures. New York State had shipped 600 cars more cabbage this year than last year on December 1st and Wisconsin 700 cars more. Shipments are still running nearly one hundred cars per day and Florida and Texas have already loaded a few cars for shipment. The cabbage outlook is not for a much larger price unless the unexpected happens as it did last year with a bad freeze in the south.

Similarly the domestic trade in apples has been slow and unsatisfactory. The export demand has, however, been very good and because we had the quality of fruit to satisfy it, has proved to be a great boon to New York apple growers. The English embargo up to November 15, on low grade apples has almost proved to be a blessing in disguise, for it has resulted in some of the best packed apples going out of Western New York that have been packed here in years. Because inspection as to grade was required, much more shipping point inspection was required than usual.

Apples Are Graded Better

I understand that the Rochester office has thirty-five inspectors engaged in this work this season where only twelve men have been required to do the work in other years and that of the first thousand cars inspected only six failed to make the grade. To date less than 2 per cent of the fruit packed has been found to be misbranded and a much larger percentage of the U. S. No. 1 has been packed than formerly. I have been told that exporters buying in Western New York for the South American trade what they have formerly purchased in Virginia, have been more than pleased with what they found here this year, and this may have created a permanent demand. All Western New York needs to do is to improve the quality of its pack, and then get a suitable quantity of this quality of fruit under cooperative control and it need fear the competition of no other region.

It is most gratifying to note what a splendid response is being made to the annual County Farm Bureau membership campaigns. Nearly all the counties in this part of the state are showing substantial increases in membership, and this in the face of the drought, the depression, and low prices. Best of all, the increase is apparently the result, not of high pressure salesmanship or drive methods, but rather to the winning of farmers by substantial programs of achievement which lie at the root of "farm relief." If now the local program building methods which have served production so well can be further applied to distribution problems "farm relief" will have really arrived and it can arrive by no other known method. It is just this as I understand it, that the Farm Board is trying to bring about as a major objective.—Hilton, New York, Dec. 6.

Apples or Pears?

In the Hudson River Valley do you believe that a man would get better returns from setting out an apple orchard or by setting out pears?

THE correct answer to this question will depend to a considerable extent on location. As compared to apples, there are comparatively few places where pears can be grown.

WINTER BROILERS

DO YOU WANT to make more money from your fall and winter broilers? Then buy chicks that will live well and grow rapidly. More broiler growers are turning to Hubbard Farms chicks each year because they are assured of uniform quality chicks that will live practically 100% and will make a 2 lb. broiler in eight weeks. They know Hubbard Farms' chicks are always dependable. Every chick we sell is produced from our own strain of Reds, bred for 14 years for vigor and rapid growth. We have 8,000 breeding birds here on our own farms and every bird is blood-tested by the State University. We guarantee full satisfaction on every order. You cannot go wrong with Hubbard Farms' chicks. Get our catalogue. HUBBARD FARMS, Box 147, Walpole, New Hampshire.

Lights Help Make Layers Lay

TESTS at the agricultural colleges indicate that proper use of electric lights in the poultry house will increase winter egg production from 30 to 40 per cent. Since the primary purpose of using artificial lights in the laying house is to lengthen the hen's working day and in that way give her a chance to eat more feed, it is important to have feed and water available for her when the lights are on. If lights are turned on automatically with an alarm clock at four or five A. M., it will be necessary to scatter feed in the litter the evening before and to arrange for holding water over night above freezing temperatures.

Users of artificial lights are finding that it is desirable to place the lamps in such a way that the roosts will not be dark. The general plan is to use one 40-watt lamp for every 200 square feet of floor space, or two of them in a 20 by 20-foot house. Lamps are placed about 6½ feet from the floor and about 10 feet apart in this width of house. Reflectors 16 inches in diameter at the base and four inches high are recommended.

The four months from November to February, inclusive, are "electric light" months in the laying house. A common system of lighting is to turn the lights on with the alarm clock about 4:30 A. M., leaving them on until daylight. Another plan is to turn the lights on for awhile in the evening, or these two systems may be combined. Still another idea is to serve the hens evening lunch by turning the lights on for an hour about eight or nine in the evening. Each of the evening methods necessitates use of a dimming device to enable the hens to tell when it is time to go to roost. Any one of the four plans should be started gradually.

Poultrymen without power line service are finding that use of lights on their laying flocks provides one way to make a farm light plant pay for itself while they are enjoying the advantages of electricity in the home as well.

Too Much Meat

"I have a flock of Leghorn hens, middle of May pullets, which are laying well, but now are taken sick. They just seem to get weak and sleepy, stand around with eyes shut and no appetite but drink when you put them to the water. They get weaker and weaker. We had a deacon calf which we gave to them but have taken it out now when it got a little warm. They are pullets that are in good condition. Have mash and lots of water, shells and good dry place. If you could tell me anything to do I would be very glad."—J. M., New York.

YOUR pullets are probably suffering from a digestive disorder brought on by eating too much of the fresh meat. Possibly it was slightly tainted which would cause the equivalent of ptomaine poisoning. When severe this is often called limber neck.

You have done the best possible thing in removing the probable cause. For treatment give each droopy bird a tablespoonful of castor oil. This is given most easily by using a small funnel and rubber tube which is passed down the throat into the crop.—L. E. Weaver.

The Pennsylvania State College of Agriculture at the State College, Pennsylvania, has recently published circular 132 on Summer Shelter for Pullets. This little four-page circular gives plans and directions for a shelter for pullets, 10' by 9' wide. It also gives the complete bill of material and good directions for construction. This little circular may be obtained by our Pennsylvania subscribers by writing to the Pennsylvania State College for it.

Drugs added to their drinking water will not remove lice from poultry, positively assert officials of the Food and Drug Administration.

It takes these Extra Eggs to bring Success from Poultry

"And thousands of poultrymen have found their flocks didn't reach top production until they fed BULL BRAND"
— says Uncle Charlie

VITAMIZED LAYING MASHES

and B-B Scratch Feeds are guaranteed to give more eggs or money back.

VITAMIZED CHICK STARTER RATION

combines in one mash all ingredients needed for baby chicks.

VITAMIZED BROILER AND GROWING RATION

combines in one mash all ingredients needed for growing birds.

DAIRY FEEDS

24% Dairy Ration, 20% Hi-Test, 16% Marmico. A Protein content suitable for every grade of roughage.

SOONER or later, most poultrymen discover that unless they can keep their flock average up around 60% to 70%, profits are pretty slim. And it's more than coincidence that thousands of poultrymen don't get high flock averages until after they turn to B-B Feeds.

Take Charles Felleger, Chester Heights, Pa., for example. He writes, "I was on the verge of selling out for I wasn't getting an egg. Then I tried B-B Laying Mash. In three weeks 80% of my birds were laying. I have fed several mashes but can say Bull Brand excels them all." Or W. A. Guthrie of Butler, Pa., who says, "Since feeding B-B my hens have averaged 70% production and I never had lower feed cost." "I fed B-B Laying Mash to 124 hens and got as many as 97 eggs a day during November," writes M. Alvater, Brooklyn, Md.

A County Record of 81.3% Lay

Lester Waldron of North Creek, N. Y., says: "I began feeding B-B Laying Mash early last spring and during the month of April made a county (Warren) record of 81.3%." Poultrymen continually praise the uniform quality of B-B feed. No wonder! Made in one of America's largest and finest equipped mills, of choicest ingredients and with every manufacturing process under the most rigid inspection, each sack of B-B feed is just like every other sack. That's why we guarantee results.

But in spite of the success which B-B feeds have brought to thousands of other poultrymen, you will have to make a test of your own to know what they will do for you.

We Guarantee Most Eggs Per Dollar of Feed Cost

You can make this test without any risk. Ask your dealer for enough B-B Laying Mash *vitamized with Cod Liver Oil* and B-B Scratch Feed to last one pen for 30 days. (Write to me if your dealer can't supply you.) At the end of the test period compare the egg production, the condition of the birds and the feeding cost. If you don't find that B-B has given you most eggs per dollar of feed cost take the empty bags back to your dealer and he'll return your money without question.

Valuable Poultry Book Free

Practical poultrymen tell us they have never seen so much good sound information as is packed into our 64-page book, "Making Poultry Pay a Profit," written by Prof. L. N. Gilmore, of Syracuse University. I would like to send you a copy free. Just fill out and mail the coupon below.

Reviewing the Latest Eastern Markets

Milk Prices December Prices

Dairymen's League prices are based on milk testing 3.5%. Sheffield on the basis of 3%.

Class	Dairymen's League	Sheffield Producers
1 Fluid Milk	3.37	3.17
2 Fluid Cream		1.70
2A Fluid Cream	1.86	
2B Cond. Milk		
Soft Cheese	2.11	
Evap. Cond.		
Milk Powder		
Hard Cheese	1.90	1.50
Butter and American Cheese. Based on New York City Market quotations on butter and American Cheese.		

NOTE—The Class one price in the Metropolitan area was dropped 47 cents effective December 8. This makes the League class 1 price in New York, \$2.90 for 3.5% milk and Sheffield Producers, \$2.70 for 3% milk.

The Class 1 League price for December 1929 was \$3.42 for 3.5% milk and Sheffield's \$3.22 for 3%.

The above prices in each class are not the final prices the farmer receives. The final price received from the dealer is the result of weighted average.

November Prices Announced

The Dairymen's League announces the following pool prices for November for 3.5% milk.

Gross	\$2.60
Expenses	.06
Net Pool	2.54
Certificates of Indebtedness	.10
Net Cash Price to Farmers	2.44

	Net Cash	Net Pool
November 1929	\$2.82	\$2.97
November 1928	2.98	3.08
November 1927	2.92	3.02
November 1926	2.62	2.72

The Sheffield Producers announce the cash price to producers for 3% milk in the 201-210 mile zone, as \$2.55 per hundred, (2.75 for 3.5% milk).

	3%	3.5%
November 1929	\$2.83½	\$3.03½
November 1928	2.93	3.13
November 1927	2.98	3.18
November 1926	2.67	2.87

Effective December 8, the Dairymen's League and Sheffield Producers dropped

the price of class 1 milk in the metropolitan area 47c a hundred. Reasons back of this decrease at this unusual time are a rather heavy production, decreased consumption and a flood of independent milk which has been coming into the city to be sold as bulk milk in grocery stores.

Butter Suffers Another Break

CREAMERY SALTED	Dec. 13, 1930	Dec. 6, 1930	Dec. 14, 1929
Higher than extra	33-33½	37-37½	40-
Extra (92 sc.)	32½-	36½	39-
84-91 score	26½-32	28-36	30-38
Lower Grades	25-26	26½-27½	28-29

The butter market has suffered another severe blow. It will be recalled that in last week's report we expressed much doubt that the market would hold in view of the wide differential existing between the West and the Atlantic seaboard. With prices working lower in Chicago, it became very evident that that influence would work against the New York market.

On Monday, December 8 the market opened with prices starting down but to the extent of ½c per pound on the better grades. Later in the morning wires from Chicago advised of another drop in prices there and the weakness in New York became very pronounced. On Monday and Tuesday, the market experienced heavy receipts. This added to the weakness in the West and the sensitive condition of the New York market started prices on the toboggan and down they went. The sharp decline induced wider buying interests although of insufficient volume to meet the situation. Wednesday found the market just about steady, but with a very noticeable evidence of nervousness and caution. This increased to the extent that on Thursday the market showed further weakness and the price dropped to 33c on creamery extras. The New York trade shows unmistakably a lack of confidence in the situation, which is aggravated by the uncertain industrial and economic conditions existing in New York.

Friday's market was a little more active with buyers operating more freely. The situation darkened again in the afternoon when the Government report came out with figures that were considered quite bearish. Any support the market had was withdrawn, confidence was further disturbed and the market slipped into a weaker condition.

On December 12, the four cities reported 33,795,042 pounds of butter on hand compared with 40,913,624 pounds at the same time a year ago. The U. S. Government report states that on December 1 the total U. S. storage stocks were 87,969,000 pounds compared with 111,650,000 pounds December 1, 1929. From November 1 to December 1 the Government report states our cold storage holdings had been reduced 21,677,000 pounds whereas during the same period last year the holdings were reduced 26,755,000 pounds.

No Change in Cheese

STATE FLATS	Dec. 13, 1930	Dec. 6, 1930	Dec. 14, 1929
Fresh Fancy	20-21	20-21	23
Fresh Average			22
Held Fancy			26-26½
Held Average			23½-24½

The cheese market has been substantially the same as it was last week. There has been a fair movement of well cured cheese, while the movement of fresh makes is practically at a standstill, dragging and meeting only moderate outlet. The present range of prices in the New York market was considered unsatisfactory in comparison with country costs.

The December 1 report of the U.S.D.A. gave the total holdings at 70,842,000 pounds compared with 71,065,000 pounds December 1, 1929. From November 1 to December 1 the report states holdings were reduced 8,077,000 pounds, whereas during the same period last year holdings were reduced 6,993,000 pounds. Statistically the cheese market shows up much better than does the butter market.

Egg Market Still in Bad Shape

NEARBY WHITE	Dec. 13, 1930	Dec. 6, 1930	Dec. 14, 1929
Hennery	1930	1930	1929
Selected Extras	32-35½	37-39½	61-63
Average Extras	29-31	35-36	59-60
Extra Firsts	27-28	31-34	54-58
Firsts	26-27	29-30	50-52
Undergrades		26-28	45-49
Pullets	20-21	27-28	45-47
Pewees	17-19	25-26	
NEARBY BROWNS			
Hennery	35-37	41-43	61-64
Gathered	25-34	30-40	54-60

It is mighty discouraging to report the egg market. During the week ending De-

cember 13, prices suffered another decline, the low spot coming on Thursday. The market opened on Monday, December 8, in an unsettled condition. Whites and mixed colors showed an inclination to turn easier. The situation continued and the market sagged steadily. On Wednesday there was an over supply of fresh eggs and all colors turned weaker. On Thursday closely selected extras were selling at 31c to 33½c. Some premium marks reached 36c. On Friday there was a little more confidence in evidence among buyers of fresh eggs. They showed some inclination to take on stock beyond their immediate trade needs.

As the market comes to a close the situation is a little better due to the fact that some fresh eggs have been diverted to competing markets and buyers are showing inclination to take on stock beyond their trade needs. The situation isn't quite as heavy. As the market closed at noon December 13 it was steady to firm.

The December 1 U. S. Government report states that on that day U. S. storage stocks totaled 4,150,000 cases compared with holdings on the same day a year ago totaling 2,631,000 cases. From November 1 to December 1, this year, storage holdings were reduced 2,635,000 cases, where as during the same period last year, holdings were reduced 2,229,000 cases. This side of the report is a little more encouraging. On the other hand the frozen egg market report is still bad. On December 1, U. S. holdings of frozen eggs totaled 89,567,000 pounds, whereas at the same time last year we held approximately 28,000,000 pounds less. During the month of November the out of storage movement was only a shade greater than it was a year ago.

Demand for Fowls Light

	Dec. 13, 1930	Dec. 6, 1930	Dec. 14, 1929
FOWLS			
Colored	18-22	23-27	19-25
Lehigh	14-16	18-22	15-20
CHICKENS			
Colored	18-21	19-24	17-19
Lehigh	15-16	15-18	14-17
BROILERS			
Colored	30-40	32-40	22-33
Lehigh	25-30	30-33	24-27
OLD ROOSTERS	12-13	15	14-15
CAPONS	30	28-35	32-35
TURKEYS	20-30	25-30	27-32
DUCKS, Nearby	20-22	19-25	23-24
GEESE	18-20	19-22	23-25

It is a good thing that the supply of live fowls was not heavy this week (ending December 13) for the demand was quite limited. Only a few strictly fancy colored fowls brought full prices. Chickens and pullets experienced a good market and closed firm. Broilers have been top heavy. We call your attention to the prices this year and last. Long Island spring ducks have sold well and farm fattened geese from New Jersey met a ready sale.

We caution shippers of live poultry to hold back any low grade stock. The market is in too critical condition in the first place and secondly poor stock is never wanted at holiday time. Again we urge shippers to look to the local market. We know of a great many instances where farmers got top prices for their grades at Thanksgiving and a great many enjoyed handsome premiums over the New York quotations.

The outlook for Christmas turkeys is still uncertain. The market is waiting to the very last minute. Certainly the outlook is not as strong as it was just following the Thanksgiving market. Economic conditions are more aggravated and the market is more cautious.

Potatoes Easier

The potato market is easier than it was last week. This is to be more or less expected as from now until after the first of the year the trade will be paying more attention to holiday specials. Maines in 150 pound sacks are bringing \$2.75 to \$3; in bulk per 180 pounds \$3.25 to \$3.50. Long Island prices are 25c higher in all cases. The first car of Floridas arrived this past week and they got very little attention. They showed very poor quality.

Christmas Greens

Up to December 13 the market has been quite dull on most Christmas greens. It is a little too early. Some selected N. C. holly has brought \$4 to \$5 per case. Some is selling from \$3 to \$3.25 while other lots only bring \$1.50 to \$2.25. Holly wreaths are bringing from 75c to \$1.75 per dozen. Some large ones reached \$2.00.

Pine needles have been bringing \$2.50 per case. There has been very little good mistletoe, most of it bringing \$2 to \$3 per barrel. Trees are being offered liberally with most of the wholesale business at \$1.25 to \$2 per bundle in the yards. In small lots some reached as much as \$2.25.

Fruits and Vegetables

The apple market has been a little more irregular during the past week, on apples in barrels and baskets. Some ordinary stock suffered price declines.

Cabbage failed to hold its advantage and again slipped back to \$18 and \$22.

State celery is holding steady with prices ranging from \$1.50 to \$2.25.

Pumpkins are worth \$1 to \$1.50 per barrel.

Radio market reports are sent over the air from WEAH at 12:30 P.M. They carry the very latest information on market conditions and shippers should not fail to tune in daily. One good market "scoop" will sometimes more than pay for the radio.

Hay Prices a Shade Easier

Hay prices are a little easier this week. Receipts have been full and plenty at Manhattan while Brooklyn has received more limited supplies. Extremely choice hay has been scarce at all times. The bulk of the offerings have consisted of medium and low grade hay, mostly in small bales. The market closes barely steady. Straight timothy has been bringing from \$23 to \$28 per ton. Sample \$16 to \$20, light clover or grass mixed \$19 to \$26. Rye straw gained this week under improved demand and advanced to \$14 to \$15, oat straw \$12.

The above quotations taken from the weekly feed letter of the N. Y. S. Dept. of Agr. and Markets are for straight carlots, f.o.b. Buffalo. Prices on mixed cars and less than carlots are higher. Consult your local freight agent for freight rates to your station.

Meats and Livestock

CATTLE—Better grade steers strong, other 25c lower. Load good 1374 pounds. Virginias \$11.00. Medium 1180 pound steers \$9.25. Cows and bulls slow, weak. Common to medium cows \$4.00-5.50; low cutters and cutters \$1.75-3.50, Medium bulls up to \$6.00.

VEALERS—Scarce, slow, weak to 50c lower. Good to choice \$11.00-13.00. Mediums \$7.50-10.50. Cull and common \$5.50-7.00.

HOGS—Weak to 25c lower. Good to choice 160 to 200 pounds \$8.50-8.75; mediums down to \$8.25.

LAMBS—Lambs scarce, slow, weak to 25c lower. Good New York lambs \$8.00-8.25.

COUNTRY DRESSED CALVES—Receipts moderate all the week. Demand fair through until Friday when trading was very slow and prices were lowered. Market weak and not cleaned up. Fresh receipts per pound: Choice 14-15c; fair to good 12-14c; small to medium 10-12c.

HOTHOUSE LAMBS—Receipts too liberal for the demand and stocks being carried over daily. Small sales, good to fancy, each \$7.00-9.00, imitations, each \$3.00-5.00.

COUNTRY DRESSED PIGS—Receipts light to moderate. Sales in small quantities only. Per pound: Roasting, 12-15 lbs. 20-22c; Pigs, 15-20 lbs. 16-18c; 22-30 lbs. 14-17c.

LIVE RABBITS—Fresh receipts moderate during the week but stock accumulated. Demand slow all through. Market weak. By the coop, 12-18c.

DAILEY FARM, LEXINGTON, MASS. TEL. 1085

Farm News from New York

The Annual Agricultural Round-Up at Albany

THE week of January 19th may, so far as farmers are concerned, fairly be called one of the most noteworthy weeks of the year. By its Constitution, the New York State Agricultural Society meets—as it has for the past ninety-eight years—on the third Wednesday of January, which this year falls on the 21st.

This meeting will be opened promptly at ten A. M. in the Assembly Parlor, State Capitol, Albany, by the President, Charles H. Baldwin.

The morning session will be presided over by Henry Morgenthau, Jr., Chairman of the Governor's Agricultural Advisory Commission. There will be four main addresses at this session.

Hon. Peter G. Ten Eyck—known to so many New York State farmers—will discuss the interesting topic, "The Port of Albany and Its Relation to New York State Agriculture," stressing the fact that now for the first time in its history Albany is to be considered a deep water seaport.

C. R. White, President of the New York State Farm Bureau Federation, will consider that always interesting question, "The Tax Situation."

Farm people will not forget that H. E. Babcock is manager of that tremendous farmer-owned organization, The G. L. F. Exchange, and very properly he will discuss their marketing program and service.

There is at least one man who never lacks for an audience, and that is Dr. George F. Warren, of Cornell and he will discuss, "The Regional Food Markets." This is a live subject in which there is sure to be increasing interest in the immediate future.

The afternoon session will be in charge of Senator Leigh G. Kirkland. There will be routine business and the reports of committees, but the outstanding event of the afternoon will be an address on "Prospective Agricultural Legislation" by Commissioner Pyrke. Among the committees to report will be a committee for formulating plans for celebrating the one hundredth anniversary of the founding of the State Agricultural Society. A. L. Brockway is chairman of this committee.

A resolutions committee, consisting of Dr. H. B. Knapp, of Farmingdale, chairman, E. V. Underwood, of Ithaca, and F. B. Halliday, of Jamestown, is prepared to receive resolutions to be brought before the meeting for consideration. E. R. Eastman, as chairman of a committee on consolidation of farm organizations, will also report.

By common consent, the annual old-fashioned farm supper of the State Agricultural Society is the one outstanding event of the agricultural year. This year the dinner will be served at the Aurania Club, in a dining room where four hundred guests may be seated. It will be a sumptuous meal, and the price will be \$2.25 with no tipping allowed. The master of ceremonies will be George W. Sisson, Jr., of Potsdam. As always, the Governor will be the chief guest and principal speaker. Commissioner Berne A. Pyrke will also have a place on the program.

On Thursday there will be a joint meeting of the New York State Dairy-men's Association and the New York State Breeders' Association, and they will hold their annual dinner that evening.

On Friday there will be a meeting of the State Guernsey Breeders' Association. In addition to these, many other associations will hold meetings of boards of directors, advisory councils etc., and provision has been made for suitable assembly rooms for the various groups. All in all, it will be a busy week, and it is hoped that a large number of farmers will find it possible to attend.

State Reforests Land

Under the Hewitt Law, which provides that New York State can acquire abandoned land in lots of not less than five hundred acres for reforestation purposes, the New York State Conservation Department has already secured 40,257 acres.

The purpose of this law is to make

profitable use of agricultural land that is now idle. The following counties contain one or more reforestation areas of five hundred acres or more:

Allegany	2	Broome	2
Cattaraugus	3	Chautauqua	2
Chenango	11	Cortland	5
Livingston	1	Madison	2
Montgomery	1	Oswego	2
Otsego	8	Schoharie	5
Steuben	2	Albany-Schoharie	2

If you live in one of these counties it would be interesting to determine where the areas are located and then to visit them. If you live in other counties, we suggest that you bring the matter up, possibly before your board of supervisors, to see whether popular sentiment cannot be started to have such an area in your county. By the way, another law provides state aid to help boards of supervisors in developing county forests.

* * *

THIS is the time of year when the taking of Christmas trees from state or private land is rather prevalent. In this connection, we would like to emphasize to our city friends, that this is plain stealing and is punishable by arrest and fine. To our farm readers we suggest that they use more than ordinary diligence in reporting immediately either to your local authorities or State Police any theft of Christmas trees.

Centralized School Representatives Have Enthusiastic Meeting

AN enthusiastic group consisting of representatives of boards of education of centralized rural schools, together with a few school principals and district superintendents of schools, met at the Hotel Onondaga, Syracuse, for a two day session on December 11 and 12.

The Thursday afternoon session consisted primarily of verbal reports from each central school district, telling what had already been accomplished in their district. It was reported that there are now one hundred and nine central rural school districts in New York State. The representatives from boards unanimously reported that the great majority of taxpayers in their districts were more than pleased with the progress that had been made. Several made comparisons of tax rates before and after centralization to show that the rates in these districts had been materially reduced.

In the evening, approximately 300 persons sat down to a banquet which was followed by the usual after-dinner speaking program. Dr. Carl E. Ladd, director of extension of the State College of Agriculture, acted as toastmaster.

Talks were given by: Mr. L. H. McCluen, president of the Board of Education of the Trumansburg central district; Mr. Irving Rice, chairman of the Assembly Committee on Education; Miss Elizabeth MacDonald, president of the State Federation of Home Bureaus; Miss Helen Heyl of the State Department of Education. Mr. E. R. Eastman, editor of American Agriculturist was scheduled to talk, but was unable to be present and sent his greetings to the meeting which were read by H. L. Cosline, associate editor of American Agriculturist.

Ulster Has Live Pomona Grange

A MOST interesting and worthwhile Grange meeting was that held by the Ulster County Pomona at New Paltz, on December 5. There was something doing on the excellent program every minute, both during the day and in the evening, and several hundred Grangers from nearly every community in the County were present.

During the evening the program was devoted to the subject of taxation. An interesting debate was given on the subject, "Resolved, that income taxes should be substituted for taxation of real estate." There was an entertaining little play emphasizing the fact that the farmer's tax burden is too heavy, and this was followed by an address on "The Farmer and His Taxes" by E. R.

Eastman, editor of American Agriculturist.

It is quite evident that the special meetings held by the state officers this summer to initiate new members of the State Grange preparatory to the meeting of the National Grange in Rochester, have had a quickening and revival effect on all of the Grange work of the state. Grangers certainly seem to be on their toes.

Proposal to Increase Parcel Post Rates

OUR farmers will be greatly concerned about the proposal of Postmaster General Brown to increase parcel post rates. These rates have already been submitted by the Post Office Department to the Interstate Commerce Commission.

William F. Dillon

MR. WILLIAM F. DILLON, part owner of the Rural New Yorker, died recently at New Rochelle.

Mr. Dillon was born on a New York State farm, left it as a boy, studied journalism, and then became affiliated with the Rural Publishing Company. Mr. Dillon is survived by his wife, his daughter Clare, three sisters and his brother John J. Dillon, publisher of the Rural New Yorker.

For the first and second zone an increase of the present initial pound charge from 7c to 8c is proposed, with an increase in the additional pound rate from 1c to 1.1c. In the third zone, the initial pound charge would be increased from 8c to 9c; fourth zone, from 8c to 10c; fifth zone, from 9c to 11c; sixth zone, from 10c to 12c; seventh zone, 12c to 14c.

It is another inconsistency of the Federal Government, proposing to help the farmer with schemes of farm relief on one hand and then materially to injure him financially by increasing his costs on the other. American Agriculturist suggests that, if interested, you write to your congressman.

Use Waste Wood

IN an effort to find profitable uses for wood now wasted, the National Committee of Wood Utilization of the Department of Commerce, the New York Wood Utilization Committee, and the New York Development Association, are asking four thousand sawmills and wood working establishments in New York State to give them figures on wood waste.

Similar searches have been made in other states with very satisfactory results. The honorary chairman of this committee is Governor Roosevelt, while George W. Sisson, Jr. of Potsdam, New York, is acting as chairman.

Canada Selects Master Farmers

THE Master Farmer idea which was started several years ago by Clifford Gregory of Prairie Farmer, has spread across the line to our neighbors in Canada. In a recent issue of the Nor-West Farmer, a Canadian farm paper, pictures and accounts are given of the first ten Canadian Master Farmers. Judging from their pictures and the accounts of them, they will be an honor to the name of Master Farmers.

Hyde Would Control Crop Production

ARTHUR M. HYDE, Secretary of Agriculture, speaking at the annual meeting of the Farm Bureau Federation in Boston, said that an organization of farmers was needed to plan production and control marketing.

"The root of our troubles," said the Secretary, "is over-production. The job immediately ahead of us is two fold—to stop economic expansion to new lands, and to get unprofitable sub-marginal land

out of crop production and to regulate the acreage of all crops."

The Secretary, in his speech, also made a vigorous defense of the Farm Board and said that its present efforts to stabilize the price of wheat had justified the Board's entire existence and cost.

The Farm Bureau Federation introduced a resolution proposing to seek operation of Muscle Shoals and its fertilizer possibilities by a cooperative organization of farmers. In another resolution the Federation recommended stricter regulation of the grain and cotton exchanges for the purpose of minimizing speculation.

Hoover Asks Funds for Farm Board

AS has been expected, President Hoover has asked Congress to appropriate an additional one hundred fifty million dollars for the use of the Federal Farm Board. The original law, you will remember, provided for a fund of five hundred million dollars, which has not yet been made available. Therefore, this one hundred and fifty million asked for is not a new request, but is merely making available the money provided in the Federal Marketing Act. Assuming that this is appropriated, it will make a total of four hundred million dollars, which has been furnished for the operations of the Federal Farm Board. The Board has already purchased one hundred and ten million bushels of wheat and Chairman Legge states that the Board will continue to support the grain market indefinitely.

Apples Versus Tangerines

MORE than twenty million apples have been sold on the streets of New York during the past six weeks by unemployed men and some women. To one who likes to see the apple industry prosper, it is encouraging to see the beautiful red apples on practically every street corner in the heart of the great city. One cannot go three rods without being asked to buy an apple. Thousands of people have bought them who never have made a practice of eating apples regularly before. It cannot help but be a great aid to the industry.

As American Agriculturist has before pointed out, it is unfortunate that all of these apples come from the West and that Eastern growers missed out on this opportunity. But even Eastern apple growers will benefit indirectly by the strengthened market.

During the last few days tangerines have made their appearance with the apples, selling two for five cents. The apples sell for five cents each. Oranges were suggested to be sold with the apples, but were finally not accepted because they cannot be well peeled and eaten on the street; tangerines can be.

Time for License Plates

JUST as a reminder, the 1931 New York State license plates are now available and it goes without saying that if anyone should wait until the last day of the month, the Bureau of Motor Vehicles would be unable to supply them. Let us be among those who help both themselves and the Motor Vehicle Bureau by getting plates early.

Larry Fay on Trial

LARRY Fay of considerable notoriety in the New York loose milk business, together with 140 other defendants, comprising the New York Milk Chain Association, are on trail in New York City on a charge of restraint of trade. The trial has been progressing rather slowly, having had one or two postponements and some difficulty in getting a jury to sit on the case. We plan to keep our readers informed on developments in this case.

Those who attend the annual meeting of the State Horticultural Society at Rochester in January, will have an opportunity to show their familiarity with insect pests. Substantial prizes are to be awarded for an identification contest.

Mothers, Mix This at Home for a Bad Cough

You'll be pleasantly surprised when you make up this simple home mixture and try it for a distressing cough or chest cold. It takes but a moment to mix and costs little, but it can be depended upon to give quick and lasting relief.

Get 2½ ounces of Pinex from any druggist. Pour this into a pint bottle; then fill it with plain granulated sugar syrup or strained honey. The full pint thus made costs no more than a small bottle of ready-made medicine, yet it is much more effective. It is pure, keeps perfectly and children love its pleasant taste.

This simple remedy has a remarkable three-fold action. It goes right to the seat of the trouble, loosens the germ-laden phlegm, and soothes away the inflammation. Part of the medicine is absorbed into the blood, where it acts directly upon the bronchial tubes and thus helps inwardly to throw off the whole trouble with surprising ease.

Pinex is a highly concentrated compound of genuine Norway Pine, containing the active agent of creosote, in a refined, palatable form, and known as one of the greatest healing agents for severe coughs, chest colds and bronchial troubles.

Do not accept a substitute for Pinex. It is guaranteed to give prompt relief or money refunded.

ACHES and PAINS Quick Relief with JAPANESE OIL

"Don't Let Pain Keep You At Home."

Antiseptic Japanese Oil is used by millions of busy people instead of hot water bags, electric devices, greasy salves, sticky plasters for Rheumatism, Neuralgia, Neuritis, Lumbago, Sore Muscles, Sprains, Stiff Joints—Pains caused by fatigue and exposure. Rub it in. It generates a pleasant soothing heat that drives out pain QUICK. Won't blister like old type liniments.

HEAD CHEST COLDS

Japanese Oil often relieves them in 24 to 48 hours. For head colds inhale antiseptic vapors. For chest cold, congestion, sore throat rub in vigorously. 46 Years Success Behind It! At Druggists.

Don't Let Your Accident Insurance Policy Run Out

If you have been notified that your policy is to run out soon, renew it right away with an AMERICAN AGRICULTURIST agent or direct to,

American Agriculturist,
10 North Cherry St., Poughkeepsie, N. Y.

Ten Cents Plus

The Simplest Gift May Be Given a Personal Touch

WHAT if the present has to be very inexpensive? Just add a little loving personal touch, and like magic it becomes a worthy gift!

For instance, who wouldn't like a nice face-cloth bearing the initials in an embroidered wreath and accompanied by the verse:

"A little gift, but don't refuse it,
And on the face I love, please use it."

Quite pretty little guest towels may be procured for a dime, and it is but a few moments' work to stamp a simple design and embroider with a bit of leftover silk. With this goes the card:

"A guest towel as my gift you see,
It is not for the fam-i-lee,
For home folks it is far too small,
Just use it for the guests—that's all!"

Speaking of towels, why not give the young son or daughter a towel for his or her very own, especially if you know that there will be countless toys among the other gifts? Cut a design from any

951

Here is a real sitting-up dog pillow. It will be a pal to every youngster below school age and, besides, if desired for an ornament, it is a rare and natural looking puppy. Design is stamped on fine black felt and when finished measures 22 inches high and 13 inches wide. White rayon silk is used to back up eyes and nose, which portions of black felt are cut out in silhouette fashion and sufficient white rayon is furnished for entire back of pillow. Wool yarn is used for embroidering which is done very quickly with outline stitching. Price for stamped felt and all necessary rayon material included is 80c, post-paid. Yarn for embroidering if wanted is 20c extra. Ask for No. C95-1 when ordering from Embroidery Dept., American Agriculturist, 10 N. Cherry St., Poughkeepsie, N. Y.

fast color cotton material, and applique on the end. For a boy a lobster, crab, or some animal, for a girl a butterfly or flower could be used. To complete the gift wrap a cake of colored soap to match the towel, with it, and accompany with a rhyme:

"Here's a towel all your own,
Just for you and you alone,
Is it borrowed? Raise a howl,
'Here you, don't you take my towel!'"

Something for the baby who has no end of pretty things made by clever fingers? Well, for a dime you can pick up an orange reamer, for in these enlightened days orange juice is early included in the infant diet. Wrap it prettily and don't forget a card:

"Orange juice for baby—
Yes, the doctors all agree.
So you'll use this, maybe,
And I hope you'll think of me!"

With a scrap of cotton material, you can easily fashion a bag to hold marbles, and what boy doesn't gloat

over them? While you are at it, make another bag to hold jacks for sister, and see if your gifts aren't popular.

So after all, it isn't the gift itself, it's the love and thought that goes with it, and if your gifts have to come from the ten cent store, just add the little personal touch of thoughtfulness to them, and they will be appreciated, indeed.—E.D.Y.

Doorstops from Coffee Cans

A DOORSTOP is an acceptable present or a prize, and a very attractive one can easily be evolved from a one-pound coffee can (the low kind.) Fill it with sand, and place it in the centre of a square of black oilcloth which has been bound with green bias tape. Draw up the corners, sew them together, and fill the slits which remain with flowers made from felt, bright colored oilcloth, or yarn.

For another kind of doorstop, take a tall coffee can (one-pound), fill with sand, and wrap black oilcloth around it, as crepe paper is wrapped around a flower pot. Attach a long handle of wire, wound with green. Make oilcloth flowers on wires, and drive these into the top of the can. A very pretty doorstop is the result.

A third doorstop can be made from another tall one-pound coffee can filled with sand. To the top attach a ten cent doll's head, (such as is used for boudoir pillows). Make a full skirt of rose colored oilcloth, place a lace fichu over the little bare shoulders, and "mademoiselle" is ready to hold the door open.

As an inexpensive, but what will prove to be a most welcome gift, a coffee can may be "dolloed up" as described, and filled with home made candy.—A.B.S.

Accident Cake

HERE is a cake in Christmas colors that I originated quite by accident. I had been baking several cakes just before Christmas and had at hand at least eight egg yolks I did not want to throw away. I used them in the following way:

- ½ cup butter
- 2 cups sugar
- 1½ cups juice from huckleberries, (blackberry or juice from purple plums would give the same effect)
- 4 cups flour
- ½ teaspoonful soda
- Vanilla
- 2 teaspoonfuls baking powder

When baked, this cake turned out a very unusual color—for a cake—but it was quite suitable for the occasion. It was a decided green due to the combination of the yellow of the eggs and

the bluish color of the fruit juice. The icing was tinted red and it was decorated with a sprig of holly.—Mrs. John Land.

An After-Christmas List

NOT exactly on "the night before Christmas," but several nights before, I sit down to address my greeting cards, and always have the lurking fear that all unintentionally some one may be left out. So this year the day after Christmas, I took all my pretty cards,

Embroidery picture NO. B3789 comes stamped on gray felt for the house design with enough embroidery floss of pretty colors to complete it. Size when framed is about 15x19 inches. (Frame not included in package.) Price \$1.50 each. Order from Embroidery Department, American Agriculturist, 10 N. Cherry St., Poughkeepsie, N. Y.

and listed the names and addresses of those who had so kindly remembered me, and put the book safely away for reference later on. It will be a great help, I know.

A New Book

"Wind-Blown Stories" by Ethel and Frank Owen is full of the loveliest stories which in turn are filled with imagery and ideas that appeal to childhood. From Mr. Pudge of Oak Tree Town to Bob Static and the Melody Fays of the radio is quite a jump for the imagination, but to a modern child it would be very natural indeed to bridge this gap. The Tinkle family, Ding, Dong, and Dell, live in the bells in the steeple across the street and figure in one of Sandy's experiences. Chuff, the mouse, and Chooky, the cat are good friends, to the amazement of Ted, the little boy. I'veens, castles and fairies are not forgotten in this bag of "Wind-blown" stories as collected by the Vender of Stories for the delight of the children of Bramton. And when put up in the attractive, well-illustrated book of that title all children who read it catch the spirit and revel in it. Abingdon Press, New York City. \$2.00.

Clever Napkin Holders

NAPKIN'VELOPES are a positive necessity. The ones we are offering are bound with yellow calico-print bias fold and have birdies of the same on the outer flap. The material itself is a cretonne weight in horizon blue. Blue covering helps to keep white linens from turning yellow. These napkin'velopes come to you cut out, with bias binding, applique bird or birds, embroidery floss and instructions included.

Number M225 is the single bird for the tea napkins, No. M226 the sociable two birds for dinner size perhaps, although

both fold to a square about 7½ inches each way when finished.

M225 or M226—Material, binding, applique and floss, each.....25 cents

Order from Embroidery Dept. American Agriculturist, 10 N. Cherry St., Poughkeepsie, N. Y.

Aunt Janet's Corner

We Wish a "Homey" Christmas to You All"

At this season of goodwill our thoughts turn to the readers of the Corner, for it is there that we have the most personal and intimate touch with our American Agriculturist friends. We wish for you the joy and content that come from those sweet, human relationships with family and friends. We do not wish you many gifts, but rather that you get the supreme joy of giving and doing for others.

I have a great many friends whom I have not seen for years and it always warms my heart to get their Christmas messages and to know that I am not forgotten. I believe that most folks feel just the same way and appreciate being thought of at this season: when all of us try to make some expression of our friendliness.

It is not the amount of money spent for a gift that gives the most pleasure; it is the suitability of the gift for the person. If my family or friends remember that I have a weakness for pink rosebuds or for green or for pitchers of all shapes and sizes, and that my kitchen is in yellow and black, while my living room is in copper, blue and tan and select their gifts to me accordingly, then I am doubly grateful for the personal consideration which entered into the choice. Some of the gift pitchers have come from Italy and Spain, but I cherish some just as much—and use them more—that came from the five-and-ten and bargain basements.

Your flower-loving friend will be just as enthusiastic if you remember her wish for seed from your sweet william, or some gladioli bulbs. Your city friend would be delighted with a jar of

your pickles or some of your strawberry jam made from your own garden. The thing I am trying to say is—it doesn't matter an awful lot what is given, so long as the *givee's* personal tastes are considered. Of course, we all should enjoy lavishing gifts upon those we love, but, fortunately, life teaches us self-restraint and forces us to use our heads to express that affection in a more fitting manner.

And now, dear readers of the Corner, we wish you Merry Christmas and a heart full of good-will to all.

—AUNT JANET.

A Piece Bag for Peggy

WHAT could I give Peggy for Christmas, since to my mind she apparently had everything, and was likely to get more, if such a thing were possible! But I made a bag from gay print, and in it placed "pieces" of various size, material and pattern, all neatly rolled and pinned. They were taken from my own piece bag which had been accumulating odds and ends for many years.

It really cost me nothing, and I was delighted to learn that it was one of Peggy's treasured gifts, for it provided unlimited material for doll dresses, bean bags, and other juvenile sewing, and in these days of ready-mades, "pieces" seem to be few and far between.

To clean spoons tarnished by eggs, stand them in an aluminum cup filled with hot water in which a teaspoon of soda has been dissolved.

"Beau-Night" Dress

DRESS, PATTERN NO. 2831 with its dainty features is just what the school girls want for "beau night." The youthful cape and softly flaring godets are very alluring when made up in velvet, either in black or in the newer shades of forest green, rust red and brown. Triple georgette or canton crepe would be equally good. The pattern cuts in sizes 14, 16, 18, 20 years, 36, 38, and 40 inches bust measure. Size 16 requires 3 1/2 yds. of 39-inch material with 1/4 yd. of 9-inch lace. PRICE, 15c.

2852

Charming Day Dress

2831

DRESS PATTERN NO. 2852 has chic because of its interesting details found in the shirring below the elbows, the narrowed effect across the hips and the button trim. The inky browns, dark greens and pretty reds are charming in velvets, marocain crepe, or in crepe woolens. The pattern cuts in sizes 16, 18 years, 36, 38, 40 and 42 inches bust measure. Size 36 requires 4 yards of 39-inch material with 1/4 yard of 9-inch contrasting. PRICE 15c.

TO ORDER: Write name, address, pattern sizes and numbers clearly and correctly and inclose with correct remittance in stamps (don't send coin). Add 12c for one of the fashion catalogs and address to Pattern Department, American Agriculturist, 10 N. Cherry St., Poughkeepsie, N. Y.

TWO HELPERS INSTEAD OF ONE IN EVERY BAR

That's why

EXTRA HELP APLENTY IS WAITING FOR YOU IN FELS-NAPTHA

IT'S AS PLAIN as day—the reason why Fels-Naptha must give you *extra* washing help. For every one of these big, generous bars brings you *two* cleaners instead of one. Not just soap; but unusually good golden soap and plenty of naptha.

Naptha, you know, is a remarkable dirt-loosener. You can tell there's plenty in Fels-Naptha. You can smell it! It's there to work with the golden soap. Joining hands, these two safe, active cleaners loosen the most stubborn dirt and wash it away. They make your clothes freshly, sweetly, crisply clean; and they do it quicker, easier—without hard rubbing.

Your hands will enjoy Fels-Naptha's *extra* help, too. It gets them out of water sooner, and helps keep them nice. Try Fels-Naptha and you'll also agree it's a real washing bargain. It brings you

not more bars, but more help. *Extra* help in tub or machine; in hot, luke-warm or even cool water; whether you soak or boil your clothes.

Get Fels-Naptha at your grocer's to-day. Remember its *extra* help for household cleaning, too.

SPECIAL OFFER—We'll be glad to send every user of laundry soap a Fels-Naptha Chipper. Many women who chip Fels-Naptha into their washing machines, tubs or basins find this chipper handier than a knife. Use it and Fels-Naptha to make fresh, golden soap chips (that contain plenty of naptha!) just as you need them. Send only a two-cent stamp to help cover postage, and we'll mail you this chipper without further cost. Write to-day. Dept. 1-12-20, Fels & Company, Philadelphia, Pa.

Just David--By Eleanor Porter

THE STORY THUS FAR

Because of failing health David's father, a violinist, decides to leave the mountain home where they had lived alone for six years. They start down the mountain on foot, but strength fails the man before they go far. A farmer gives them a lift for a way and they decide to spend the night in a nearby barn where Simeon Holly and his wife find them. David's father is dead. Because no one else wanted him, David stayed with the Hollys.

David is considered a real problem by Mr. Holly. The boy hears him say that no one wants him and goes to the barn loft where he can feel that his father is near him. He is missed by Mrs. Holly who cannot resist telling him that she does want him. David is happy again, but Mr. Holly feels that it is just another mouth to feed with the mortgage coming due at the bank soon.

David's latest escapade is the release of a crow that Perry Larson had captured by endless patience and staked out in the cornfield to keep other crows away.

* * *

See here, sonny, you no need ter look at me in that tone o' voice. I didn't hurt the varmint none ter speak of—ye see he could fly, didn't ye?—an' he wa'n't starvin'. I saw to it that he had enough ter eat an' a dish o' water handy. An' if he didn't flop an' pull an' try ter get away he needn't 'a' hurt hisself never. I ain't ter blame for what pullin' he done."

"But wouldn't you pull if you had two big wings that could carry you to the top of that big tree there, and away up, up in the sky, where you could talk to the stars?—wouldn't you pull if somebody a hundred times bigger'n you came along and tied your leg to that post there?"

The man, Perry, flushed an angry red.

"See here, sonny, I wa'n't askin' you ter do no preachin'. What I did ain't no more'n any man 'round here does—if he's smart enough ter catch one. Rigged-up broomsticks ain't in it with a live bird when it comes ter drivin' away them pesky, thievin' crows. There ain't a farmer 'round here that hain't been green with envy, ever since I caught the critter. An' now ter have you come along an' with one flip o' yer knife spile it all, I— Well, it jest makes me mad, clean through! That's all."

"You mean, you tied him there to frighten away the other crows?"

"Sure! There ain't nothin' like it."

"Oh, I'm so sorry!"

"Well, you'd better be. But that won't bring back my crow!"

David's face brightened.

"No, that's so, isn't it? I'm glad of that. I was thinking of the crows, you see. I'm so sorry for them! Only think how we'd hate to be tied like that—" But Perry Larson, with a stare and an indignant snort, had got to his feet, and was rapidly walking toward the house.

Very plainly, that evening, David was in disgrace, and it took all of Mrs. Holly's tact and patience, and some private pleading, to keep a general explosion from wrecking all chances of his staying longer at the farmhouse. Even as it was, David was sorrowfully aware that he was proving to be a great disappointment so soon, and his violin playing that evening carried a moaning plaintiveness that would have been very significant to one who knew David well.

Very faithfully, the next day, the boy tried to carry out all the "dos," and though he did not always succeed, yet his efforts were so obvious, that even the indignant owner of the liberated crow was somewhat mollified; and again Simeon Holly released David from work at four o'clock.

Alas, for David's peace of mind, however; for on his walk to-day, though he found no captive crow to demand his sympathy, he found something else

quite as heartrending, and as incomprehensible.

It was on the edge of the woods that he came upon two boys, each carrying a rifle, a dead squirrel, and a dead rabbit. The threatened rain of the day before had not materialized, and David had his violin. He had been playing softly when he came upon the boys where the path entered the woods.

"Oh!" At sight of the boys and their burden David gave an involuntary cry, and stopped playing.

The boys, scarcely less surprised at sight of David and his violin, paused and stared frankly.

"It's the tramp kid with his fiddle," whispered one to the other huskily.

David, his grieved eyes on the motionless little bodies in the boys' hands, shuddered.

"Are they—dead, too?"

The bigger boy nodded self-importantly.

"Sure. We just shot 'em—the squirrels. Ben here trapped the rabbits." He paused, manifestly waiting for the proper awed admiration to come into David's face.

But in David's startled eyes there was no awed admiration, there was only disbelieving horror.

"You mean, you sent them to the far country?"

"We—what?"

"Sent them. Made them go yourselves—to the far country?"

The younger boy still stared. The older one grinned disagreeably.

"Sure," he answered with laconic indifference. "We sent 'em to the far country, all right."

"But—how did you know they wanted to go?"

"Wanted—Eh?" exploded the big boy. Then he grinned again, still more disagreeably.

"Well, you see, my dear, we didn't ask 'em," he glibed.

Real distress came into David's face.

"Then you didn't know at all. And maybe they *didn't* want to go. And if they didn't, how *could* they go singing, as father said? Father wasn't sent. He *went*. And he went singing. He said he did. But these—How would you *like* to have somebody come along and send *you* to the far country, without even knowing if you wanted to go?"

There was no answer. The boys, with a growing fear in their eyes, as at sight of something inexplicable and uncanny, were sidling away; and in a moment they were hurrying down the hill, not, however, without a backward glance or two, of something very like terror.

David, left alone, went on his way with troubled eyes and a thoughtful frown.

David often wore, during those first few days at the Holly farmhouse, a thoughtful face and a troubled frown. There were so many, many things that were different from his mountain home. Over and over, as those first long days passed, he read his letter until he knew it by heart—and he had need to. Was he not already surrounded by things and people that were strange to him?

And they were so very strange—these people! There were the boys and men who rose at dawn—yet never paused to watch the sun flood the world with light; who stayed in the fields all day—yet never raised their eyes to the big fleecy clouds overhead; who knew birds only as thieves after fruit and grain, and squirrels and rabbits only as creatures to be trapped or shot. The women—they were even more incomprehensible. They spent the long hours behind screened doors and windows, washing the same dishes and sweeping the same floors day after day. They, too, never raised their eyes to the blue sky outside, nor even to

the crimson roses that peeped in at the window. They seemed rather to be looking always for dirt, yet not pleased when they found it—especially if it had been tracked in on the heel of a small boy's shoe!

More extraordinary than all this to David, however, was the fact that these people regarded *him*, not themselves, as being strange. As if it were not the most natural thing in the world to live with one's father in one's home on the mountain-top, and spend one's days trailing through the forest paths, or lying with a book beside some babbling little stream! As if it were not equally natural to take one's violin with one at times, and learn to catch upon the quivering strings the whisper of the winds through the trees! Even in winter, when the clouds themselves came down from the sky and covered the earth with their soft whiteness—even then the forest was beautiful; and the song of the brook under its icy coat carried a charm and mystery that were quite wanting in the chattering freedom of summer. Surely there was nothing strange in all this, and yet these people seemed to think there was!

CHAPTER IX

JOE

DAY by day, however, as time passed, David diligently tried to perform the "dos" and avoid the "don'ts"; and day by day he came to realize how important weeds and woodboxes were, if he were to conform to what was evidently Farmer Holly's idea of "playing in tune," in this strange new Orchestra of Life in which he found himself.

But, try as he would, there was yet an unreality about it all, a persistent feeling of uselessness and waste, that would not be set aside. So that, after all, the only part of this strange new life of his that seemed real to him was the time that came after four o'clock each day, when he was released from work.

And how full he filled those hours! There was so much to see, so much to do. For sunny days there were field and stream and pasture land and the whole wide town to explore. For rainy days, if he did not care to go to walk, there was his room with the books in the chimney cupboard. Some of them David had read before, but many of them he had not. One or two were old friends; but not so "Dare Devil Dick," and "The Pirates of Pigeon Cove" (which he found hidden in an obscure corner behind a loose board). Side by side stood "The Lady of the Lake," "Treasure Island," and "David Copperfield"; and coverless and dogeared lay "Robinson Crusoe," "The Arabian Nights," and "Grimm's Fairy Tales." There were more, many more, and David devoured them all with eager eyes. The good in them he absorbed as he absorbed the sunshine; the evil he cast aside unconsciously—it rolled off, indeed, like the proverbial water from the duck's back.

David hardly knew sometimes which he liked the better, his imaginative adventures between the covers of his books or his real adventures in his daily strolls. True, it was not his mountain home—this place in which he found himself; neither was there anywhere his Silver Lake with its far, far-reaching sky above. More deplorable yet, nowhere was there the dear father he loved so well. But the sun still set in rose and gold, and the sky, though small, still carried the snowy sails of its cloud-boats; while as to his father—his father had told him not to grieve, and David was trying very hard to obey.

With his violin for company David

started out each day, unless he elected to stay indoors with his books. Sometimes it was toward the village that he turned his steps; sometimes it was toward the hills back of the town. Whichever way it was, there was always sure to be something waiting at the end for him and his violin to discover, if it was nothing more than a big white rose in bloom, or a squirrel sitting by the roadside.

Very soon, however, David discovered that there was something to be found in his wanderings besides squirrels and roses; and that was—people. In spite of the strangeness of these people, they were wonderfully interesting, David thought. And after that he turned his steps more and more frequently toward the village when four o'clock released him from the day's work.

At first David did not talk much to these people. He shrank sensitively from their bold stares and unpleasantly audible comments. He watched them with round eyes of wonder and interest, however,—when he did not think they were watching him. And in time he came to know not a little about them and about the strange ways in which they passed their time.

There was the greenhouse man. It would be pleasant to spend one's day growing plants and flowers—but not under that hot, stifling glass roof, decided David. Besides, he would not want always to pick and send away the very prettiest ones to the city every morning, as the greenhouse man did.

There was the doctor who rode all day long behind the gray mare, making sick folks well. David liked him, and mentally vowed that he himself would be a doctor sometime. Still, there was the stage-driver—David was not sure but he would prefer to follow this man's profession for a life-work; for in his, one could still have the freedom of long days in the open, and yet not be saddened by the sight of the sick before they had been made well—which was where the stage-driver had the better of the doctor, in David's opinion. There were the blacksmith and the storekeepers, too, but to these David gave little thought or attention. Though he might not know what he did want to do, he knew very well what he did not. All of which merely goes to prove that David was still on the lookout for that great work which his father had said was waiting for him out in the world.

Meanwhile David played his violin. If he found a crimson rambler in bloom in a dooryard, he put it into a little melody of pure delight—that a woman in the house behind the rambler heard the music and was cheered at her task, David did not know. If he found a kitten at play in the sunshine, he put it into a riotous abandonment of tumbling turns and trills—that a fretful baby heard and stopped its wailing, David also did not know. And once, just because the sky was blue and the air was sweet, and it was so good to be alive, David lifted his bow and put it all into a rapturous paeon of ringing exultation—that a sick man in a darkened chamber above the street lifted his head, drew in his breath, and took suddenly a new lease of life, David still again did not know. All of which merely goes to prove that David had perhaps found his work and was doing it—although yet still again David did not know.

It was in the cemetery one afternoon that David came upon the Lady in Black. She was on her knees putting flowers on a little mound before her. She looked up as David approached.

Just David

(Continued from Opposite Page)

For a moment she gazed wistfully at him; then, as if impelled by a hidden force, she spoke.

"Little boy, who are you?"

"I'm David."

"David! David who? Do you live here? I've seen you here before."

"Oh, yes, I've been here quite a lot of times." Purposely the boy evaded the questions. David was getting tired of questions—especially these questions.

"And have you—lost one dear to you, little boy?"

"Lost some one?"

"I mean—is your father or mother—here?"

"Here? Oh, no, they aren't here. My mother is an angel-mother, and my father has gone to the far country. He is waiting for me there, you know."

"But, that's the same—that is—" She stopped helplessly, bewildered eyes on David's serene face. Then suddenly a great light came to her own. "Oh, little boy, I wish I could understand that—just that," she breathed. "It would make it so much easier—if I could just remember that they aren't here—that they're waiting—over there!"

But David apparently did not hear. He had turned and was playing softly as he walked away.

HANDY ANDY Says "Here's How"

To Bank Your Furnace Fire

By Ray Inman

Smoke is wasted fuel.
You can save it, if you use any of the smaller grades of coal, by firing your furnace thus:

leave a 6" layer of ash on grate; pile in coal higher on one side than on the other; place kindling on top; light and open small draft holes in fire door.

to refuel: Pull all red coals to one side of fire pit, place fresh coal on opposite side.

repeat each time fresh coal is needed. Do not use this process with lump coal. (TO BE CONTINUED)

How to Prevent Contagious Abortion

(Continued from Page 3)

normal pregnancies and then another series of abortions.

One of the reasons why quacks have been able to fool farmers into buying certain abortion remedies guaranteed to cure abortion is the fact that farmers sometimes buy the remedy, so-called, feed it to their cattle, and then seemingly the cattle do not have abortions again for a long time. Of course, this immunity is not due to the remedy but to natural causes and to the nature of the disease itself, which comes and goes. In every case where the so-called "sure cures" have been tested out by the scientists under controlled conditions they have proved to be absolutely worthless.

* * *

What can be done to ward off abortion in an infected or presumably infected animal?

The answer is, absolutely nothing. Progressive infection of the membranes and of the fetus itself cannot be stopped by any medical, surgical, or biological procedure known to the scientists.

* * *

What then is the only means of approach to this great problem which causes the animal industry such tremendous losses?

The answer is, prevention. As already stated, the blood tests will determine the amount and the extent of the disease in your herd. That is the first step towards eliminating abortion. The next step is to get rid of the infected animal and to keep the herd clean, thereafter.

* * *

After the herd is once free, what are some of the steps in preventing a return of the disease? In other words, how can I keep my herd free from contagious abortion?

Here are some definite recommendations: 1. Before a new animal is introduced into a herd, be sure that it is free from infection. This means a blood test given to the animal. Until the test is given and the animal has proved itself clean, it should be kept separate from the rest of the herd. If such a test is not practical, then the animal should be kept in isolation from the rest of the herd until her calf is born in a normal manner. 2. When buying new stock or making replacements in your herd, if it is practical or feasible at all, try to get young, unbred heifers. 3. If you own an infection-free herd, never permit your herd bull to be used for the breeding of outside cows. Some authorities say

that this is not dangerous but why take the chance? Bull associations are fine from one standpoint in breeding up better cows in a community but it should be kept in mind that there is some danger in such associations from spreading contagious abortion. The least that can be done is thoroughly to disinfect the bull both before and after service. Such disinfection should be made also of the bull, of course, when he is used in your own herd with any animal suspected not to be free of the abortion bacilli.

4. One of the most common ways of spreading contagious abortion is in the pasture where both diseased and disease-free animals are allowed to mix. Here, also, is the old problem of the line fence with the herd on one side which the owner has spent years to get disease-free and a badly infected herd on the other side. Even if the cattle do not break through, there is danger of infection by drinking infected water which flows across both farms, or by too close association over the fence.

* * *

Of all tested methods for preventing the spread of abortion, what probably is most important?

Stable care and isolation experiments have proven time and again that infected animals should, if possible, be isolated in separate buildings. If this is not practical, at least a stall in the stable should be isolated where the cow may be placed until the discharge is stopped. Such a stall should be easily cleaned and disinfected, with tight side walls and, if possible, a concrete floor. Of course this stall should be thoroughly disinfected before and after the cow is in it. All bedding litter should be removed, the stall thoroughly scrubbed, and then the disinfectant applied. Buy a disinfectant that you are sure is effective. The abortive fetus after birth and the litter from the maternity stall should be buried or burned. It is extremely important that the other cows should not come in contact with these. Remember this precaution, if the cow should abort anywhere, as in the stanchion, barnyard, or pasture.

* * *

Is it necessary to disinfect a whole stable?

It certainly is if there is a suspicion of contagious abortion in your herd, and a thorough job must be done including the soiled exteriors of the cows themselves and all utensils such as

shovels, manure forks, wheel barrows, and the like. Too much emphasis cannot be placed upon thorough cleanliness and the use of a strong, reliable disinfectant in the control and prevention of contagious abortion.

* * *

Are outside milk products for feeding farm animals a dangerous source of infection?

They certainly are. One of the commonest ways of spreading bacilli of this disease is through milk obtained from off the farm, or even from infected animals on the farm. Milk from a cow infected with abortus bacilli whether she actually aborts or not is likely to contain the germs. The commonest way to affect another animal is through the digestive tract. Any feed, milk or otherwise, may spread the infection. The discharges from the animal after drinking this milk may infect clean animals that come in contact.

In this and in the preceding article, we have tried to cover just a few of the high spots about contagious abortion and its prevention. Because of its dangers and the great losses which it causes, every dairyman ought to study the subject thoroughly. Every college of agriculture has published several circulars and bulletins about contagious abortion. Our advice is, if you are a dairyman, to write to two or three of the colleges not only of your own state but of adjoining states for a col-

lection of literature on the subject. Study it, and then apply your knowledge in your regular dairy practice. We know of no single thing you can do that is likely to save you more money.

* * *

What about vaccines for the control of contagious abortion?

Both living and dead abortus bacilli have been experimented with to control abortion. This work is still in the experimental stage and is not generally recommended. It has been found that in some cases a temporary protection against abortion has been obtained, but this form of vaccination is by no means sure. It is apt to be costly to the owner and dangerous to the animal. Many advocates think that it has to be done annually to be effective. There are a number of other objections.

* * *

Has the general health of the animal anything to do with her tendency to abort?

Most authorities agree that there is a close connection between the health of the animal and abortion. Many animals are infected with the bacilli and yet seldom if ever have an abortion. Probably the chief reason is that they are in good health enough to resist the disease. This is just common sense. One of the ways to build up the health of the animal, of course, is through the use of carefully balanced rations.

How Big An Electric Motor?

TO those planning the purchase of electric power one of the first questions is, "What size motor shall I buy?" Another, "Shall I get a stationary or portable motor?"

Portable motors are favored for the seasonal power jobs. These are now available in the 3, 5, 7½, and 10-horsepower sizes, mounted on wheels or trucks, and complete with protective switches and with extension cables.

A 5-horsepower motor will handle any modern well-designed cutter regardless of size and deliver from 5 to 10 tons an hour. When faster filling is desired a 7½-horsepower motor is recommended. This size is also preferable to the 5-horsepower for operating the 8 and 10-inch burr mills. The popular hammer type mills developed for grain grinding will operate with a 5-horsepower motor.

Little power jobs do not affect the size motor, for although the efficiency of a large motor operating a small load is below normal, the power consumed depends largely upon the load pulled.

One other factor determines the size motor. Some power companies place a demand or horsepower charge on motors above one horsepower. When the motor is used this horsepower charge generally pays for the current used but when the motor is idle the charge continues. Therefore it behooves the buyer to find out from his power company whether charges are made and if so, to limit the motor size to the point where monthly current usage will equal or exceed the horsepower charge.

Life of Fencing

ACCORDING to a survey made by the Iowa State College, Ames, Iowa, the life of an average woven wire fence on an Iowa farm when posts are replaced and the fence restretched is 18 to 27 years.

The average life of barbed wire was given as 23 years by most of these farmers. A total of 238,390 rods of fence are included in the survey.

Among the members of the association on whose farms the survey was made, 25.2 percent of the fence was barbed wire, 74.8 percent of the fence was woven wire and less than .01 percent was of all other kinds. The survey

indicates that farmers are replacing barbed wire fences with woven wire.

The percentage of steel posts used in the past few years in building fences indicates that they are rapidly replacing the wooden posts for this purpose. Decided preference for "T" type steel posts are given by the farmers interviewed, while the cedar posts are the most popular wooden kind.—I. W. D.

Portable Sack Holder

A SUBSCRIBER writes; "I am sending you diagram (D-749) of a very convenient portable sack holder which I have found very satisfactory for use

MATERIAL USED FOR HOOD SHOWN IN FIG. A: 1/2" THICK 1 1/2" WIDE STRAP IRON 3/8" OR 1/2" DIA STEEL ROD WOULD BE PREFERABLE MATERIAL FOR HOOD SHOWN IN FIG. B

around my barn and granary and believe other readers will find it so."

EDITOR'S NOTE—We are very glad to have this handy sack holder and believe the diagram explains the construction fully. Let's have more of these handy ideas.

—I. W. DICKERSON.

Adjusting Spark Plugs

IN adjusting spark plug gaps never move the center wire as it may damage the insulator and cause the plug to become inoperative. Move the side wire only.

In today's high compression engines the sparking gaps should be inspected from time to time and set precisely according to the instruction manual. Unless the sparking gap of each plug is adjusted accurately maximum performance cannot be attained.

JUNKMAN'S SWEETHEART—Oh, Algernon, won't you let me come down here some day and put this place in order?—JUDGE.

File Claims Against Crossley

A NY subscriber who has a claim for produce shipped to Crossley, Inc. who have been doing business as commission merchants at 340 Washington Street, New York City, should write American Agriculturist, or the State Department of Agriculture and Markets, Albany, New York, and ask for a form on which claim can be filed with the Department.

The commission merchant's license which was issued to Crossley, Inc. on July 1, by the State Department of Agriculture and Markets, has been revoked by Commissioner Pyrke because of failure of the company to account promptly and properly to consignors of farm produce. Due to this action, Crossley, Inc. is not authorized to receive or offer for sale on commission within New York State, any kind of farm produce.

Shippers of eggs will be protected to the amount of the three thousand dollar bond which commission merchants are required to take out by the New York State Law. Producers will have until March 4, to file claims with the New York State Department of Agriculture and Markets. It appears that this firm owed shippers about \$3,-

500. If this is correct, shippers should get a large percentage of the money coming to them.

What Becomes of the Money

A SUBSCRIBER recently asked us for a statement on the Gospel Guards, an organization claimed to be organized for charitable purposes. We secured a report on this which, while it did not indicate that there was anything irregular about their transactions, did indicate to us that an unduly large portion of the collections was spent in overhead charges and that a relatively small percent reached the poor for whom the money was intended.

In asking a friend about the general situation he stated the belief that in general, the smaller organizations have to use a relatively large amount of the money for overhead than do the larger charitable organizations.

In forwarding this information to our subscriber we received a reply from him to the effect that the man who solicited him for a contribution to the Gospel Guards was far from

courteous in his actions and that the same complaint had come to him from several friends in his own town. We are by no means trying to discourage our readers who may be charitably inclined as we know there is plenty of need for it at this time. We do feel, however, that anyone who contributes to any organization is entitled to know what becomes of the money.

Have You Seen This Man

SOME time ago a subscriber asked us to collect for a case of eggs which had been shipped to the Vineland Butter and Egg Company of New York City. On investigation we were informed by the Vineland Butter and Egg Company that the eggs had been bought by a Mr. S. B. Holland who had misrepresented himself to producers and who was in no way connected with the Vineland Butter and Egg Company.

Since that time we are informed that Mr. Holland has given checks on the Hartley, Delaware bank, which came back marked "no account." We have further been informed that Mr. Holland weighs about 250 pounds, is 6 feet 1 inch tall, has a little red mustache, blue eyes, and when last seen was driving a Star car with license number 4D5446. If any subscriber is approached by a man of this description who claims to be an egg buyer, we will be glad to know about it.

About "Buy Back" Concerns

WE continue to get letters from readers, asking our opinion about raising rabbits for companies who want to sell them stock and then buy back all the offspring. A recent advertisement of one concern contains the following paragraph:

We give you a five year contract to buy all you raise, and then to be renewed from year to year at a guaranteed stipulated price, so our market for the offspring is assured and thus your income, too.

In this connection, we can only say that the United States Department of Agriculture is an authority for a statement that no concern can contract to buy back all the offspring on a proposition like this and live up to their guarantee 100%. We understand that when one proprietor of a buy-back scheme was approached on this angle, he came back and said that they realized that a certain number of those who bought stock from them would not continue in the business. Possibly then, enough rabbit raisers do not continue so that the dealer is able to buy back the offspring of those who do continue, and sell them to other breeders who are caught through advertisements similar to the one we have just quoted. The A. A. Service Bureau has consistently advised against buying stock in the hopes that the concerns selling them will buy back all the offsprings at a profit.

Power Lines Across Farms

(Continued from Page 2)

destroy the trees. It is not improper for an owner to insist that this be done under the supervision or by a person trained in forestry work.

If, for the interests of the corporation, a distribution system deviates from the highway, then the question of whether compensation is sought for the right to occupy private property should be controlled by the necessities of the case, as well as by the value of the property sought to be used.

In general, it is fair to say that every land owner is in control of his land and should determine for himself whether he will ask compensation for the right to place electric lines upon his property or not. The amount which he will ask is equally within his control and should depend upon the value of the right desired. Fairness to his neighbors as well as fairness to the corporation should be the rule in reaching a conclusion in either case.

"I am writing you to inform you thatsent me in the mail this morning a check for \$136, amount due me.

GRIMM MAPLE SUGAR UTENSILS

Farmers using up-to-date equipment and producing No. 1 grade syrup make more money from their sugar orchards than from any other farm crop. GRIMM COMPANY stands for the best in everything for the maple producer. Send now for our Catalog "B", stating the number of trees you tap.

G. H. GRIMM COMPANY
Rutland, Vermont

Don't let horses suffer . . . Reach for ABSORBINE

For 38 years farmers have relied on Absorbine, when strains and sprains threaten lameness. Brings quick relief to sore, swollen tendons and muscles. Aids healing of ugly gashes, sores. No blisters, no lost hair, no lay-ups. Famous for economy. \$2.50 a bottle—all druggists. W. F. Young, Inc., 579 Lyman St., Springfield, Mass.

MEDICATED DILATORS

FREE

Moore Bros. Purpl medicated Wax Dilators are wonderful for test troubles. They keep the test open and hasten healing. And they're safe—contain no metal or wire core. Use for Splinters, Obstructions, Hard Milkers, after removing scabs from teat tips, after operating. 25¢ a Doz.; 5 Doz. \$1.25, at your dealer or direct, postpaid. Send for a liberal supply free, also catalog.

MOORE BROS., Dept. 11, Albany, N. Y.

Post Your Farm And Keep Trespassers Off

We have had some new signs made up of extra heavy material because severe storms will tear and otherwise make useless a lighter constructed material. We unreservedly advise farmers to post their land and the notices we have prepared comply in all respects with the laws of New York, New Jersey and Pennsylvania. The price to subscribers is \$1.00 a dozen; \$3.50 per fifty; \$6.50 per hundred; \$60 per thousand.

Check or Money Order must accompany order.

American Agriculturist

\$10,000 PROTECTION AGAINST ACCIDENT and SICKNESS

For Only **\$10. year** No Dues or Assessments

Men, Women, 16 to 70 Accepted
NO MEDICAL EXAMINATION

Policy Pays

\$10,000 for loss of life, hands, feet or eyesight. Many unusual protecting clauses. \$25 Weekly benefits, pays doctor and hospital bills. Covers Automobile, Travel, Pedestrian and many common accidents. Covers many common sicknesses, including typhoid, jaundice, cancer, lobar pneumonia, etc., etc. Largest and oldest exclusive Health and Accident Insurance Company. Don't delay, you may be next to meet sickness or accident. Mail coupon today for free descriptive literature.

Give Consumers What They Want

(Continued from Page 3)

are an investment and not a present, but at least, they are worth thinking about.

FOR THE PASTURE—Lime and superphosphate. A half a ton of lime for every acre and 400 pounds of superphosphate. A good brush-hook too for the brush land.

FOR THE NEW MEADOW—Lime two tons for every acre and the best northern grown clover seed with a little choice grass seed.

FOR THE OLD MEADOWS—Needs toning up; some complete fertilizer for top dressing, a 2-12-6 for those with clover and alfalfa in them; while a 6-8-6 for the grass land.

FOR THE SILO—Some good early ripening corn that will have well filled ears at silo filling time.

FOR THE COWS—Something to help out the pastures in August; Sudan grass, millet, sweet clover are possibilities.

FOR THE ALFALFA—Some fertilizer for top dressing. The 2-12-6 or 4-16-20 would be fine.

FOR THE MANURE—A supply of superphosphate—fifty pounds of good 16% for every load of manure to balance up the fertilizer ingredients.

Other things worth considering are soy-beans for hay or ensilage mixed with corn. Roots for the cattle or poultry—but lime must be used. An acidity test on some of those fields that aren't doing so well may tell a story. They can be tested for phosphates too.

Green or White Asparagus

Does green asparagus come from a different variety than white or is it merely a matter of blanching? Which does the market prefer?

THE term green and white merely refers to whether or not the crop is blanched and not to varieties. For the past few years there seems to be a tendency to prefer the green asparagus.

"Life's Pay Checks"

THE above is the title of a sympathetic, understanding, helpful volume written by a man who has long been a friend and counsellor of many of our readers, Dr. John W. Holland. Much of it is a collection of short, helpful, and interesting talks like those that have appeared in A.A.

Dr. Holland is well qualified to establish himself as the friend and minister of farm people. Born on a farm in Iowa, living the formative, growing years of his life on a farm, doing the ordinary everyday chores that are demanded of tillers of the soil, experiencing the problems and trials as well as the supreme joy and satisfaction that are embodied in the richness of living close to the soil, and from this experience steadily storing up within his soul a fund of knowledge and helpful understanding of the lives of those who are the foundation and support of this great nation, the farmers and their womenfolk—we reiterate, this man is well qualified to philosophize about those matters that touch deeply the hearts and lives of farm folk.

Here in this volume are no new-fangled ideas, but the straightforward human story of faith and brotherhood, right-minded messages for right-thinking people. It is a book alike for the minister, or anyone who is actively interested in a church, and the layman. It is written without frills in Dr. Holland's usual style, filled with encouragement, common-sense and help.

"Life's Pay Checks" is published by the Fleming H. Revell Company, 158 Fifth Avenue, New York City, and costs only \$1.25.

If you are one of the many who believe that money alone is not sufficient for happy living, you will like this book. Read it.

SAVE Labor and Money with these handy machines

McCORMICK-DEERING
Feed Grinders with reversible double-faced grinding plates are obtainable in 3 sizes for engine or tractor operation.

INDOORS and OUT the McCormick-Deering Engine is one of the most useful machines on the farm. Made in 1½, 3, 6, and 10 h. p. sizes.

McCORMICK-DEERING Corn Shellers

A McCormick-Deering Corn Sheller will enable you to shell corn for seed, feed, or market at low cost. Built strong to give long service. The line includes shellers for hand, engine, or tractor power.

Grind Wheat for Feed

THESE days many farmers are doing themselves a good turn by grinding wheat and feeding it to live stock. It is highly profitable whenever a surplus of wheat and shortage of corn makes wheat the cheaper feed. The U. S. Department of Agriculture Miscellaneous Publication No. 26 states that a pound of cracked wheat equals a pound of corn in all-purpose feeding value. It goes on to say that wheat should be crushed or coarsely ground for live stock, and rather finely ground for dairy cows. It should be used with other elements to make a balanced ration.

Write for our special circular covering the feeding values of wheat

THE saving in time and labor, the economy, and the convenience of being able to grind your own feed and shell your own corn whenever you want to, more than justifies owning a McCormick-Deering Feed Grinder, Corn Sheller, and Engine. The small investment required to put these machines to work on your farm is offset many times over by the many advantages they offer the year around, and by the savings they effect.

Examine the models the McCormick-Deering dealer has on display. Ask him to point out the exclusive features, quote prices, and demonstrate for you.

Write for illustrated folders and read all about the many features of these money-saving machines

SHRINES OF AMERICA

Plymouth Colony

THE story of Plymouth Rock and the Pilgrims is familiar to all of us. It marked the beginning of the white man's conquest of a new world. In these days, with all our modern conveniences, it is difficult to realize the hardship that confronted the first settlers on an inhospitable shore only a little more than 300 years ago. We can never honor these brave and hardy pioneers too much. We all remember the story of Captain Myles Standish, too, and his courtship by proxy immortalized in Longfellow's poem. The picture at the left is his home, built in 1666 and still standing. Below is a monument erected at the spot where the Pilgrims landed to commemorate the 300th anniversary of the event.

To Specialize or Not to Specialize?

Readers Give Answers Based on Their Own Experiences

SOME time ago we announced a contest on the subject of "Specialized Versus Diversified Farming." We knew that this is a problem which confronts many of our readers and we believed that personal experience letters from our readers would be of interest and value in helping to solve the problem.

As might be expected, both sides have their champions, but an unusual

and shrubs. Several have done remarkably well growing certified farm crop seeds. These specialized farms are likely to stand out in our minds because they are different and because there are but few of them. Just think over how many such farms you know and also how many you have known to fail by specializing. Then think of the diversified farms which you now know to be making a real success.

I can think of sixty farmers in two townships in my own county whom I would consider really successful. These farmers have from ten to twenty high producing cows, mostly pure bred and nearly all have from ten to fifty acres of alfalfa. Most of them grow some potatoes and cabbage and nearly all have an income from something else; some have a few sheep; some have pigs; some make maple sugar, and a few follow truck gardening.

Nearly all of these farmers have fair sized families and in nearly every case the children are having good opportunities in school.

The diversified farm can have a regular rotation of crops or can use each field for such crop as its soil is suited to grow. The owner's family's labor can be evenly distributed throughout the year and there is some income every month in the year and no year so bad but that some part of the farm enterprise is profitable.

In conclusion, diversity of interests tends toward a broader outlook in life, a common interest and sympathy with those around you, and breaks up the monotony which comes from the routine work of the specialist.—J. S. M., New York.

Should Farmers Specialize?

(Third Prize Letter)

WHY not? The big money in business goes to the man who concentrates on one line and becomes an expert. The big fees in medicine go to

surgeons and specialists, not to the family doctor. And the successful farmers of this section are truckers, poultrymen or dairymen—not diversified farmers.

Diversification is a holdover from pioneer times when a man had to raise everything his family needed, or go without. Times have changed. Farmers no longer tan leather and cobble the family shoes. They cannot compete with manufacturers who produce better and cheaper shoes by machinery. Then why expect success if they plod along the old diversification rut in

50 to 100 bushels more of marketable potatoes per acre than the diversified farmer. Quantity production permits better grading and more advantageous marketing. Higher yields and lower labor expense mean lower cost per bushel. He can undersell the diversified farmer and still make a profit. He watches his costs like any good business man, while the diversified farmer rarely knows his costs because his business is too complicated to permit an accurate check-up.

In other words, the ancestral blunderbuss worked all right when the

Our first prize winner's herd sire—Maple Lane Marathon Pontiac Ormsby was first prize senior yearling at Syracuse in 1929, and senior herd sire in the first prize county herd at Syracuse in 1930.

number voted neither for depending on one source, or raising a little of everything, but for concentrating on two or three good substantial sources of income.—THE EDITORS.

"Hobby" Farming

(First Prize Letter)

"YOU'RE going to fail," quoted some of our diversified farmer friends when we moved on to our 148 acre "clay flat farm." We just made a mental note that most of these diversified farming friends' land had been handed down from father to son and moved out our few good grade and thoroughbred cows. We realized the all wise Creator had specialization in mind when He made the clay flats—He made them for dairying—not potatoes.

The rattle of the milk bottle brought success. For five years we peddled our own and neighbor's milk. Our mortgage holder boasted he'd have the farm back in a year but our first year's sale of hay deducted \$1000 from our original \$8000 debt. Twenty-five dollars procured a purebred bull calf. We raised calves from our purebred. He proved not only a good investment to us but to Washington County as well. Two other breeders won first prize on their calves at Syracuse last year and one of these calves won first in the 4-H at the National Dairy Show. We have eighteen of his daughters. We traded him for a calf backed on both sides by state champions. We refused \$1000 for him after he proved to be New York's first prize yearling last year.

We make grade A milk, have joined a cow-testing association and are "Gopatis" members. Nine years of specialized farming have lifted our mortgage, added another 112 acres, installed running water, electricity modern conveniences, and built up our herd.

Specialized farming requires less equipment. It is efficient farming and because it is "hobby farming"—the kind of farming that a man puts his whole heart into—it's bound to be the most profitable of all farming.—Mrs. C. F., New York.

A Vote for Diversification

(Second Prize Letter)

OCCASIONALLY we see a farmer who has a specialty which has enabled him to make a great success, an outstanding fruit grower, a breeder of some special livestock, or even flowers

This man is typical of the man who does not put all his eggs in one basket. Tomatoes are grown as a cash crop but he has other crops and more than likely a dairy too.

competition with farmer specialists who have the same tremendous advantage of mass production and lower costs?

For example, the diversified farmer, with a few acres of potatoes cannot afford adequate machinery which increases his labor bill. Lacking a sprayer, he may lose a crop from blight. The potato specialist has the necessary machinery and takes no chances. He uses a better seed, better cultural methods, more fertilizer and produces

woods were full of game but the modern Nimrod must use a more accurate weapon. Far-sighted farmers have seen the trend and cast away the old blunderbuss of diversification.—Mrs. H. B., New York.

Two Sources of Income

WHEN we consider the farm population as a whole we are convinced that only a small percentage can specialize in one particular line. There are many outstanding examples in specialization, namely the breeding of high grade stock, the growing of certified seed and many others which we might mention. But in order to succeed along this line, we must have the following qualifications: capital, adaptability and location.

But what can the masses do to better their financial conditions? It seems to me if the average farmer will stop and go over his farm operations for the last five years, he will be able to determine the two lines which have paid the best. In our own case, we decided some time ago that time spent with the cows and the fruit brought the greatest labor income.

Until conditions change, we shall emphasize these two lines of farming. We grow wheat, corn, oats, barley, clover and alfalfa, all of which will provide more than ninety percent of the ration for the cows. We would be glad to eliminate wheat but so far we have gotten the best seeding after this crop. The cows will furnish fertility for the orchard. This system equalizes the work throughout the year and we can hire our help by the year, which is a decided advantage.

New methods and efficiency have been stressed and they should be, but I am wondering if we can not well afford to give more thought and attention to the expense account. Receipts less expense make up the profit. We do not seem to be able to change our receipts to any great degree, that is, we have to take what we can get for our product. But, I believe by careful thought and study we can lessen the expense account.—E. B. C., N. Y.

The Song of the Lazy Farmer

MY RADIATOR froze last night, Mirandy said it served me right, she's been remindin' me all fall to fill it up with alcohol, before I'd go to bed at night she'd tell me that it wasn't right to take a chance, for she was sure we'd git some zero temperature. Most ev'ry ev'ning she would go and tune in on the radio to git the latest weather dope, and then she'd tell me not to hope that I could crank up my old Liz next day, for it would sure be friz. At her ideas I didn't scoff, but I just kept a-puttin' off that job, until this morning come, and it was froze tight as a drum.

Mirandy says, "I told you so, you were too indolent to go and put some dope in that old bus, and now you've got to go and fuss and pour hot water through a spout to thaw that radiator out. If while you're at

it you should git your ears and nose and thumbs frostbit, you'll git no sympathy from me, you've got what you deserve, by gee." I never answered back a word; when some misfortune has occurred, it doesn't pay for anyone to argue what they should of done, so all the rest of that there week I spent a-fixin' up each leak, a car is so much trouble that I'd sooner walk from where I'm at to where I want to go than fuss all day a-fixin' up the bus!

Boston Entertains A.F.B.F.

Over Two Thousand Delegates and Friends Present

By N. M. FLAGG

New Hampshire Editor, American Agriculturist

AT the annual meeting of the American Farm Bureau Federation held in Chicago a year ago, a group of Massachusetts and New Hampshire Farm Bureau leaders and officers appeared on the scene, clad in early Colonial costumes and in true Colonial style invited the national body to come to Boston for its 1930 meeting. Only once before, about ten years ago when it went to Atlanta, Georgia, had this meeting been held outside of Chicago. After much discussion by the board of directors it was finally decided, in early summer, to accept this invitation and as a result, Boston and many hundred residents of the East had an opportunity to attend the recent convention and see this great group of progressive farm leaders at work.

Banquet Shatters Record

In the first place, allow us to tell something of the size of the meeting. Actual registration cards filed at the reception desk were in excess of fifteen hundred, but it is known that many hundreds failed to visit this desk and a very conservative estimate of the total attendance is about twenty-five hundred. At the banquet, on Tuesday evening, there were served, by official count, twelve hundred twenty-seven farm men and women, which was not only a record crowd for a national Farm Bureau banquet, but it shattered all records for a banquet ever served at the Hotel Statler, where the Grand Ball Room, the foyer, and all available space in the balconies, were filled to capacity. In spite of this enormous crowd, everything progressed as smoothly and as rapidly as though it were a small dinner party. Massachusetts, the host state, naturally had a larger attendance than any other, with a total registration of three hundred nine while New Hampshire was second with two hundred fourteen pres-

ent at some or all of the sessions. Following these, in order, came Connecticut with one hundred seventy-nine, Vermont with one hundred seventy, New York with one hundred fifty, Maryland with seventy-five, New Jersey with sixty-two, Illinois with sixty, Indiana with thirty-six, and so on to California, with nine, and Texas with two. At some conference or other, it was said that every state in the Union, with two exceptions, was represented.

Women Have Program, Too

Speaking of the banquet itself, with music by a group of players from the Boston Symphony Orchestra, selections by Miss Gertrude Ehrhart, soprano, and with a talk by Mrs. Charles Sewell of Indiana, surely one evening could hold no more of inspiration and good fellowship. New Hampshire was honored in having Governor Tobey selected to represent the Eastern States in delivering the address of welcome to the convention on Monday morning, and after being introduced by Mr. Putnam, he proved that the selection was a most happy one. Preceding the convention itself, the series of women's meetings were held on Friday and Saturday, and out of a long list of nationally famous speakers, many women agreed that the talks given by Miss Mary Mims of Louisiana, Miss Grace Abbott of Washington, D. C., Mrs. Frank Evans of Salt Lake City, Utah, and Judge Florence Allen of Cleveland, Ohio, were exceptionally helpful. On Saturday evening over five hundred men and women journeyed to Ford Hall, back of the State Capitol and enjoyed an old fashioned baked bean supper, as guests of the City of Boston and the

Massachusetts Farm Bureau Federation. On Sunday morning special busses were provided for all those who desired to attend services at either Old North Church or King's Chapel, and, following this, twelve bus loads of the Farm Bureau members were taken to various historic spots in and around Concord and Lexington.

At Horticultural Hall a fine display of fruit, vegetables, and flowers was seen by many of the visitors, but to many of those from other parts of the country, the exhibit of early agricultural and household equipment at the same place was the star attraction. The famous Daniel Webster plow, the A shaped wooden framed spike tooth harrow, the sap yokes and the wooden plow coming from Robert Gould's farm in Contoocook, New Hampshire, all caused much interested comment. Exceedingly helpful to all who were present was the meeting of State presidents and secretaries on December sixth, where an exchange of ideas as to carrying on membership work and other organization matters took place. Practically all the states were represented at this gathering and enthusiasm ran high.

Governor Tobey Welcomed Us

With the opening of the main convention on Monday morning, attendance and enthusiasm both mounted even higher and the address of welcome by Governor Tobey of New Hampshire, was delivered to an audience estimated at twenty-three hundred people. Mayor Curley of Boston and Governor Allen of Massachusetts also welcomed the convention to the city and state. Following this President Thompson gave his annual address which we wish might have been heard by every farmer in the country. Then came talks by C. C. Teague, of the Federal Farm Board;

(Continued on Page 15)

Uncle Sam Will Deliver Your Eggs

Parcel Post Selling Has Advantages---Also Disadvantages

EGG prices have been very discouraging during the last few months. At such a time it is natural to search around for possible ways of getting better returns. Any method of marketing which will get a higher percentage of the consumer's dollar is welcome. It is evident to anyone who studies the situation carefully that shipping eggs by parcel post is not a cheap method of marketing. We hear much about the big spread between producers and consumers and certainly we should do everything possible to cut down this spread. At the same time, it is cheaper to ship eggs in cartons than it is a dozen at a time. The big point which should be kept in mind in parcel post egg marketing is that it does provide a way whereby the consumer can be assured of absolutely fresh eggs of a very high quality.

Many readers have asked us how to get customers. There are two ways that occur to us. Most people have a few friends in the city and by writing may be able to interest them in trying out eggs by parcel post. If they are satisfied, they will tell their friends about it. Another method is to use a small classified advertisement in one of the metropolitan papers, probably the Sunday edition. It is generally agreed that it is not profitable to ship small lots of eggs further than the second zone and this should be kept in mind when attempting to build up the list of customers.

It is exceedingly important, in our opinion, to have a very clear idea as to what kind of eggs you are going to sell direct to the consumer by parcel post methods. As we have already mentioned, it is not a cheap way of marketing. Producers of most farm products ship only the very highest quality when marketing costs are high.

For example, the Western apple growers do not find it profitable to ship their seconds and culls to the East. Neither do the California poultrymen ship their poorest stuff to producers here and keep the best at home. While the producer is not required to grade his eggs according to

eggs and if you are prepared to supply high quality eggs to them.

The question of pay may be a little troublesome. It might seem that there would be plenty of consumers who would be answering your parcel post egg advertisement with the sole idea of getting something for nothing and with no intention of ever paying. Probably there is not much danger of this. Those who are trying to get something for nothing are looking for bigger game than merely a few dozen eggs. Some one has suggested that for the sake of convenience the customers be billed only once a month. On the other hand, it would certainly not be advisable to ship to anyone very long if they did not remit promptly. It is more than likely

that you will have some bad accounts but over a period of time a list of reliable customers can be built up. It is possible, of course, to ship C.O.D. but this is not so convenient for the consumer and would probably not work out satisfactorily.

What about containers for shipping? There are two kinds, one is a corrugated box container which is designed to be used only once, the other is a stronger box which is returnable and is designed to be used again and again. From what we have been able to gather, it seems that the returnable case is more likely to be satisfactory. If your experience has been otherwise, we will be glad to have you write us. Containers can be purchased in various sizes to contain from a dozen up to twelve dozen or even more. The New York State College of Agriculture says that the entire cost of a round trip for a twelve dozen returnable parcel post container is about seventy cents, or about six cents a dozen. This figures in

(Continued on Page 14)

Give Your Own Experience

A FEW weeks ago we mentioned the marketing of eggs by parcel post and the unusual number of letters received indicates that producers are more than usually interested in this type of marketing. Because so many have asked questions about shipping eggs by parcel post, we are giving you additional information. However, we feel that those of our readers who have had actual experience in marketing eggs this way have learned much about the business and should be given an opportunity to pass on their knowledge to others. For this reason, we will be glad to hear from any subscriber who sells eggs by parcel post and will pay our usual rates for all personal experiences which we are able to publish.

the New York State law, his aim should be to grade them at least as rigidly as they are required by this law, and if anything, even more carefully. In other words, we cannot hold out much hope for success in parcel post marketing unless you are prepared to ship eggs of good size, clean, fresh, and carefully graded as to shape and size. Even though you may gather the eggs every day or even several times a day, they should be candled in order to take out any which may be blood spotted, meat spotted or which may have blind checks in the shells.

Quite a number of readers asked how much to charge. A little experience in this line will enable you to tell how much you have to get above local prices in order to make it profitable. One authority says that you should get somewhere between 10 and 14 cents more in order to make it pay. So far as prices are concerned, we believe you will find consumers perfectly willing to pay this premium if they really want high quality

Christmas Day in the Morning

When times are hard and there is little income, Christmas comes with a real pull on poor folks.

—E. D. G.

THIS quotation taken from a recent letter from a friend set us to thinking about this whole Christmas idea. Sending someone a postcard this year because they sent you one last year, or giving somebody a gift he does not want and you can ill afford is, of course, entirely contrary to the spirit of Christmas. There is all too much of this kind of "giving without the giver." One's love and generosity, also, can run wild at Christmas time in making gifts to loved ones that are unwise. Such extravagances may bring real hardship to the family later. This, also, is not what Christmas is for.

Like all good things, the Christmas idea is misused. But with all of the extra work that often tires people out, with all its bother and with all of its costs, we still say, "Eliminate all of the other holidays, if you will, but still leave us this one."

It is well for us to stop occasionally as we journey along the Great Road in this mad rush of life that leads to no one knows where, and check up a bit on our aims and ideals. What are we trying to do anyway but to gain a little happiness for ourselves and for our friends? Christmas rightly used gives us that opportunity. A lot of money does not make a nice Christmas. A lot of love does. The best one we ever had was that far-away day when as a very small boy we had the magnificent sum of a whole dollar with which to buy presents for father, mother, and the three brothers. That and other memories of other Christmases spent with those we shall not see again are among our treasured possessions.

If you miss the things this holiday really stands for, what is there left? Christmas with most of us means the homecoming of family and friends, the reunited family circle, which as the years roll on happens all too seldom. Something is the matter with the man or a woman, no matter how old, who is not still enough of a child to get some happiness out of the atmosphere that should prevail at Christmas time—the festive shops, the secretive buying and hiding of small presents, the Christmas music, the delicious aroma of the dinner on the fire, the gathering around the tree or family hearth when the presents are given, and best of all, the laughter and joy of little children.

Would Reduce Farm Truck Fee

ASSEMBLYMAN Charles P. Miller, of Genesee County, has brought to our attention his proposal to amend the vehicle and traffic law to reduce fees for auto trucks owned by farmers and used exclusively for agricultural purposes

and not for hire. Mr. Miller's suggested amendment reads as follows:

"For each vehicle the annual fee of five dollars.

"Provided that if any motor vehicle, for which a registration fee is provided in this subdivision, is registered on or after July first and before October first in any year, the registration fee for that year shall be one-half the fee, and if registered on or after October first in any year the registration fee for that year shall be one-fourth the fee, herein provided for such motor vehicle."

In discussing this with us, Mr. Miller stated that this amendment is needed as a matter of plain justice to the farmer. The details of this proposal may need changing but the principle is right. Thousands of farmers own trucks which they are able to use only a small part of the year, either because of bad weather, bad roads, or both. Why should they pay a fee on the same basis as a truck owner who uses his truck nearly every day during the entire year? What about the justice to the man, also, and there are many such, who uses his truck for transporting his products on his farm, seldom going on to the highway at all? The whole principle of taxation of motor vehicles should be on the basis of the amount of time they are used on public highways.

In these days of much-discussed schemes for aiding the farmer, we are always interested in practical suggestions that can be worked out immediately. The above amendment, for example, would help to reduce the farmer's farm-to-market costs and result in at least some small benefit not only to the farmer himself but to the consumer.

Personal Experience of a Consumer

THE writer has spent most of his life in the country, was raised on a farm, farmed it himself, and has been connected with the farm industry all his life. At the same time, it has been necessary in recent years to live, with the exception of summers, in a large city. This experience makes it possible to look on this problem of the growing and marketing of food from both sides; that is, from the viewpoint of a producer, and also as a consumer. There is much to be said for both sides, both for and against.

Everybody knows that the great outstanding problem of modern times is to find a better marketing system. Such a system can be found, however, only after the facts are known. In order to bring out some of these facts, there will appear on this page in coming issues short sketches taken from the personal experience of the editor and of his friends in buying food for a family in a large city.

Let us, for example, tell you of a little experience in trying to get good butter. Our entire family is very fond of it. When it is good, butter is a fine food. It is easily digestible and it contains vitamins and other valuable food ingredients not to be found in any other product. But as every old butter maker knows, it is easier to go wrong in making butter and keeping it than with almost any other food. The result is that there is little good butter on the market. We have traveled from store to store in the city where we live and made all kinds of effort to get butter that was not strong or did not have an unpleasant odor. No matter how much was paid for the product or what grade was purchased, about half the time our butter has been so poor that we could eat little or none of it. Many stores make advertising claims for the quality of their butter; so do the big milk companies; but their products seldom come up to their claims.

Finally it was the pleasure of the writer to visit what is perhaps the greatest cooperative butter packing plant in the world, the Land O' Lakes Creameries in Minneapolis. Several hundred creameries in the Northwest are banded together in this organization, and the one big fundamental policy on which it works is quality. No butter from any of these creameries is accepted in the central plant to go out under the brand name unless it is 93 score or better. Moreover,

we actually saw with our own eyes that no expense was omitted by this organization to handle, grade and pack the butter with the greatest care.

Well, we came home after this visit and suggested to the wife that we give Land O' Lakes butter a trial. She made some mild objection that it cost more because of the higher score, but we finally agreed that the stuff we had been buying was dear at any price. We purchased a little of the Land O' Lakes brand as a trial, and have been buying it and eating it with enthusiasm ever since.

This is not an advertisement for any brand of butter, but we are talking right out in meeting to emphasize the point that consumers must have what they want when they want it, and that the first qualification is quality. The consumer may be cranky and foolish in his whims, but the cold fact remains that if you do not please him, some other producer or group of producers will. The chief reason why Western producers living thousands of miles from these great markets are getting the markets away from Eastern growers is the study they have made of consumer demand and their united organized effort to meet that demand.

Why Pay Officials by Fees?

THERE is a general tendency to eliminate the compensation of public officials by fees and put them on a straight salary basis. This is right. The fee system is obsolete, inefficient, and often costly. Many sheriffs are still paid by the fee plan and some of these are not overpaid in this way, but how much more satisfactory it would be for the county to provide all of the equipment, pay the sheriff and his full-time deputies by definite salaries, and receive all the fees into the county treasury.

The same criticism applies even more strongly to paying collectors by fees. An unnecessary expense of several hundreds of thousands of dollars is saddled on to New York State taxpayers through the present fee plan of paying collectors. What is the matter with the idea of eliminating these collectors entirely by paying taxes directly by check to the county treasurer?

Write Us a Letter

AMERICAN AGRICULTURIST will pay one dollar for every good letter we can find room to publish, on the subject of "Old Sayings in Your Neighborhood." Every neighborhood has colloquial expressions like, "Kicked the bucket," "Ginger to grindstones," "Not on your tintype," which the resident never questions but which have no meaning at all for the outsider, even though that outsider live no farther away than fifty miles, perhaps. Tell us about the old sayings in your neighborhood. And if you know the history of the saying, its derivation or origin, it will add much to the interest and value of your letter.

Eastman's Chestnut

UP in Senator Leigh Kirkland's home town of Randolph, New York, there is a pastor of the Federated Church beloved not only for his spiritual qualities and ability but also because he is human—in touch and in sympathy with his fellowmen. One of this pastor's congregation recently sent me a little story about this pastor which goes as follows:

"Our minister, whose name is Archie Hillard, is very jovial and good-natured, and a great hand to joke and tell stories. He has a neighbor by the name of Lee Hoytink who is a member of his church, president of the Men's Club, and also an undertaker. The Pastor wanted to talk with Hoytink about some church matters and called his office on the 'phone. Mrs. Hoytink answered; the Pastor asked, 'Is Hoytink there?'

"Mrs. Hoytink answered that he was in the house. Pastor replied, 'Tell him I want him; I am dead.' The message was duly delivered to Mr. Hoytink who came to the 'phone, and replied, 'Yes, Archie, where are you?'"

New Jersey Master Farmers Honored

Governor Larson Presents Medals at New Brunswick Banquet

ON Wednesday evening, December 17, Governor Morgan Larson of New Jersey, demonstrated the vital interest which he has in agriculture. Invitations to attend a number of meetings on this evening had been received by the Governor, yet he chose to attend the New Jersey Master Farmer banquet and personally to present Master Farmer medals to five New Jersey farmers who had been awarded this distinction by two agricultural papers—*Pennsylvania Farmer* and *American Agriculturist*.

The men honored are W. S. Hibler, Newton, Sussex County; William Schober, Monroeville, Salem County; George and Lawrence Smith, South River, Middlesex County; and John H. Weed, Vineland, Cumberland County.

We believe the Governor made a good choice when he chose to attend. He either enjoyed himself immensely or else he is a wonderful actor. In fact, we have seldom attended a banquet where there was such a general air of

as understood by the editorial staffs of *American Agriculturist* and the *Pennsylvania Farmer* were given by Henry Morgenthau, Jr., publisher of *American Agriculturist*. A man who receives the title of Master Farmer must be far more than a financial success. It is true that he must produce good crops or good livestock and make a profit by so doing, but in addition to this, he must be the type of man who is always willing to help his neighbor, who is willing to spend much of his own time in community work, and who enables his children to get the kind of training which will fit them for their chosen work. We might say that Master Farmers should excel in three things: on the farm, in the home, and in community life.

Mr. C. L. White, editor of the *Pennsylvania Farmer*, then explained exactly how these men were chosen for the honor. Mr. White told how the *Pennsylvania Farmer* and the *American Agriculturist*, early each spring, call for nominations for this honor. Any neighbor or friend may nominate a man who, in his opinion, meets the high standards required. Every man nominated receives what we call a "work sheet" from one of the publications. This work sheet, when filled out, gives a great amount of information about the farm, the family, and community relationships. Unfortunately, it is not possible for the editorial staff personally to visit every nominee. However, each year a considerable number of those nominated are visited by a representative of one of the papers, and following this, the Board of Judges, composed of Dean J. G. Lipman of the New Jersey State College of Agriculture, H. E. Taylor, Secretary of the New Jersey Federation of County Boards of Agriculture, and William B. Duryee, New Jersey State Secretary of Agriculture, visit several of the nominees. The judges then make their decision. We might mention here, that because a man is not awarded the honor this year, he is not disqualified for other years. In fact, a number of men who have been awarded Master Farmer medals, did not win the distinction the first time they were nominated.

We are glad that Governor Larson could be with us. It speaks well for agriculture when such busy men have the interest and find the time to take part in honoring Master Farmers. It signifies to us that agriculture, as a means of making a living, is receiving the recognition which we have long believed it should have.

Up until 1930, ten New Jersey farmers have received this honor. These men are:

(1927) Jacob L. Pittenger, Monmouth County, (deceased); Charles B. Probasco, Mercer County.

(1928) William J. Clayton, Monmouth County; Willard B. Kille, Gloucester County; Clifford E. Snyder,

Hunterdon County; Wallace W. Tittsworth, Sussex County.

(1929) James Ewart, Middlesex County; Charles Fitting, Atlantic County; Franklin G. Rue, Monmouth County; Alfred Sloan, Salem County. Those of this group who attended the

Mr. William Schober, Monroeville, Salem County.

banquet, were presented with their wives, by G. W. Harris, New Jersey Editor of the *Pennsylvania Farmer*.

It may be trite to state that the future of our agriculture depends upon our young farmers, but such is the fact. In this connection, the guests at the banquet were much interested in the presentation of a number of young folks. First, H. O. Sampson, Supervisor of Agricultural Education in New Jersey, presented a group of vocational students in agriculture known as the Future Farmers of America. This is a nation wide institution of vocational students with a state degree to which especially worthy students are admitted and with a national degree which may be won by outstanding work.

Seven of the ten Future Farmers were at the banquet. They were: Ivan Neckle, Lambertville; Arthur Smith, Flemington; Alexander Hill, Salem; Richard McDaniel, Newton; Samuel Stelletta, New Brunswick; and Abe Berkowitz, Paterson. The three who were unable to be present were: Raymond Lloyd, Cape May; Tony Darmo, Morristown; Henry Walton, Morristown.

Mr. Sampson also introduced David Johnson, the boy who is now a freshman at Rutgers College and who was chosen at a recent meeting in Kansas City as the outstanding vocational agricultural student in the entire country.

Professor A. M. Hulbert, assistant director of extension, introduced two of

the four New Jersey 4-H Club delegates to the 1930 4-H Club Camp at Washington. The two boys, George Wheaton of Bridgeton, and Roger Merrick of Farmingdale, were present but the two girls were unable to attend. They are: Ida Hammell of Sparta, and Erma Biddle of Belvidere. It was an inspiring sight to see these two groups of young people stand on their feet and to realize the important part they will be taking in agriculture in a few years.

A few words about the men who were named would not be out of place.

John Weed of Vineland, New Jersey, has a poultry farm and the business has been gradually built up in size and efficiency. Just as an example of how things are done there, Mr. and Mrs. Weed sell a large number of eggs to a special market and stamp each egg with the trade name "Yesterlaid." The poultry farm is thoroughly equipped with up to date houses, running water, electric lights, and the soil around the house is worked each year with small tractors and sown to a cover crop in order to keep the place free from disease. The farm itself, would, of course, be of little use without high quality birds and Mr. Weed has these too.

Perhaps more important from the Master Farmer point of view is the fact that Mr. Weed has the reputation

Mr. John Weed, Vineland, Cumberland County.

for interest in everything which will benefit his own community, the poultry industry, and New Jersey agriculture in general. We cannot tell you the whole story but we can say that all Master Farmers are always at home to their friends and ready to show what they have on the farm. We would suggest, though that you should not all visit Mr. Weed on the same day.

It is impossible to talk with Mr. William Schober of Monroeville long before realizing that he loves his job. He came to his present farm in Salem County when he was a young man. He had come to this country from Germany a few years before and after he had been on the place a little while realized he had paid more than its true worth for it. However, he went ahead, setting out a few fruit trees each year. As his fine family of boys and girls grew up, he has taken the boys into partnership with him, paying them wages and a percentage of the profits. The entire Schober family are enthusiastic church workers and always ready to give their time to community work. One daughter has made an enviable reputation as a 4-H Club worker and leader.

George and Lawrence Smith, of South River, who are father and son, have been working together in partnership for a number of years and a Master Farmer medal is awarded to these two men as partners. Here again, we have a fruit farm located a few

(Continued on Page 9)

Mr. W. S. Hibler of Newton, Sussex County.

enjoyment and appreciation. First, we enjoyed an excellent dinner. The folks at the New Jersey State College for Women certainly know how to cook! Following the meal, there were a number of short talks which will be mentioned in more detail later, followed by the presentation of the medals—the real event which brought us all together. As the Governor presented each medal everyone was impressed not only with the worthiness of the men, but with the dignity and importance of agriculture as a whole.

Senator David H. Agans, Master of the New Jersey State Grange, acted as toastmaster. In introducing the Governor, Senator Agans recalled that he and Mr. Larson had entered the New Jersey State Senate at the same time and for many years have been fast friends. The Senator recalled too, that several years ago Mr. Larson had confided to him that some day he intended to be Governor of New Jersey and that when he did, he intended to appoint Senator Agans as a member of some commission. The Senator confided to us that at that time he thought the Governor was crazy.

In replying, the Governor told how he had kept his promise by appointing Senator Agans as a member of the Tax Commission and said:

"When I said that I meant to be Governor some day, Senator Agans thought I was crazy, and when I added that I intended to appoint him on some commission, he was sure that I was crazy."

Although the presentation of the medals was the chief event of the evening, every one of the several speakers on the program had something to say and said it well. In the past, not everyone has had the same conception of what makes a Master Farmer. A definition and explanation of the term

George Smith and his son, Lawrence, South River, Middlesex County

Stop, Look and List

What You Own and What You Owe

By K. A. HOWLETT

New York State College of Agriculture

NOWADAYS there are all kinds of railroad warnings from the simple stop, look and listen, to the complex systems of blinking lights and ringing gongs. All serve the same purpose to keep us from crossing over without making sure that the way is clear. At this time of the year the College of Agriculture, Farm Bureaus and the rural banks are taking the part of one of these warning signs and trying to get each farmer to look all ways before he crosses over and sets out in a new year.

Many times we may feel farming would be a much more pleasant job if we didn't have any accounts to worry about. Sometimes I think driving a car on a smooth straight road with not even a cat in the way is the greatest joy of all. After a few miles of such leisure I find myself yawning and about ready to fall asleep; not so great a pleasure after all. It would be easier to keep awake if I had something to keep awake for. Before long I come to a railroad crossing and a big freight train is there ahead of me. I stopped short and reflect, "If it hadn't been for this train, I might have gone to sleep." Farming is often similar to that—if we don't have a little check up now and then on our judgment and vision, we may fall asleep.

Danger Makes the Job Interesting

Not so long ago a friend told me he had to drive all evening in a pouring rain. At the end he was tired for while he was driving he had to be on the alert every minute for curves and approaching cars. After the successful completion he remarked, "Dangerous travelling but you know that gives to life its kick." It is the dangers that make the job interesting. Now is the time to stop and see if there is a freight train in the way. Now is the time to see how successful the 1930 journey has been.

The other day I heard of a farmer who was a little discouraged about the future. His wife felt that of all years this year was the worst. I fully believe that if it had not been for the assistance the bank gave this man at inventory time, this farmer would have lost interest in farming another year. This particular farmer was \$1500 better off at the end of the year, had paid off \$600 in debts, had increased machinery \$600, and had built a small building costing \$300. When he found that out, his joy was first expressed in "Tell it to my wife." It was just as necessary for this man to stop, look and list what he owned and what he owed in order to find out the way clear ahead as it may be for some to find the way not clear ahead. To this man, farming the next year was a much more exciting job and I think he expressed it well when he said, "At that rate, I can soon pay my debts." He now has a definite goal to work for and can check the progress made next year.

Finding What Went Wrong

The 1931 inventory for some may not be so encouraging. I don't think that any of the interest need go because last year we ran behind. I don't suppose there is a farmer who at one time or another has not lost a cow without knowing the cause. The first idea is have a post mortem and see what went wrong. I know a while ago a neighbor lost a cow on his farm and was not sure of the trouble but didn't do anything to determine the cause. He has never been satisfied because he didn't know what went wrong. Running behind last year is a similar situation. What went wrong? The first place to start is to take the 1931 inventory.

Not Expensive

When President Hoover wants to know what went wrong and is continuing to be wrong with law enforcement, he appointed a commission to work on the problem. Congress votes an appropriation to cover the costs and then

we wait for a report. Finding what went wrong on the farm last year ought not to be quite so long or as expensive a process. The farmer can act as his own commission and he can appropriate a few hours of his time and set to work. The best place to begin to take the 1931 inventory is to become curious with it. Compare it with that 1930 edition. Try to see how much it costs to have a tractor and milking machine on the farm. Probably the first thing that comes to your atten-

Where To Get Help

AFTER you have read this article and are convinced that you should take inventory, you may probably ask how to begin. We suggest that you either write to your State College of Agriculture for instructions or that you get in touch with your County Agent. Or, if you wish, we will be more than glad to get the information for you. Most of our state colleges have a simple book which not only has a place for listing all of the farm property, but also contains a lot of valuable information concerning the work of taking an inventory.

It has been frequently stated that no one item of farm records brings more for the time involved than the taking of an annual inventory.

tion will be, "I didn't suppose depreciation was so large an item." If you are primarily a dairyman, you may discover a good reason why Betsy didn't do as well last season. She is close to 12 years old. It only takes 10 dimes to make a dollar and it only takes a few leaks here and there to make the difference between a prosperous year and a poor year. Farmers do not always watch the efficient use of labor and equipment. In other cases, a farmer may be using store credit and consequently pay 10 to 25 per cent more for feed and fertilizer. Others may be getting low yields and that reduces the income. The farm inventory will not point out all these weaknesses, but you as a committee, will be able to report them after you get all of the facts. That is the test—can you get all of the facts? Farm inventory is one step and for more facts, the cash account is a good place to find them.

A Lifetime Proposition

When any of us start farming, we usually do it as a life time proposition. One year cannot determine what the

end result will be. Taking one inventory cannot predict what the old age reward will be. It takes one inventory after another to measure that. Successful inventories give a check upon the improvements. If the net worth increases at the same rate as a snail paces, then I believe there is yet plenty of room for bigger and better improvements. For any business to succeed, it seems to me that the owner needs all the facts it is possible to have. 1928 facts are not going to take the place of 1931 facts and when 1933 rolls around, these facts cannot be complete without this 1931 contribution.

Certainly many more farmers should be ready to join this year with the 15 or 20 thousand men who have previously taken a farm inventory and have made careful and definite plans for the New Year.

With the A.A.
**FRUIT
GROWER**

Red Mites a Serious Pest

Can red mites be controlled by the usual spray schedule or is it necessary to use an oil spray?

SOME report success with the usual spray schedule but there seems to be some trouble, particularly where the summer application of lime sulphur is omitted. Where there is trouble, two solutions are offered. One is to use a 4 per cent oil spray just before the buds show green which kills the eggs. The other is to use ¾ gallon of white oil and ½ pint nicotine sulphate in 100 gallons of water for a summer application.

Adding Copperas to Lime Sulphur

Does the addition of iron sulphate to lime sulphur help to prevent the russetting of fruit, especially Baldwins?

APPARENTLY where a heavy application of lime sulphur is made, the use of iron sulphate in the mixture tends to lessen russetting. We understand that with the ordinary applications there is not much benefit from it.

More Seedless Apples

NOTE in your issue of April 26, you speak of a seedless apple tree in Canada. In my work as AA salesman I have found two such trees on the Del-Mar-Va Peninsula, one owned by Carrie Rogers and another by Columbus Rogers, both of Georgetown, Delaware. The AA Service Bureau is posted on one and they are both readers of the A. A.—J.M.M.

Burpee's Seeds Grow

Burpee's Annual abounds in interesting planting information and offers valuable suggestions as to the best and most profitable varieties to grow. It is an interesting book of 144 pages, with many of the leading Vegetables and Flowers illustrated in color.

New Vegetables and Flowers

Read about Burpee's new "Tangerine" Tomato, Burpeeana Cauliflower, that won the National Cauliflower Contest, Sweet Peas, Dahlias, etc. Burpee's Annual will be mailed free.

W. Atlee Burpee Co., 1 Burpee Bldg., Philadelphia, Pa.

SASH

Size 3 ft. x 6 ft. \$1.55
Painted, two coats 1.85
With double thick glass 4.00

The quality product of America's largest hotbed sash mill. Genuine tidewater red cypress, select grade. Joints blind, well mortised, tight-fitting. No knots or checks. Smooth finish and sides absolutely parallel to prevent gaps that let cold in.

Pure white lead paint applied by a process that fills all corners, etc. Double thick glass bedded in special putty of our own grinding.

These sash are extra strong to stand any weather for years without rotting, weakening or paint and putty chipping. Easily the best you can buy. Satisfaction guaranteed.

Low price also on greenhouse construction material or complete erection, including heating and benches.

Little Recipes for Little Cooks

by *Betty*

Betty Wants to Tell You About Setting the Table Just Right

Lesson
Number
Twenty-Three

Dear Little Cooks:

Here it is, holiday time again, isn't it? Mothers have been pretty busy, I 'spose, cooking and baking for Christmas Day and maybe we little cooks can help. Setting the table when mother is in a hurry with the meal is one good way and if we learn to set it neatly and not forget to put everything on, she may even let us set the company table sometime.

You see, I am learning, but I'll have to practise a while longer before I can set a big company table. Mother is quite particular to have the silver and china just so and when there are extra spoons and forks I would probably get them mixed up. Do you always get the silver and everything just right?

I have learned to fix the salted nuts that we quite often have for special dinners and I am going to tell you how, because they are awfully good. It's hard not to eat a lot while you're fixing them. My mother says they seem to shrink more when I fix them.

Goodbye for this time, little cooks,

BETTY.

Salted Almonds

First I get the nuts and if they need to be shelled I do that. Now I want to get the brown coat off because that is a little bitter, so I put the almonds in a bowl and pour boiling water on till they are covered. I let them stand in the hot water till the skins slip off easily when I rub them with my fingers. The nuts look white and nicer after I have taken off all the brown skin. This is called "blanching" in the cookbooks.

Then I am ready to salt them and so I put them in a pie tin and add a little olive oil or butter. I stir them well and set the tin in the oven till they get a light brown. You must not put them in a very hot oven or they will brown too much and if you forget them a little too long that is bad, because they aren't very good if they get real brown.

When I take them out I sprinkle a little salt on them and let them cool. It is a good plan to stir them once in a while when they are browning.

One tablespoon of oil or butter is enough for a cup of nuts.

Bananas Baked in Cranberry Sauce

I usually make these when mother has cranberry sauce left that I can use. If there isn't any cranberry sauce ready, cook some clean cranberries till they are soft and press them through a strainer with a spoon. Sweeten the strained cranberries with almost as much sugar as you have cranberry sauce.

Take 1 banana and cut it in quarters, once

How to Place the Silverware and China

- | | |
|---|------------------|
| A. Plate. | E. Salad Fork. |
| B. Dinner Knife. | F. Dinner Fork. |
| C. Soup Spoon. | G. Napkin. |
| D. Teaspoon. | H. Water Goblet. |
| I. Bread and Butter Plate and Spreader. | |

When setting the table, little cooks can place the plates more evenly if they set them around so there is the same distance between each plate. The lower edge of the plates should come one inch from the edge of the table.

Now place the knives and forks. Put knives on the right side of the plate and the forks at the left side. The sharper edge of the knife should go next to the plate.

Soup spoons go next to the knife on the right side and teaspoons to the right of the soup spoons.

If there are no soup spoons, the teaspoons go next to the knife.

Salad forks go to the left of the dinner plate and to the right of the dinner fork.

Water glasses or goblets go at the tip of the knife.

Bread-and-butter plates, if used, go above the plate and a little to the left, almost at the top of the fork.

Napkins are placed at the left of the forks.

A vegetable dish (for corn or tomatoes, etc.) would be placed at the top of the plate between the water glass and the bread-and-butter plate.

If bread-and-butter plates are not used and the salad is served with the main course, place the salad plate where the bread-and-butter plate would be.

Coffee is placed at the right of the teaspoons.

the long way and once across. If it is a large banana, maybe half would be all you could eat.

Put the banana quarters in a small glass baking dish or an old saucer and pour about four tablespoons of the cranberry sauce over them. Bake slowly for about 20 minutes.

If the banana seems to get dry, pour on another spoonful or two of the cranberry sauce.

Date Cake

This is the time when dates are always seen in the stores and they do not cost much at this time either, so let's make a date cake. Your mother will like this recipe because it uses so little butter and only one egg.

Small Recipe

- 1/4 cup brown sugar.
- 1 tablespoon of beaten egg.
- 3/4 teaspoon butter.
- 1/4 cup boiling water.
- 1/4 teaspoon vanilla.
- 2 tablespoons dates.
- 1/4 cup plus 2 tablespoons flour.
- 1/4 teaspoon soda.
- Pinch salt.
- 2 tablespoons nuts, cut fine.

Large Recipe

- 1 cup brown sugar.
- 1 egg.
- 3 tablespoons butter.
- 1 cup boiling water.
- 1 teaspoon vanilla.
- 1/2 cup dates stoned and cut fine.
- 1 1/2 cups flour.
- 1 teaspoon soda.
- 1/2 teaspoon salt.
- 1/2 cup nuts cut fine.

First, I get the dates stoned and cut fine and then I pour the boiling water over the dates and let them stand in the water till it is cool. While this is cooling, I have time to cut up the nuts. Then I beat the egg and add the sugar, stirring well. Next I add the butter, melted, and stir again. Then I add vanilla and salt and then the dates and water when cooled.

I sift the soda and flour together and add them. I beat and stir well with my spoon, and last of all I add the nuts. I bake this in a medium oven, that is, not very hot or very cool, you know.

If you want to frost this cake, you could make a brown sugar frosting:

Brown Sugar Frosting

- | | |
|--------------------|---------------------|
| 1 cup brown sugar. | Pinch salt. |
| 1/2 cup cream. | 1 teaspoon vanilla. |

Cook the sugar and cream and salt till it is quite thick, then test it in cold water. If a drop forms a ball in cold water, it is done. It should make a soft ball, not a hard one.

Cool, and beat till it is almost stiff, add vanilla and spread it on the cake.

Mocha Frosting

I make this with powdered sugar and cold coffee and butter. Moisten the powdered sugar, just enough to spread, with the coffee. Melt and brown a tablespoon of butter in a small saucepan. Add the butter and spread the frosting on the cake.

Johnny Cake

One little cook wrote and asked me if I wasn't going to tell how to make Johnny Cake? I certainly am! Here it is:

- | | |
|-------------------------|-----------------------------|
| 1 cup yellow corn meal. | 3/4 cup sour milk. |
| 3/4 cup flour. | 1 egg. |
| 1 teaspoon soda. | 1 tablespoon melted butter. |
| 1 teaspoon salt. | |
| 1/4 cup molasses. | |

Beat egg. Add the molasses, milk and melted butter. Sift flour, soda and salt together. Add the corn meal and then the dry ingredients sifted. Beat well with your spoon. Pour into a greased cake pan. Bake in a hot oven 30 minutes. Eat this while warm.

Reviewing the Latest Eastern Markets

Milk Prices

Dairymen's League prices are based on milk testing 3.5%. Sheffield on the basis of 3%.

Class	Dairymen's League	Sheffield Producers
1 Fluid Milk	3.37	3.17
2 Fluid Cream		1.70
2A Fluid Cream	1.86	
2B Cond. Milk		
Soft Cheese	2.11	
3 Evap. Cond. Milk Powder		
Hard Cheese	1.90	1.60
4 Butter and American Cheese. Based on New York City Market quotations on butter and American Cheese.		

NOTE—The Class one price in the Metropolitan area was dropped 47 cents effective December 8. This makes the League class 1 price in New York, \$2.90 for 3.5% milk and Sheffield Producers, \$2.70 for 3% milk.

The Class 1 League price for December 1929 was \$3.42 for 3.5% milk and Sheffield's \$3.22 for 3%.

The above prices in each class are not the final prices the farmer receives. The final price received from the dealer is the result of weighted average.

Butter Regains After Further Losses

CREAMERY SALTED	Dec. 13, 1930	Dec. 13, 1929	Dec. 20, 1929
Higher than extra	30 1/2-31	33 -35 1/2	41 -
Extra (32 lb.)	30 -	32 1/2-	40 -
84-91 score	24 -28 1/2	26 1/2-32	30 -33 1/2
Lower Grades	23 -23 1/2	25 -26	26 -29

The third week in December saw the butter market hit another low spot, the likes of which we have not seen in twenty years. On Monday, December 15, prices slipped another 1 1/4c and the entire butter market was featured by a lack of confidence on the part of all concerned. The easy tone continued on Tuesday and prices fell off another fraction. Supplies were liberal and the demand was not sufficient to keep offerings clear, in spite of the fact that a good deal of stock was held off the market. Most of the large

buyers failed to take hold because the situation was so unsettled and values were expected to go lower. On Wednesday, the market suffered another sharp break and became utterly demoralized. Creamery extras went down to 29 3/4c.

On Thursday, there was a broader buying interest and the market developed a steadier tone with creamery extras established at 30c. It appeared that the market felt that it was time to buy and the whole situation seemed to be working into a better position. However, there was plenty of butter available and everyone was in the mood to move stock. This situation continued over into Friday with that market moving firmer. There was a little less stock available at 30c for creamery extras and Chicago reported a sharp advance above par with New York. This gave the New York trade considerable confidence in the situation, something the trade has lacked for several days. It gives the market a tone at the close that speaks well for next week's market. However, we look for no prolonged up-turn in prices because there is plenty of butter available and the consuming market is none too good. Production is reported to be on the increase, which further complicates the situation.

Cheese Loses Ground

STATE FLATS	Dec. 19, 1930	Dec. 13, 1930	Dec. 20, 1929
Fresh Fancy	19-20	20-21	22 -
Fresh Average			21 -
Held Fancy			26 -26 1/2
Held Average			23 1/2-24 1/2

The fresh cheese market lost a cent during the third week in December, the reduction coming on the 18th. Cured cheese has held rather firmly although outside prices are somewhat extreme. The cheese market has been a very slow, uninteresting tale to report for many weeks, and at the lower rates the situation has not improved. It is fortunate that very little fresh cheese is coming to New York City for the demand is very limited.

Eggs Slightly Improved

NEARBY WHITE	Dec. 19, 1930	Dec. 13, 1930	Dec. 20, 1929
Hennery			
Selected Extras	34-37 1/2	32-35 1/2	63-65
Average Extras	31-33	29-31	61-62
Extra Firsts	28-30	27-28	56-60
Firsts	26-27	26-27	52-55
Undergrades			
Pullets	20-21	20-21	-50
Pewees	17-19	17-19	47-49
NEARBY BROWNS			
Hennery	36-39	35-37	65-66
Gathered	26-35	25-34	50-63

The egg market closed on December 20 approximately 2c over the close of the week previous. Low retail prices have evidently stimulated a demand for and resulted in a larger use of fresh eggs. Receipts have also shown some shrinkage which has helped the situation. The improvement came during the latter half of the third week in December. For one thing, the supply of Pacific Coast whites is a little more limited while the offerings of nearby fresh whites are considerably lighter. If it were not for the supply of Pacific Coast whites the market on fancy nearbys would be something to crow about. As the market draws to a close on the 20th the trend is upward and it cannot go too far to suit eastern poultrymen. However, we do not look for any prolonged advance due to the plentiful supply available both of fresh and refrigerator stock. If the trend would just keep up and business continue to roll along it would be a great deal better than short jumps up and then stagnation.

Live Fowl Market About Same

FOWLS	Dec. 19, 1930	Dec. 13, 1930	Dec. 20, 1929
Colored	17-22	18-22	25-31
Leghorn	12-16	14-16	20-22
CHICKENS			
Colored	16-21	18-21	24-25
Leghorn	16-18	15-16	19-20
BROILERS			
Colored	33-40	30-40	29-36
Leghorn	28-33	25-30	27-30
OLD ROOSTERS	12-13	12-13	-14
CAPONS	30-35	-30	38-45
TURKEYS	32-40	20-30	32-35
DUCKS, Nearby	21-25	20-22	22-24
GESE	17-20	18-20	23-26

The live fowl market is substantially the same as it was at the close last week. Receipts have not been over-plentiful but poultry has been more or less draggy. Chickens in contrast to fowls have been showing up firmer and higher except in larger sizes which have been running very staggy. Rock broilers have not been selling any too well, Leghorns and Reds, on the other hand, trend upward, with Leghorns in some cases experiencing

some scarcity. The market has been looking for fancy capons. Turkeys are the one bright spot in the market. If the situation continues next week, everything is going to be all right. At this writing, on December 20, fancy turkeys are bringing 40c and we have heard of a few premiums. The market is closing entirely in the seller's favor. Some poor turkeys are with us and they are only bringing 32c.

Meats and Livestock

CATTLE—One load medium Ohio steers about steady at \$9.50. Cows and bulls steady. Common to medium cows \$4.00-5.50. Low cutters and cutters \$2.00-3.50. Cutter to medium bulls \$4.25-6.25.

VEALERS—Scarce, steady. Good to choice \$11.00-13.00; medium \$7.50-10.50; cull and common \$5.50-7.00.

HOGS—Irrregular; 220-300 lbs. \$8.00-8.25.

LAMBS AND SHEEP—Lambs slow, about steady. Small lot good lambs \$8.00; few mediums \$7.50. Ewes steady, \$4.00 down.

COUNTRY DRESSED CALVES—Receipts moderate to liberal all the week. Demand slow all through and carryovers daily. On Friday trading was very slow and prices were lowered. Market weak and not cleaned up. Fresh receipts per pound: Choice 12-13c; fair to good 11-12c; small to medium 8-10c.

HOTHOUSE LAMBS—Receipts too liberal for the demand and stocks being carried over daily. Small sales, good to fancy, each, \$7.00-9.00, imitations, each, \$3.30-5.00.

COUNTRY DRESSED PIGS—Receipts moderate all the week. Demand slow all through. Per pound: Roasting, 12-15 lbs. 20-22c; Pigs, 15-20 lbs. 16-18c; 22-23 lbs. 14-16c.

LIVE RABBITS—Fresh receipts moderate during the week but stock accumulated. Demand slow all through. Market weak. By the coop, 12-18c.

Fruits and Vegetables

The market on Maine potatoes has been barely steady, 150 pound sacks bringing \$2.75 to \$3, with bulk goods bringing 50c more per 180 pounds. Long Islands generally average 25c above Maine prices. Southern potatoes continue to drag heavily.

Business has not been any too good in the barrel and basket apple market. In some quarters the situation has been favoring the buyers. Basket goods range from 50c to \$1.50 per basket, with the exception of McIntosh which reach \$2.

Cabbage from New York State continues to drag heavily. Bulk goods bringing from \$17 to \$22 per ton.

State celery is steady to firm, bringing from \$1.50 to \$2.25 per crate. Hearts have been bringing \$1 to \$1.50 per dozen bunches.

White turnips from nearby have been bringing from 50c to 65c per bushel. Rhubarbs have been bringing from \$1.25 to \$1.50 per hundred.

Nearby Marrow squash closed at \$1 to \$1.50 per barrel, while nearby Hubbard brought \$1. to \$1.75. Hubbard squash from Missouri has been bringing from \$1.75 to \$2 per barrel, something for our nearby shippers to think about.

The fruit and produce market is reported daily by Radio. Tune in every noon at 12:30 to get the latest market news from WEAF.

Furs

MINK—Northern New York mink have brought anywhere from \$6 to \$12 for No. 1 skins depending on size. No. 2's bring from \$3 to \$8, poorer stuff sells as low as 25c. Other sections generally bring from \$3.50 to \$7.50 for No. 1 and \$3 to \$5 for No. 2. Lower grades as low as 25c.

RACCOON—No. 1's \$2.50 to \$6.50; No. 2 \$2 to \$4; poorer 25c to 50c.

RED FOX—From Northern New York. No. 1 \$5 to \$12 depending on size. No. 2 \$4 to \$8, No. 3 \$1, poorer down to 25c. Other sections No. 1 \$4 to \$8; No. 2 \$3 to \$6, poorer down to 25c.

SKUNK—Medium No. 1 \$1.50, No. 2 \$1.10, poorer down to 40c.

GREY FOX—Medium No. 1 \$3, No. 2 \$2.

MUSKRAT—Anywhere from 20c to 70c depending on condition.

Hay Closes Steady

The hay market closed fairly steady, on December 20, after a week of fair buying and moderate demand. Most of

the small bale supply was from Canada grading No. 3 which sold readily at \$23 per ton. There was good inquiry for hay of fancy quality. Timothy easily brought anything from \$23 to \$28, depending on grade. Sample sold from \$15 to \$20. Mixtures containing grass or clover brought \$26 for the best and ranged down to \$19 for the poorest. The demand for straw has been slow in the face of fairly liberal supplies. Wheat and rye straw have brought \$14 while oat straw is lower at \$12.

No Change in Beans

There has been no change in the bean market of late. Jumbo marrows still bring from \$6.50 to \$7.25, while average marrows bring \$5.50 to \$6.25. Pea beans are quoted at \$5 to \$5.50; Red Kidneys \$9 to \$9.50; White Kidneys \$7 to \$8; Round Cranberries \$5.75 to \$6.50.

All eastern markets are reporting reductions on fluid milk. At Philadelphia, the Interstate Milk Producers' Association announced that the basic milk price had been reduced 40c a hundred weight effective December 13.

The Connecticut Milk Producers' Association reduced the price of fluid milk from 9 1/2c to 8 1/2c a quart, delivered at the market center, beginning December 16.

The New England Milk Producers' Association, effective Monday, December 8, reduced the price of milk from 9c to 8c a quart, delivered at the market. The retail prices were also reduced. As was announced last week, the Dairymen's League and Sheffield Producers' Associations have made reductions in the class one price, approximating one cent a quart.

The New York cream market is reported as easy and unsettled with production maintained well and supplies in excess of demand. The same report comes from Boston with the addition that concessions were probably made to buyers in many cases. Philadelphia states that supplies of milk and cream continued considerably in excess of trade requirements.

CATTLE

HAY CROP SHORT?

Jerseys produce heavily on very little hay. Extra high grade Jersey cows and heifers, freshening fall, winter or spring, \$120 to \$150. P. O. B. or delivered by truck up to 100 miles. Accredited Herd No. 273387.

Farm News from New York

Milk Prices Down in All Eastern Markets

A LETTER from a subscriber mentions some resentment toward the Dairymen's League because of the recent drop in milk prices. In this connection, it may be of interest to note the situation in other Eastern markets.

The New England Milk Producers' Association reports that metropolitan Boston and many of the secondary markets in Massachusetts and Rhode Island made a reduction in the fluid milk price, effective December 8. The reduction was from 9c to 8c a quart, delivered at the market. This was followed by a reduction

a statement that the executive committee of the Association met on December 11, and reduced the price of fluid milk from 9½c to 8½c per quart delivered at the market centers, beginning December 16. The bulletin says:

"The action of your executive committee in making this change is the result of long and careful study of the markets which we serve and of the general situation throughout the country. The factors which have made this reduction not only advisable but absolutely necessary are: competition from independent, cut-price dealers; the constantly decreasing consumption due to general business depression, unemployment and lack of buying power; competition of condensed and evaporated milk; competition of other foods and decrease in most of the factors which enter into the cost of producing milk."

It is the belief of the A.A. staff that every one of these associations is vitally interested in maintaining milk prices at the highest possible level and that, without these producers' associations, the drop in prices would have come sooner than it did.

Appropriation Bill for U.S.D.A.

AN appropriation bill carrying \$213,043,000 for the maintenance of the U. S. Department of Agriculture was reported to the House December 16, by the Appropriations Committee. This sum is \$51,516,000 greater than for the current year. The increase is due primarily to an increase from \$75,000,000 to \$125,000,000 in authorized annual outlet for Federal Highway Aid.

A sidelight on this appropriation bill was revealed when Dr. Duvell, chief of the Grain Futures Administration, advocated authority for the Secretary of Agriculture to control short selling in grain by the Federal Government.

It is generally believed that this comes as a consequence of the recently disclosed Russian transactions on the Chicago pit. It seems that the Department of Agriculture wants a larger group of confidential inquirers to secure information

and prosecute those responsible for irregular transactions on the country's grain markets.

Governor's Agricultural Advisory Commission Meets

GOVERNOR ROOSEVELT has asked the members of his Agricultural Advisory Commission to serve in a similar capacity for the coming year. Henry Morgenthau, Jr., publisher of American Agriculturist, will again act as chairman of the Commission. The first meeting of the Commission this winter was held Friday evening, December 19, at the Executive Chambers.

Other states are coming to regard New York State as the leader in legislation helpful to agriculture. Much has been done, but the Advisory Commission and the Governor are not resting on their laurels, but are looking ahead to see what still remains to be done.

Holstein Men to Meet

THE New York Holstein-Friesian Association will have its annual meeting at Utica, 10 a. m., January 7. One item of business to be transacted at the meeting will be a proposed amendment having to do with choosing the board of di-

rectors. Anyone wishing additional information about the meeting should get in touch with W. D. Robens, New York State Master Farmer, and secretary of the New York State Holstein-Friesian Association. Mr. Robens' address is Poland, New York.

Good Holsteins Still Sell

THE recent Holstein sale at Earlville went off in a manner very satisfactory to all concerned. The average for the sale of \$304. is especially interesting to Holstein breeders at this time because it indicates that in spite of the business situation it is still possible to sell good cows for good money.

Mr. R. Austin Backus, who had charge of the sale, said that the crowd was the largest ever present at an Earlville sale. One animal, Ormsby Sensation 45th, was sold for \$2125.

News Writing Contest

A FEW issues ago we mentioned a news writing contest for high school students in vocational agriculture. There are few rules. American Agriculturist is offering a monthly prize for the best local news article sent to us by a student in vocational agriculture and in addition to that will pay space rates for all items published.

New Jersey Master Farmers Honored

(Continued from Page 5)

miles from New Brunswick. It has been built up over a period of years and to a state of productivity which has created a name for itself in that section. The elder Mr. Smith is still very active in the conduct of the farm at a time when he might well be pardoned for taking things pretty easy. Those who have known Mr. Smith for years are well aware of his interest in all activities pertaining to the benefit of agriculture. It is by no means necessary that a man take his son into partnership in order to achieve the distinction of Master Farmer but we cannot help but feel that it is particularly fitting when this is done and the family name is carried on a farm from one generation to another.

* * *

Mr. W. S. Hibler's farm in Newton, has been in the Hibler family for five generations. It is a hilly farm and for that reason not especially adapted to modern production methods where machinery plays such a big part, yet Mr. Hibler, by careful planning, has been able to adapt modern methods to the farm in a very successful way.

New Jersey has many types of farming and Mr. Hibler has made his mark as a dairyman. As everyone knows, it requires endless patience and work to breed a herd which will produce on an average of around 9,000 pounds. This accomplishment alone would not have won a Master Farmer medal for Mr. Hibler. As he himself says, "I could have made more money if I had made that my sole aim but along with making money, we have wanted to live." As an example of this point, Mr. Hibler has supplied a considerable number of calves to youngsters who have become interested in 4-H Dairy Clubs.

It is certainly surprising to find how much time a busy man finds to give to community work. Mr. Hibler has been for years Director in the Farm Bureau and is a member of the Board of Managers of the New Jersey Experiment Station. Both Mr. and Mrs. Hibler are active in church and community work.

Augusta Hibler, daughter of Mr. and Mrs. Hibler is a graduate of Russel Sage College and has been taking work in child study at Cornell for a Master's Degree.

The Master Farmer viewpoint is frequently illustrated by the balance between farm and home so far as labor saving devices are concerned. Mr. Hib-

ler's farm is well supplied with trucks, tractors, and all the labor saving devices that go with them. The home, however, has not been neglected. Here we find a furnace, an electric refrigerator, a bathroom, a radio and electric lights and appliances.

This is the Master Farmer combination, a productive farm, a comfortable up-to-date home, a contented family and a real interest in helping the community.

After the program, the group broke up reluctantly. A number remained to shake hands with the visitors, to congratulate the new Master Farmers and their wives, and to tell how much they had enjoyed the entire program. Not one, we are sure, left the meeting without a feeling of inspiration and a firmer conviction that agriculture is the noblest occupation of all.

New York County Notes

COLUMBIA COUNTY—This has been a week without snow or ice. The 4-H Girls Club of Stuyvesant held an Achievement Day and gave a fine demonstration of their skill in sewing and cooking. At the Hebrew Community Center, Troop 3, was given a demonstration of first aid methods by Deputy Scout Commissioner A. W. Coons. The Campfire Girls of Germantown gave a two-act comedy in Grange Hall which was excellent. Dr. Parker, county veterinarian, gave a summary of the county bovine tuberculosis eradication work at the annual Farm Bureau meeting. R. A. Dyer, 4-H Club agent gave his report. Mr. Buchholz, Farm Bureau County Agent, gave a summary of the year's work. George Hieber of Chatham was a new director, elected at the meeting. Eggs bring from 30c to 40c a dozen, butter 39c a pound in trade at country store.—Mrs. C.V.H.

CATTARAUGUS COUNTY—Light showers and melting snows of December brought relief from the dry weather of the late fall. Up to then, nearly all the streams flowing through the valleys as well as springs and wells in the greater part of the county were dry. Although the farm people are not jobless and are not seeking employment in vain, nevertheless the pinch of the depression is felt in the lower returns for milk and eggs, with only slight reductions in feed prices. Corn silage is poor in quality and hay prices higher than in former years.

There is an abundance of good cheer and the farm folks are to enjoy a good Christmas dinner and young and old a visit from good old St. Nick with a spirit of optimism in looking forward to good crops, between rain and sunshine the coming season.—M.M.S.

TIOGA COUNTY—It was decidedly cold the 15th and 16th with a slight sprinkle of snow. Condemnation actions are being instituted to acquire the rights of land for highway purposes, near the end of

the Owego-Endicott new strip, which is being made to avoid so many curves and turns and thus avert danger to life.

There are many fires. Not enough care is taken in many instances and incendiaryism is suspected in some cases. There is some chicken thieving, as the holidays approach. Eggs have not been as low in many years, as at the present time. Shippers are paying 24c a dozen for the large white eggs and only 18c for pullet eggs.

The housewives who had depended on the sale of the eggs in the fall and early winter do not realize enough from their sales to feed other fowls and are killing the flocks off in quantities. Meats keep high in price. Potatoes are retailing around \$1.00 to \$1.25 per bushel and were carrying for 70c to 75c. Onions keep low; fine, sweet, mild ones can be purchased 10 lbs. for 25c and less by the quantity.—C.A.A.B.

ERIE COUNTY—The December Erie County Pomona Grange was held at Lawtons. State delegates were chosen, four candidates obligated and Pomona officers elected. At the open meeting in the evening a fine program was given.

A movement is on foot to hold two big apple celebrations in Niagara County in 1931, a mammoth apple blossom festival in the spring and an annual national observance in the fall to boost western New York apples. A committee of nine men has been appointed to work out details.

Thawing of the heavy snowfall of the last week in November, with subsequent rains, has filled wells and streams so there is no longer a water scarcity.

December, to date (December 15) has been mild and considerable plowing has been done, which is unusual. Coon hunters seem to be having little success but a few muskrats are being trapped. On account of the low price of milk some farmers are drying off a part of their dairies. Potatoes are low in price and moving slowly. Eggs ditto.

The New Teacher in the Rural School

Encouragement and Cooperation Bring Far Better Results than Destructive Criticism

IN visiting the rural school fairs, one learns that a large number of our rural schools are in charge of new teachers this year. "Is the new teacher going to be a success or not?" This is a very important question to the many parents who are anxious that their children make great progress. Are the majority of parents endeavoring to assist the teacher in reaching that goal? Do we for a moment realize the all-important part we play in making the teacher either a wonderful asset to the community or what might be termed a failure? As one listens to the average conversation concerning the new teach-

What do you think of the fair? It certainly takes an awful lot of time and then it isn't fair the way they help the children that they want to win, and I don't think the judging is fair either. I don't believe they have done a thing the last week but get ready for this fair and I'll tell you that won't put them through their examinations. Why they were actually outside the school the other day in the middle of the afternoon parading around. Old Jim Case that lives over there said he saw them and he wasn't going to pay taxes to keep a teacher to amuse the children."

Mrs. Green—"John heard that, too and Betty said her father and mother told her just to tell the teacher she wasn't going in the parade for her father and mother wouldn't let her. She had to stay in and study. Yes, and Betty said a lot of the children said their parents were going to see the trustees about it and the inspector too for they weren't sending the children to school for such nonsense."

4. Mrs. Crab—"Well, what do you think of our teacher not having a parade this year and our school taking the prize every other year. Isn't that some idea? I just think she was too lazy to bother herself. Why Miss Simpson wouldn't think of such a thing as not having one. She thought it was good training for them."

Mrs. Bright—"Yes, but, of course, Miss Simpson was here a long time and this girl has had a very short time to get ready and I don't suppose she would know all their names yet, forty pupils, and then she wouldn't have time to discover which were capable of taking different parts. I know what it is to train children for concerts in the church."

Mrs. Crab—"Oh yes, but she could have made an attempt at it anyway."

5. Miss Prim—"I am so glad to see you people. Isn't that a terrible crank we have in the school? Why my

nephew is just terrified to go to school. The other morning he was up in the class and just happened to say something to one of the boys and because he did not know the lesson she kept him in after four. Now Willie never deserved such treatment, and he can't stand staying in after four for he needs the fresh air, and he is tired by four o'clock. You know Willie isn't a stupid boy at all. Then some of the boys trailed lime in on the floor and she strapped them because she said the floor was freshly varnished. Now they couldn't help that and oh, Robert Stephenson was wild because she whipped Art. He is going down to the school to-morrow and last night I was at Mrs. Snobbs for tea and the girls were telling us that she whips the children for no reason at all and Mrs. Snobbs said for them to just come home and not take the whipping and their father would see about it."

In this particular school was a new teacher who was compelled to restore order as the parents had interfered so much with the previous teacher that she had let the pupils become so unruly that she lost entire control of the school and was disheartened. Next appeared on the scene Mr. Munroe, an interfering character in all community affairs.

"Well, ladies I hear you have a pretty strict teacher in your school this year. Just wish we had one like her. Our teacher hasn't order at all. I said to Joe tonight. Well what pranks did you play on the teacher to-day and he told me the wild time they are having. They will soon have her out."

Now in the majority of these schools were young women who were making every effort to conduct the school in a creditable manner and who were trying to do the very best for the various types of children in their charge. Naturally when a strange teacher arrives children are curious but if parents are in sympathy with her in her work the boys and girls will try to conduct them-

selves in a proper manner and assist the teacher by carrying on as best they can. The most of the trouble begins at home when parents begin questioning children and criticizing the teacher in their presence. If we do not approve of some of the teachers' methods, wouldn't it be better to wait and see the outcome and impress upon our boys and girls the fact that if they do what is right they will get along and instill in them a respect for law and order and for those in authority over them. If we would ponder this matter and show the teachers in our rural schools that we are their friends, sympathetic and anxious to help them in their efforts to mould noble characters from these boys and girls so that in the future years we will have

Smart Sophistication

2881

Dress pattern No. 2881 is just the thing for the young girls and is delightful when made up in patterned wool crepe, covert cloth or wool jersey. It has real style and is just as practical as it is stylish. The pattern cuts in sizes 8, 10, 12 and 14 years. Size 8 requires $1\frac{1}{2}$ yards of 39-inch material with $\frac{1}{2}$ yard of 35-inch contrasting. Price 15c.

er one's sympathy extends to the young lady who has selected this noble profession as hers.

Following are a few conversations overheard at county school fairs:

1. Mrs. Jones—"Well, what do you think of the new teacher?"

Mrs. Smith—"If she would give them more to do in school and less homework it would be better. I don't know what she is doing all day. They don't seem to be learning anything."

Mrs. Jones—"That is just what my husband said. I think she spends the time singing and playing with them."

2. Mrs. Brown—"Why how are you, Mrs. Jay? I just wanted to see you. Say, what do you think of that bird we have in the school now? Why Mary doesn't seem to have a thing to do at night and before she always had her lessons and took such an interest in them. Now she never brings home a book and she has nothing to do."

Mrs. Jay—"Just what we were saying. That will never do, for I want Jim to pass this year. We cannot afford to send him to school for nothing, and I think I'll send her a note and tell her if she doesn't do better I'll see the trustees."

3. Mrs. Watson—"Hello Mrs. Green.

Shadow Applique

THE new shadow applique is simple to do and practical to launder. It gives to sheer glass curtains the most colorful transparency that one can possibly imagine. Between two thicknesses of marquisette, voile or organdy, the designs of flowers, leaves, and urn are placed, basted, then sewed with even running stitches in two strands of floss, either in black or in the colors of the materials. No edges are turned on these, which of course simplifies the work and gives a like finished appearance from both sides. Design spots must be of a firm weave.

The design itself is worked in four colors, rose-pink, blue, yellow, and green, suitable for almost any bedroom or living room. A pleasing variety of hue, with perhaps a dominant one, around which the harmony is planned, is more favored

today than the extreme oneness of color once stressed in a room's furnishings.

Placed in a vertical panel, as shown, the posies solve the problem of French doors or a single door panel. It may be centered on a sheer bedspread over some plain tint undercovering. Horizontally placed for glass curtains, the same units are in a hem which graduates from about 4 to 9 inches at the center as shown in the sketch. In either placing, the veiled color, with light shining through, assures curtains that will prove a constant joy.

M227—Pattern for shadow Applique curtains 20 cents

M228—Material for applique, at 35c.

M229—4 8-inch marquisette, per yard 45c.

Order from Embroidery Dept., American Agriculturist, 10 N. Cherry St., Poughkeepsie, N. Y.

Embroidery picture No. B3762 is a little Japanese boat scene to be worked in colored floss on the hand tinted canvas. The package includes the canvas, floss, picture-frame, glass and mat. Price, \$1.00. Order from Embroidery Department, American Agriculturist, 10 North Cherry Street, Poughkeepsie, N. Y.

men and women in our country who respect law and order and who will stand by right and justice at all times.

Our boys and girls are losers when we take the critical, fault-finding attitude. The loss is greater than we can ever estimate for if we help our teachers to do their best and trust them they will take fresh heart and in the majority of cases return to the district services of inestimable value.

Under present conditions in many districts these young women are heartbroken and wasting their very energy in worrying and are unable to carry on their duties to the best advantage. Not only do they find all these difficulties but in many a community the parents treat this valuable instructor as an outsider, never entertaining her in their home or showing her a glad hand in any way.

As a result many a one feels that she is ostracized and in a short time secures a position in the town or city where the boards of education are ever on the lookout for the most efficient teachers and the country loses what might have proved a great blessing to the whole community.

Let us start this year by taking a new friendly interest in the school and the teacher and instead of begrudging her the salary she is receiving for her work, make her realize that we are her friends, anxious to see her happy in her work and let us look for something to eulogize. If we wish to have a talk concerning any of our children, have it privately, and not air our troubles all around the section.

Don't let us spend our evenings discussing how much the teacher is receiving unless we think she should receive more for we have not the slightest conception of the many waking hours she spends out of school planning how best to develop the powers of our little ones and help them to make progress in this old world. The extent of her work cannot be measured in dollars and cents, and it is certainly unpleasant for her to hear the amount of her remuneration discussed as if she were some one dealing with a piece of machinery instead of a human soul. Is it not true that many of the most eminent statesmen, clergymen, and other professional and business men have traced the foundation of their success to the efforts of some rural teacher who devoted her life to the upbuilding of character?

—M. V. WYE

Notes for Home Milliners

The Matron Trims Her Hat with the Cloth of Her Coat

IT is very new and very smart this year to match one's hat with the rest of the costume not only in color, but in material as well. There are hats of broadcloth, tweed, velvet, fur-cloth, and even fur, in the shops and on up-to-date heads now that winter is here, all matching as nearly as possible the material and color of one's coat or suit.

With this in mind, our hat for the matron will be trimmed with the material of her winter coat, or of a cloth as nearly approaching it as possible. First, get out the old felt hat that

each side so that the ends of the strip extend below the crown line at a point in back of the ears. Then, tack the strip to the hat about three inches from the knot on each side, and your hat is finished.

Note: Descriptions of novel ways of trimming hats according to latest imports from Paris seen on Fifth Avenue will be given in an early issue.—C.V.S.

Black Leads Parade

BLACK is leading the parade of fashionable colors for both day-time and evening wear this winter, Miss Hazel Hill, extension clothing specialist, University of New Hampshire, pointed out recently in an interview on the trend of women's fashions for the next few months. No radical departures from last year's styles will be noticeable, she said.

Length of skirts remains about the same—three or four inches below the knee for daytime wear, with the length increasing as the day progresses, she said. The even hem-line is a new feature. Skirts continue to have their fullness below the hip-line and the high or normal waist line is very much in evidence, but should be adjusted, to the individual.

Coats are as long as the daytime dresses. Many are fitted, although the clothing specialist sees some straight ones. Materials will include both smooth and crepe broadcloth, tweeds, camel's hair, and novelty weaves.

Suits in broadcloth, tweeds and knitted goods are very popular, Miss Hill explained.

Among dress materials, satin and velvet seem to hold the front rank for dress occasions, while travel and

canton crepes seem to be favored for daytime wear. Many woollens are being shown, such as wool crepe, wool lace, georgette, silk and wool printed crepes and tweeds of all kinds.

Brown shades, wines, lighter-than-

New Year Lullaby

L. M. THORNTON

Merrily the bells are ringing,
Sleep, my baby, sweetly sleep;
Glad the message they are bringing,
While my vigil here I keep.
Low and sweet the song I'm singing,
In the flickering candle light;
While the New Year bells are ringing,
Sleep, my baby, sleep tonight.

Cheerily the bells are ringing,
Sleep, my baby, smiling sleep;
Joyous bells, their notes are flinging
Over plain and woodland deep.
Prayers and praise are upward winging,
Stars are shining clear and bright,
While the New Year bells are ringing,
Sleep, my baby, sleep tonight.

navy blue, and greens follow black as the leading colors for fall and winter wear, Miss Hill states. Black and white and brown and white combinations are especially good.

Tested Recipes

French Pork Loaf

Season two pounds of ground pork with summer savory, salt and pepper. Combine with one-half cupful of milk, two beaten eggs, one teaspoonful chop-

ped onion, one teaspoonful chopped parsley, and two cupfuls fine bread crumbs. Form in loaf shape and bake in roasting pan in slow oven for two hours. The last hour put quartered, tart apples about the pork loaf, and fifteen minutes before taking from oven dust apples with brown sugar. Remove to hot platter, put one-half cupful small mushrooms, salted in butter over top of loaf, garnish with bits of parsley and serve.—L. M. T.

Slimming Silhouette

Dress pattern No. 2858 is especially adapted to figures above normal because of its softly rippling rever that cuts the breadth, the snug hip and circular skirt. Patterned wool crepe or canton crepe with the turquoise blue vest would be stunning. The pattern cuts in sizes 38, 40, 42, 44, 46 and 48 inches bust measure. Size 38 requires 4 1/8 yards of 39-inch material with 1/4 yard of 27-inch contrasting. Price 15c.

TO ORDER: Write name, address, pattern sizes and numbers clearly and correctly and inclose with correct remittance in stamps (do not send coins). Add 12c in stamps for one of the Winter Catalogs and address to Pattern Department, American Agriculturist, 10 North Cherry St., Poughkeepsie, N. Y.

QUICK RELIEF

Rub antiseptic Japanese Oil on aching spot. It generates a pleasant soothing heat that drives out pain QUICK. Won't blister like old type liniments. 46 Yrs. Success. At druggists

JAPANESE OIL

Cuticura

Shaving Cream

Refreshing and non-irritating even when used twice daily.

At dealer's or sent on receipt of 85c. Address: "Cuticura," Dept. 222, Malden, Mass.

Two-Faced Pillows

Nos. C3369-C3372 and C3602 are silhouette cut-out designs stamped on all-wool black felt, size 18 x 18. These do not require stitching. Cut the marked portions of felt and use some silk you may have for backing up the cut out parts and for the back of pillow. Nos. C451-C453 and C461 are of rayon taffeta in colors of gold, blue, green, tangerine, orchid, coral or black. These designs you can make with the simple quilting stitch. The price of 50c includes stamped rayon taffeta for front, same material for back and wadding lining. For two-faced pillows use any one of Nos. C3369-C3372 or C3602 then for backing up the cut out and for back of pillow use any one of Nos. C451-C453 or C461. If one of each group is used one side of pillow will show silhouette cut out and the other will show quilted design. Price for any one number is 50c, postpaid. Lustrous rayon taffeta not stamped can also be had for completing cut outs in tangerine for No. C3369; green for No. C3372 and rose for No. C3602 at 50c extra. When ordering two-faced pillows send \$1.00 and state the two numbers, one number of cut-out and one number with quilting stitch design, and the color of silk wanted. Order from Embroidery Dept., American Agriculturist, 10 N. Cherry St., Poughkeepsie, N. Y.

matches this year's coat. If you feel that you can wear the extreme new style, most of the forehead exposed, cut the brim of your hat according to the directions given in our notes on a hat for the miss, in the November 29th issue. However, a small brim is always more becoming to older women.

Spotted or soiled felts can be cleaned by rubbing them well with sandpaper or a stiff brush. If the outside is very soiled, turn the hat inside out and you will have a brand new one.

Cut two strips, fifteen inches long by five inches wide, of the material you have chosen. Sew the lengthwise edges together on the wrong side. Then pull this tube-like length inside out. Turn in the edges at each end and stitch together. You have a long strip of material, doubled, that resembles a sash.

Next, tie a loose knot in the middle of the strip. Put your hat on. Measure on your hat in the middle of the front where approximately an inch above the hairline of your forehead would be and place a pin to mark it. At that place, tack the knot of the strip to the hat from the inside.

With your hat on, draw each end of the strip down to the crown line at

mean?" An' she said she "most particularly wanted an edition of Shakespeare complete in one book." Well, I was going to get that an' I just happened to think it wouldn't be much of a surprise after her telling me that very one. So I got "Treasure Island" for her, instead. She says the bookcase in the living-room is a bit crowded anyway an' I can keep that book with my other ones, in my room. An' boy, it's a darn good book too!

Well, I got Jean a tractor, one of the new kind just like Dad's big one. It'll pull the heaviest things! An' believe it or not, she doesn't appreciate it one bit! Never played with it at all. It just set on the floor in the corner till I thought it'd be wore out for lack of use, so this afternoon I used it with the rest of our farm an' barn outfit. An' it works great.

I got the swellest punching bag for Jack. Lucky I did, too, 'cause Dad got us some boxin' gloves for this Christmas and we can both use the punching bag.

I didn't know what to get for Peg but I finally found a peach of a printing set. It's a daisy! Peg has used it a lot already. I wanted to trade something for it but she won't trade, so far. I've offered her my best marbles, an' a pretty good Jack-knife, an' my sling-shot, an' a bean-shooter. But she won't trade for any of 'em. Funny, too.

But Peg thinks she's smart anyway, 'cause she's in third grade an' can spell most as good as I can. I think I did some swell choosing of the family's presents, but I got discouraged when I came to get for Aunt Mary an' Uncle Henry—the only things left that I wanted myself was a bike an' some new skates built right on shoes, like the champions have but my money wasn't holding like I expected so I gave each of 'em a couple of bran' new handkerchiefs and called it square.

Take it all together it's been a pretty good Christmas. But I think I'll try to save still more money next year an' maybe next Christmas will be a still better one.

Bill's Christmas Gifts for the Family

By Bill Himself, on the Night After Christmas

I SAVED up money most all year for buying things for all my folks this Christmas an' I had quite a lot—for me. I figured on getting everyone of 'em something pretty nice. Then I begun to wonder how I'd know what to get so's they'd all be pleased. I asked mother and she said to try to get each one something he or she wanted—I asked her if that was what she was going to do 'cause if it was I wanted to help her along by telling her some of my biggest wants, but she smiled and said to "never mind."

Then I asked Dad, he said better get folks some things they needed an' if I wanted to do that I could start in by getting him a new suit an' a couple tires for the "ark." That was all off, in his case anyway, 'cause my dough wouldn't have held out.

So I asked Aunt Mary an' she told me a good plan would be to get something I'd like myself. That sounded best yet, so I started in on the list. There was Dad an' mother and Jean (she's twelve) and Jack (he's eight) an' Peg (she's six) and Aunt Mary an' Uncle Henry that I wanted to buy presents for. I bought a swell present for each one of 'em an' this is what I picked out:

First, a dandy air-rifle for Dad—it was something I'd have liked myself, all right. But mother had been making me wait 'cause she said I was too young. But I knew she wouldn't mind if Dad had one. You ought to have seen Dad's face when he saw the card and knew the air-rifle was his. After he looked it over, I told him that in case he didn't have time to use up all the shot there was with it, I'd help him out any time he needed me to. An' he said, "Sure, son, I imagine you'll have to see that it's exercised some every day so it won't get stiff and rusty."

I hadn't been able to decide what to get for mother. Her present seemed to be 'specially important too, so I'd finally asked her, "Say, mother, if you was going to buy a new book what would you choose, for yourself, I

Just David--By Eleanor Porter

THE STORY THUS FAR

Because of failing health David's father, a violinist, decides to leave the mountain home where they had lived alone for six years. They start down the mountain on foot, but strength fails the man before they go far. A farmer gives them a lift for a way and they decide to spend the night in a nearby barn where Simeon Holly and his wife find them. David's father is dead.

David is considered a real problem by Mr. Holly. The boy hears him say that no one wants him and goes to the barn loft where he can feel that his father is near him. He is missed by Mrs. Holly who cannot resist telling him that she does want him. David is happy again, but Mr. Holly feels that it is just another mouth to feed with the mortgage coming due at the bank soon.

David's latest escapade is the release of a crow that Perry Larson had captured by endless patience and staked out in the cornfield to keep other crows away.

* * *

Silently the Lady in Black knelt, listening, looking after him. When she rose some time later and left the cemetery, the light on her face was still there, deeper, more glorified.

Toward boys and girls—especially boys—of his own age, David frequently turned wistful eyes. David wanted a friend, a friend who would know and understand; a friend who would see things as he saw them, who would understand what he was saying when he played. It seemed to David that in some boy of his own age he ought to find such a friend. He had seen many boys—but he had not yet found the friend. David had begun to think, indeed, that of all these strange beings in this new life of his, boys were the strangest.

They stared and nudged each other unpleasantly when they came upon him playing. They jeered when he tried to tell them what he had been playing. They had never heard of the great Orchestra of Life, and they fell into most disconcerting fits of laughter, or else backed away as if afraid, when he told them that they themselves were instruments in it, and that if they did not keep themselves in tune, there was sure to be a discord somewhere.

Then there were their games and frolics. Such as were played with balls, bats, and bags of beans, David thought he would like very much. But the boys only scoffed when he asked them to teach him how to play. They laughed when a dog chased a cat, and they thought it very, very funny when Tony, the old black man, tripped on the string they drew across his path. They liked to throw stones and shoot guns, and the more creeping, crawling, of flying creatures that they could send to the far country, the happier they were, apparently. Nor did they like it at all when he asked them if they were sure all these creeping, crawling, flying creatures wanted to leave this beautiful world and to be made dead. They sneered and called him a sissy. David did not know what a sissy was; but from the way they said it, he judged it must be even worse to be a sissy than to be a thief.

And then he discovered Joe.

David had found himself in a very strange, very unlovely neighborhood that afternoon. The street was full of papers and tin cans, the houses were unspeakably forlorn with sagging blinds and lack of paint. Untidy women and bleary-eyed men leaned over the dilapidated fences, or lolled on mud-tracked doorsteps. David, his shrinking eyes turning from one side to the other, passed slowly through the street, his violin under his arm. Nowhere could David find here the tiniest spot of beauty to "play." He had reached quite the most forlorn little shanty on the street when the promise in his father's letter occurred to him. With a suddenly illumined face, he

raised his violin to position and plunged into a veritable whirl of trills and runs and tripping melodies.

"If I didn't just entirely forget that I didn't need to see anything beautiful to play," laughed David softly to himself. "Why, it's already right here in my violin!"

David had passed the tumble-down shanty, and was hesitating where two streets crossed, when he felt a light touch on his arm. He turned to confront a small girl in a patched and faded calico dress, obviously outgrown. Her eyes were wide and frightened. In the middle of her outstretched dirty little palm was a copper cent.

"If you please, Joe sent this—to you," she faltered.

"To me? What for?" David stopped playing and lowered his violin.

The little girl backed away perceptibly, though she still held out the coin.

"He wanted you to stay and play some more. He said to tell you he'd 'a' sent more money if he could. But he didn't have it. He just had this cent."

David's eyes flew wide open.

"You mean he wants me to play? He likes it?" he asked joyfully.

"Yes. He said he knew 't wa'n't much—the cent. But he thought maybe you'd play a little for it."

"Play? Of course I'll play," cried David. "Oh, no, I don't want the money," he added, waving the again-proffered coin aside. "I don't need money where I'm living now. Where is he—the one that wanted me to play?" he finished eagerly.

"In there by the window. It's Joe. He's my brother." The little girl, in spite of her evident satisfaction at the accomplishment of her purpose, yet kept quite aloof from the boy. Nor did the fact that he refused the money appear to bring her anything but uneasy surprise.

In the window David saw a boy apparently about his own age, a boy with sandy hair, pale cheeks, and wide-open, curiously intent blue eyes.

"Is he coming? Did you get him? Will he play?" called the boy at the window eagerly.

"Yes, I'm right here. I'm the one. Can't you see the violin? Shall I play here or come in?" answered David, not one whit less eagerly.

The small girl opened her lips as if to explain something; but the boy in the window did not wait.

"Oh, come in. Will you come in?" he cried unbelievably. "And will you just let me touch it—the fiddle? Come! You will come? See, there isn't anybody home, only Betty and me."

"Of course I will!" David fairly stumbled up the broken steps in his impatience to reach the wide-open door. "Did you like it—what I played? And did you know what I was playing? Did you understand? Could you see the cloud-boats up in the sky, and my Silver Lake down in the valley? And could you hear the birds, and the winds in the trees, and the little brooks? Could you? Oh, did you understand? I've so wanted to find some one that could! But I wouldn't think that you—here—" With a gesture, and an expression on his face that were unmistakable, David came to a helpless pause.

"There, Joe, what'd I tell you," cried the little girl, in a husky whisper, darting to her brother's side. "Oh, why did you make me get him here? Everybody says he's crazy as a loon, and—"

But the boy reached out a quickly silencing hand. His face was curiously alight, as if from an inward glow. His eyes, still widely intent, were staring straight ahead.

"Stop, Betty, wait," he hushed her. "Maybe—I think I do understand. Boy, you mean—inside of you, you see those things, and then you try to make your

fiddle tell what you are seeing. Is that it?"

"Yes, yes," cried David. "Oh, you do understand. And I never thought you could. I never thought that anybody could that didn't have anything to look at but him—but these things."

"Anything but these to look at!" echoed the boy, with a sudden anguish in his voice. "Anything but these! I guess if I could see anything, I wouldn't mind what I see! An' you wouldn't, neither, if you was—blind, like me."

"Blind!" David fell back. Face and voice were full of horror. "You mean you can't see—anything, with your eyes?"

"Nothin'."

"Oh! I never saw any one blind before. There was one in a book—but father took it away. Since then, in books down here, I've found others—but—"

"Yes, yes, Well, never mind that," cut in the blind boy, growing restive under the pity in the other's voice. "Play. Won't you?"

"But how are you ever going to know what a beautiful world it is?" shuddered David. "How can you know? And how can you ever play in tune? You're one of the instruments. Father said everybody was. And he said everybody was playing something all the time; and if you didn't play in tune—"

"Joe, Joe, please," begged the little girl. "Won't you let him go? I'm afraid. I told you—"

"Shucks, Betty! He won't hurt ye," laughed Joe, a little irritably. Then to David he turned again with some sharpness.

"Play, won't ye? You said you'd play!"

"Yes, oh, yes, I'll play," faltered David, bringing his violin hastily to position, and testing the strings with fingers that shook a little.

"There!" breathed Joe, settling back in his chair with a contented sigh. "Now, play it again—what you did before."

But David did not play what he did before—at first. There were no airy cloud-boats, no far-reaching sky, no birds, or murmuring forest brooks in his music this time. There were only the poverty-stricken room, the dirty street, the boy alone at the window, with his sightless eyes—the boy who never, never would know what a beautiful world he lived in.

Then suddenly to David came a new thought. This boy, Joe, had said before that he understood. He had seemed to know that he was being told of the sunny skies and the forest winds, the singing birds and the babbling brooks. Perhaps again now he would understand.

What if, for those sightless eyes, one could create a world?

Possibly never before had David played as he played then. It was as if upon those four quivering strings, he was laying the purple and gold of a thousand sunsets, the rose and amber of a thousand sunrises, the green of a boundless earth, the blue of a sky that reached to heaven itself—to make Joe understand.

"Gee!" breathed Joe, when the music came to an end with a crashing chord. "Say, wa'n't that just great? Won't you let me, please, just touch that fiddle?" And David, looking into the blind boy's exalted face, knew that Joe had indeed—understood.

CHAPTER X

THE LADY OF THE ROSES

IT was a new world, indeed, that David created for Joe after that—a world that had to do with entrancing music where once was silence; delightful companionship where once was

loneliness; and toothsome cookies and doughnuts where once was hunger.

The Widow Glaspell, Joe's mother, worked out by the day, scrubbing and washing; and Joe, perforce, was left to the somewhat erratic and decidedly unskillful ministrations of Betty. Betty was no worse, and no better, than any other untaught, irresponsible twelve-year-old girl, and it was not to be expected, perhaps, that she would care to spend all the bright sunny hours shut up with her sorely afflicted and somewhat fretful brother. True, at noon she never failed to appear and prepare something that passed for a dinner for herself and Joe. But the Glaspell larder was frequently almost as empty as were the hungry stomachs that looked to it for refreshment; and it would have taken a far more skillful cook than was the fly-away Betty to evolve anything from it that was either palatable or satisfying.

With the coming of David into Joe's life all this was changed. First, there were the music and the companionship. Joe's father had "played in the band" in his youth, and (according to the Widow Glaspell) had been a "powerful hand for music." It was from him, presumably, that Joe had inherited his passion for melody and harmony; and it was no wonder that David recognized so soon in the blind boy the spirit that made them kin. At the first stroke of David's bow, indeed, the dingy walls about them would crumble into nothingness, and together the two boys were off in a fairy world of loveliness and joy.

Nor was listening always Joe's part. From "just touching" the violin—his first longing plea—he came to drawing a timid bow across the strings. In an incredibly short time, then, he was picking out bits of melody; and by the end of a fortnight David had brought his father's violin for Joe to practice on.

"I can't give it to you—not for keeps," David had explained, a bit tremulously, "because it was daddy's, you know; and when I see it, it seems almost as if I was seeing him. But you may take it. Then you can have it here to play on whenever you like."

After that, in Joe's hands lay the power to transport himself into another world, for with the violin for company he knew no loneliness.

Nor was the violin all that David brought to the house. There were the doughnuts and the cookies. Very early in his visits David had discovered, much to his surprise, that Joe and Betty were often hungry.

"But why don't you go down to the store and buy something?" he had queried at once.

Upon being told that there was no money to buy with, David's first impulse had been to bring several of the gold-pieces the next time he came; but upon second thoughts David decided that he did not dare. He was not wishing to be called a thief a second time. It would be better, he concluded, to bring some food from the house instead.

In his mountain home everything the house afforded in the way of food had always been freely given to the few strangers that found their way to the cabin door. So now David had no hesitation in going to Mrs. Holly's pantry for supplies, upon the occasion of his next visit to Joe Glaspell's.

Mrs. Holly, coming into the kitchen, found him emerging from the pantry with both hands full of cookies and doughnuts.

"Why, David, what in the world does this mean?" she demanded.

"They're for Joe and Betty," smiled David happily.

Just David

(Continued from Opposite Page)

"For Joe and—But those doughnuts and cookies don't belong to you. They're mine!"

"Yes, I know they are. I told them you had plenty," nodded David.

"Plenty! What if I have?" remonstrated Mrs. Holly, in growing indignation. "That doesn't mean that you can take—" Something in David's face stopped the words half-spoken.

"You don't mean that I can't take them to Joe and Betty, do you? Why, Mrs. Holly, they're hungry! Joe and Betty are. They don't have half enough to eat. Betty said so. And we've got more than we want. There's food left on the table every day. Why, if you were hungry, wouldn't you want somebody to bring—"

But Mrs. Holly stopped him with a despairing gesture.

"There, there, never mind. Run along. Of course you can take them. I'm—I'm glad to have you," she finished, in a desperate attempt to drive from David's face that look of shocked incredulity with which he was still regarding her.

Never again did Mrs. Holly attempt to thwart David's generosity to the Glaspells; but she did try to regulate it. She saw to it that thereafter, upon his visits to the house, he took only certain things and a certain amount, and invariably things of her own choosing.

20 YEARS AGO

Twenty years ago, Lord Farms started with the strain of S. C. White Leghorns we have today. It is safe to say that a large part of the successful poultry farms in the east today have been built on Lord Farms stock to some extent.

During these twenty years we have made steady improvement in our stock. By continuous trapnesting and individual pedigreeing and wing-banding of thousands of chicks, we are now in a position to offer chicks by the thousand that were sold by the dozen at high prices a few years ago.

Our Grade-A Chicks now all come from stock that good poultrymen would have been proud to own one pen of a few years ago.

We have probably as many breeding birds on our own farm as any one in the Eastern States. So we know that our stock is all we claim for it. Buying from Lord Farms is different than buying from an ordinary hatchery. Lord Farms customers are successful.

Any one planning for next spring's chicks should get our catalog and bulletins describing our plants and the four men, all in one family, who are giving their lives to this work. Write today. Lord Farms, 85 Forest St., Methuen, Mass.

With the A. A. Poultry Farmer

Uncle Sam Will Deliver Your Eggs

(Continued from Page 3)

postage, insurance, return postage and deterioration of the container. We will be glad to give addresses of manufacturers of parcel post containers to anyone who is interested. Parcel post shipments can and should be insured as this takes away the possibility of loss from breakage.

Packing eggs for parcel post shipments is a little different process than it is where they are shipped wholesale. Usually each egg is wrapped in paper in order to prevent breakage. There are, however, some containers which are designed to hold each egg very firmly and to prevent rattling around and possible breakage.

There are certain advantages of parcel post marketing both to producers and consumers but there are also certain disadvantages. The chief advantage to the shipper is that he does get a good price for his eggs. On the other hand, it requires a lot more work to ship by parcel post than it does to sell wholesale. There is the question of a little more careful packing, the question of wrapping up and addressing a large number of containers, the necessity of keeping accounts with each customer and sending bills to them, and there may also be the possibility of a little more trouble with collections than there is if you ship to an absolutely reliable wholesale receiver.

The advantage to the consumer is primarily one of receiving fresh eggs. It is no joke when we say that many city consumers do not know what a fresh egg should look like and taste like. This is the chief and perhaps the only advantage to the consumer. Consequently, if a shipper becomes careless and ships poor eggs, the consumers' interest in this method of buying will not last long. In fact, the advantage to the consumer must be so great that it over balances the disadvantages, and there are several. First, the consumer does not always use the same number of eggs every week. When buying from a groceryman, he can buy as many as he wants; when buying parcel post, he has to order a certain number to be delivered at regular intervals. Then, where returnable containers are used, they have the bother of taking them to the Post Office and shipping them back to the producers.

Summing up the whole situation, it seems to us that this is a possible method of marketing for the man who is willing to take pains and who does not expect too much from it. It takes time to build up a satisfactory list of customers but we know that a certain number of poultrymen have been successful. Write us your experiences and we will be glad to pass them on for the benefit of others.

The Sixth Week at Storrs

THE trend of egg production in the Storrs contest has turned upward. For the last three years the birds have slackened the pace in the fourth week, eased a bit more the following week, and then climbed more or less steadily until the first week in March.

Thus, in the sixth week of the current contest the birds came through with 256 eggs more than for the previous week and 281 better than in the sixth week of last year. The total production for all pens was 4,524 eggs, or a yield of 64.6 per cent.

Leghorns Vie With Reds

An English pen, entered by Tom Barron of Catforth, has the only birds that have succeeded so far in crowding the Reds off the front page. This team of ten pullets came through with a tally of 65 points to place first for the week. Donald I. Goodenough's pen of Reds that have so consistently set the place for the first five weeks was in second place with a score of 63 points.

Reds and Leghorns continued the scrap

by tying for third place. Homestead Farms at Newtown, Conn., sponsoring Reds, and Mount Hope Farm of Williamstown, Mass., backing Leghorns, each scored 61 points. For fourth position three pens tied with 59 points each. These include two Massachusetts pens of Reds owned by Globus Poultry Farm at Attleboro and Scott Poultry Farm from Groton. The third pen in the group was Australorps entered by Jerseyland Farms of Point Pleasant, New Jersey.

Dry House Helps Prevent Colds

"I have a 20x20 ft. chicken coop and 100 White Rock pullets that seem to be droopy. I noticed this morning that there was one pullet that refused to eat and on examining her I found she had sort of a rattling in her throat. I think she has taken cold although I haven't noticed any of the others affected in that way.

"Do you think ventilators would help and where would you advise placing them? I was told keeping front curtain up all the time would do away with most of the dampness. It has helped somewhat but has failed to take care of this difficulty as I feel it should."—WHS., New York.

KEEPING the cloth curtains and K windows open in a shed-roof poultry house will not keep the house dry unless there are other openings at the highest point in the building to let the moist air out. If you will open up the spaces between the rafters and above the front plate all the way across the front I believe you will be able to keep the house dry. Your birds are not crowded.—L. E. Weaver.

This **REMINGTON SHEATH KNIFE** is just what you need for hunting, fishing or camping trips. It has a 4¼ inch forged blade with strong, durable, keen cutting edge. Bone Stag handle and leather sheath. We will send you this knife

Reliable Advertising

AMERICAN AGRICULTURIST is a member of the National Better Business Bureau. Along with a recent pamphlet entitled, "Protecting the Public Confidence in Periodical Advertising," Mr. Alfred C. Fuller, President of the National Better Business Bureau, writes us the following letter:

I doubt that any report could adequately describe the thorough manner in which publishers have undertaken the elimination of deceptive advertising in magazines.

The advertising which has been eliminated is that which not only distresses the legitimate advertiser whose message must compete with it but is the sort that decreases the reader's confidence in all magazine advertising.

The progress which the magazine industry has made is an outstanding example of successful business self-government.

I hope you are satisfied with the part it has been the privilege of the National Better Business Bureau to play and that the Bureau will have your continued co-operation and support.

We would welcome an expression of your interest."

We have received excellent cooperation from the National Better Business Bureau in all complaints which we have called to their attention and we believe them to be an important force in maintaining the ethics of business on a high plane.

Trespassers Fined—Sentence Suspended

AN ULSTER COUNTY subscriber recently asked our aid in prosecuting John Post and John Watzka for hunting on his property, which had been legally posted. We referred this to the Conservation Department who cooperated in bringing these men to trial. A hearing was held before Justice Alexander Speers in the town of Ulster.

The men were convicted and a fine of \$25.00 was imposed. So far the story is entirely satisfactory. However, the sentence was suspended and the men were dismissed with instructions that hereafter they should keep off posted land. This we fail to understand. The men were convicted and so far as we know, made no defense that they did not know the lands were posted. It would seem that they merely ignored the signs and it is our belief that a few good stiff fines would do more than any other one thing to cause a little more respect for posted land.

The State Conservation Department did all they could in this case and have signified their willingness to follow any cases of trespassing which we care to bring to their attention.

Settles for Stolen Hickory Nuts

We received your letter and acting on your advice, we had a warrant sworn out for larceny and trespass. We had a Constable serve it. The party settled and paid all costs. We wish to thank you for your advice, also for the kind interest you took in the case.

WE certainly appreciate the above letter. Our subscriber originally wrote us, telling about a party who stole some hickory nuts off their farm and who refused to go when ordered to leave. Our subscriber took a record of the license number and we advised him to take the matter up with the Pennsylvania State Police. Captain William Clark of Troop "B" advised them to get a warrant from their local Justice of the Peace, charging the offender with larceny and trespassing, and have the Constable serve it. This was done with the result shown in our subscriber's letter.

It is our belief that such prompt action will go a long way towards stop-

ping the nuisance of farm stealing. In this case, we congratulate the Troopers on the part they took in getting this settlement.

Help in Appraising Trees

A SUBSCRIBER recently asked for our opinion as to the value of trees which had been cut on his property by a person who had no right to do this. Inasmuch as this reply was to be used as the basis for an action of damages, we referred it to the New York State College of Forestry of Syracuse University, Syracuse, N. Y. We received a very courteous reply from Professor Henry Francis of the college asking for additional information which would help them to make a correct appraisal. We are telling you about this, in order that anyone who wishes an appraisal on trees for this or some other purpose, may know where to go for it.

Professor Francis also stated that it would be possible to have a technical forester visit his property if he wished to do so and that the college would be glad to send him a list of reliable men qualified to appraise the trees.

New Jersey Licenses Commission Men

Can you give us information about the law requiring that New Jersey commission men be licensed and bonded?

THIS law, which became effective recently, provides that buyers of farm produce on commission take out a bond for the protection of shippers for a minimum sum of \$3,000. If they go out of business or fail to make returns, this bond can be used to settle with shippers.

Buyers of farm produce who pay at the time they buy, are not required to take out a license; neither do they have to have a license if they buy only in amounts valued at less than \$25; neither does it apply to duly incorporated farmers' cooperative associations.

If you wish to get a copy of the law

which goes a little more in detail, you may get it by writing to the New Jersey Department of Markets, Trenton, New Jersey.

Boston Entertains A.F.B.F.

(Continued from Page 3)

C. E. Huff of the Farmers' National Grain Corporation; C. A. Ewing, President of the National Live Stock Shipping Association; C. W. Holman of the National Co-operative Milk Producers' Association; E. F. Creekmore of the American Cotton Co-operative Association; and Miss Elsinger, Director of Organization in the Ohio Farm Bureau Federation and others. On Tuesday, talks were given by Mrs. Edward Young of New York; Morgan McKay, President of the National Association of Agricultural Agents; Miss Mary Mims of Louisiana; Earl Smith, President of the Illinois Agricultural Association; R. W. Blackburn, President of the California Farm Bureau Federation; and Edward O'Neal, President of the Alabama Farm Bureau Federation. At this time the announcement of the Distinguished Service Medal Award was made by the committee. Three medals were bestowed this year, being received by Mrs. Ellsworth Richardson of Albia, Iowa; Dudley Myers of Mendon, Illinois; and Professor T. L. Haecker of Lincoln, Nebraska. Mrs. Richardson is chairman of home and community work in Iowa Farm Bureau Federation and has given largely of her time in the development of the organization in her State, is the mother of two boys, and maintains her own farm home on a high plane. Mr. Myers, a modest, unassuming dirt farmer was largely responsible for the establishment of Adams County Livestock Shipping Association, the largest county unit in Illinois, and a model for many similar associations throughout the mid-west and far-western country. Professor Haecker is known to most farmers as "the father of the cooperative dairy system in Minnesota," but his outstanding service to agriculture has been his research work.

New York State Sends Speakers

One of the high spots of Tuesday afternoon's session was the address given by Mark Graves, Commissioner of Taxation in New York, who spoke on "Taxation and its Relation to Agriculture." As taxation is one of the principal problems of our people and as Mr. Graves is one of the foremost authorities in the United States on this

subject, his talk was considered one of the most instructive of the meeting. On Wednesday morning, Secretary of Agriculture Arthur M. Hyde of Missouri, delivered his talk and again the Grand Ball Room was crowded to capacity, there being over two thousand people to hear his clear-cut statement of present day conditions. Dr. Warren of Cornell University also gave a very helpful and optimistic talk on "The Economic Outlook for Agriculture in America." Secretary Winder of the American Farm Bureau Federation next gave his annual report, which showed the national organization to be in the best condition it has ever occupied and the report in book form is well worth keeping for its fund of information relating to the various State Farm Bureaus.

Resolutions Approved

Among the resolutions of particular interest to New England farmers were those relating to Muscle Shoals and the tariff in general, but specifically the stand for increased tariff protection for our growers of pulp wood. The Federation will sponsor a bill to allow Muscle Shoals to be leased to a cooperative made up of representatives of agriculture, and if this can be brought about a saving of at least twenty-five per cent can be made in the price paid by our farm people for fertilizer.

No mention has been made of the numerous teas, dinners, luncheons, etc., that were served to different groups, neither can we give the necessary space or time to tell of the pageant that was staged after the banquet and depicting the first agricultural demonstration ever put on in the early Colonial days. Special trips to the Navy Yard, to Plymouth, to the great shoe factories of Brockton, and the ship building plant at Quincy, were enjoyed by great numbers after the convention was brought to a close.

Old Ties Renewed

One of the most interesting events of the meeting occurred early in the gathering, when an old gentleman living in Massachusetts came to us and inquired if we knew where "Charlie Hearst" was. We happened to know that Mr. Hearst of Iowa was busy with the resolutions committee in a certain room on the fourth floor and upon being told this the inquirer said "Never mind, I guess I won't bother him". Upon being questioned, he admitted that he really would like to see him, so we piloted him to the committee room and on the way he told us that he had seen in the previous day's paper that Mr. Hearst was in town and that over forty years earlier he had known Hearst and his people and had not seen any of them since. Upon coming to the door, Mr. Hearst looked inquiringly at us, and the little old gentleman asked "Are you Charlie Hearst?" Upon being assured that he was, he replied, "Well, my name is So and So," but that was as far as he got. Hearst, who is a large man, fairly fell upon him and nearly smothered him in his hearty greeting, and thus we left them for their reunion.

No story of this great gathering from the country at large would be complete without mention being made of the splendid work of the Massachusetts Farm Bureau Federation in arranging the innumerable details for the entertainment of the visitors. Howard S. Russell, secretary of the Massachusetts Farm Bureau bore the brunt of this work and the success of the many pleasant features of the week was largely due to his untiring work, not only during the meetings, but for several weeks previous. He had a hospitality committee of one hundred and twenty-five Farm Bureau members who were divided into relays and met all incoming trains at both stations, assisted strangers in getting to the hotels and were on constant duty at the main registration desk to answer the thousand and one questions that were being asked on all sides. Massachusetts, as a host, and the entire Farm Bureau, in the role of guests, have established a record that any other state, or any other convention, will find difficulty in surpassing.

Before you

WITHIN the next few months, thousands of farmers who are now reading this advertisement, are going to build new or remodel their old Barns, Poultry Houses or Hog Houses.

One year from now some of these same farmers will be saying, "I wish I had consulted Jamesway about my buildings — there are so many things about it that I'd like to have different."

Most of these thousands of farmers however are going to have a different story to tell — because **most** of them will write to Jamesway **FIRST** — their experience will be one of life-long satisfaction. Consulting Jamesway on any Building, Remodeling, Ventilating or Equipping problem is the sure way to save yourself regrets later on.

It makes no difference how large or how small a job you have, Jamesway can show you how to do it better — how to economize on cost and material — how to arrange it so that you are saved dozens of steps every day in the year — how to build so that you will continue year after year to get the greatest return from your investment.

Greater profit from farm animals is best accomplished by increasing the return per animal with the least amount of care and labor. For more than 25 years Jamesway Dairy and Poultry Experts have been working and developing better methods of housing, heating, insulating, ventilating, and equipping for farm stock — how to do it in the best and most economical way.

All of this vast experience has been compiled in this New Book and we now offer to you the most up-to-date, practical and helpful information on the subject that can be obtained. It's yours free for the asking. Mail coupon today.

Build...

When you build you naturally want the *best* building you can get for the *least* money. Jamesway with a quarter of a century experience in planning better farm buildings is the largest and best equipped organization of its kind to help you with your building problem.

Remodel...

Jamesway advice is, "Don't build if you can remodel your old buildings." Many old buildings with the aid of our "know how" experience can be made convenient and entirely satisfactory at a fraction of the cost of a new building.

Ventilate...

If you are keeping any farm animals, Cows, Horses, Hogs, or Poultry in improperly ventilated buildings, you are losing money every day you continue to do it. Pure fresh air is just as essential to animal life as food and water.

or Equip...

For more than a quarter of a century Jamesway Equipment for Barns and Poultry Houses has been the recognized leader. Jamesway's progressiveness in developing new and better types of farm buildings is also demonstrated in the New Pointed Arch Poultry House, Pointed Arch Farrowing Houses and Calf Barns.
